Per P. and O. steamer from Marseilles, Feb. 13.—To Hong Kong: Mr. McDonald.

Summary of News from the Far East.

CHINA.

PEKING.

Our Peking advices reach to the 5th of November. There is little to note, with the exception of a rifle meeting held there on the 27th of October, a report of which is appended. The Chinese disciplined troops, to the number of two thousand, are still under drill, and make very satisfactory progress. These men have been gradually embodied, Captain Coney's force having been taken as the nucleus. About five hundred were reviewed some short time ago by Colonel Yonge, 67th Regiment, and received very flattering notices from that officer as to their steadiness and proficiency.

The foreign residents have started an amateur theatrical company, and lately gave a most successful representation before the foreign Ministers and the other residents. The pieces played were the popular burlesque of "Vilikins and his Dinah," and "Twenty Minutes with a Tiger." The acting was allowed on all hands to rival anything of the kind ever seen on any boards, in Peking or elsewhere, and the orchestra (an harmonium), under the direction of a talented musical amateur, gave universal satisfaction. As to the rifle meeting, the day was all that could have been wished, the Chinese authorities lent their parade ground for the occasion, and the natives mustered in vast crowds to witness the proficiency of the foreign marksmen. All the foreign residents turned out in full strength, and their Excellencies Chung Lun and Hêng-ki, of the Foreign-office, likewise put in an appearance. The ground was kept clear by bodies of drilled Chinese, and an excellent tiffin was provided for the invited guests.

The Ministers' Cup was shot for by Messrs. Murray and Man, and won by the former gentleman, who made a centre at one hundred yards, Mr. Man making an outer at the same distance. The meeting terminated without accident of any kind, and besides giving all concerned in it a very pleasant day's amusement, proved that the foreigners in Peking are not only on the best possible terms one with another, but that they are determined to keep up European pursuits even in the midst of the Chinese capital. The Shanghai settlers can no longer boast of being the sole representatives of English civilisation and the sole supporters of English sport in the Far East. The few lonely residents in Peking are determined to emulate all our efforts, and gain a well-founded reputation for securing enjoyment under the most unfavourable circumstances.

KIU-KIANG.

The first cricket match which has taken place between the Hankow and Kiu-kiang communities resulted in the victory of Kiu-kiang by 22 runs. It is hoped that it will now become a half-yearly meeting. Hankow was unable to send down two of of its best cricketers, or perhaps the result of the game might have been a different one. However, a pleasanter match or weather more propitious to the contest could not have been had.

From the minutes of a meeting held at Kiu-kiang, published in the *North China Daily News*, we observe the British residents at that port have agreed to apply to the Home Government for the appointment of a chaplain; which step is found necessary owing to the growing numbers of English residents. A salary was guaranteed of £350 per annum; and another resolution empowered a committee to take immediate steps "for raising a fund for the purpose of defraying the cost of erecting a church and parsonage;" and in the meantime to procure temporary accommodation till such church and parsonage should be completed.

CHEFOO.

The following account of the loss of H.M.S. *Racehorse* is from the *North China Daily News*:—

"We regret to have to report the total loss of H.B.M. despatch-boat *Racehorse*, which occurred on the evening, of the 4th prox. in the bay of Lung-mun, about twelve miles to the east of Chefoo. At 8 o'clock on the above evenings the weather being at the time extremely thick and hazy, it was thought that the vessel was entering Chefoo harbour, to which Lung-mun

Digitized by Google

bay bears a great resemblance. Similar accidents have occurred on previous occasions, as, for instance, in the case of the British barque *Homer*, which was totally wrecked there during last winter, and the steamer, *Swatow* which, under exactly similar circumstances, was indebted to a mere accident for preservation from destruction. As soon as the *Racehorse* went ashore, the masts were cut away and every attempt made to lighten her and get her off. These efforts were, however, unsuccessful, as a gale, which had been threatening for some time before, set in with terrific violence, and prevented the men from either working at the ship or launching the boats. Nothing remained, then, for the crew to do but to fasten themselves down as best they could. Enormous seas continued to sweep over the deck so that next morning, out of a total strength of one hundred and eight officers and men only nine survivors were found, the rest having perished of cold and exhaustion or having been swept off the decks. The survivors are the commander, the paymaster, boatswain, and six sailors who saved themselves by taking to the last remaining boat, and drifting about for thirty-six hours, when they were picked up by a junk. On the morning after the wreck H.M.'s gunboat *Insolent*, accompanied by a French despatch vessel, cruized for a considerable time in the neighbourhood, but did not succeed in picking up any others of the crew."

SHANGHAI.

The following provision for the conveyance of subjects sentenced to deportation has been made :—

Whereas by Articles XX. and XXI. of an order of Her Majesty in Council, dated June 13th, 1853, it is provided that British subjects sentenced before any of Her Majesty's Consuls to be sent out of the dominions of the Emperor of China to Hong Kong, shall be embarked on board any of Her Majesty's ships of war or any British vessel bound to Hong Kong, and whereas at certain of the ports of China opened by treaties or conventions negotiated since the date of Her Majesty's Order in Council, it has been found difficult to embark persons so sentenced in vessels bound to Hong Kong, the undersigned, in pursuance and in execution of the authority vested in him by Art. III. of the same Order in Council, as Her Majesty's Chief Superintendent of Trade for the time being, hereby makes the following rule :—

Until the pleasure of Her Majesty's Government shall be farther declared, it shall be in the power of any Consul or consular officer acting as Consul at any port in China, to send any British subject duly sentenced to deportation as above, to whatever intermediate port shall appear to him to possess the greatest facilities for the transmission of the persons sentenced to Kong Kong; and it shall be lawful for the commander or master of any British vessel bound to such intermediate port, to receive any such person on board, under the usual warrant addressed to the Chief Magistrate of Police of the Colony of Hong Kong, and to convey him in custody to the port to which the vessel is bound, and on arrival to deliver him with the warrant to the Consul or consular officer acting as such at the said port: and the Consul or consular officer aforesaid shall grant him a receipt for his prisoner and for the warrant, and shall detain the prisoner in custody until a suitable opportunity for sending him to Hong Kong shall present itself, and shall then forward him thither in the manner pointed out in Article XX. of the Order in Council before cited. And this provisional rule shall apply to all cases wherein British subjects may be sentenced by Her Majesty's Consuls to imprisonment at Hong Kong, as provided by Article XXV. of the same Order in Council.

(Signed) THOMAS F. WADE.

Chargé d'Affaires and Acting Chief Superintendent of Trade.

The *North China Herald* comments on this :—"The new provisional rule for the conveyance to Hong Kong of British subjects deported from places which possess no direct communication with the south, will, when carried out, prove a very great boon to the Yangtsze and northern ports. Hitherto the number of European settlers at the smaller places open to trade has been so limited, that it has very seldom been found necessary to inflict the punishment of deportation. But now that the disbandment of the disciplined forces has cast a large number of unemployed Europeans into the midst of the foreign communities, any difficulty which might possibly arise in getting rid of such as may prove objectionable should be carefully guarded against. We need only take a short stroll through the settlements in order to prove most satisfactorily that a very large body of destitute foreigners is in existence, and that no adequate means of employment is at hand to afford it relief. Up to six months ago, such a sight was never seen in Shanghai as a foreigner begging his bread, but now unfortunately it has become only too common. Men with misery inscribed on every lineament sue for alms, and relate heart-rending tales of destitution and hardship. Want is so often the exciting cause of crime, that we need not be surprised if the poor fellows who throng our streets are compelled to resort to violence in order to obtain food. To many of them perhaps this mode of subsistence would not be new. Amongst the destitute class now residing here, there is doubtless a strong desperado element. But there are also many who would be glad to obtain a respectable subsistence, did any means of so doing present itself. This section of the distressed class claims our most active sympathy, and imposes a heavy responsibility upon us. It is not necessary for us to enter on the discussion of any plans by which European labour might be made to supersede Chinese labour so far as to relieve the necessities of the men to whom we now refer. The thing could be easily done, and in the interests of humanity, as well as of self-protection, we trust it may be done."

CONSULAR NOTIFICATIONS.

The undersigned has been instructed by T. F. Wade, Esq., C.B., H.M.'s Charge d'Affaires and Acting Chief Superintendent of British Trade in China, to publish the following despatch for general information.

(Signed.) H. S. PARKES, Consul.

Peking, Oct. 21, 1864.

Sir,—I am instructed by Earl Russell to acquaint Her Majesty's Consul in China with the opinion of the Law Officers of the Crown regarding the liabilities of the ships in disputes arising between merchants at Chinese ports and the captains of ships trading there, a question on which his Lordship had been requested to give a decision.

The law officers hold that any question between a merchant and the captain of a British ship arising in China which can be the subject of a civil suit may be adjudicated upon by the Consul, and any judgment against the captain may be enforced by distress upon the ship or other property belonging to himself; but cannot be enforced by the detention of any ship which is not his property. The ship's Certificate of Registry and her other papers cannot be detained for the purpose of enforcing any such decision in any case in which the ship itself is not liable to be distrained for the same purpose.

Your obedient servant,

(Sd.) THOMAS F. WADE,

True Copy,

EDW. SOLBE, *Assistant.*

Sir H. S. PARKES, K.C.B., &c., &c., &c, Shanghai.

The undersigned has been instructed by T. F. Wade, Esq., C.B, H.B.M.'s Chargé d'Affaires and Acting Chief Superintendent of British Trade in China, to make publicly known that the Chinese Government has declared the export duty on "camel's wool" to be 5 per cent., *ad valorem.*

HARRY S. PARKES, Consul.

PRUSSIAN NOTIFICATION.

It is hereby notified for general information, that since the 15th of this month, the transaction of judicial affairs of his Prussian Majesty's Consulate General has been given in charge of Mr. Assessor Tettenborn, hitherto a judge in the Royal Court of the city of Berlin. All plaints and communications referring to the jurisdiction of the Consulate General have therefore in future to be directed in the hours from 10 A.M. to 4 P.M. to the abovenamed officer, who has his residence for the time being in Astor House, Hong-que.

His Prussian Majesty's Consulate General for China,

VON RADOWITZ.

3de 538 Shanghai, Nov. 19th, 1864.

The extracts subjoined are from the *North China Daily News* :—

News has been received to the effect that a battle was fought a few days since at Kuang-sing-fu in, the province of Kiang-si, between the Imperialist forces and a large rebel army led by Hung Yuan-cheng, a near relative of the deceased Tien Wang, and Li Shuiseng, a relative of the Chung Wang, whose title was Yu Wang, or the Admired King. The former was killed in action, and the latter was captured. The loss is said to have been very serious on both sides; the rebels, however, were totally defeated.

The following mercantile notices have appeared :—

The interest of Mr. James Joseph Mackenzie, and of the late Mr. Henry Hubbard, in our firm, ceased on the 30th June last —Dent and Co.

The business hitherto carried on in Yokohama, Japan, by Mr. James S. Downie, will in future be conducted under the name of Fletcher and Co. Mr. James S. Downie is authorised to sign our firm per procuration.—Fletcher and Co.

A noted chief of Canton thieves and rowdies—to the number it is said of a thousand—has been executed, along with nine of his accomplices. His death will be a heavy blow to the cause of burglary and rowdyism in the North and every-

Digitized by Google

where ; and we have a double cause for congratulating ourselves on his disposal, as in his confession we find he was meditating a journey South, where he expected even greater success than in Shanghai and its neighbourhood.

The gunboat *Hardy* had left for Hankow, as the residents there were apprehensive of an attack of banditti.

The tug steamer *General Ward*, which sank on the 21st Oct. in consequence of the bursting of her boiler, was raised by Messrs. Robinson and Mr. Noland. She was announced for sale by auction.

THE PRESIDENTIAL ELECTION.

(To the Editor of the *North China Daily News.*)

DEAR SIR,—In conformity with the circular which you will find below, the American residents of Shanghai voted as follows,

For George B. McClellan,	...	...	...	132
„ Abraham Lincoln, ...	...	...	...	83
„ John C. Fremont, ...	...	...	...	1
„ John A. Dix,	...	...	...	1

As the result has not been published as advertised, the inference is that the result is not what was expected by the originators of the idea. It is satisfactory, however, to the supporters of "Little Mac," who feel confident that he is the President elect of the United States.

By publishing this communication you will oblige all who voted for McCLELLAN.

CIRCULAR.

The undersigned, at the request of many American residents of Shanghai who are desirous of obtaining an expression of opinion from their fellow citizens in regard to the merits of the various candidates for the Presidency of the United States of America, and the 8th day of November being the day for the Presidential election in the United States, would respectfully notify all American residents that they have prepared a ballot box, and printed ballots, which will be under the charge of a competent clerk, and that the ballot will be taken in one of the private rooms of the Bank Exchange, entrance on Foochow-road. It is hoped that a full vote will be registered, the result of which will be published. D. W. McCOMB.

Shanghai, 7th November, 1864.

SHANGHAI RACES.

(*North China Herald.*)

The autumn meeting has fully sustained the reputation which has been fairly earned by the Shanghai community for providing first-class prizes and excellent horses to contend for them. Hadji added very considerably to his previous laurels, and other well-known horses kept up their reputation. The most annoying incident at the meeting was an eccentricity on the part of an excited spectator, which caused the defeat of Lawyer at a time when he looked a certain winner. The individual, whose enthusiasm for *le sport* was thus so disagreeably exhibited, may congratulate himself that the scene of his exploit was Shanghai rather than England. In the latter country, disgust at his conduct might have been manifested in a more forcible manner than by universal condemnation. A detailed account of each race is subjoined. The first day rose as favourably as could have been wished by the most critical in racing weather. The sun was lightly screened by clouds, the air was warm and invigorating, and the course in the best possible order. At about half-past twelve the Stand looked exceedingly well, the front bench on the lower row lined by ladies, whose variegated costumes lent an air of additional gaiety to the scene. The first saddling bell was rung at a quarter to one, and the jockeys, in all the glories of red, white, and blue, made their appearance. The Maloo Plate—for China ponies—was the first on the list, and out of thirty-five entries fourteen came to the starting post.

1.—The Maloo Plate. Value Tls. 50. For China ponies. Weight for inches as per scale. Entrance Tls. 5 each. Half a mile.

Ozone	1
Wiggle Waggle	2

This race was one of the best of the day. For a third of the distance the competitors kept well together, but then Ozone and Wiggle Waggle forged ahead, Ozone finally winning in a canter, with Wiggle Waggle second. Time 1 min. 9 sec.

2.—The Oriental Cup. Value 100 guineas. For all Arabs. Weight 9st. Entrance Tls. 10 each. One mile and a half.

Hadji	1
Hassan	2

This race was contested by four horses, viz., Early Purl, Forrester, Hadji, and Hassan. For it Hadji seemed to be the favourite, although bets were given readily on Forrester. Hassan, a splendid bay Arab, had not so many supporters, but came in a good second to Hadji's first, the latter hard held, Early Purl third. Hadji's success in this race was, we believe, mainly owing to his rider, who displayed much judgment in the treatment of his horse. Forrester, we are sorry to say, came to grief after running about three quarters of the distance. He is said to have burst a blood vessel. Time 3 min.

3.—The Maiden Stakes.—Value Tls. 75.—For China ponies that have never run at any meeting in China. Weight for inches as per scale. Entrance Tls. 5 each. ¾ mile.

Dontitim	1
Blair Athol	2

Out of the thirty-seven entries for this race seventeen presented themselves. The start was a fair one, Dontitim, however, losing about five lengths by skittishness. He soon made it up, and, after a well contested race with the Wizard and Blair Athol, came in a good first, Blair Athol second, and the Wizard third. Time, 1 min. 40 sec.

4.—The Farewell Cup.—Presented by J. D. Gibb, Esq. For English and colonial horses. Weights :—English, three years, 9st. 4lbs. ; four years, 10st. ; five years, 10st. 7lbs. ; six years and aged, 10st. 10lbs. Colonial—Three years, 7st. 11lbs. ; four years, 8st. 7lbs. ; five years, 9st. ; six years and aged, 9st. 3lbs. Entrance Tls. 10 each. 1½ mile.

Exeter	1
Traveller	2

The following horses ran :—Traveller, Pathfinder, and Exeter. Pathfinder was looked on as a tolerably safe horse, but his performance did not quite come up to the hopes of his supporters. At an early period in the race Exeter and Traveller walked away from him, and came in well ahead, Exeter first, Traveller second. Time, 3 min. 2 sec.

5.—The Criterion Stakes.—A Sweepstakes of Tls. 50 each, with Tls. 200 added from the Fund. For all Colonial horses that have never won in Shanghai. Weights—3 years, 8st. 7lbs. ; 4 years, 9st. 3lbs. ; 5 years, 9st. 10lbs. ; 6 years and aged, 9st. 13lbs. Entrance Tls. 10 each.—1¼ mile.

Incledon	1
Gorilla	2

Colonial horses which had never before won in Shanghai had now a chance. Six ran, and contested the sweeps nobly. Incledon, though not apparently the most promising of the colonists, came out well. The pace was excellent, and for a time it was difficult to prophecy the result. It was settled, however, about a quarter of a mile from the winning-post, Incledon coming in well in front, Gorilla second, and Malabar third. Time, 2 min. 25 sec.

6.—The Haphazard Stakes.—Value, Tls. 200. Weights : Arabs, 8s. 7lbs. ; Stud Bred, 9st. ; Colonial not otherwise entered at this meeting, except for Steeple Chase and Hurdle Race, 11st. Entrance, Tls. 10 each. 1½ mile.

Hadji	1
Anecdote	2

For these four horses were put forward. Again Hadji showed his blood and breeding, although in Anecdote he found a fresh horse of no despicable powers. Kept well behind at first, he slowly but surely crept up, and at last came in at a canter an easy winner.

The second day passed off as well as did the first. The course, which was somewhat cut up by the previous day's work, had been restored to its normal state of smoothness. The weather was delightful, although a little warmer than the day before, and the only drawback was the dusty state of the roads in the neighbourhood of the Grand Stand. The Grand Stand was again crowded, and the ladies of Shanghai lent their presence to the gay and animated scene. The road was crowded by Chinese, anxious to see the foreigner at his extraordinary and break-neck amusements, but perfect order was maintained by a small body of municipal police. The first saddling-bell rang at a quarter to one, and at one o'clock everything was in readiness for the race.

1.—The Northern Cup. Value Tls. 50. For China ponies. Weight for inches as per scale. Winners at this meeting 7 lbs extra. Entrance Tls. 5 each. Quarter of a mile.

Mrs. Gamp	1
Wiggle Waggle	2

Out of the thirty-nine ponies entered for this cup, fifteen came to the post. The quarter of a mile was well run in 30 sec. Several false starts were made, but when once off Mrs. Gamp and Wiggle Waggle quickly drew ahead, many of the others, however, pressing up closely.

2.—The Autumn Vase. Value £100. For all Arabs. Weight 9st. Winner of the Oriental Cup 7 lbs extra. Entrance Tls. 10 each. Two miles.

Hadji	1
Early Purl	2

Two horses presented themselves, viz., Hadji and Early Purl. A capital start was made, but Hadji had it his own way from the commencement, Early Purl closing up at one period of the race, but soon falling into the rear. Time 4 min.

3.—The Subscription Cup. Value Tls. 500. For China ponies. First pony to receive Tls. 300 ; second pony, Tls. 150 ; third pony, Tls. 50. Weight for inches as per scale. Entrance Tls. 10 each. One mile.

Cobweb	1
Bogtrotter	2

Out of the forty-four entries seventeen were put forward. The start was good, and for most of the distance a blanket might have covered the field. Towards the end Cobweb came to the front ; Bogtrotter a good second, and Agony third. Time 2 min. 16 sec.

4.—The Bachelors' Cup. Value 150 guineas. Presented by the bachelors of Shanghai. For colonial and English horses. To be run for at the autumn meetings, and to be won two years consecutively by a horse or horses the *bona fide* property of the same owner. Weights : colonial, 9st. 7lbs. ; English, 10st. 7lbs. ; professionals allowed to ride at even weights. Entrance Tls. 10 each. Two miles.

Digitized by Google

Exeter 1
Sir William 2

This was contested by only two horses, viz., Sir William and Exeter. Sir William took the lead, and held it for about a third of the distance, when Exeter crept up, and a neck-and-neck race ensued. Exeter, however, eventually burst from his rival, and came in a good first. Time 3 minutes 53 seconds.

5.—The Arabian Plate.—Value Tls. 250. For all Arabs. Weight 9st. 7lbs. Winners at this Meeting of one cup 7lbs. extra. Entrance Tls. 10 each. 1 mile.

Hadji 1
Hassan 2

Four out of the seven horses entered contested this race. Hadji, as winner of the Oriental Cup and Autumn Vase, carried 7lbs. extra, and came in first, Hassan second, and Godolphin third. Hadji's performance in this race, and the excellent jockeyship of his rider were the theme of universal admiration. The owner of the animal may well be proud of him, and of his fortune in securing the services of riders so accomplished.

6.—The Hong Kong Cup.—Presented by the Hong Kong Community.—For English and colonial Horses.—Weights:—English 3 years, 9st. 3lbs.; 4 years, 9st. 13lbs.; 5 years, 10st. 6lbs.; 6 and aged, 10st. 9lbs.; Colonial, 3 years. 8st.; 4 years, 8st. 10lbs.; 5 years, 9st. 3lbs.; 6 years, and aged, 9st. 6lbs.; Entrance, Tls. 10 each.—1¼ miles.

Exeter 1
Incledon 2

This had been looked forward to as the race of the day, and for it there were twelve entries, seven running. The distance—one mile and three quarters—was run by Exeter in 3 min. 20 sec., Incledon closely behind. Pathfinder at first took the lead, but did not keep it long. It was soon evident that the cup lay between Incledon and Exeter, Priam pulling up after a short run. The race was well contested. Incledon pressing Exeter very closely, and coming in about a length behind.

7.—Hack Stakes.—Of Tls. 25 each, with Tls. 100 added from the fund. For all horses not otherwise entered at this meeting. Catch weights. Entrance Tls. 10 each. Once round.

Robin Hood 1
Inheritor 2
Basilisk 3

Six horses ran. It was dusk before the start was effected, we can only therefore, give the names of the winners.

The weather was again propitious on the third day, the course capitally looked after, and the Grand Stand again crowded. The roads were sunk deeply in dust as before, but this was, after all, but a secondary consideration.

1.—The Handicap Plate.—Value Tls. 250.—A Handicap for all Arabs that have run at the meeting. To be handicapped by the Stewards at the conclusion of the second day's races. Entrance Tls. 10 each. 1½ miles.

Hadji 1
Early Purl 2
Hassan 3

Five horses came to the post. The mile and a half was run in 3 min. 1 sec. At the start Hadji remained a short distance behind, but closed up to the others at the end of the first mile. He was then let out, and after an exciting race with Early Purl, collared the latter and came in about four lengths ahead.

2.—The Champion's Plate.—Value $200.—For China Ponies.—To be run for at the Autumn Meeting, and to be won two years consecutively by a pony or ponies, the *bona fide* property of the same owner.—Entrance Tls. 20 each.—2 Miles.

Ozone 1
Cure 2

Out of the thirty-two that entered seventeen presented themselves. Deserter third. The ponies kept well together at starting, and for the first round it was difficult to speculate with anything like certainty on the winner. Shortly after passing the Stand, however, Ozone and Cure came to the front, and kept it up to the finish, Ozone, although first, being closely pressed by Cure. Time, 4 minutes, 46 seconds.

3.—The Shanghai Cup.—Value 150 Guineas. For English horses only. Weights:—4 years, 8st. 7lbs.; 5 years, 9st. 0lbs.; 6 years, and aged, 9st. 3lbs. Entrance Tls. 10.—1¼ miles.

Sir William .. .. w.o.

This was a walk over on the part of Sir William.

4.—The Australian Cup.—Value £100, added to a sweepstakes of Tls. 50 each. For Colonial horses only. Weights:—3 years, 8st. 7lbs.; 4 years, 9st. 3lbs.; 5 years, 9st. 10lbs.; 6 years, and aged, 9st. 13lbs. Entrance Tls. 10 each.—3 miles.

Exeter 1
Traveller 2
Incledon 3

This was, with the exception of the Steeple Chase, the most exciting race of the day. The distance was sufficient to pump the longest winded, so that after all it became a question of endurance almost as much as of speed. On passing the stand the first time (half a mile from the starting post) Incledon was leading, with Traveller close behind. When next they passed, Incledon and Traveller had changed places, and Exeter, whose strength had been carefully husbanded, began to creep up. At the finish Exeter came in a good first, leaving Traveller and Incledon lots of room to spare. Time, 5 min. 58 sec.

HONG KONG.

The Messageries Imperiales steamer *Tigre* brings the following freight to Europe:—Silk, for Marseilles, 449 bales, for London, 730 bales. Cotton, 20 bales for London. Treasure, 72,000 taels for Shanghai. Opium, 786 boxes for Marseilles, and 23 boxes for London.

The following ladies and gentlemen compose the dramatic company. Miss Mattie Aldrich, Miss Josephine Aldrich, Miss Jenny Arnot; Messrs. C. R. Thorne, Junior, H. Clifton, R G. Marsh, L. W. Brown, C. R. Faylor; Masters G. Marsh and Joseph Bingham.

The British steamer *Fusi-Yama*, from Japan, reports having had moderate weather on her passage down. The steamers *Bahama*, *Monitor*, *Scotland*, and several Japanese steamers, were in Nagasaki harbour when she left. Her dates are from Yokohama, 8th Nov., and Nagasaki, 18th Nov., but no news is reported.

It appears that the steamer *Island Queen*, which rendered some service to the P. & O. Company's steamer *Nepaul*, has put in a claim. The following is from the *Daily Press*:—A rapacious tug is coaxed alongside one of the Company's ships, which has had the misfortune to be stranded, and helps to pull her off. The master of the tug follows the steamer to Hong Kong and arrests her for $200,000. We thought it was $2,000—then we added a cipher, and now we have to add another. Did ever any one hear of such voracity? The P. & O. are fighting the battle of the owners of the silk, as in any case little of the money could come out of their pocket. We sincerely hope that the voracious owners of the rapacious tug will have to chew the cud over a sweltering bill of costs. If they have not passed out a hawser to the lawyers, which the latter know how to handle better than Captain Sutherland did the *Nepaul's*, we are vastly mistaken. Two hundred thousand dollars! It beats horse-racing hollow.

Two Europeans were apprehended on board the Siamese ship *Canton*, from Ningpo. They are charged on information received with the robbery of $2,000 from the firm of Messrs. Hart and Co., of that port. A third individual is also in custody on suspicion of having been an accomplice to the robbery. The sum of $500 in money, along with a draft for $400, was found in their possession. They have been remanded to jail, in order to give the authorities time for further investigation. Several others have likewise been apprehended for having been engaged in the burglary.

The burglars have again been engaged *improving* upon the drains—for, however, a peculiarly characteristic purpose. On Monday morning it was discovered that the godowns of Messrs. Camajee, corner of Peel-street and Queen's-road, had been broken into. The feat had been achieved in this way. From the main drain they worked underground until they reached the floor of the godown, through which they very ingeniously burned a hole wide enough for free access to the coveted opium. They had thus succeeded in carrying off three chests of the drug. On information being sent to the police the drain was searched; but our contemporary falls into an inaccuracy when he says the man's head seen peeping up from it was that of a thief, as it was one of the constables getting a mouthful of fresh air: the burglars are by no means the men to fall into any such a mistake as to show their heads from a drain in broad daylight. In the drain, however, a number of implements and a quantity of other stuff were found; and the drain itself was very dangerously choked up with rubbish, which had been thrown up by the burrowing through the earth. Two-thirds of the stolen property was recovered by the police on the premises of Tam Achoy.

The trial of the eleven men of the 99th regiment is adjourned. The charge has been reduced to "riot." We should say that, from the evidence adduced, there is not much likelihood of the prisoners being found guilty.

We take the subjoined from the *Gazette*:—

GOVERNMENT NOTIFICATION.

The following return of land sale at Kowloon and Hong Kong by public auction on the 16th Nov. is published for general information.

By Order,
W. T. MERCER, Colonial Secretary.

RETURN OF LAND SALE BY PUBLIC AUCTION ON NOV. 16, 1864.

No. of Lot.	Purchaser.	Annual Rent.	Premium.
	AT KOWLOON.		
Mar. 27 ..	The Union Dock Company ..	$480.00 ..	$50 00

SIAM.

We have dates from Bangkok to the 17th November.

The price of Rice continues to increase (we find it reported under date of the 14th), and good cargo is to day up to 90 ticals per coyan. Paddy is up to 79 and 80. There are rumours abroad that the sale of paddy has been interdicted, and several rice boats have returned back up country. During the famine in 1844 prices went up to about the present rates, and the King was obliged to import several cargoes to keep the people from starving.

Her Britannic Majesty's Acting Consul had been engaged in an enquiry, not yet ended, into a mysterious case of an attempt to scuttle the British barque *Euphrates*.

Siam (observes the *Siam Times* of the 17th) affords an extensive field for cotton culture. In 1848 we made a tour into the upper districts, where it is principally grown. We were peculiarly struck with the fine appearance of the plant, and admirable adaptation of the soil to its culture. It was then, and still is, principally grown by Hainan Chinamen. The consumption of Siam cotton, until two years or so past, was mainly confined to Hainan. It is still largely exported thither. The favour with which some exportations of this country's cotton has been received abroad, and the great demand for the article, leads to the inquiry, how is it possible to extend its culture? We have seen some fields cultivated by the Siamese, but they bore no comparison with those worked by Hainan Chinamen. The Siamese succeeded better in growing rice. Where one class or race of people has successfully produced any article it is good economy to encourage its increase, if possible, by them. We know that the island of Hainan is thickly populated, and doubtless multitudes would be glad to emigrate to Siam and engage in the culture of cotton, were the means and opportunity afforded them. Let men of enterprise take this subject into consideration, and see what can be done to increase immigration, and extend cotton culture in the fertile and extensive, but now waste lands in Siam.

On the 9th November Dyer and Co. reported eight arrivals and only two departures. Our shipping list continues to grow, and where it may stop it would be hard to tell. We have now in port 101 merchant vessels, of about 32,300 tons register. Of these vessels, 32 are British; 8 Bremen; 14 Danish; 14 Hamburg; 3 Prussian; 4 Hanoverian; 3 French; 1 Oldenburg; 1 Russian; and the remainder Siamese. Many more are said to be on the way.

His Majesty the First King, went to Ayuddhia in his steam yacht *Royal Sovereign* on the 4th November, accompanied by his princes, nobles and Government officers, to make the annual visit to the royal Wats in the old city and vicinity. He returned on the morning of the 7th, and left again on the 9th, accompanied as above, to visit the ancient temple of Phra Phradhum, at Laconchasri. This wat or temple is supposed to be the oldest Buddhist monastery in the country. For some time past his Majesty has been repairing, rebuilding and greatly enlarging it. While its general aspect will be improved, it loses much of its ancient appearance and consequent historic interest. His Majesty has done much to rebuild and restore old places, which is very gratifying to the people. The Second King has returned after a short excursion down the gulf.

An interesting letter on "Railways to China" appears in the *Siam Times*. It will be seen that our contemporary in the few comments appended treats the writer as an authority, holding the offer of his Majesty's elephants as real and abiding. The letter is as follows:—

Sir:—It is rumoured among people of other countries that the King of Siam is very shallow minded, and easily persuaded into all European things and business, and is greedy of fame and praise. Whoever persuades him to purchase or do anything, why he purchases and does it all—therefore somebody is trying to persuade him to make a railroad to China.

When the difficulties were made known to them on a former occasion, they would not credit it, but still believed it could be done, and again troubled his Majesty with the subject. If the person who brought up the subject still thinks his Majesty is fond of praise, we know that that person is fond of fame and pays more regard to idle reports than to those who speak the truth.

If for the various reasons concerning this subject, those persons who have proposed it think a railroad should be made to China, let them get up a subscription and engage an engineer to come to Siam, and give him authority to go and make a survey for the road first, and know for a certainty where it should be made, and how it should be done, and how much it will cost. Let the engineer first make his report, and then we will believe. His Majesty will furnish elephants and give protection from Bangkok, through his dominions to Hluang Phrabang; but he cannot furnish the means to pay his passage and salary, he fears it will be wasting money. He is also fearful that the engineer will get intoxicated and fall into the river and be drowned, or on account of change of climate die of dysentery, or from travelling in the jungle may die of jungle fever, the same as many others have done, and thus the business prove a failure, and the money wasted. His Majesty is of opinion that it will be better to hire mechanics to come and do astonishing things, the benefits of which can be sooner reached. He is willing, however, to furnish elephants free of expense within his own dominions, but when they have arrived at the territorities of the Cochin Chinese, or Laos Lur, or Haws, he cannot. These distant people are wild men of the forests, and easily excited; they will not listen to the voice of the Siamese, and you cannot astonish them with anything that you may say. The Cochin Chinese now fear the French; if you can get their assistance perhaps you may succeed.

If the Siamese, or the Laos belonging to them, should accompany the engineer with elephants, we think the Cochin Chinese called Kao, and the hill tribes, will seize the elephants and take all the people captives. The Laos Lur are tributary to the Haws and the Burmese; notwithstanding this, the persons who are employed, some by the Haws and some by the Burmese, if they come and oppress them too much they are met and killed in the road on their return. This occurs yearly. Even in the capital of the Laos Lur themselves, and the principal places under them, they are often on good terms for a time and then at enmity. If the orders of their governor pleases them, they will obey; if not pleased they go to war, and their governor has had to flee, and take refuge in other countries several times.

The Haws are under the Emperor of Peking, and are a race of Chinese very easily excited, and do not know anything. If, therefore, foreigners desire to have the road surveyed by engineers, it would be better to have one engineer start from China and meet the one from Bangkok at the town of Hluang Phrabang or Wiang Chan.

Even if there is wealth enough in the kingdom, and money sufficient in the Royal Treasury to make a railroad to China, the Government officers who receive a salary of only one and a-half or two catties (£15 to £20) will not want to serve; for what can they do? They will not receive money enough to support them. It is to be regretted that the persons who urge this subject give credence to idle rumours, and will not believe the real truth.

Foreigners came and asked permission of his Majesty to dig a large canal across the Malay peninsula from Krah to Ranong and the mouth of the Chumpon (Pakchan(river, that steamers and sailing vessels might pass through and shorten the distance to and from China. After his Majesty had given permission to perform the work, an engineer came and surveyed the country, who reported that it being very difficult, on account of the rocks, to dig a canal, it would be better to make a railroad, and tranship goods from Krah to Ranong and mouth of the Chumpon River, and *vies versa*; and asked for a grant to that effect, which the Siamese authorities gave.

From that time to this nothing has been done. What are they afraid of that they do not do it? Has his Majesty hindered them? Are the Europeans, who come from a country abounding in wealth a hundred or a thousand times more than Siam, afraid to invest their money in a railroad of only twenty or thirty miles? Is this the reason it is not done?

When inquired of they say that the people of Singapore are jealous, and will not permit it to be done. The Singaporeans are an enlightened people; why should they prevent it? Will the Cochin Chinese called Kao, the Laos Lur and Haws, who are barbarous, permit one to be made? Do the persons who urge this subject think that the King of Siam, can persuade them to give their consent? If they would have followed the King of Siam, we think he would have had them for dependencies and pay tribute long ago.

At the close of the Siamese year Marong 1218, agreeing with the Christian Era 1856-7, the foreign community united in calling meetings and getting up a written paper similar to a newspaper, which they did every Saturday for several weeks, bnt had not the means to print it. Sometimes it was written by Mr. Hunter and sometimes by Mr. Porter. In one of these papers it was stated that the foreign community are agreed that it is not pleasant for them to locate at Sempeng and Kawkkwai, mixed up with Siamese, Chinese and other races, as there will be frequent quarrels and difficulties arising amongst them; and besides, there are no suitable landings for ships to come up to anchor, discharge and receive cargo at these places. There is also much time lost, and it is difficult to sail up and down; and further, according to the treaty, foreigners are not permitted to purchase land within four miles of the city; they can only rent. It would be a good thing if all foreigners were permitted to build storehouses and wharves, and establish a town by themselves at a place called Bangna. It will be near for merchants who import goods for sale, and even if goods are brought from a distance above, they are easily floated down by the current. Goods that foreigners purchase can be stored in the warehouses until shipped, and whatever goods are brought for sale, there will be only Europeans to purchase, so that there need be no strife with the Chinese. As for all kinds of light valuable imported articles, such as are sold in the floating houses and shops, a canal could be dug straight from Bangna to the city, thus cutting off the bend of the river, and the boats could be towed by buffaloes or horses, in a manner called by the English "Navigation Inland," and thus easily bring them up to the traders in the city. This desire of theirs they thought his Majesty would grant.

This written newspaper containing the above was presented to his Majesty, who gave command to say that at Bangna the water was salt, and it was difficult to get fresh water. Should foreigners locate there, would they not suffer for want of fresh water? The reply was, "No matter, with houses built as they are in Singapore, having eave-troughs around them, they could catch plenty of rain water, so that they need not fear from salt water. In digging the canal from Bangna, if there is fear of the salt water coming up to the city, locks with gates can be made, and at flood tide close the lower end, leaving open the upper gate, and when it is full then shut it and keep the water in, so that it can be used at both high and low water.

Digitized by Google

After remaining silent for several days, the Borneo Company, Mr. Gilfillan at the head, Hamilton Grey and Co., Mr. Wilsonne at the head, jointly addressed a letter to the Minister of Foreign Affairs requesting to have the subject brought before his Majesty, and asking him to assist in purchasing a place at Bangna, that they might put up their storehouses at once, and also urging the Government to hasten in digging the canal, and making a road from Bangda to the city. His Majesty consulted with his high officers, who approved of the plan. He therefore requested the Minister of Foreign Affairs to assist in purchasing two places at Bangna, which cost about 300 ticals each, one of which was given to the Borneo Company, and the other to Hamilton Grey and Co. His Majesty also caused a canal to be dug, and a road to be made straight from Bangna to the new canal called Padong Krungkasame, which cost between 200 and 300 catties (say $12,000). As for the two places which were given, one to the Borneo Company, and the other to Hamilton Grey and Co., both Mr. Gilfillan and Mr. Wilsonne were much pleased at first, but after receiving the land they remained silent, and to this day have not done anything. The places still belong to them. In this affair the Royal treasures were wasted, were they not? The canal is of some use to people who go through it, but it is not of any benefit or advantage to the Government or to trade. This is an example to show that it will not do to hastily follow what the foreign community say, less money be spent uselessly, as in this case.

With reference to the railway to China, it may be well to have an engineer who is acquainted with surveying and map-making to come, examine the route, and make an estimate. Even should there not be a railroad made, we should know something of the state of those distant wild hilly countries which would be of some use. But if his Majesty should engage to pay the passage and salary of an engineer, we fear he would take advantage and charge over a thousand dollars a month, thinking his Majesty so very fond of European improvements; should he get intoxicated and be drowned, or die of dysentery or jungle fever, the money would be spent uselessly. If the foreign community would get up a subscription and hire one, we think they will get him cheaper. His Majesty will furnish elephants and people to accompany, assist, and protect him in his own dominions to Muang Phra Bang, but he cannot protect him against the jungle fever.

If the foreign community desire a specific against the jungle fever, let them address his Majesty the Second King to graciously give them one, and perhaps they may get it, for his Majesty is not afraid of the jungle fever, but can travel all seasons, both wet and dry, even into the great jungle Phrayafai without fear.—I am Sir, yours truly, WOHAR.

Our contemporary remarks on the above:—

"Why the parties interested do not go on with the work of making a railroad we do not know. The delay does not prove that it will not be done. We believe, however, that a ship canal will yet be made. There is too much delay and injury to goods in transshipping, to cross the peninsulars and isthmuses by a railway, and it is hoped no money will be invested in a railroad across the Malay Peninsular at Krah until it is more definitely determined that a ship canal cannot be made. Of the railroad from Siam to China we have but little more to say. The noble and generous offer of his Majesty, to furnish elephants and protection through his dominions, to enable engineers to survey the route, is all, under the circumstances that can be asked. Let time and circumstance decide when it will be proper to make the survey, and commence the work. In regard to the proposal to establish an European town at Bangna and cut a canal to the city, it never met our approval. We suggested at the time that a canal cut from Daokanong (nearly opposite the lower end of the new road) to the village of Paknam would meet the interests of trade much better. A road and telegraph must ere long be made from Pangkok to Paknam, and then the one formed by digging the Bangna canal will be of great service. It is gratifying to see that his Majesty is alive to the interests of the Royal Treasury, as well as that of trade, and desires to confine public expenditure to objects of real utility."

MALACCA STRAITS.

SINGAPORE.

Dates hence are to the 3rd December. The London mail of the 26th October, arrived out on the 1st December.

The French mail steamer *Hydaspe*, that left Singapore at seven o'clock on the morning of the 24th of November, ran aground on the Pan Shoal, at the top of high water at nine o'clock on the same morning, going at the rate of ten knots an hour. She was on her way to Batavia, on her first trip from Singapore thither with the French mail from Europe. The Dutch steamer *Java* came up to her two hours after she got on shore, and remained by her for some hours; but all attempts to move her off proving fruitless, the *Java* proceeded on her voyage, receiving the mails from the *Hydaspe*, and taking the news of the accident to Rhio. His Netherlands Majesty's steamers *Apeldorn* and *Dassoon* proceeded to the reef, and made ineffectual attempts to get the vessel off. The *Dassoon* was then despatched to Singapore to get six tongkangs loaded with bamboos to act as floats. The *Rifleman* steamer, of the British Navy, was also despatched from Singapore on the 25th to render assistance. Small hopes, however, were from the first entertained of getting the *Hydaspe* off, in consequence of the fore compartment (which was full of water) not being built sufficiently high to keep the water off the lower deck; and as there were no bulkheads on the deck to prevent its flowing down the after hatchways, should the tide rise high enough to allow of its doing so, it followed that the only hope of keeping the ship afloat was by building a bulkhead on the lower deck strong enough to prevent the water going aft. The *Rifleman* came up to Singapore late on the evening of the 26th to procure the materials and carpenters for the purpose, and left directly they were on board. The bulkhead was nearly completed on the night of the 28th, but at 11 P.M. the midship compartment of the ship had made so much water, through an unusually high tide, that the engines were unable to keep it down, and it eventually put the fires out. Under these circumstances the ship had to be abandoned, and the *Rifleman* left on the morning of the 29th. The *Rainbow* arrived with boats on the evening of the 1st December, and the next day, at daylight, commenced stripping the wreck. The vessel's stern had sunk down so that at low water the water nearly covered the deck as far as the mainmast, while the bow was high upon the rocks. She had also taken a strong list to port, so that the seas broke clear over her. Some valuable property, however, had been got out of her, consisting of a steam crane, force-pumps, chains, anchors, yards, &c., so that the purchasers of the wreck, continues the *Straits Times*, "can scarcely be losers by the venture. By the Dutch steamer *Java* which arrived this morning (Dec. 3) it is reported that the vessel had disappeared altogether. We can scarcely reconcile this, however, with the fact of the *Rainbow* still remaining away, and the report has since been contradicted." A Dutch gunboat arrived at the shoal the same night as the *Rainbow* did, to renew the two beacons which had disappeared, but it is said that nothing but a good stone beacon will stand at the exposed north-east part of the reef.

Sir James Brooke has added a sister ship to the *Rainbow* to his marine. The *Heartsease* was launched from the yard of Messrs. Buyers and Robb, the builders, on St. Andrew's Day, being the second steamer that firm has sent out to assert the ship-building repute of Singapore. The launch was witnessed by most from the deck of another steamer also building for Borneo. To Mrs. Crookshank, the wife of the representative of the Sarawak Government, devolved the duty of christening; the Bishop of Labuan standing by at the time, as also Mr. Crookshanks.

The *Straits Times* has an article advocating the immediate construction of a line of telegraph to connect Penang with Singapore, as a useful and probably remunerative line in itself, and one forming a span on the great highway of telegraphic communication with the Far East, "which will hasten our communication with Europe, and certainly prevent any short-cut departure from our doors."

A case involving charges on two counts, viz., assault with a criminal intent, and assault against the master of the British ship *Africana* had been investigated. The stewardess of the ship was prosecutrix. From the details of the evidence given by the husband of the complainant, and subsequently by other witnesses, there appeared to have been an assault committed during the passage down from Melbourne to Hong Kong on the prosecutrix by the captain. After Mr. Atchison had closed his case for the defence, the magistrates retired for a few minutes and on taking their seats on the bench were heard to say that they were of opinion that an intimacy did take place before and after the alleged assault between the defendant and the prosecutrix, and only on one occasion a resistance was made; that their worships were unable to state why this resistance was made; that the assault on the second count was satisfactorily proved, and that under the circumstances the magistrates fined the accused 100 rupees, or the alternative of four months' imprisonment. The fine was paid.

An "Hydrographic Notice," containing the results of the *Rifleman's* recent cruise in the China Sea, appears in the *Straits Times* of the 3rd December. The notice embraces Vanguard Bank, Granger Bank, Alexandra Bank, Prince of Wales Bank, Amboyna Cay, Spratly Island, Ladd Reef, West London Reef, London South Breakers, Gullus Shoal, the South Western, and the Vernon Shoal. The following note is appended at the close:—

In surveying the extensive banks in the China Sea, beacons have necessarily to be used, and as these are very apt in squalls to drag off the bank, captains of ships are requested if they see them to report their position to

Digitized by Google

the *Rifleman*, in order to ascertain the set of the current. They are made of bamboos cut in 6 to 8 feet lengths, and lashed round a spar to which a weight is attached; on the upper part of the spar a long bamboo with a distinguishing flag is fastened, which can be seen in the clear weather from six to eight miles. Captain Gilham of the *Shenshah* lately saw one, which he took to be a rock, in lat. 6. 42' N., Long. 108. 19' E.; but as the description of the supposed rock exactly answers to one of the beacons, viz. "a small black rock 5 feet under water, with a bamboo sticking up in it; a heavy swell at the time and no breakers," we concluded it was the beacon that drifted off the Vanguard Bank from lat. 7° 34' N., Long. 109° 44' E., the current having set it to windward 99 miles in 18 weeks.

Cocoanut sprouts were planted on Amboyna Cay and Spratly Inland. Of the latter (evidently identical with Storm Island of Horsburg) it is said:—"Spratley Island in the months of June and July swarmed with turtle of a very fine description. Large numbers were easily taken. They possibly may frequent the island at other seasons. The average weight of those brought on board was 300lbs. They are easily turned over by two or three men on the beach, in the evening or night; and occasionally in the day time. They are apparently identical with the green turtle of Ascension Island. Immense quantities of their eggs were found in the sand on the S.W. side. Fish were numerous, but very few captures effected. Sea-birds' eggs (in June) literally covered the ground."

Births, Marriages, and Deaths.

(Announcements for Subscribers are made free of charge.)

BIRTHS.

BLAKISTON—On the 28th Dec., at Wood-end, Hollington, near St. Leonard's-on-Sea, the wife of Commander Peyton Blakiston, R.N., of a daughter.

COLLINS—On the 17th Nov., at Astor House, Shanghai, the wife of Mr. W. P. Collins, of Christy Minstrels, of a daughter.

GODDARD—On the 29th Dec., at 7, Victoria-road, Clapham-common, the wife of Mr. James Goddard, of a daughter.

HEINSEN—On the 17th Nov., at Shanghai, Mrs. R. Heinsen, of a son.

HOGG—On the 19th Dec., at 38, Westbourne-park Villas, the wife of Alfred Graham Hogg, of Hong Kong, of a daughter.

ROBB—On the 26th Nov., at Marina Villa, Singapore, the wife of Mr. D. Robb, of a son.

TATE—On the 23rd Dec., at Croydon, the wife of William Henry Tate, Esq., of a son.

TRAUTMANN—On the 28th Dec., at Mulgrave House, Fulham, London, the wife of J. F. H. Trautmann, of a daughter.

WILGOSS—On the 5th Nov., at Yokohama, the wife of Henry Wilgoss, of a son.

MARRIAGES.

EVANS—WHISTLER.—On the 29th Dec., at St. James's Church, Colchester, by the Rev. R. F. Whistler, M.A., rector of Hollington, Sussex, brother of the bride, assisted by the Rev. R. S. Cummins, M.A., Joseph Henry Evans, of Hankow, China, to Mary, daughter of Edward Webster Whistler, Esq., of Colchester.

MACGREGOR—PROVAND.—On the 19th Nov., at Trinity Church, by the Rev. Mr. Butcher, Mr. J. Macgregor, of Hankow, to Miss Jessie Provand.

DEATHS.

HARVEY—On the 8th Nov., on board the ship Northfleet, at Hong Kong, in the 23rd year of his age, Richard John Harvey, son of the late Richard Coward Harvey, of Ludgate-hill, and grandson of the late Thomas Tegg, of Cheapside.

NOBLE—On the 15th Nov., at Hong Kong, at the Agra Bank, Catharine Isabella, the wife of Henry Noble.

O'BRIEN—On the 13th Nov., at the Lodge Head Quarter House, Hong Kong, the wife of Staff Sergeant Major O'Brien.

PUTTFARCKEN—On the 22nd Nov., at Singapore, Malwina, infant daughter of Otto Puttfarcken, Esq.

WHEELOCK—On the 16th Nov., at Shanghai, James J. Wheelock.

The picul is 133⅓ lbs. weight; the tael at Shanghai is equal to 1 dollar and 40 cents and is divided into decimal parts of ten.

SHIPPING INTELLIGENCE.

ARRIVALS.

At SHANGHAI.—From London: Nov. 17, Sir Harry Parkes. From Liverpool: 11, Queensbury. From Shields: 10. Ensign. From Cardiff: 12, Spirit of Trade; 17, Star Queen. From Newcastle: 12, Agnes Holt and Torres; 14, Bertha.

At HONG KONG.—None.

At SINGAPORE.—For London: Edwin Fox. For Falmouth: Susanne. For Bordeaux: Marie.

DEPARTURES.

From SHANGHAI.—For London: Nov. 12, Palawan; 15, Queen of the Ocean. For Liverpool: 14, Ariadne; 17, Dennis Horton and Aerolite.

From HONG KONG.—None.

From SINGAPORE.—For London: Dec. 1, Anna Maria.

LOADING.

At SHANGHAI.—For London: Anglo Saxon, Bedfordshire, Bosworth, Canadian, Countess Russell, Courier, Delhi, Diligentia, James Russell, Jubilee, Lochlevan Castle, Spirit of the Deep. For Liverpool: Constance, Coringa, Gitana, Her Majesty, Isabella, Nora Greame, Queen of the East, Roodee, Royal Bride, Sailor's Home, Savoir Faire, Silvia, Yorick.

At HONG KONG.—For London (*via* Cape of Good Hope): Xulla. For Liverpool: Jas. Vinnicombe and Melbrek. For New York: N. B. Palmer.

At SINGAPORE.—From London: Dec. 3, Alexandra. From Liverpool: Nov. 24, Drache. From Cardiff: 22, Insulaneren. From Sunderland: 24, Chalmer. From Glasgow: 22, Kate Carnie. From Rotterdam: 30, General Michels.

LONDON, TUESDAY, JAN. 3, 1865

JAPANESE CURRENCY.

WE find unmistakable traces of the underhand dealing of the Japanese Government in currency matters, in the announced rarity of itzebues at Yokohama, at the very time when t is affecting to give an impetus to foreign trade. Thus to the compulsory submission to an exchange of Mexican dollars for a coin which is no part of the currency of the islands, and two pieces of which merely give us the same dead weight in silver and alloy, must be added the evil of an arbitrary supply, leading to an injurious fluctuation, the amount circulating at the ports at one time deserting at another, hastily recovering some unknown but prescribed average limit. It is essential that these negotiations include a complete understanding as to the basis of our future mercantile transactions. We have no evidence that Sir RUTHERFORD ALCOCK has modified his views on the currency question, or we might find in the enforcement of a demand that the terms of the treaty which gave an exchange of three itzebues to the dollar should be complied with, and this, not in itzebues especially manufactured for the purpose, but in the currency of the country, one of the most efficient means of Imperial interference with foreign trade would be removed. The theory of maintaining the sovereign right of an Emperor to determine what shall or shall not be a legal tender, urged on this point by Sir RUTHERFORD, might apply to any country rather than Japan, where sovereign rights are shadowy and undefined, and engagements are made with the secret intention of violating them. It is simply exchange we ask for, the exchange of the Mexican, now stamped by Japanese officials with the mark of three itzebues for the coin of the country. The real objection is not that we would get an undue value on the exchange, for Mexican dollars themselves carry a premium, which would be enhanced did they circulate in the interior, but that the operations of trade would be facilitated, and that the native dealers, mostly with limited means, would become more extensive purchasers of our manufactured goods. As it is, the heavy discount on the Mexican dollar at the Imperial mint places us under the discredit of introducing a depreciated currency. It is most essential, too, if our trade is to be materially enlarged, that the prohibitive price placed on copper should be removed. We can bring this article from any quarter of the globe to Yokohama cheaper than we can purchase it there, whereas it is known to exist in abundance and to be easily mined. The extraordinary impetus given to the culture of cotton on the permission accorded to cultivators to forward it without restriction to the foreign ports, sufficiently indicate the effects of a similar privilege as to copper. Let mining industry be but fairly excited, and Japan at once enters on a new career. The influx of light Mexican dollars at Yokohama, and the recrimination and inconvenience thus occasioned, constitute additional cause for regret that the mint of Hong Kong destined to become the chief supplier of a silver currency not only for China but the whole Eastern Archipelago, should not be in operation.

OUR FURTHER PROGRESS IN JAPANESE MYSTERY.

THE insight latterly afforded into the internal political condition of Japan, enables us to estimate with tolerable accuracy the efficacy of the means at our command to secure for the future a proper regard for treaty rights, and to prevent the formal concessions that have been or may yet be made from being neutralised. It may be supposed that on the outbreak of the Simonoseki hostilities the TYCOON had already resigned himself to the idea of seeing the empire exist in fragments. On the making of the treaties in 1858 an ebb and flow of power between Miako and Yedo was clearly perceptible, rendering it difficult to determine which of the two potentates controlled the Council of the Empire; since then, both the spiritual and temporal authority would appear to have undergone decadence, and we find that theologic chieftain CHOSHIU seeking to subordinate the former to his political aims. The danger which impended rendering the tenure of the TYCOON'S power insecure, was not only the formidable and increasing strength of too powerful Daimios, but the foreign recognition of their pretensions to treat as well as fight with us as sovereign Powers. The Japanese nation has the merit, rare among Asiatics, of adapting itself to the ideas and entering into the activity of the West; but a Government that stands still when the country has reached a point of organisation impelling to further development; that instead of applying itself to vitalise by new purposes and fresh agencies the whole political framework, mainly concerns itself with enforcing those restraints on industry still within its power, could have no other fate, if left to itself, than that of a stranded wreck left high and dry. A Saracen or Tartar ruler with an empire thus showing every sign of disintegration from the weakening of old cohering elements would have resorted for a remedy to foreign war, to give expansion to that martial spirit which is vivid, bold, and desperate in the Oriental, when the secret of awakening it is found; but this insular empire finds no lands to conquer, and the sword if unsheathed, is turned against herself. It may fairly be doubted, after all, if the TYCOON'S fear of the extension of foreign relations is not greater than for Daimios aiming at territorial aggression and seeking to revive revolutionary associations. The true character of those expressions of delight, poured into the ears of the foreign envoys, at this unlocking of the Simonoseki Straits, are not to be misunderstood either by Japanese or foreigners, any more than were the carefully worded inuendos in the plays of ARISTOPHANES by the Athenian audiences before which they were performed. True to that Asiatic assumption which ever seeks to make capital out of the exigencies of circumstances, and acting as though the whole naval and military force of Western Powers in those seas were at his beck, the TYCOON proceeds to cancel exemptions from residence in Yedo that had been granted to the more powerful Daimios,—a suicidal act, strengthening an already formidable combination, and which is suggestive of a disposition to exercise the most unlicensed and remorseless despotism, if only opportunity allowed. The mistrustful temper of the Daimios, their secret jealousies, and widely different, introduce elements of weakness into all their combinations; and a true appreciation of the interests both of his dynasty and the country on the part of the TYCOON, would have suggested an enlargement rather than curtailment of privileges, more especially as to foreign trade. Our power will be best shown in neither directly forwarding nor opposing any internal movement, but by urging on the TYCOON the giving ascendancy to those commercial considerations which will provide the best means of reconciliation and of union. We have every confidence that an extensive and friendly intercourse, not simply with the rulers, but the people of Japan, will, in no long period, be realised. To suffer the energies of the country to expand with force and freedom is plainly the only mode of securing for Japan internal tranquillity, and the effect of true civilisation. With her various populations capable of distinguishing themselves in numberless branches of skill and industry; imbued, too, with an uncorrupted spirit of respect for constituted authorities, the means exist for such a reorganisation as would drive away that innate, restless spirit of discontent which, if left to itself, can only produce pestilential fruit.

Literature.

Mémoires sur la Chine: Coutumes. Par le COMTE D'ESCAYRAC DE LAUTURE. Paris: Librairie du Magasin Pittoresque.—The new part of this valuable work, under the general head of "Customs," contains chapters on the Social Life, the Theatres, Ceremonies, Private Life, Public Instruction, and Agriculture of the Chinese; with additional Notes on Conveyances, Arithmetic and Measures, Pawnbroking Establishments, and on the Commerce of China in 1863. A few preparatory words warn the reader that all these subjects are rather glanced over than fully discussed; and it must be admitted that the illustrations—all spiritedly engraved after Chinese drawings—form the main attraction of the present section of the book, which when complete will form a stately and ornamental volume. The illustrations are in such number and excellence in the part now under notice as to entirely condone for any deficiency of interest or novelty in the letter-press. M. de Lauture often indulges in reflections *apropos* to his subject which are sure to fix the attention, either by their originality or their bold expression of views opposed to the theory in vogue. There is a good deal of justice in the following remarks on the metric system:—

The origin of the ideas that govern us is often humble or obscure: perhaps the decimal system came to us from China as exhibited by the Jesuits. It must be regretted that those who were its promoters, being pure theorists, were ignorant of the most common facts: they have ushered into the world new measures, christened in dog-Latin and bad Greek, taking for departure the ten-millionth part of a line whose exact length is not yet known. There was in their work somewhat of the useful, but with a little more study they might have done better. Inferior States took our measures with our fashions; America, under John Adams, criticised them more severely: Napoleon himself, not finding in them what there should have been, abolished them by decree. Had they been better informed, the learned authors of the new metres would have seen that the entire world was using measures almost alike; they would then have understood that those measures had a reason for their existence, and that the point was not to divide the day into ten hours,—or what is more ridiculous still, to engrave on the map of France a new division of the circle,—but to give to France a uniform foot, and to propose to the nations this new foot, but slightly different from their own, and with which, in ordinary use, it might easily be confounded. There are natural and universal measures that might with facility be brought to one type, by having recourse to an international and neutral congress: such are the foot, the ounce, and the pound, the acre and the *arpent*, and still more the fathom and the ton, common to all mariners; with the geographical mile, an exact division of a degree, the only measure of distance that geography and navigators can recognise. To such measure as these should an intelligent legislator confine himself, in place of seeking out artificial types and decorating them with barbarous names, the half of which have already become obsolete.

All the portions of the work before us hitherto published have been delivered to subscribers only, but the two last parts, devoted to Language and Geography, are, from the special nature of their subjects, to be made purchasable by the public separately.

Functional Diseases of the Stomach. Part I. Sea Sickness: Its Nature and Treatment. By JOHN CHAPMAN, M.D.—Messrs. Trubner, of Paternoster-row, have just published a pamphlet bearing the above title, which it is incumbent on us to notice as a matter of news—for grateful news it will be to many a sufferer, that the agony of sea-sickness can be prevented, or immediately removed. We shall not pretend to pass a judgment on the inductive reasoning that led Dr. Chapman to fix on the remedial means he recommends and may be said even to guarantee. Suffice it to say that for professional readers those reasons are given and fairly argued out, and that cases are narrated in which the topical application advised proved thoroughly successful. The treatment proposed is the following:—

The inevitable conclusion from all the facts and arguments of the preceding exposition is that the only scientific and really effective remedy for sea-sickness must be one which has the power of lessening the amount of blood in the whole nervous centres along the back. This, as I have proved, can be effectually done by lowering the temperature of the spinal region by the application of ice. A formidable-looking remedy I admit; but when it is judged of by the aid of experience it ceases to terrify, and, on the contrary, is found decidedly agreeable. Ice applied in bladders, or by any of the ordinary methods, would undoubtedly occasion great discomfort, would constrain the movements of the patient, compelling him to remain for the most part in one position, and, in fact, could not be so applied as to insure success. It is necessary, first, that the ice be kept in contact with each region of the spine, the upper portion of the ice being prevented from falling down as the melting proceeds; secondly, that the application do not extend far on each side of the spinal cord, otherwise the patient will become cold; thirdly, that having regard to the comfort of the patient, the mouth of the bag containing the ice be so effectually closed as to prevent the water from escaping as the ice melts; fourthly, that the mouth of the bag be as wide as the bag itself, in order that the bag may be easily and rapidly filled; fifthly, that without any inconvenience to the patient, facility should be afforded for giving escape to the air which accumulates in each compartment of the bag as the ice melts.

Instructions are given as to the mode of filling the bags, and the best manner of applying them to the person, and properly constructed bags have been patented both for England and the Continent. The proposed remedy has certainly this remarkably good quality—that if found injurious or even disagreeable to the patient, it can be instantly removed and the effect must cease almost immediately. So much cannot be said for potions taken internally.

The Chinese and Japanese Repository for December opens with a paper on the Topography of the Kiangsu Province, which contains the two important cities of Nanking, the ancient southern capital, and Shanghai, the great emporium of modern trade. Next we have a continuation of Mr. Consul Swinhoe's interesting description of the Island of Formosa; followed by "Directions for the cultivation of Cotton, especially in the district of Shanghai," translated from the Chinese Encyclopedia of Agriculture. There is also a curious collection of Chinese "Sententious Sayings," with a list of the 28 constellations forming the Chinese Zodiac. The number is wound up with the completion of the Editor's very valuable contribution on the grammar of the Japanese language. We extract the following from the description of Formosa, trusting that the want of a good survey will not have to be complained of in the December of 1865:—

The dangers and difficulties of the Formosan coast, with the aid of the best surveys, cannot be exaggerated. It is true comparatively few ships visit the coast with a view to trade, but vessels bound up and down the China coast have too often to lie over to Formosa. With the increasing traffic wrecks yearly multiply; and yet the Government takes no steps to survey the island. With the exception of a few special notes we may say that the greater part of the Formosa coast is unknown. I have been assured by adventurous masters of vessels that there are good and safe harbours at the south cape of Formosa, and probably some on the lower portion of the east coast. The advantage that such would afford, as places of refuge in stress of weather, to vessels availing themselves during the north-east monsoon of the gulf stream beyond Formosa, cannot be too strongly advocated; and yet, with all the fine ships at their command lying idle in Hong Kong harbour, the Admirals have turned a deaf ear to this project.

A little incidental notice of the difficulties with which commerce is frequently impeded in China deserves reproduction:—

It is singular that in a country noted for its produce of camphor, like Formosa, it was almost impossible to purchase an ounce of the drug in the shops. So jealously guarded is this article by the Taotai, who claims the entire monopoly of its sale, that the druggists have to petition him in a body to be permitted to purchase a picul for distribution among themselves to retail. Powder and shot are also contraband goods at Taiwan-foo.

Macmillan's Magazine for January begins the year well. Everything is good from first to last, Lord Hobart winding up with a short but pithy paper on "The Finances of France and England," which does him infinite credit, containing, as it does, reflections worthy of being treasured up by every thinking man. —*The British Army and Navy Review* keeps up the prestige acquired by its later numbers. The narrative of a "Carolina Loyalist" is a reminiscence of the Old Revolutionary War happily saved from oblivion. "The Apparatus of War" is evidently from the pen of one who thoroughly loves and understands his profession; while Mr. Serjeant Burke's series of "Celebrated Trials" gives us this month one of the most important in our military history, that of Lord George Sackville. All the other articles are completely identified with the spirit of the services, and can hardly be too well spoken of.

HOLLAND.

(FROM OUR OWN CORRESPONDENT)

ROTTERDAM, Dec. 23.

With the 31st Dec. in sight, the discussions about the Budgets have been continued with zeal, and terminated in the Second Chamber of the States-General yesterday evening. The debate respecting the Budget of War touched chiefly on our system of defence and our fortified towns. Prior to the debate the Minister had, in a general secret committee, given the necessary explanations, and also explained the opinion of the Government. The demolition of many of our fortifications was recommended from various sides, and though there are no positive promises, yet the Minister has announced that it is his intention to dismantle Bergen op Zoom. This chapter was finally passed by 41 against 24 votes. The Budget for Colonial Affairs was next brought on for discussion. You can easily imagine that the early departure of the mail does not leave me time to give you a complete abstract of the debate, which lasted five days. Therefore

Digitized by Google

I shall for the present only give a few of the principal points, more especially because, as you will see afterwards, the debate has not yet quite finished.

The Conservatives began the attack. Messrs. de Brauw, van Goltstein, Wintgens, Schimmelpenninck, Hoffman, Meyer, Rochussen, and van Zuylen fiercely attacked the colonial policy in general, on the ground of the discontent existing everywhere in India, and of the certain loss of the *batig slot* (revenues of the Indies). Mr. Viruly Verbrugge commented on one point only, and wished for an improvement of the scholastic education in India. Some Conservatives showed more confidence in the Ministry, and declared that they would rather postpone giving their opinion, because they felt a conviction that India wanted reform in a liberal sense. Not one of the Liberals spoke in the beginning of the debate to deny the alleged mal-administration. In the sitting of last night the Minister of the Colonies answered all the speakers, the one after the other, in a masterly speech, which lasted nearly three hours.

The debates about the Budget will now commence in the First Chamber of the States-General. According to our constitution they can last only seven days. The budgets must be approved or rejected before the 31st.

Mr. Groen van Prinsteren is going to resign his seat as representative in the Lower House, in consequence of ill-health. Shortly after this was known we heard of the death of Mr. S. A. Baron van Heemstra, one of the leaders of the Conservative party.

The Prince of Orange returned from Compiègne a few days ago.

His Majesty had been pleased to create Knights of the Fourth Class of the Military William Order, Captain J. E. de Man, commander of H.M.'s squadron in Japan; Captain J. P. G. Muller, commander of H.M.S. *Amsterdam*; Captain Lieut. P. A. van Rees, commander of H.M.S. *Djambi*; and to promote to Knights of the Third Class Captain J. E. de Man, and Captain Lieut. Jhr. F. de Casembroot, commander of H.M.S. *Medusa*.

The King has honourably dismissed from service A. D. Meyer, the medical officer on board of H.M.S. *Djambi*.

In consequence of the battle in the Straits of Simonoseki other nominations and promotions will take place in a few days.

SINGAPORE.

(To the Editor of the *London and China Telegraph.*)

SIR,—Mr. John Crawfurd, formerly Governor of Singapore, and a person subscribing himself "R," have already remarked on a paragraph which appeared in *The Times* of the 13th December, and although very cursorily criticised, enough has been said by them to completely disprove the unwarrantable and false assertions contained in the said leading article.

The article in question had too much the flavour of the Westminster Hotel for any one to doubt from what quarter it emanated, and therefore there was little chance of *The Times* inserting letters from individuals exposing its fallacies.

The retention, however, of Singapore under the Supreme Government of India, which has been plundering its community for very many years (for its own purposes), is not the only grievance of which the commercial and proprietary population have to complain, by which their interests are likely to suffer.

The British flag was hoisted at Singapore, and the settlement founded by Sir Thomas Stamford Raffles, in the year 1819, and a proclamation issued by him declaring it a *free port*, which was approved and confirmed by the then Supreme Government of India.

In 1823 Sir Thomas Stamford Raffles gave grants of land to such persons as pleased to apply for them, and further engage to build upon them, thus to form the town of Singapore, and, to induce individuals to do so, he issued a second proclamation, again declaring the settlement a *free port*, and made sundry regulations for conducting its trade. This also was approved and confirmed by the Supreme Government.

Subsequently, to give confidence to the commercial settlers, also to the builders and founders of the town, a proclamation or document was published prohibiting for the future any duties being levied on the trade and commerce of Singapore.

Now the grievance of which I as well as many others complain is, that Sir Charles Wood, without any just or well-founded ground, has taken upon himself to annul that prohibition, thus laying the settlement open to the infliction of duties at some future period.

He has done it on the plea that the Chamber of Commerce required him to do so, for the purpose of raising funds to establish a Harbour Master's Office, &c. This plea has been proved to him to have no foundation in fact, as the copy of the correspondence between the Chamber of Commerce and the local Government very clearly establishes, which copy has been sent to him.

The free settlement of Singapore has quite difficulties enough to encounter in competing with the several Dutch free ports established in its vicinity and among the Eastern Islands, and the infliction of duties would drive the native trade and resident native shopkeepers into the arms of the Dutch.

The settlement has for many years paid large sums, which have been most unjustly exacted from it by the Supreme Government, which are now being reclaimed, and which it is confidently expected the Government will be obliged to refund, which of itself will prove that the settlement hitherto *has, can*, and *in future will be* able to pay its way, even if saddled with the deficiencies of Penang and Malacca.

No one can be surprised, therefore, that the inhabitants of Singapore, suffering so much as they have been, by the unfair exactions of the Supreme Government in India, and the despotic conduct of the Secretary for India at home, are most desirous of being set free from such rulers; they are anxious to get out of the clutches of the former, and to be replaced by the latter in the position (as regards trade) in which Sir Thomas Stamford Raffles left them.—Your obedient servant,

London, 30th December, 1864. BACHAR.

THE IMPERIAL GOVERNMENT.

(*North China Herald.*)

It is singular that, notwithstanding its material weakness, the Chinese Government contrives to maintain unimpaired the suzerainty over neighbouring States which it acquired in former days, under more energetic emperors. The Talelama of Thibet, though nominally the chief authority, is actually subject to the civil governor appointed from Peking, and through Thibet all the Indo-Chinese races on the Himalayan frontier are kept under Chinese influence. Bhootan pays an annual tribute, and Nepaul is believed to continue to acknowledge to the present day the supremacy asserted by Kien-lung after he had repelled the Goorkha invasion of Thibet. Siam continues to send its tribute of rice, and the Corea acknowledges such complete subjection that, as appeared from a recent announcement in the *Peking Gazette*, its sovereigns are crowned by Chinese delegates. Not the least singular instance of the influence which the empire still exerts, is the fealty acknowledged by the kingdom of Liu-chiu, of which also proof was given in a translation from the *Peking Gazette* which appeared in the *North China Herald* of the 28th May. The tribute-bearers from this island sovereignty had, it was stated, arrived in Chekeang and begged to be permitted to proceed to Peking to salute the present, and worship the manes of the departed, Emperor. Formerly, the Liu-chiuan envoys proceeded to the capital as a matter of course, but in the 10th year of Hsien-fung, and since the accession of T'ung-chi, the route has been closed by rebels, and by the alteration in the channel of the Yellow River, which has destroyed the Grand Canal in its neighbourhood, and they have been debarred from the inestimable privilege of prostrating themselves at the feet of the Brother of the Sun. Now, however, that the districts bordering on the latter stream have again been reduced under the Imperial sway, a return to the former custom has become possible, and the *Peking Gazette* to which we allude mentioned that the Emperor had referred the pressing request of the envoys to be allowed to visit him to the decision of the Board of Rites, with the remark that it appeared reasonable. The report of the Board of Rites was not made public; but a few weeks ago some gentlemen, travelling along the Grand Canal towards Hangchow, met five large boats, containing the persons of the Liu-chiuan Ambassadors and the arrears of tribute, on their way to the capital. While professing to concede an interview with the Emperor as a favour, the Chinese Government could not adopt a more certain method of maintaining their *prestige* and impressing the Liu-chiuans with a sense of their power. To people accustomed to the narrow limits of their own islands, the journey of several weeks' duration through the heart of the empire, cannot fail to convey an exaggerated idea of its extent and power, and of the hopelessness of any attempt to cast off their allegiance, should the idea of attempting such a step occur to them. But the Chinese Government is not the only one to which, if the imperfect information which can be obtained on the subject may be credited, the Prince of the Liuchius owns fealty. The prince of Satsuma is believed also to claim an authority over him, more direct even than the Emperor of China; and the propinquity of the Liu-chiu islands proper to Japan renders it extremely probable that he does so. It would be equally easy for Satsuma to take possession of one of this group as a material guarrantee, as for China to exert moral pressure on one of the Madjicosimahs, in case the Prince of the Liu-chius showed signs of insubordination; the former group being as near Kagosima as the latter to Foochow.

THE TAIPINGS.

(To the Editor of the *Standard.*)

SIR,—As an admirer of the different tone of your journal, allow me to call your attention to a leading article in yesterday's issue of *The Times* apparently upon the demise of the Anglo-Franco-Manchoo legions hitherto infesting the treaty ports in China, the disbandment of which mercenary battalions is announced by the last mail from that country.

Being an old resident in that distant and little understood empire, and having traversed during the last four years every inch of Taiping territory, and thereby become thoroughly acquainted with the so-called "long-haired robbers" of your contemporary, I take the opportunity to notice several facts that have evidently been forgotten during the composition of the leading article in question.

In the first place, it opens with a delightful little series of suppositions which might have been given as well-known facts. Doubtless to those who have "always most earnestly advocated" the bolstering up of the Manchoo Government (a Government its most ardent supporters have now discovered is incapable of regeneration), the prosecution of aggressive war upon China in order to force our trade and peculiar views upon her, and the extermination of the Taipings because they might have interfered with the due receipt of the "indemnity" for the last war, the opium trade, and our commercial interests, it is unpleasant to acknowledge that their machinations have terminated in comparative failure. But why state realities—numerously declared by our late Minister at Peking, and also by Mr. H. N. Lay, C.B., the late Inspector-general of Chinese customs—as mere anticipations of evil?

Exchanging the fictitious Chinese Minister of *The Times*, "San-pan wang," for the real personage, Prince Kung, every rightly Chinese informed Englishman would render the conclusion of the amusing, if not candid, anecdote of suppositions thus:—"He might conclude by assuring the Assembly" (*i.e.*, the members of the Manchoo Government), "that these mercenary bands" (Major Gordon's, Colonel Cooke's, General d'Aguibelle's, and others, being now unnecessary, have been dismissed

Digitized by Google

and that China is now free to indulge her own pleasure . . . to go back to the ancient exclusive policy of the last reign," (and not) "to pursue the newer course which has been adopted under the temporary and adverse pressure of recent times."

When the prime agents of that policy which the great and unbiassed journal has "always most earnestly advocated," write to this effect (see "Extract of a despatch from Sir F. Bruce, respecting maintenance of treaty rights in China," and other despatches, and pp. 18, 20, 33, 37, &c., of "Our Interests in China," by Mr. H. N. Lay, including a letter from Captain Sherard Osborn, R.N., and various statements by Sir F. Bruce), how is it the public are not satisfied with a more substantial appearance of these facts in *The Times*?

Before leaving the San-pan-wang anecdote it is necessary to notice the statement—"that the provinces which were lately the scene of the rebellion have recovered their green and fertile aspect: that the places of the murdered men have been filled . . . ." The late desolation and massacres have been effected by Major Gordon and other mercenary legions while carrying the uncontrolled horrors of Asiatic warfare among the Bible-reading Taipings, to effect their extermination, or, as *The Times* has it, the "pacification of the country by the expulsion of the Taipings."

Passing on to the definitely-stated part of the article, I find that after very correctly touching upon the absorbing mercenary spirit of the Shanghai land proprietors, this passage occurs:—"And the crowd, which in their agony of fear paid so well for their protection, is gone back to cultivate cotton, and silk, and rice, and tea." This, if unexplained, seems to imply that the cultivators of such produce had been driven to Shanghai by the Taiping rebels; that, consequently, these staple productions had been neglected, but, that, upon the defeat of the Taipings, the people had returned to cultivate cotton, silk, tea, &c. Any such inference would, however, be grossly incorrect. The whole of the valuable silk districts were entirely under the control of the Taiping Government from the summer of the year 1860 until the summer of 1864, and during this period the exportation of silk from the producing districts very largely increased, attaining, at the close of the season of 1861, nearly the largest amount ever exported from China in one year, viz., 88,112 bales, which, until Major Gordon's and other mercenary contingents carried war into the interior, constituted very little more than the average.

I have travelled throughout the silk and tea districts when they were in the possession of the Taipings, and found them always fully peopled, and those valuable productions diligently cultivated; while, beneficially affected by the moderate taxation of the insurgents' government, the trade seemed carried on with a much greater freedom than under the Manchoo *regime*.

If people have been required from Shanghai to cultivate the mulberry or tea plantations, it must be to fill the places of those unfortunates who have lately been slaughtered by the bloodthirsty colleagues of Major Gordon. *The Times*' article states:—"For the moment there are no more massacres and no more fires, and in the name of humanity we ought all to rejoice that by small and comparatively little cost we have been able to produce a result which, however it may work upon the policy of a barbarian Court, has at least restored a vast tract of country to industry, and has given happiness to many millions of our fellow-creatures." If there are no more fires and no more massacres then Major Gordon and his compeers have rested upon their arms, blood-stained as they are by such treacherous massacres as those perpetrated at Soo-chow, Ka-sing-foo, Chang-chow-foo, &c. I have wandered through hundreds of villages, once tenanted by crowds of happy, well-to-do Taipings, but in the winter of 1863 I have passed through each village and into each house, and have found as one result of the policy we have lately pursued in China, the whole of the wretched inhabitants starved to death, or those few yet living eking out a fearful existence by crawling among and devouring the bodies of the dead; therefore, I for one, cannot rejoice "in the name of humanity." Certainly, although having lived in the districts referred to by *The Times* during the last four years, I am at a loss to know where the "vast tract of country" that is stated to have been "restored to industry" can be situated. And if our policy "has given happiness to many millions of our fellow-creatures" it has given death or unhappiness to a far greater number.

From the leader of *The Times* it appears—"Eventually the same causes must produce cognate results;" that is to say, that the corrupt Manchoo Government, despite our murderous attacks upon the Taiping rebellion, "the organisation of which only has been broken," will soon drive the oppressed Chinese into another insurrection; this seems an all-sufficient argument against our hostility to the Taiping movement—a movement of a crushed people against a tyrannical foreign dynasty, which in analogous cases, such as that of Poland, Italy, or Hungary, has found the warmest sympathy and aid from Englishmen.

Intending to shortly again address you upon the same subject, I trust to your impartial columns for the insertion of these few protests against the animus pervading the leader of *The Times*.

London, December 31. A. TAIPING.

BOARD OF TRADE RETURNS

The Board of Trade Returns for the month and eleven months ended the 30th November may on the whole be regarded as satisfactory, although the amount of exports is not quite so large as in the corresponding month of last year; but the chief falling off has been, as for the first two or three months, in cotton yarn and cotton manufactures. The total declared value of Exports for the month of the present year was £12,065,213, against £12,758,323 in 1863, and £9,761,510 in 1862, being a decrease of £693,110 as compared with the former period, but an increase of £2,303,703 over the latter. For the eleven months of the present year the total was £148,340,865, against £132,135,368 in 1863, and £113,280,779 in 1862, being an increase over 1863 of £16,205,497, and of £35,060,086 as contrasted with 1862.

We extract those facts presented by these return swhich relate to trade with the Far East:—

EXPORTS TO CHINA AND HONG KONG.

	1862.	1863.	1864.
	For the Month ended the 30th November.		
Cotton yarn	—	379,474	72,800 lbs.
Cotton manufactures	1,598,183	3,158,419	8,279,580 yds.
Worsted stuffs	943,239	874,883	1,261,850 „
Woollen and worsted cloths	31,181	11,289	20,278 „
Lead	808	1,450	680 tons
	Value for the Eleven Months ended 30th November.		
Cotton yarn	£183,963	£215,084	£226,090
Cotton manufactures	1,219,777	1,063,212	1,832,465
Worsted stuffs	374,212	581,017	874,363
Woollen and worsted cloths	239,812	279,639	280,569
Lead	176,351	287,112	159,915

Of Cotton Manufactures the quantities and values exported to the other great centres of trade in which our readers are principally interested are exhibited by the following figures:—

	1862.	1863.	1864.
	Quantities for the Month ended 30th November.		
Ceylon	146,152	3,229,567	653,638 yds.
Singapore	176,500	3,596,694	3,693,817 „
Java	1,345,660	1,742,706	—
Philippine Islands	—	180,019	—
	Value for the Eleven Months ended 30th November.		
Ceylon	£261,230	£430,607	£391,024
Singapore	541,941	595,829	644,016
Java	489,925	347,334	484,882
Philippine Islands	252,329	324,391	546,257

Of Cotton Yarn the export to Ceylon for the month of November was only 7,520 lbs., and the value for the eleven months of the three years was:—1864, £26,707; 1863, £58,413; 1862, £26,654. To Singapore the quantity for the month is 381,400 lbs., against 194,390 lbs. in the same period of 1863, and 20,000 lbs. in 1862. The value for the eleven months of the three years is respectively:—1864, £126,790; 1863, £203,045; 1862, £96,949.

IMPORTS.

In Raw Cotton the import for the month of November does not present that extreme ratio of increase that characterised the earlier part of the year, though the value for the ten months ending with October testifies to the immense development of the supplies furnished from the East:—

	1862.	1863.	1864.
	Quantity for the Month ended 30th November.		
British India	627,514	352,293	428,815 cwts.
China	198	23,682	82,458 „
	Value for the Ten Months ended 31st October.		
British India	£12,632,381	£22,051,712	£29,183,930
China	84,528	1,545,833	5,174,553

Of Sugar the quantity imported from Java and the Philippine Islands in the month of November is 2 cwt. of the second quality (equal to Brown Clayed); 168,423 cwt. third quality (equal to Brown Muscovado); and 29,072 cwt. fourth quality (not equal to Brown Muscovado). The figures following show the difference in the import under the new scale of duties enacted last session:—

	1862.	1863.	1864.
	Quantities for the Eleven Months ended 30th November.		
2nd quality (equal to Brown clayed)	35,999	3,419	438 cwts.
3rd (not equal to Brown clayed)	316,784	726,939	29,328 „
3rd (equal to Brown Muscovado)	—	—	268,498 „
4th (not equal to Br. Muscovado)	—	—	109,850 „
	Value for the Ten Months ended 31st October.		
2nd quality	£49,736	£4,551	£632
3rd (previous to April 16, 1864)	308,691	644,627	41,205
3rd (subsequent to do.)	—	—	112,551
4th quality	—	—	104,282

Of Hemp the import from the Philippine Islands in the month of November was 26,244 cwt., against 9,124 cwt. in that month of 1863, and 15,205 cwt. in 1862. For the eleven months of the present year the quantity is 160,246 cwt., against 254,507 cwt. in 1863, and 135 355 in the year preceding. The value for the ten months ended 31st October in the three years is given thus:—1864, £235,085; 1863, £319,772; 1862, £156,848.

The Coffee imported from Ceylon during November was 4,742,694 lbs., against 4,903,886 lbs. in the eleventh month of 1863, and 735,685 lbs. in 1862. The quantity for the eleven months of the present year is 64,254,355 lbs., against 66,108,754 lbs. in 1863, and 51,854,594 lbs. in 1862. The value of the import for the ten months ended 31st October was £2,041,456 in the present year, against £2,252,999 in 1863, and £1,894,395 in 1862.

The Declared Value of the British and Irish Produce and Manufactures exported from the United Kingdom to the ports and countries undermentioned, during the ten months ended 31st October, is returned as follows:—

To	1862.	1863.	1864.
Singapore and Eastern Straits	£970,342	£1,134,692	£999,823
Ceylon	469,572	762,629	711,222
Hong Kong	979,100	1,165,889	1,431,491
China (exclusive of Hong Kong)	1,687,691	2,036,926	2,456,578
Japan	—	73,526	486,352
Netherlands India (Java, &c.)	687,147	489,695	687,421
Philippine Islands	379,209	503,835	764,647
Siam	17,068	11,958	15,129
Cochin China, Camboja, and Tonquin	247	36,597	—

HOLLOWAY'S PILLS.—ENJOYMENT OF LIFE.—When the blood is pure, its circulation perfect, and the nerves in good order, we are well. These Pills possess a marvellous power in securing these great secrets of health by purifying, regulating, and strengthening fluids and solids. Holloway's Pills can be confidently recommended to all persons suffering from disordered digestion or worried by nervous fancies or neuralgic pains. They correct acidity and heartburn, dispel sick headache, quicken the action of the liver, and act as alteratives and gentle aperients. The weak and delicate may take them without fear. Holloway's Pills are eminently serviceable to invalids of irritable constitution, as they raise the action of every organ to its natural standard and universally exercise a calming and sedative influence.

Here young ladies may read the lives of good, great, and noble women; such as the tender nurse, the stout-hearted Florence Nightingale; the prison friend, Elizabeth Fry; the Christian authoress, Hannah More, &c., &c.

MILLY MOSS; or, SUNLIGHT AND SHADE. A charming Tale. By ELLEN CREATHORNE CLAYTON, Authoress of "Celebrated Women," &c. With eight full-page Illustrations on tinted paper, by Florence Claxton. Crown 8vo., cloth gilt, 3s. 6d. "A charming tale."—Englishwoman's Journal.

DEAN'S NEW GOLDEN SERIES, FOR 1865,

Of Sixpenny Coloured Toy Books; or, One Shilling, on Untearable Cloth. These are decidedly the most attractive series of Sixpenny Toy Books ever published. Eight different, viz.:—

THE MERRY OLD DAME who sang 'Fiddle-de-Dee. Eight large coloured pictures, and brilliant cover in colour and gold, 6d.

MARRIAGE OF MR. PUNCH AND MISS JUDY.—All about the Courtship, Marriage, Honeymoon, Flitch of Bacon, the New Baby, &c. With eight large coloured pictures, and cover of Colour and Gold. 6d.

DADDY HUBBARD AND HIS CAT.—A delightful companion to our old frfend Mother Hubbard. With large Coloured Pictures, and cover in Gold and Colour. 6d.

THE PET LAMB THAT LOST ITS DAM.—A very sweet little story in rhyme, after the style of the "House that Jack built." With eight extra large coloured pictures, and rich cover of Colour and Gold. 6d.

THE A B C OF FAMILIAR OBJECTS.—In fine bold letters, accompanied by a profusion of familiar objects, cover of Gold and Colour. The most effective Alphabet out for 6d.

THE FROG THAT WOULD A-WOOING GO, showing how he at last got gobbled up by a Lily White Duck, and all through disobedience to his Mamma. Large coloured Pictures, cover Gold and Colour. 6d.

THE UGLY DUCKLING. (DEAN'S Edition.) showing how the poor despised little hen-pecked bird became at last a stately Swan. Large Coloured Pictures-cover of Gold and Colour. 6d.

THE TRICKS OF MASTER FOX.—Very funny and sly tricks too—only such as a Fox would do. Eight arge Coloured Pictures, cover in Colour and Gold. 6d.

DAME CRUMP AND HER PIGS—their Deeds and Misdeeds. With 40 very large coloured pictures. Super royal 8vo. cloth gilt, 3s. 6d.

THE SIX GRAND PARTIES, given by the Dog, the Cat, the Lion, the Donkeys, the Butterflies gay, and the Monkeys. Red cloth, 3s. 6d.

DON QUIXOTE—Re-written for the Young.—With numerous Engravings. Cloth, gilt, many large and small pictures, by Gilbert, Lenny Meadows, &c., cloth gilt, 3s. 6d.

Just Ready, Demy 8vo. and Rubricated, printed in old-fashioned-face type, in colours, and altogether a unique publication. 8vo. price 3s. 6d.

DADDY'S MAKINGS: Little Rhyming Undertakings, Very new and very funny, Worth all the Children's Pocket-money. Full of Pictures drawn with care, Coloured with a Beauty rare. All by DADDY DUMKINS, who Nothing better had to do.

LONDON: DEAN AND SON, 11, LUDGATE-HILL, E.C.

BLUE PICTURES and BLUE RHYMES, from many Lands and Climes. By Irving Wood. Size demy 8vo., printed in blue and red. Making a humorous Pleasant Picture Verse Book for the Grave and Gay. Price 1s. Text and Type rubricated, stiff cover in Colours.

YE COMICAL RHYMES OF ANCIENT TIMES,—Dug up into Jokes for Small Folks. By C. H. R. Emblazoned on each page with atrociously comic and novel style of illustrations in red and black, and the antique type rubricated. 1s., stiff cover in colours.

RUMMICAL RHYMES,—a Companion Book to Ye Comical Rhymes. With Pictures to Match, set forth in fayre prospect, alphabetically and geographically, by J. V. Barrett. 1s., stiff cover.

YE BOOK OF PICTURES PAINTED BY ANTIENT PEOPLE TO VERITABLE HISTORIC RHYMES Rung out by Ye Chimes of the Bells of Bow Steeple. By Irving Wood. 1s., stiff cover in colours.

JOLLICAL RHYMES, or DROLLERIES DONE BY PENCIL and PEN, for Gleeful Ladies and Jolical Men. 24 full page Illustrations, with verse and illustrations rubricated. 1s., stiff fancy cover.

AN AMUSING COMIC FAIRY TALE.—With sixteen humorous full page engravings, printed in colours, as is also the reading, on a charmingly tinted pink paper, viz:—THE HISTORY OF HARRY: what He Saw, and what He Did, and what he did Not see and Do. This Book naturally shows how evil-doers are always punished while the good are invariably rewarded, 2s. 6d. bound tasty cover.

MISS CORNER'S LITTLE PLAYS, FOR LITTLE ACTORS, for Home Performance, 1s. each, increase in Popularity every year, a new edition with Covers in Colours. "Most beneficial for reading aloud." The six sorts are—1. Beauty and the Beast, illustrated by Alfred Crowquill. 2. Whittington and his Cat, illustrated by Alfred Crowquill. 3. Cinderella and Little Glass Slipper, illustrated by Alfred Crowquill. 4. Children in the Wood, illustrated by Barret. 5. Mother Goose, illustrated by H. Weir. 6. Prince Sigismund's Courtship; or the Fairy Ordeal, with illustrations. The six books make two Gift Books, in cloth gilt, 3s. 6d. each.

A PICTURE BOOK.—Price 1s. 4to.—Quite a pretty style of Book, full of beautifully coloured engravings, with verses enclosed in neat ornamental border.

THE CONCEITED KITTEN.—A Tale about Cozey and Pudgy, and how after many disasters, Pudgy was cured of her vanity and conceit. With six full page engravings, printed in colours, as is also the reading, on a pretty tinted pink paper, bound in stiff boards, fancy wrapper, price 1s.

THE GREEDY PUPPY.—A Story of Little Fido, who ran away from home, and met with various sad adventures. A book for a vast number of little ones to derive pleasure and profit from. Printed on pink tinted paper, in colours, and illustrated with six full page engravings, bound in stiff boards; a fancy cover, 1s.

THE OLD OAK TREE AND ITS INHABITANTS.—Illustrating the Wisdom of the Owl, the Simplicity of the Robin, the Maternal Solicitude of Mrs. Bunny, the Loneliness of the Squirrel, and the various characteristics of the many other inhabitants of the Old Oak Tree. Six full page illustrations, printed on a pink toned paper, in blue and black; bound in stiff boards, fancy cover, 1s.

PERFUMED CARTE DE VISITE ALBUM.—This complimentary scented Carte de Visite Album affords a very elegant and agreeable medium for presenting the sender's photograph. The covers are beautifully and variously adorned in gold and colours, and embossed flower groups. The inside contains a highly perfumed satchel in lace envelope, a pretty ornamental design, with appropriate verse, and gilt frame for photograph. Complete, 1s.

QUOTATIONS FROM THE POETS.—A highly-intellectual round Game, both amusing and instructive, suitable for an evening party. In box, 2s. 6d.

LONDON: DEAN & SON, 11, LUDGATE HILL, E.C.; And, by Order, of all Booksellers.

FOR HONG KONG and WHAMPOA, the splendid clipper ship CARACTACUS, A 1 thirteen years, 676 tons register, GEORGE H. TWISS, Commander; lying in the East India Docks. This ship sails very fast, having made the passage from Anjer in 77 days.

For Freight or Passage apply to PHILLIPS, SHAW, and LOWTHER, 2, Royal Exchange-buildings, E.C.

COLOMBO, CEYLON, Direct—having the greater portion of her cargo engaged and shipping, the magnificent clipper ship PRINCESS, A 1 for thirteen years, KINGSLY HUNLEY, Commander; loading in the West India Docks. This splendid vessel, having a full poop, has unrivalled accommodation for the comfort and convenience of passengers.

For Freight or Passage apply to W. A. WINCKLEY, 23, Birchin-lane, Cornhill, E.C.

COLOMBO DIRECT (to follow the Princess), the new clipper PALESTINE, the highest class at Lloyd's, register 607 tons, Captain T. PARK; loading in the West India Docks. Has most splendid accommodation passengers.

For passage apply to W. H. TINDALL, 5, Tokenhouse-yard; or for freight or passage apply to W. A. WINKLEY, 23, Birchin-lane, Cornhill, E.C.

COLOMBO DIRECT.—The beautiful clipper ECHO, A 1 12 years, 369 tons register, is now loading in the West India Dock, and having a large portion of her cargo engaged, will be promptly despatched.

For Freight or Passage apply to STUART and SIMPSON, 9, Clement's-lane, Lombard-street, E.C.

With Immediate Despatch.

DIRECT for COLOMBO, the splendid British-built clipper ship FRANCES, A 1 thirteen years, 489 tons register, F. W. HILL, Commander; lying in the London Docks. This magnificent ship is confidently recommended to shippers.

For Freight or Passage apply to TOULMIN, LIVINGSTON, nd Co., 31, Great St. Helen's, Bishopsgate-street, E.C.

With Immediate Despatch.

DIRECT for BOMBAY, the nearly new clipper-built ship FRANCIS K. DUMAS, 1,209 tons register, J. LEMIEUX, Commander; East India Docks. This splendid vessel, built this year, will be found a first-rate opportunity to shippers requiring despatch.

For Freight or Passage apply to TOULMIN, LIVINGSTON, and Co., 31, Great St. Helen's, Bishopsgate-street, E.C.

To follow the FRANCES.

DIRECT for COLOMBO, the beautiful clipper ship EVELYN WOOD, A 1 10 years; 384 tons register; D. WYLIE, Commander; London Docks. This splendid vessel offers a first-rate opportunity to shippers of fine goods.

For Freight or Passage apply to TOULMIN, LIVINGSTON, and Co., 31, Great St. Helen's, Bishopsgate-street, E.C.

FOR RANGOON Direct, the British clipper ship DUKE OF WELLINGTON, A1 12 years; 724 tons register, J. KERR, Commander; is now loading in the West India Dock.

Apply to TOULMIN, LIVINGSTON, and Co., 31, Great St. Helens, or to EDWARD HIGGIN and Co., 2, East India-avenue, Leadenhall-street, E.C.

To follow the "Aminta."

Will positively sail on Jan. 15 (full or not full) last Shipping Day the 12th.

DIRECT FOR CALCUTTA, the magnificent clipper-built ship STAR OF SCOTIA, A 1; 999 tons register; J. M'DOWELL, Commander; East India Docks. This splendid vessel, built this year, will be punctually despatched, thus offering a first-rate opportunity to shippers.

For Freight or Passage apply to TOULMIN, LIVINGSTON, and Co., 31, Great St. Helen's, Bishopsgate-street, E.C.

Monthly Line of Clipper Ships for Calcutta.

To leave the Docks on the 20th January. Last Shipping day the 18th, unless previously full.

DIRECT for CALCUTTA, the splendid clipper ship BOLINGBROKE, A 1 12 years; 1,259 tons register; HUGH ROSS, Commander; loading in the East India Docks. This magnificent ship was built in 1863, under special survey, especially for this trade. Has beautiful cabin accommodation.

For Freight or Passage apply to the owners, LISTON, YOUNG, and Co., 36, Cannon-street, E.C; or to GELLATLY, HANKEY, and SEWELL, 27, Leadenhall-street, E.C.

Monthly Line of Clipper Ships for Calcutta.

To leave the Docks on the 20th February. Last shipping day the 18th, unless previously full.

DIRECT FOR CALCUTTA, the the splendid New River-built clipper ship VARUNA, A 1 12 years, owned by Messrs. Smith, Fleming, and Co.; 1,330 tons register; JOHN TOVAR, Commander; loading in the East India Docks. This magnificent vessel, just launched by Mr. Charles Lungley, offers the best opportunity for shippers; has beautiful accommodation for cabin passengers.

For Freight or Passage apply to LISTON, YOUNG, and Co., 36, Cannon-street, E.C.; or to GELLATLY, HANKEY, and SEWELL, 27, Leadenhall-street, E.C.

NOTHING IMPOSSIBLE.—The Greatest and most Useful Invention of the day. AGUA AMARELLA.—Messrs. JOHN GOSNELL and CO., Three King-court, Lombard-street, Perfumers to Her Majesty, respectfully offer to the public this truly marvellous fluid, which gradually restores the human hair to its pristine hue—no matter at what age. The Agua Amarella has none of the properties of dyes; it, on the contrary, is beneficial to the system, and when the hair is once restored, one application per month will keep it in perfect colour. Price One Guinea per Bottle; half bottles 10s. 6d. Testimonials from artists of the highest order, and from individuals of undoubted respectability may be inspected. Messrs. JNO. GOSNELL and Co. have been appointed Perfumers to H.R.H. the Princess of Wales.

THE LONDON AND CHINA TELEGRAPH.

THE SIXTH Volume of this JOURNAL was completed on the 26th December, 1864. The Subscription for the three numbers per month is 30s. per annum, including Postage, and to the Export Supplement 12s. Terms for advertising, 2s. 6d. per five lines; and 6d. for each additional line.

List of Passengers.

PASSENGERS INWARD.

By this mail to Marseilles per P. and O. steamer Ceylon, arrived Jan. 10. From Shanghai: Mr. R. Shrill. From Hong Kong: Colonel Gordon.

PASSENGERS OUTWARD.

Per P. and O. steamer Delta, Jan. 4, 1865, from Southampton.—To Hong Kong: Mr. J. Manger, Commander Round, R.N., Mr. J. R. Bromley, Mrs. Bird, Mr. F. D. Wakeford, Mr. Glasse, Major Blamire, Mr. Tudor, R.N., Commander Menzies, R.N., and servant, Mr. Turner, R.N. To Shanghai: Mr. H. M. Carter. To Ceylon: Miss Wodehouse, Mr. Thompson, Mrs. C. Morrison, Messrs. Hope and Davis, Miss Rothwell, Mr. B. L. Armitage, Mr. and Mrs. Byrde, two Misses Brown, Miss Swan, Mr. Swan, and five second-class passengers. To Calcutta: Messrs. Plomer, J. Tawse, G. Raban, F. Raban, J. Semple, D. Anderson, C. W. V. Bradford, Cliff, D. Thomson, E. J. Wynne, J. H. de Renzy, H. T. Pearce, C. Abraham, Pringle, James, G. Bickham, Inglis, and Coupland, Mr. and Mrs. G. B. Pasley, Miss Siddons, Major Ellerman, Mrs. Manson, Miss Tawse, Mr. and Mrs. J. H. Donald, Lieut. and Mrs. Spragge, Capt. and Mrs. Jones, Mr. and Mrs. Woodruffe and European servant, the Rev. J. B. and Mrs. Archer and infant, two Misses George, Lieut. R. S. Green, Dr. Milne, Mr. and Mrs. Figg, Ensign J. A. Little, and nine second-class passengers. To Madras: Mrs. T. Chase, Capt. and Mrs. Bell, Capt. and Mrs. Pereira, the Rev. J. Gritton, Messrs. Seacombe, Clark, Calcraft, Rhodes, and D. Hume, and three second-class passengers.

From Marseilles, Jan. 12.—To Hong Hong: Mr. and Mrs. A. Hancock, Mr. and Mrs. H. G. Bush and European servant. To Shanghai: Mr. and Mrs. Morgan and European servant, Mr. Jas. MacKenzie. To Ceylon: Mr. and Mrs. Faviell, Mr. and Mrs. H. C. Byrde. To Calcutta: Messrs. J. Douglas, J. W. Smyth, Severin, Wodehouse, Sandby, Middleton, Lyons, J. R. Shea, Steel, and Vickers, Mr. and Mrs. C. B. Thornhill, Miss Thornhill, Dr. J. A. Payne, Gen. H. Vetch and son, Sir Barnes and Lady Peacock and native servant, Capt. and Mrs. Bruce, Mr. and Mrs. Cook, Mr. and Mrs. A. Symonds, Mr. and Mrs. H. G. Ross, Capt. and Mrs. Paske, two infants, and child, Capt. and Mrs. Taylor, Lieut.-col. W. Fyers, Mrs. Ross. To Madras: Mr. J. M. Miller, Miss Blissett. To Alexandria: One second-class passenger.

Per P. and O. steamer Poonah, Jan. 20, from Southampton.—To Singapore: Mrs. Scott, Mr. E. Hill. To Hong Kong: Mrs. A. Boardman, Miss Winkworth, Mr. J. S. Southey, R.N., Mr. J. Pittis, R.N., Mr. Turner, R.N., Sub-Lieuts. Joliffe, C. A. Tucker, and F. N. C. Hall. To Shanghai: Mr. J. A. Fraser, Mr. T. F. Hughes. To Ceylon: Mrs. Tranchell and two children, Mr. R. A. King, Mrs. Clark.

From Marseilles, Jan. 28.—To Hong Kong: Mr. and Mrs. Eusden, Mr. J. W. Escherich. To Singapore: Lieut. Hatchell. To Shanghai: Mr. C. Simpson, Mr. Whittaker, Mr. F. H. Bell. To Ceylon: Mr. E. Strong.

Per P. and O. steamer from Marseilles, Feb. 13.—To Hong Kong: Mr. McDonald.

Per P. and O. steamer, Feb. 20, from Southampton.—To Hong Kong: Sub-Lieut. D. M. Smith.

Per French steamer, on 19th inst.—For Singapore and Hong Kong: Mr. and Mrs. Rufino Rangel.

Summary of News from the Far East.

JAPAN.

YOKOHAMA.

Dates hence are to the 17th November. The London mail of the 10th September arrived out on the 8th November.

Captain Wilkinson, of the *Nepaul*, has obtained high commendation for the energy and seamanlike activity he evinced on the occasion of the late mishap to his vessel. The *Nepaul* left Yokohama on the 1st November with cargo, passengers, and mail for Shanghai; but about 4 P.M., just as it was believed that the business duties of the day were concluded, two steamers were seen coming in, and for a short time the usual excitement attendant upon the expectation to receive immediately "our mail" ran round the Settlement, in a few minutes, however, to be painfully disappointed; for of the steamers which were seen rounding the point one was immediately recognised as the *Nepaul* returning to port at slow speed—the other the missing *Island Queen*. The first-named vessel had proceeded at fair speed about twenty or twenty-two miles, when, on nearing the Plymouth rock a sudden and violent concussion was experienced by all on board, and it was found that the vessel's bows had struck on a sunken rock, detached from what we believe is called the Ingersoll Patch, and which is not shown in the latest surveys of that part. Just before this occurrence Capt. Wilkinson had signalled the *Island Queen*, which was at anchor close by; and immediately after having asked for assistance that steamer got under weigh and towed her off. She came into harbour about five o'clock, and was immediately run alongside the storeship *Nassau*, and her valuable cargo commenced to be transferred. All connected with the steamer speak in the very highest terms of the readiness with which boats and men from most of the ships in harbour were sent to proffer assistance, and that these acknowledgements are specially due to H.B.M.'s ships. The *Nepaul's* passengers and mails, and the most part of her cargo, were conveyed to Shanghai per the steamer *Australian*, Capt. Hamlin, which was chartered the same evening by the P. and O. agents from Messrs. Macpherson and Marshall, her consignees, and left on the morning of the 3rd November. The celerity with which arrangements were made by the agents for lightening as much as possible the public inconvenience attached to this unfortunate occurrence has been universally commented upon, acknowledged, and praised.

Too much praise cannot be given to all who had any part to take consequent upon this accident; the *Nepaul* left on the morning of the 1st, and returned damaged about four o'clock that afternoon. In the evening of the same day the *Australian* steamer was taken up for cargo and passengers. On the 2nd and 3rd all the damaged cargo was taken out and stored—all the sound cargo, the mails, &c., transferred to the *Australian*—and in the evening the passengers embarked in the latter vessel, which left early the following day. The damaged cargo, indiscriminately thrown into a go-down, was sorted, catalogued, sold, and closed up on Monday the 7th, and the *Nepaul* herself was despatched on the 10th to Hong Kong for her repairs.

Digitized by Google

The 168 bales of damaged silk ex *Nepaul* were sold at auction by Mr. Hansard on the 7th.

There were no items of political occurrences to note during the postal fortnight, and of domestic events but few. Although no official announcement has yet been made of it, we believe we may safely assert as a fact that the Japanese authorities have been prevailed upon at last to consent to form a really fine road some three or four miles in extent round or near the Mississippi Valley, and a race-course, and to make certain other extensive improvements for the advantage and accommodation of foreigners.

"The Japanese mail (writes a Shanghai correspondent) has brought no news. Everything is quiet, the Inland Sea is opened, and trade appears to be going on satisfactorily. To the great regret of English residents in that country, as well as in China, Sir Rutherford Alcock is to leave for this port, *en route* for England, on the 15th proximo. It is rumoured that a desire on the part of the Government to confer with him is the motive of this sudden return. It is to be hoped that this reason may be the true one, for during the few months which have elapsed since his return from England, he has by his vigorous measures brought our political and commercial relations from a deadlock to a very satisfactory condition." Sir Rutherford and Lady Alcock arrived at Shanghai, per steamer *Corea*, on the 22nd November, *en route* to England.

Messrs. Jardine and Matheson's steamer, the *Rona*, is laid on to run regularly between this port and Shanghai, in connection with the Messageries Imperiales, signing bills of lading through to Marseilles.

On the evening of the 13th November, about half-past nine o'clock, a fire broke out in the kitchen of the residence of one of the principals and some of the employés in the house of Carst, Lels, and Co., on No. 25, which in a few minutes communicated to the main building. The alarm was first given by Mr. Frey, who was visiting at the adjoining house, and several civilians were soon upon the spot, quickly followed by the Belooche Regiment, and detachments of the 20th, Royal Marines, French Guard, and of seamen from all the men-of-war in harbour. The engine of Mr. Hegt was first up, Mr. S. J. Gower's close behind him, Mr. Kingdon's being stationed on the front on the bund. It was low tide, and there not being yet formed any tanks below highwater-mark no supply was to be obtained from the sea. Mr. Gower's engine soon cleared out the three or four adjoining wells, and the supply of water could only therefore be kept up at long intervals in short duration. There was soon found to be but little chance of saving the building itself, or any important part of its contents, which were in a short time all sacrificed to the flames. The principal fear was that the buildings in the rear, occupied as the "Golden Gate" livery stables, should ignite, and thus form a communication across to the other street; but there was fortunately but very little wind, and the activity displayed by all hands (the Beloochees working with great vigour and pluck) in clearing down the burning building, and intervening lumber on that side, together with the efficient aid rendered at every moment that water could be obtained by Mr. Gower's engine, soon quieted any anxiety as to its extending beyond the building itself. Mr. Freeman and his corps of firemen were early on the ground, but the services of the latter were not availed of. Lieutenant Colonel Browne was busy in every quarter, and doing great service in the calm direction of the military working parties. There were two severe accidents: one of the Marines during the conflagration fell from the roof of the building and broke his arm, and another was seriously injured in the back, and amongst the wounded we have to mention Mr. Stearns (slightly), who was observed working with his usual energy and courage. The building and furniture are insured.

A case of Japanese broken contract had come on for trial in H.B.M.'s Consular Court. "We consider (remarks the *Japan Herald*) that the thanks of the whole mercantile community are due to Messrs. Macpherson and Marshall for their public spirit in withstanding the temptation to accept any compromise of their demands upon the Japanese merchant Hudzo rather than suffer the annoyance and trouble of a Consular suit in which Japanese officers are concerned. The wretched system of making advance bargains, to be completed if the market rises, or to be repudiated or thrown up if it answers the purpose of the purchaser, under penalty at least of no peace in one's office, must be checked, and we think a good step has now been made towards it. The case of Hudzo was a most glaring one; and we hope the trial and result may be translated and published 'for the benefit of the concerned;' on the one hand as a lesson to the Japanese merchants that such nefarious attempts are not only fruitless, but somewhat dangerous and costly; and on the other to show the Japanese officials that they make themselves somewhat ridiculous before us in bringing forward such cases for their merchants. They know full well that before H.B.M.'s Consul they will get the most ample measure of fair-play, but the earlier they learn not to wash their hands in such very muddy water as this the better for all concerned." The following is a report of the case:—

H.B.M.'S CONSULAR COURT.

(BEFORE C. A. WINCHESTER, ESQ., CONSUL.)

Messrs. A Winstantley, R. D. Robison, S. Rowell, Assessors.

YESEJA HUDZO *v.* MACPHERSON AND MARSHALL.

This was an action brought through the Japanese officials to recover the sum of $3,376, as per the following plaint. "Our merchant Yeseja Hudzo made an agreement with your merchant Macpherson to buy 300 piculs of iron-wire, and paid as an advance upon it $3,376. He received 50 of the 300 piculs and found the wire different from the sample and useless. On doing so, Hudzo communicated with Macpherson in order to have the wire exchanged for other, but he refused. Hudzo therefore had to take the fifty piculs of the said wire, without having them exchanged, and he made a further agreement that the remaining 250 piculs of wire should be received as per agreement. After that they were separately examined, and what was bad taken out, but Macpherson declined to inspect the wire, contrary to their agreement. All the above has been made subject of complaint to us by Hudzo. I have therefore to request that you will explain the matter with Macpherson and arrange the said goods be examined and delivered according to agreement." The contract was put in by the defendants, and it came out in explanation that 108 piculs of one-quality iron-wire was sold at $22 and 216 piculs at $17. The ship was to arrive within five days or the contract was to be void, and the whole was to be cleared within ten days after her arrival.

The Consul, to the Interpreter: Ask the plaintiff what he alleges as the cause that he has not completed his contract.

(The Japanese officers began to prompt the plaintiff, but were immediately silenced by the Consul.)

The Plaintiff: Two hundred piculs arrived; they were at the bottom of the ship, and it took 17 or 18 days to land them; I offered to take 100 piculs of the best kind; I wanted to receive 100 piculs of the best kind first, to send it to Yedo to get paid for it. I wanted $500 of the bargain-money to be put against the account of the 100 piculs which I wanted to receive first, but this was not agreed to. Since then I have offered several times to take the best kind of the wire paying for that; I received 50 piculs and in addition to the bargain-money paid $2,376. I received 25 cases; this was the kind bought at $22, value for $1,188; I did not take away the remainder because it was not equal to sample. I sent the 50 piculs to Yedo, and was told it was not good and broke.

[The sample produced and acknowledged.]

By Messrs. M. and M.: Did the defendant not come to our godown with the Government officers and interpreter? did they not examine the goods, and did not the officer say they were equal to sample and he must take them? Answer: We examined some, and some did not break and I said I was willing to take it.

By Messrs. M. and M.: Did we not offer to have it examined by two different parties, one chosen by himself and the other by us, and did he not refuse that?—Answer: That is true. I refused because I did not know anyone I could ask to look at it for me—because I did not like to be bound by anyone's opinion; but anyone could see it would break.

By Messrs. M. and M.: He says he did not know anyone he could ask to look at it for him. Ask him if he is not one of the largest teamen in the place?—Answered: I was formerly a large tea merchant, but owing to the "Loonins" on the 20th day of the 9th month I came to grief (*sic.*); I did offer $500 to be let off the bargain.

By Messrs. M. and M.: What was the difference between the market price at the time he made the contract and the time he first came about being let off?—Answer: I do not know what the rate was, but it might have been cheaper.

Messrs. M. and M.: We can tell him, then, we hold similar wire to the $22 wire which we should have been glad then to sell for $15.

Several casks of the wire were brought up to the Consulate out of the godown, promiscuously, and opened, they were found to be perfect in their packings; the lining of tin, soldering, &c., all in good order. The wire contents were carefully examined by the Consul and Assessors, and declared to be fully equal to the samples.

After some further hearing, the Consul said there could be but one conclusion, viz., that the wire was equal to the sample, and that the plaintiff had not the vestage of a reason for not fulfilling his contract. It was quite clear he had made a bad bargain, and now wanted to wriggle out of it. He must take delivery and fulfil his payments, together with certain equitable charges, such as godown rent, interest of money, fire insurances, &c., or the defendants would be at liberty to sell the goods at auction and give the plaintiff credit for the nett balance of such sale after the payment of expenses and the sums already received, if that should leave the balance in his favour, to pay it to him: or if on the other hand it should leave a balance against him, Messrs. Macpherson and Marshall could sue him before the Governor through him (the Consul). He again repeated the plaintiff had not a leg to stand on in bringing this complaint.

Messrs. Macpherson and Marshall offered that the plaintiff could, if he first deposited the whole purchase money within four days, come to their godown and select any of the goods he said were not equal to sample, and they should be placed aside for the decision of the practical assessor.

The Imperialists began to advance against the city in July from Chungching. I went out with Tow Wang against them. We met them 40 li from the city, and Tow Wang divided his men into two bodies, the right body under a Kin Wang was to out-flank the Imperialists while Tow Wang retired in front of them. The manœuvre succeeded. The Imperialists rushed on after Tow Wang, who retired and then turned at them, while Kin Wang took them in flank and drove them back: about 150 Imperialists were killed, no quarter being given. Tow Wang pushed on till he came in sight of the Imperial stockades situated on small hills; we got round them, and being out of fire from the stockades under the brows of the hills, threatened their rear; which being seen by the Imperialists made them run, leaving everything standing in their camps, four of which were taken with some boats. Tow Wang afterwards went back to the city. Tow Wang was very daring; he led his men himself, and made the rebels fight desperately. He scarcely slept two hours in the twenty-four, was always about, and very much feared by the rebels. The garrison may have been 50,000 or more.

On our return to Wuchufu, Kung Wang arrived from Nanking with an escort. The villages in the immediate neighbourhood and suburbs of Wu-chu were for the most part in ruins, and subsisted in a squalid half starving state. All offences received one punishment—death. I saw 160 men beheaded, as I understood, for absence from parade; two boys were beheaded for smoking; all prisoners of war were beheaded; spies, or people accused of being so, were tied with their hands behind their backs to a stake and brushwood put around them, and they were then burnt to death In spite of the orders against smoking, the chiefs were inveterate smokers.

About a week after our return to the city Tow Wang ordered us to accompany him to the east of the city. We drove back the Imperialists who were attacking the stockades at Linza with a large number of gunboats and a steamer. When Tow Wang saw the steamer, he said I had deceived him and that foreigners were fighting against them, and that instead of 4,000 cash a day we should only have 1,000. From Linza we went down to Tung-poo, where an Imperial force had advanced. We had a great deal of fighting here; the rebels had got a force of Imperialists surrounded and were keeping the other Imperial force from helping them. Tow Wang had not many gunboats, so he drilled his small boats in the lake and taught them when to advance and retire. He then sent one of them to fire at the Imperial gunboats, while he landed some rebels on a bank in secret. The Imperial gunboats came out against the small boats which retired, the gunboats pursuing, when Tow Wang ordered the other small boats to advance, they dashed forward and the party on the bank fired into the gunboats whose crews deserted them. We pushed on and came close up to the stockade, capturing a boat with a 12-pounder English howitzer V.R. and some six boxes of shell. Tow Wang gave the gun over to me with another 12-pounder iron gun. Some thirty or forty gunboats were taken from the Imperialists. We had many encounters with the Imperialists and with the French force with varied success. The Imperialists had their breastworks on the opposite side of the creek to ours, they tried to cross but were driven back. All the Imperialist soldiers belonging to the Mandarin who was surrounded were beheaded, cut down, and driven into the creeks. Demetrius was killed in one of the fights, and Pasquali died of sunstroke. When we went back to the city Tow Wang and Kang Wang assembled all the men into a square, and mounted a sort of scaffold made of tables. Tow Wang addressed them first. He mentioned the words Soochow, Quinsan, and Yang-kwei-tsze very often. I understood enough to make out that he was mentioning the places the rebels had lost, and alluding to the Yang-kwei-tszes refered to their present situation. Kang Wang then addressed them in the same strain. This lasted some two or three hours; while it was going on, some of the soldiers commenced firing off their muskets. Tow Wang ordered silence, but another report was heard, the offender was ordered up, he was a clean-looking boy of fifteen years' old, he was made to kneel down, but Kang Wang begged his life. Tow Wang, however, saw two or three rebels playing with their spears, and ordered his officer to go down and "cut." The officer returned in a very short time with two heads, which were laid down in front of the Wangs. Kang Wang, on coming down from the tables, spoke to me in English very slowly, he asked me what I was, I said an Englishman. He said he had never met a good foreigner, and asked me to go with him to Kiangsi. I did not see him again, I think he went with some men soon after.

Shortly after, I was ordered to go to the N.W. side of the city, against the Imperialists who were advancing. I went out and found the Imperialists had placed one of their stockades within two hundred yards of the rebel stockade. I was ordered with my men to put my gun in the rebel stockade, which I did, after making good the parapet. I fired on the Imperialists but they opened such a fire of shell on my gun as to cause great loss to the rebels, who were hustled in rear of the gun. About a day or two after, the Imperialists assaulted at 4 P.M. They were bothered with the ditches and were repulsed; several rebels were beheaded for running away. A shot struck my gun on the trunnion and disabled it. The chief of the stockade told me that I had better go away, as he was afraid that they would lose the stockade, and that if they did, they would get into trouble with Tow Wang if the gun was taken. I therefore went back to Wuchufu with the boat and gun. The 1,000 cash per diem had been discontinued, and we were told to subsist ourselves. There was some distress now in the city, and we saw signs of the evacuation, rice being sent out to a place 41 li off towards the north. On the 24th August, a rebel chief came to me and told me it was likely they would move, and that we had better get ready. I asked him what they would do about a wounded man; he said he must go with us. It was now evident that the city was to be vacated, as the shops were shut and the shopkeepers and their goods embarked and sent into a small lake 50 li to the North West of the city. At midnight of the 26th August, the head man came again and told us that the start would be made at daylight the next day; our idea was to escape during the confusion, but the wounded man was our drawback. At midnight we tried to get the wounded man into a boat, but were met by Tow Wang himself at the North gate. He was furious, and ordered us back. We waited till 2 A.M. 28th August, when we were ordered to take the wounded man down to the boats. At this time signal lights were hoisted to the outposts to retire. Men were patrolling the streets to cut down any who might try to escape. That evening we saw fearful sights, the rebels were embarking their wounded and could not take all—the poor women crowded down into the boats and were cut at and driven back. We left the city, which was empty at 3 A.M. and soon saw it in a blaze, it rained, however, heavily. We pushed on and passing through the lake came to the entrance of the creek. Here the most fearful confusion ensued, all the boats were yulowing on and jamming one another, the rebels marching along the bank. Here we passed the night. The next day we could not advance—six of the men, viz., the two Englishmen, the two Austrians and two of the Greeks here left me. With me were the two remaining Greeks, the interpreter and the wounded man. The rebels resumed their march at daybreak, but they soon began to be apparently hurried, and one of them called out to us that the Imperialists were advancing. The wounded man was our great trouble. Nothing could further be done with him and it was certain death to remain. I took leave of him and told him I could do no more, as we could not carry him. He begged me to shoot him, and offered his ring and money. I said I could not do it, but he could ask his two countrymen. They refused, and we left him in the boat. The rebels were now in confusion, running everywhere, and the Imperialists were close at hand. We landed, and after wandering about two or three days got a boat and with some difficulty got down to Shanghai. Tien Wang's son was not in the city, and I never heard of him.

Continental Intelligence

HOLLAND.

(FROM OUR OWN CORRESPONDENT.)

ROTTERDAM, Jan. 7, 1865.

It may be intentional or not, yet it is a fact, that the different Budgets were received so late by the First Chamber of the States-General that it was impossible to bring them on for discussion before the New Year. In consequence of this, Mr. Bosch Vollenhoven proposed on the 23rd of December that the different Chapters should be postponed until the next month, because the Budget was of too great importance for it to be disposed of without due consideration. On the day this proposal was brought forward there were as many votes in favour of it as against it, and it underwent the ordeal of the vote again the next day, when it was rejected. Practically, however, there was a discussion, for the last days of the year were employed in exchanging the reports and the replies of Government. Only the Budget of Means and some other unimportant ones were disposed of in 1864, and this was passed by 25 votes against 3. The principal points to be noticed are, in the first place, the carrying over of two *batige sloten* of the year 1864-65; 2ndly, the question respecting the so-called East India debt, and the not carrying over, on the Means, of a sum of 9,800,000 f. for payment of the interest of that debt; 3rdly, the question respecting the land-tax in Limburg. The discussion on the Budget of 1865 was commenced as late as last Wednesday. It need not be remarked that after all that was said in the Lower House, little that was new was to be heard in the Upper. The only importance that lay in the renewed discussion was that it illustrated the degree of concord or difference existing between the two Houses of the States-General. It was, therefore, pleasant to see that the Opposition was much less fierce, the feeling being that the Budget should not be rejected for reasons extraneous to it. Without any important debate, the following Chapters have been passed:—I.11 III-III R., IV-IV B. The only point of importance was that the Minister gave a promise that the diplomatic salaries should be raised. On the Chapter relating to legal affairs (eustiee), several remarks were made on the laws relating to joint-stock companies, which were considered too severe. It will be readily conceived that what has of late taken place with reference to the Canal Company (which affair is still in a very unsettled state) was the chief cause of these observations.

Yesterday the debate commenced on the Chapter entitled "Internal Affairs," which, with the one relating to colonial matters, may be considered the most important of all. I think there will be but very little opposition on the latter, for the majority has already declared "it perceives with pleasure that the course of policy which the Minister had pursued of late was more moderate, and that, according to his own statements, he seemed to be much less radical than he had been." At the same time that the general feeling of the House is becoming much calmer, the opposition from without increases from day to day. Messrs. P. Vreede Bik, P. van Rees, J. J. Hasselman, J. D. van Herwerden, Schonck, A. L. Andriesse, D. J. A. van Hogendorp, H. D. Potter, J. L. B. Engelhard, T. P. Willer, Netscher, Canneman, and W. J. M. van Schmid, have presented a petition to the King, earnestly warning his Majesty to be on his guard against the course the present Government is pursuing in India. It is not necessary to state that this step, by

Digitized by Google

which the King becomes personally mixed up in the combat, is generally disapproved of.

Sir J. R. Milbanke, the English Ambassador at the Dutch Court, has given a splendid *thé dansant*, which was honoured by the presence of the Prince of Orange.

Baron R. F. van Raders, ex Governor-General of the West Indies, has been attacked by a sudden and severe illness. The Minister of War has again manifested his approbation in an official way to those who have taken a share in the battle of Simonoseki. Messrs. A. Fokker, barrister, Wassewaer Cortwyck, van Tets, and van Gondriaaz are named as candidates for the approaching election, in place of the late Baron van Heemstra.

A proof of how many young men are without suitable employment here is afforded by the fact that for eleven vacancies in the service of the State Railways 1,800 have offered themselves. If the *Auswandering* system were a little more practised here, this state of affairs would very much improve. The qualifications they generally possess would ensure these young men good success abroad.

Mr. B. van der Linden, the civil engineer, intends to leave for Sourabaya by the next mail, in order to put together the dry dock which has been manufactured by Messrs. van Plessengen and van Weel.

P.S.—The "Internal Affairs" Chapter passed this day by 29 against 4 votes.

COMMERCIAL.

COFFEE.—With some transactions at unaltered prices. Stock on the 1st. Jan. 374,100 b., against 264.500 b. in 1863. From the 1st of Jan. till 31st Dec. were delivered by the Trading Company 890,193 bales.

SUGAR.—Market inactive.

TOBACCO.—Dull. During the year 1864 were sold (1st hand) 3,469 c. Maryland, 291 c. Kentucky, 36,418 p. Java, 614 cer. Havana, 232 cer. Cuba, 2,523 cer. Yara, 491 p. Manila. Stock 1st Jan., 3,362 c. Maryland; 83 c. Kentucky; 13,568 p. Java; 82 cer. Havana; 287 cer. Cuba; 3,610 cer. Java; 1,180 b. Brazil; 2,009 b. Manila.

COTTON.—Rather more active, at somewhat higher prices.

TIN BANCA.—56f.

TEA.—Very firm, but nothing doing. Stock 11,900 ¼-ch., against 6,700 in 1863.

RICE.—Firm, under the influence of the London market. Stock 50,000 bales, against 19,600 b. in 1863.

SPICES.—Market very flat, owing to the great stock of the Trading Company. Cloves: Firmer; Cinnamon, No. 3, is paid with 90. to 91 ct. Stock on the 1st. Jan., Nutmegs, (1863) 593 c.; (1864) 1,570 c.; Mace, (1863) 583 c.; (1864) 539 c.; Cloves without stock at the Trading Company— Cinnamon (1863) 1,047 fard.; (1864) 441 fard. Pepper (1863) 1,137 c.; (1864) 850 c.

As the shipping is stopped by the ice, trade in general is dull, and prices are nominal. Transactions are only for consumption.

MONEY.—Rate of discount at the Bank 5½ per cent. for bills, 6 per cent. for acceptances; open market 5½ per cent. 2½ per cent.; N.W.S. 6 2½; 3 per cent. 72½; 4 per cent. 96⅛; Handelmaatschappy 139⅝; 'Change on London 3 mo. f.11.51; 2 mo. f.11.57; short, f.11.68; on Paris 3 mo. f.45.86; 2 mo. f.64.05; short, f.46.55; Hambro, 3 mo. f.34.65; 2 mo. f.34.75; short f.35.

SHIPPING.

ARRIVALS.—Dec. 26, at Texel, from Batavia, Gerard, Pieter, Servatius. Jan. 1, at Brouwershaven, from Padang, Vooruit; at Texel, from Batavia, San Salvador. Dec. 30, at Flushing, from Batavia, Salatiga. Jan. 4, at Texel, from Batavia, Julie. 5, at Brouwershaven, from Batavia, Balder, Catharina Jacoba, Henriette; Nation's Hope, from Sourabaya; at Texel, from Tjilatjap, Commissaris des Konings van der Heim. 6, at Texel, from Padang, Affiance. 7, at Brouwershaven, from Samarang, Sverige; from Batavia, Majestic, Copernicus; from Batavia via Capetown, Balder.

DEPARTURES.—Dec. 21, from Texel for Samarang, Johanna. (Shipping is still stopped by the ice, only steamers can pass the Maas.)

SHIPPING IN 1864.

ARRIVALS AT TEXEL.—From Java, 161; Kanagawa, 1; Nagasaki, 1; Padang, 4; from other harbours, 1,421 ships.

DEPARTURES FROM TEXEL.—For Decima, 2; for Japan, 3; Java, 82; Macassar, 2; Padang, 4; Singapore, 2; for other harbours, 1,368 ships.

ARRIVALS AT HELLEVOETSLUIS.—From Banjœwangie, 34; Batavia, 71; Macassar, 2; Manila, 1; Padang, 8; Passaroeang, 1; Samarang, 4; Sourabaya, 5; Tjilatjap, 7; from other harbours, 2,357 ships.

DEPARTURES FROM BROUWERSHAVEN.—For Batavia, 67; Macassar, 1; Melbourne, 7; Padang, 4; Samarang, 7; Singapore and Hong Kong, 6; Sourabaya, 8.

BUILDING DURING 1864.—149 ships, measuring 19,673 lasten, against 105 ships, measuring 10,869 lasten, in 1863.

LOADING AT AMSTERDAM.—For Kanagawa and Decima, D. J. Pisser; for Macassar, Quatre Bras; for Batavia, Ferdinand and Louis; Almelo, Sliedrecht, India packet, Staatsraad van Ewyck; for Batavia and Samarang, Galileo; for Batavia and Sourabaya, Anna and Sophia; for Samarang, Stad Leyden, Estafette, Koning Willem II.; for Sourabaya, Willem Daniel, Capella, Baltimore, Petronella.

FREIGHTS.—Quotations of Messrs. Fouchey and de Vletter, ship brokers, Rotterdam:—For Batavia and Samarang, Whampoa, 462 tons; Marie, 746 tons, Catherina Wilhelmina, 1,083 tons, 18f. to 20 for B, 25f. to 30 for S; for Batavia and Sourabaya, Delft, 735 tons, 20f. for B, 25f. for S; for Samarang, Marie Magdalena, 403 tons; Vyf vrienden, 337 tons, 25f. to 30; for Sourabaya, Salatiga, 448 tons, 25f. to 30; for Padang, Frederik Hendrik, 611 tons, 40f., all per last of 2,000 ks. of 120 cubit feet Amsterdam, of 15 per cent.; for Singapore and Hong Kong, Gouverneur van Swieten, 352 tons 30f. to 35 for S, 40f. to 45 for H, both per ton of 1,000 ks., or 40 cubit feet English, and 15 per cent.; for Melbourne (H.B.), Nereus, 665 tons, 35f. to 40 per 1,000 ks., or 40 cubit feet English, and 5 per cent.; for Decima and Kanagawa, Japan packet, 266 tons, 60f., and 15 per cent. per last of 80 cubit feet English.

HAMBURG.

(FROM OUR OWN CORRESPONDENT.)

January 7, 1865.

The good people of Trieste appear to be quite in earnest in their endeavours to obtain the full benefit of their geographical position with respect to the direct trade with China and Japan, as soon as the opening of the Suez Canal shall enable them to do so. A project has been started by a Signor Revoltella for the formation of a sort of East India Company, to trade with the Far East by means of their own steamers from Trieste, *via* Suez, under the Austrian flag. That gentleman has lately made a journey to Holland to sound the feelings of the Dutch merchants on the subject, and endeavour to obtain their support and co-operation. He has now returned to Trieste in high spirits, having ascertained that the leading East India houses at Amsterdam are greatly in favour of the plan, which also finds support and sympathy in the highest quarters, the Colonial Minister being among the number. They express their conviction that on the completion of the Suez Canal Trieste could not fail to become the chief emporium of the European continental trade with the Far East, and from its favourable situation would be able to compete successfully with any other continental trading port.

In the meantime, the Austrian Government is not blind to the fact that to promote the success of any new undertaking of this description a reform and extension of the consular system is a desideratum of the last importance. Austrian consuls abroad have hitherto been placed exclusively under the orders of, and in sole communication with, the Minister for Foreign Affairs, but the feeling has become very general in commercial circles at Vienna that the period has arrived for transferring the control and direction of the Consulates to the Department for Trade, and that the commercial reports of the consuls should be published for the benefit of the mercantile world. Above all things, it is generally agreed that immediate steps ought to be taken for negotiating commercial treaties with foreign states—more especially with China, Japan, and Siam—which will give Austrian subjects a recognised footing and a right to trade, whereas they are now only permitted to do so on sufferance, or are in the humiliating position of being obliged to place themselves, their cargoes, and their ships, under the protection of the consul of some other perhaps smaller but, at all events, more enterprising maritime State. In the spring, the Austrian Government intend to take some steps to mitigate this evil and place their national flag on a more dignified footing in foreign countries.

The subjoined table shows the total quanties of East India produce imported at Trieste by sea in the last three years (in centners.)

	1861.	1862.	1863.
Coffee	239,994	164,912	252,718
Cinnamon	125	165	8
Cassia lignea	810	494	105
Cloves	920	688	473
Nutmegs	108	97	116
Pepper	8,949	6,922	8,185
Tea	93	45	16
Ginger	101	—	541
Sugar, raw	61,455	136,079	42,731
„ refined	251,814	323,272	264,867

Rattans	2,605	1,975	822

COMMERCIAL.

COFFEE.—Since the departure of the last mail the Christmas and New Year's holidays have interfered considerably with business, and caused a check from which the market is only just beginning to recover. As the frost precludes the possibility of the arrival of any fresh supplies holders continue to be firm, and in general a favourable opinion for this article prevails. According to the statistics just published the quantity of coffee of all descriptions imported here in 1864 amounted to 69,100,000 lbs., showing a considerable falling off as compared with the preceding years (85.300,000 lbs. in 1863, 80,800,000 in 1862, and 100,000,000 in 1861), whilst the stock on hand on the 1st of January, 1865, was 10,000,000 lbs., and nearly the same in the three previous years. Sales of the fortnight, 14,000 bags.

SUGAR.—During the holidays the prices of Raw had a tendency to decline, but have since become firmer. The imports in 1864 have fallen off as compared with 1863, and the stock in warehouse is 7,000,000 lbs., against only 2,000,000 lbs. last year. Refined goods are in favour, and 20,000 loaves have been sold a shade higher.

RICE.—Market firm, with a sufficiency of orders to cause some animation, but there are no large sales to report.

SPELTER.—This article is decidedly dull, and somewhat lower than in last report. Silesian in slabs may be bought at 12⅞ marks banco per centner of 50 kilogr., both ex warehouse and for delivery in the spring, but even at this figure purchasers are reluctant to operate.

Discount, 4½ to 5 per cent.

Digitized by Google

PASSENGERS INWARD.

From JAVA.—Per Baron van Pallandt van Roosendaal, Captain Hoogenstraaten, Mr. Hurrelbrinck, Mrs. van Bommel and Son; per Vooruit, Captain Kool, Mr. Zabli and family, five soldiers; per Catherina Jacoba Henrietta, Captain Tonjes, Mrs. Soeterik, van Delden, de Hoog.

ROBBERY OF THE BORNEO COMPANY.—About the middle of May last, a young, sickly-looking man, calling himself Charles Walter Thorne, arrived in Ayr, and on alighting at the station inquired of the station-master if he could recommend him to a quiet lodging in the neighbourhood. He was directed to a house in the suburbs, where he obtained furnished apartments. He was in very delicate health, and was attended by a medical gentleman of the town. He remained for about a fortnight, during which time he took daily carriage drives, and his health seemed to improve considerably. He said he expected a lady, whom he had entrusted with the transaction of some urgent business for him in London, to call for him, and he went frequently to the station to meet her, but she never came. At last he said he would require to go to London himself, and he accordingly set off on a Monday morning, promising that he would return in a few days. He sent a telegram announcing his safe arrival in the metropolis, but nothing farther was heard of him until Wednesday last, when a lithographed circular was received at the various banks in Glasgow (accompanying which was a carte de visite of the stranger), stating that his real name was Walter H. Dalgleish, late a clerk in the service of the Borneo Company at Hong Kong, and that he had robbed the company of a £3,000 draft, for which he obtained cash in London. On 5th May Dalgleish paid £1,000, in fifty Bank of England notes for £50 each, into the Mercantile and Exchange Bank at London, in the name of Ralph Ensign, to be remitted to his credit with the Glasgow branch of that bank. He also paid £1,580 in seventy-nine like notes to the London Bank of Scotland, getting in exchange two orders of £790 each on their branch in Glasgow, in favour of Ralph Ensign. He then, as Ralph Ensign, received payment of the £1,000, and the £1,580 in Scotch notes in Glasgow, after which he proceeded to Ayr. While at Ayr he showed a considerable amount in gold, as well as a number of unset diamonds and jewellery. The last glimpse got of Dalgleish was at the Crystal Palace, near London, on the 11th June, since which all trace of him has been lost, but he is believed to have passed as Henry Gray, of Canada, and he may have gone to Canada, or some other part of America. It seems Dalgleish had been sent home by one of the partners of the Borneo Banking Company in Hong Kong on account of the delicate state of his health, and he had stolen the draft before leaving, and the theft not being discovered for some time afterwards, he has had ample time to "go off to parts unknown."

POSTAGE ON MERCANTILE CIRCULARS, &c.—Treasury warrants have been issued specifying—1st, the mode of transmission and rates of postage of packets consisting of books, publications, or works of literature or art, British, colonial, or foreign, transmitted between any part of the United Kingdom and any part of the Cape of Good Hope, by British packet boat direct or private ship—by British packet boat *via* Suez, and in closed mails *via* France and *via* Suez (the sea conveyance being by British or colonial packet boat); 2ndly, repealing the rates of postage formerly chargeable on all printed prices-current and printed commercial lists transmitted by the post and conveyed by packet boat, or private ship, from any of Her Majesty's colonies, or from any foreign countries to or through the United Kingdom, whether transmitted direct or through any other colony or foreign country; and directing that henceforth there shall be chargeable the same or the like rates of postage payable on printed newspapers transmitted by the post and conveyed in like manner from any such colony or foreign country to or through the United Kingdom; and that in all cases where printed newspapers are so transmitted and conveyed free of postage all printed prices-current and printed commercial lists shall be so transmitted and conveyed in like manner free of postage; and 3rdly, regulating the transmission of packets not exceeding eight ounces in weight consisting of patterns or samples of merchandise of no intrinsic value posted in any part of the United Kingdom, addressed to any place within any of the States of the German Postal Union, or either of the Free Hanseatic Republics of Hamburg and Bremen, or posted in any place within any of the States of the German Postal Union, or either of the Free Hanseatic Republics of Hamburg and Bremen, addressed to any part of the United Kingdom, in closed mails *via* Belgium, subject to the several rates of postage (including the Belgian transit rate) therein mentioned.

THE SWORD OF CHUNG WANG.—General Gordon, of Southampton, has received the following letter from his distinguished son, Colonel Gordon:—"I send home Chung Wang's sword. It is wrapped in a rebel flag belonging to Tieu Chwang, a rebel chief, next in command to Wang, and who was killed on it at Chan-Chu-Fu. You will see marks of his blood on the flag. Chung Wang's sword was given by him to Tye Wang, a rebel chief, of Leyang, at Wusich, in December, 1863, after the all of Soochow, and at the time that Chung Wang, disgusted, determined to return to Nanking, and take for a time no further active operations. It is more than an ordinary sword. The Emperor of China gave one to San-quo-jan, and this gift was accompanied with permission to San-quo-jan to execute anyone, whatever his rank might be, without reference to Peking. In fact it was a symbol of the power of dictator. Tien Wang, the rebel chief at Nanking, gave this sword to Chung Wang, with the same power as the Imperialists, and it was this symbol of chief and supreme command which Chung Wang handed over to Tye Wang when he was recalled to Nanking. It fell into my hands at Seyang, on the 9th of March, 1864, and has on it Chung Wang's name, 'Li-tzn-tquen,' Chung Wang, meaning 'faithful prince.' Chung Wang has since been taken prisoner by the Imperialists at Nanking."

WRECK OF THE "ALICIA ANNIE," FROM MANILA.—Another example has been offered of the damage caused by Daunt's Rock, on which the *City of New York* was wrecked while entering Cork harbour. The brig *Alicia Anne*, Andrew Fraser, master, 300 tons burden, from Manila, with a cargo of hemp and sugar, value about £10,000, struck while entering the harbour. As if to make more conspicuous the futility of the precaution the Ballast Board has contented itself with, this vessel was entering under the best possible circumstances. About six o'clock in the morning the brig was off the Old Head of Kinsale. Towards evening she neared the harbour. The captain took a pilot on board, and was taken in tow by a steamer about half-past six o'clock in the evening. The captain was walking the quarter-deck, and saw the light lately put up at Roche's Point for the purpose of pointing out the rock; the pilot was on the forecastle: and she was, as we have said, in tow of a steamer, when the vessel, drawing 14 feet of water, and going from four and a half to five knots, struck upon Daunt's Rock. She immediately filled, and was with great difficulty brought into the harbour, and beached upon the Spit bank, where she now lies, the water being just below her deck beams. The sugar she carried was in bags, and of course immediately destroyed; the hemp, value £5,000, has been all saved through the energy shown by the agents, Messrs. Scott and Co., who had it all taken out before the rise of the tide. The ship itself will be saved.

A CHINESE DINNER.—A traveller recently arrived at Paris from Peking gives the following description of a Chinese dinner:—"The first course consisted of a kind of square tower formed of slices of breast of goose and of a fish, which the Chinese call 'cow's head,' with a large dish of hashed tripe and hard eggs of a dark colour preserved in lime. Next came grains of pickled wheat and barley, shell-fish unknown in Europe, enormous prawns, preserved ginger, and fruits. All these are eaten with ivory chopsticks, which the guests bring with them. On grand occasions the first dish is always birds'-nest soup, which consists of a thick gelatinous substance. Small cups are placed round the tureen, each containing a different kind of sauce. The second course was a ragout of sea-snails. At Macao these are white, but at Ningpo they are green, viscous, and slippery, by no means easy to pick up with small sticks. Their taste resembles that of the green fat of turtle. The snails were followed by a dish of the flesh covering the skull of sturgeons, which is very costly, as several heads are required to make even a small dish. Next was a dish of sharks' fins mixed with slices of pork, and a crab salad; after these a stew of plums and other fruit, the acidity of which is considered a corrective for the viscous fat of the fish; then mushrooms, pulse, and ducks' tongues, which last are considered the *ne plus ultra* of Chinese cookery; deer's tendons—a royal dish which the Emperor himself sends as a present to his favourites; and Venus's ears—a kind of unctuous shell fish; lastly, boiled rice, served in small cups, with acanthus seeds preserved in spirits and other condiments. Last of all tea was served."

CHINESE CURIOSITIES.—The Emperor and Empress, a few days back, visited at the sale rooms in the Rue Drouot a fine collection of Chinese curiosities belonging to M. Louirette. Their Majesties were accompanied by General de Goyon, the Marquis de Caux, and M. de Saint Aubin, librarian to the Empress. M. Thiers and Baron de Rothschild had previously visited the collection. At the sale which took place on the following day a rectangular flower-stand, supported by two kneeling Chinese warriors, enamelled, with the exception of the heads and hands, which are in bronze gilt, was knocked down for 11,250f.; two pieces of furniture, in black wood, each ornamented with twenty-three plates in enamelled porcelain, fetched 4,000f.; a table, decorated with arabesques, sold for 2,000f.; a large vessel for burning incense, with gilt cover and high handles, was knocked down for 6,000f.; two white elephants, in enamel, 2,440f.; and octagon perfume burner, with gilt cover, 4,000f.; a gourd, having on each side a medallion with a landscape, 3,620f.; a basin with a flat cover, having the form of a barrel, 2,901f.; a handsome cylindrical porcelain vase of the time of the Myngs, 2,000f.; and another of the same period, 1,000f. Her Majesty is said to have been the purchaser of the finest articles. The whole sale produced nearly 85,000f.

CHINESE SHEEP.—The *New Zealander* says:—"We have received a communication from a gentleman who has some thoughts of organising a company to obtain from China a very prolific breed of sheep, which finds much favour with the inhabitants of that country. Their fecundity seems very surprising, as they are said to produce from three to five at a birth, or, as our accounts call it, a litter, and to have a litter of this kind twice a year. Their material ingenuity is not, it seems, inferior to their fecundity, as they wean the stronger lambs, and allow the more weakly ones to suck for a longer time. They are said to produce from 7 lb. to 12 lb. of wool annually, to weigh 143 lb. to 170 lb. as mutton, and to be of a quality not inferior to Leicester sheep. These sheep inhabit the northern parts of China, near the Great Wall, and would therefore require to be acclimatised to our warm climate."

ANOTHER CHINESE DISTURBANCE AT ELEPHANTA.—The last mail from Bombay reports that a number of the "Celestials" inhabiting the island of Elephanta, collected together in a mob, evidently with the intention of kicking up a tremendous row, and arming themselves with clubs and stones, marched off towards the guard-house occupied by the Tanna Rangers; on approaching which, the greater portion of the ruffians fell back, but a few who were more daring than the rest advanced stealthily to the sentinel on his post, and stoned him; whereupon his piece was at once levelled and discharged into their midst, which immediately brought out his comrades, who seeing the serious state of affairs fired at the Chinese, and after a few shots, finally dispersed them, wounding four and capturing a few others who are now doubtless in confinement.

ENGLISH SEAMEN AT A CHINESE FIRE.—The following is an extract of a letter received by last mail from an officer on board of Her Majesty's gun vessel *Algerine*:—"Hankow, Oct. 13, 1864.—Yesterday a fire broke out in the Chinese city, burning an immense extent of houses and some of the English and other foreign houses on the river side, outside our concession. The 'Algerines' were there as soon as possible; their behaviour was really admirable, as it had been during a previous fire about a fortnight since. On both occasions they were surrounded by liquor, and I had not occasion to find fault with a single man. Every one on shore remarked, 'How those men do work?' And, truly, and candidly speaking, I have been at several fires in China, and I never saw men work so well and steadily."

SCENES AT THE CAPE AND JAPAN.—In the *Illustrated London News*, 7th January, their special artist has sent an account and photograph of the view of British and Japanese troops at "Yokohama," together with a sketch of a Japanese letter, and a view of the upper battery at Simonoseki, all of which appear as engravings. Engravings are also given from sketches by Mr. F. L. Bedwell, of Port Hamilton, in the Peninsula of Korea, and of the style of dress of the Koreans. Korea will no doubt soon figure as a place of trade, through the enterprise of Englishmen.

The London & China Telegraph.

LONDON, THURSDAY, JAN. 12, 1865

THE FRENCH TREATY WITH COCHIN-CHINA.

WE find the following paragraph in a Paris paper:—

"Admiral de la Grandière, Governor of Saigon, who is shortly expected in Paris on a *conge*, is the bearer of an autograph letter addressed by the Emperor Tu-Duc to his French cousin Napoleon III. The Cochin-Chinese Sovereign most probably demands the abrogation of the treaty concluded by M. Aubaret, and the withdrawal of the French troops, on condition that the tribute-money, which no doubt he promises to increase, be paid regularly."

Our information is that during the absence of Admiral la Grandière, Admiral Jaurez will act as his *locum tenens*, and the command of the fleet will be entrusted to Flag-Captain Duquillot until the arrival of Admiral Rose, who has just been appointed to the station, and proceeds, we believe, by the next mail. Another version, however, is that the last-named officer not only replaces Admiral Jaurez in the command of the China and Japan squadron, but also as interim Governor of Saigon. Captain Ollivier, just promoted, has been appointed Flag-Captain to Admiral Rose, and has gone out in *La Guerriere*, which will replace the *Semiramis*, ordered home. Lastly, Captain Lejeune, who has left for Saigon, is said to be appointed Commandant Superieur of the Marine for Saigon, an arrangement which would lighten Admiral Rose's duties.

We hear that the Governor has introduced into the administration of the colony a Director of the Interior, and that this officer will be accountable only and directly to the Governor himself; in other words, the internal affairs of the colony will be managed without interference from any one else. A Ministerial paper of Paris says:—"The constantly increasing development of the security and prosperity of the colony renders necessary this measure, which will allow of the centralisation of the action of the various European and native authorities." We confess we are at some loss to comprehend the exact meaning of these phrases, but we suppose the purport is that the broth will be better done in proportion as fewer cooks have a hand in it. Measures are being taken for the establishment of a lighthouse at the mouth of the river Donnai, in order to facilitate access during the night to the anchorage of Cangiou. About three months since we recorded the despatch of supernumeraries and stores by the Overland route. In reference to the treaty made by M. Aubaret, it is quite decided not to ratify it, but to hold possession of the three provinces. The revenue for 1864 it is reported will reach about two and a-half million francs.

THE CONSULAR SERVICES IN CHINA AND JAPAN.

IN another column we present a list showing the present *personnel* of these departments, which are charged with such important duties in conducting our international relations on the other side of the globe. The vast extension of our interests in China and Japan during the last few years has been necessarily followed by an increase of Her MAJESTY'S official staff in those regions, and the list we publish to-day comprises probably twice as many names as would have filled it five or six years ago. The vast territorial distribution of these services is indicated by the names of the stations at which the various officers are placed, and, as chief of a department extending over some twenty degrees of latitude, Her MAJESTY'S Minister at Peking must be reckoned as holding a very onerous post. Sir FREDERICK BRUCE, who, for the last five years has very ably filled the appointment of Plenipotentiary in China, is now, however, enjoying a well-earned leave of absence, and the frequency with which his name is observed among the favoured guests in attendance on Her MAJESTY testifies to the esteem in which he is held, in common with all the members of his family, in the highest quarters. Contrary to the general expectation, his *locum tenens* is Mr. T. F. WADE, a gentleman of most distinguished scholarly attainments in the Chinese language, but who has never chanced to display—owing possibly to lack of opportunity—those brilliant talents for diplomacy and administration which have signalised Sir HARRY PARKES, the functionary who above all others seemed, as we observed at the time, marked out for the post vacated by Sir FREDERICK. It may be that weighty official considerations have necessitated the appointment of Mr. WADE; but, with all respect to this latter gentleman, we cannot help repeating that in the list we publish to-day Sir HARRY PARKES' name at the head would be a nearer approach to "the right man in the right place." We trust, however, that ere long, without detriment to any other claims, we may see our interests in China confided to the care of one who at Canton, Peking, and on the Yangtze has shown himself so well qualified for promoting them. The rumour current some time since that Sir FREDERICK BRUCE would not return to Peking seems to be accepted as a fact; should this be so, the appointment must now be under the consideration of H.M.'s Government, and it may turn out that the recal of Sir R. ALCOCK has something to do with it.

Apropos of Shanghai, it strikes us as most strange that H.M.'s Government should not yet have seen fit to create a Consul-Generalship at a port where the French and United States' Governments, with their comparatively trivial interests, have for some length of time maintained such appointments. The question is one which has been much mooted in China, and for the despatch of judicial and other business at the minor ports, we should imagine that a central authority, to decide appeals, &c., would be a great convenience in comparison with the present system of reference to Peking. It is to be hoped that Sir FREDERICK BRUCE may bring this subject before the Foreign-office during his stay in England. The correspondent of *The Times* on this subject says:—

"The lack of power by Her Britannic Majesty's Consuls in cases of criminal jurisdiction is becoming a crying evil. Setting aside the cases of rebellion against the Emperor of China, in which an English subject would now find it difficult to engage, the heaviest punishment for any crime that a Consul can inflict is twelve months' imprisonment with hard labour, with the additional sentence, after a second conviction, of deportation from China; but deportation, although a very desirable measure, can hardly be considered a punishment. It is a very different thing from transportation from England; so that for piracy, burglary, murderous assaults, and other similar eccentricities, Englishmen are at present only liable to be imprisoned for twelve months. Of course, it is competent to the Consul to send them to Hong Kong for trial, but I suspect a Consul who habitually incurred the expense of sending a prisoner and the necessary witnesses to that colony, would not be looked on benignly by Government. A murder case is of course always referred to the Hong Kong Supreme Court, but cases have frequently occurred in which the perpetrators of grave crimes have escaped with the stereotyped twelvemonths. An Englishman who was concerned in the piracy of the *Tsatlee*, which will be well remembered, was sentenced to one year's imprisonment, while an American, who had only taken an equal share in the transaction, got ten years, the Consul-General of the United States having full power even to condemn to death in cases of murder."

Among the senior officers of the Consular Service we still hail, in 1865, the familiar and respected names of Messrs. D. B. ROBERTSON, T. T. MEADOWS, W. H. MEDHURST, M. C. MORRISON, and others, who, during something like a score of years, have filled the most prominent positions in China, and who, having seen the earliest growth of our unshackled commerce, still figure as presiding in various quarters over its enormous increase. Considering, indeed, the trying climate of China, the longevity of the Consular Service is a remarkable fact; and it would perhaps be difficult to find another tropical country where, amid so many dangers to life and health, so great a number of officers are to be found (proportionally) who have passed twenty years and upwards of almost uninterrupted service. One death has occurred since the publication of our last list—we refer to Mr. GEO. C. P. BRAUNE, who died of heart-disease shortly after reaching Peking in May last. With the exception of this death, that of the Rev. W. C. MILNE, who also expired at Peking a year or two ago, and that of Mr. Consul GINGELL at Hankow in 1863, the Consular Service in China has been remarkably exempt from such mournful vacancies. The junior officers who have been dispatched to China since the outbreak of hostilities in 1857 appear to have

Digitized by Google

pulled off, a salute of twenty-one guns was given from the *Feiseen*, the booming of the return salute being the last heard of Macao, and its pleasant reception.

Outside, however, there was yet another honour awaiting us. The *Josefito Almira*, a large vessel, with over 300 coolies on board, classed as a man-of-war, received the British flag with a salute of twenty-one guns, and nine for the Commandant. This was again replied to by twenty-one guns from the *Feiseen*.

On the homeward passage, the general good-humour was pleasantly kept up. Breakfast was served down below, and we understand several toasts got up; but of this we cannot vouch. CaptainCarroll's health alone could be admitted, after the hard toasting campaign gone through in Macao.

COCHIN CHINA.

SAIGON.

By way of Singapore we have the *Courier de Saigon* of the 5th December.

The news from the interior indicates that, owing to the abundant rains of the preceding month, there is promise of a good rice crop. It is hoped that it will be as large as that of 1864.

The Chinese are spoken of as very valuable colonists. They have undertaken the reconstruction of Cholen, and in six months have created a new town. They are trying to substitute steam barges for the slow junks for the transport on the rivers. They have also spontaneously instituted a school for the French language at their own cost.

The *Courrier* calls the attention of French merchants to the profits that may be derived from the fishery on the great lake of Cambodia. The Custom-house returns at Phuom-penh for this year show a quantity of 80,000 piculs dried fish, besides fish oil, &c. This return is thought to be understated, and there is reason to believe that it may be put down at from 120,000 to 150,000 piculs, or from nine to ten thousand tons, which, adopting the average price at Phuom-penh of 10 francs per picul, represents a value of from twelve to fifteen hundred thousand francs.

The *Courrier* thus describes the harbour of St. James, at the mouth of the Saigon river:—

The large and deep watercourse that connects Saigon with the sea is easily practicable for the largest ships. These conditions of a port situated fifty miles in the interior, in the centre of consumption and of production, as easily accessible to the largest vessels as a sea-side harbour, are exceptionally favourable; they are unique in the China Sea, and rare in the seas of Europe, where the Thames and the Tagus alone can challenge a part of these advantages. At all events these rivers do not possess at their outfall a large and safe anchorage, capable, like that of St. James, of serving as an indispensable means of union between the navigation of the interior and that of the exterior. The harbour of St. James lies upon the route which is most frequented by ships coming down the China Sea, at all seasons, or going up it in the S.W. monsoon. It offers the only point between Singapore and Hong Kong where vessels can run with perfect security for refuge in bad weather with facilities for refitting. The importance it has already acquired will be increased when the colonial administration shall place a light-ship upon the station, construct a convenient watering-place in Cocoanut Bay, and establish a coal depot, anticipating on this point private enterprise, in favour of which it can afterwards retire.

NETHERLANDS INDIA.

BATAVIA.

The mail from Europe of the 17th October arrived out on the 27th November; and our dates from Batavia are to the 29th November.

H.M. steamship *Bromo* arrived on the 26th November from Singapore, having on board Vice-Admiral Fabius, who replaces Admiral May. His Excellency landed in the afternoon, and was received at the Little Boom by a small body of officials, one of whom (the Governor's Adjutant) accompanied the Admiral in the Governor's carriage and four, which had been sent down for his use, to the residence prepared for him. Admiral May, A. Prins, and H. B. v. d. Wyck, Esqrs., late Members of the Council of Netherlands India, were to leave per H.M. steamship *Bromo* for Singapore, thence to proceed by French mail to Europe.

Colonel Kroesen, the Governor of Celebes, has been appointed a Member of the Council of Netherlands India, and the steamer *Hertog Bernhard* has proceeded to Macassar to fetch the new member. C. Castens, Esq., resident of Bagelen, has been promoted to director of *Middelen en Domeinen*.

Lieutenant Tobias, N.I.I., has brought an action for defamation of character against Major Donleben, Captain Swaving, and 2nd Lieutenant von Schmidt auf Altenstadt, all of the same corps.

The Chinaman Koo A. Sian, merchant, and a sub-wykmeester, is said to have absconded by the last mail steamer, leaving liabilities to the extent of 33,000f. It seems that he availed himself of his official position to procure a passport, having put his seal of office to a document bearing the name of another man, and which was countersigned by the Major Chinaman. He is believed to be connected in business with Lim Atjiet, whose flight we reported a few weeks ago.

The *Sourabaya Courant* is informed that Mr. Roorda van Eijusinga has been served with the following telegram.—"*R. v. E. must now leave India within* 14 *days.*" One of Fowler's steam ploughs of 14-horse power, had just been landed at Sourabaya.

STRAITS OF MALACCA.

SINGAPORE.

The London mail of the 26th October reached Singapore on the 1st Dec. by the steamer *Ganges*. The Messageries' homeward mail from China arrived on the 3rd December, and was despatched for Europe the following day.

The *Straits Times* notes receipt of the intelligence that the *Salsette* had not arrived at Hong Kong in due course, and thinks it probable she had put into Labuan.

Births, Marriages, and Deaths.

(Announcements for Subscribers are made free of charge.)

BIRTHS.

BLAKISTON—On the 28th Dec., at Wood-end, Hollington, near St. Leonard's-on-Sea, the wife of Commander Peyton Blakiston, R.N., of a daughter.

DENNIS—On the 11th Jan., at Hill-side, Streatham, the wife of John Dennis, Esq., of a son.

ELLIS—On the 10th Jan., at 27, Belgrave-square, the Hon. Mrs. Arthur Ellis, of a daughter.

GODDARD—On the 29th Dec., at 7, Victoria-road, Clapham-common, the wife of Mr. James Goddard, of a daughter.

HOGG—On the 19th Dec., at 38, Westbourne-park Villas, the wife of Alfred Graham Hogg, of Hong Kong, of a daughter.

ROBB—On the 26th Nov., at Marine Villa Singapore, the wife of Mr. D. Robb, of a son

TATE—On the 23rd Dec., at Croydon, the wife of William Henry Tate, Esq., of a son.

TRAUTMANN—On the 28th Dec., at Mulgrave House, Fulham, London, the wife of J. F. H. Trautmann, of a daughter.

THOMPSON—On the 2nd Jan., the wife of W. H. Thompson, Esq., The Firs, Bickley by Bromley, Kent, of a daughter.

TWIGG—On the 22nd Nov., at Shanghai, the wife of Mr. Paul O'Brien Twigg, of a son, stillborn.

WINCHESTER—On the 12th Dec., at Sunderland, the wife of Capt. John Winchester (late of the Caribbean), of a daughter.

MARRIAGES.

EUSDEN—GAREY.—On the 29th Nov., by Consular licence, and at the Episcopal Church, Avenue Marbouef, Paris, by the Rev. G. G. Gardiner, M.A., Richard Eusden, Esq., Japanese Secretary to H.B.M.'s Legation at Yedo, Japan, to Mary Ann, youngest daughter of the late Edward Garey, Esq. No cards.

EVANS—WHISTLER.—On the 29th Dec., at St. James's Church, Colchester, by the Rev. R. F. Whistler, M.A., rector of Hollington, Sussex, brother of the bride, assisted by the Rev. R. S. Cummins, M.A., Joseph Henry Evans, of Hankow, China, to Mary, daughter of Edward Webster Whistler, Esq., of Colchester.

SCHMIDD—LONGSTAFF.—On the 15th Nov., at St. John's Cathedral, Hong Kong, by the Rev. T. J. Irwin, D.D., Colonial Chaplain, Stephen Henry Schmidd, to Sophia Longstaff.

VOLKMAN—VERNON.—On the 22nd Nov., at St. John's Cathedral, Hong Kong, by the Rev. T J. Irwin, D.D., Louis Volkman, to Martha Vernon.

DEATHS.

FALCONER—On the 4th Dec., at Singapore, Mr. John Falconer, of Stonehaven, Scotland.

FEGAN—On the 17th Nov., at the Military Hospital, Hong Kong, Thomas Fegan, private H.M.'s 99th Regt., aged 28 years.

DOOLEY.—On the 4th Nov., perished in the wreck of H.M. ship Racehorse, in the China Seas, Mr. G. M. Dooley, Chief Engineer, eldest son of the late Commander Dooley, R.N., of Worthing. A widowed mother and five sisters are left to mourn the loss of a dutiful son and loving brother.

GRAY—On the 18th Nov., at the Civil Hospital, Hong Kong, Charles Gray, destitute seaman.

HARVEY—On the 8th Nov., on board the ship Northfleet, at Hong Kong, in the 23rd year of his age, Richard John Harvey, son of the late Richard Coward Harvey, of Ludgate-hill, and grandson of the late Thomas Tegg, of Cheapside.

HOGG—On the 6th Jan., at 42, Norland-square, Notting-hill, deeply regretted, Edward Hogg, Esq., in the 72nd year of his age.

NOBLE—On the 15th Nov., at Hong Kong, Catherine, the wife of Henry Noble, of the Agra Bank.

PENDER—On the 14th Nov., at Hong Kong, James Pender, late engineer S.S. Clan Alpine.

YOUNG—On the 21st Nov., at West Point, Hong Kong, Mrs. Young, wife of the schoolmaster of H.B.M.'s 20th Regt.

COMMERCIAL REPORT.

CHINA IMPORTS.

COTTON YARN.—The only sale reported in this article during the past fortnight consists of the settlement of five bales of medium numbers purchased for re-shipment to Japan. Grey Shirtings: These goods have remained entirely without inquiry during the past fortnight, and the only settlement to notice is that of 3,050 pieces of damaged goods which hav

Digitized by Google

been moved off by public auction. White Shirtings: The same remarks apply to these fabrics, which have not found any buyers since the date of last circular, and 150 pieces of damaged goods disposed of by public auction constitute the fortnight's transactions. T-Cloths: There have not been any sales of sound goods reported in this colony, but from Foochow we hear of the settlement of 800 pieces 6 lbs. at 3.25 dols. per piece: 1,300 pieces of damaged cloths have been disposed of at public auction. American Drills: The market is quite bare of these goods. White Spotted Shirtings, Dyed do., Brocades, White and Coloured: There are not any sales of these manufactures to notice either here or in Foochow, and prices remain nominally as before quoted. Damasks: There are not any sales reported. Chintzes remain without inquiry. Handkerchiefs have been purchased in this colony to the extent of 750 dozens.

WOOLLENS.—Spanish Stripes, Medium Cloths, Ladies' and Habit Cloths: The sole sales of these goods reported in this colony during the fortnight are those of 156 pieces of medium Cloths, while at Foochow business has been limited to 240 pieces Spanish Stripes taken at 85 cents per yard. Long Ells: There has not been any business transacted in these goods. Camlets: Nothing doing. Lastings: The sales of the fortnight amount to 200 pieces. Blankets: There has been a moderate inquiry shown, and the settlements are put at 500 pairs.

METALS.—Iron, Flat, &c.: The value of iron is very firm, and there is a fair amount of inquiry existing for the various descriptions of Nail Rod imported. The business of the fortnight is put at 2,700 piculs of Nail Rod and 330 piculs of Hoop. In Canton, 1,250 piculs of Hoop and 500 of Flat Bar have found buyers at advanced rates. Lead: Continues very dull of sale; the business transacted amounting to 125 piculs, and 700 piculs for Hong Kong and Canton respectively. Tin: The settlements of the fortnight amount to 700 slabs. Tin Plates have been taken to the extent of 300 boxes.

SHIPPING INTELLIGENCE.

ARRIVALS.

At YOKOHAMA.—From London: Nov. 4, Velocidade.

At SHANGHAI.—From London: Nov. 23, Aurora Australis. From Liverpool: 11, Queensbury. From Cardiff: 12, Spirit of Trade; 17, Palmerston; 18, Amaranth; 21, Hainan and Trieste. From Shields: 10, Ensign. From Sunderland: 18, Magra. From Newcastle: 12, Agnes Holt and Torres; 14, Cornine and Bertha.

At FOO-CHOW.—None.

At HONG KONG.—From Glasgow: Nov. 17, Blairmore. From Boston: 14, Goethe.

At MANILA.—From London: Nov. 10, Elisa. From Glasgow: 17, Luzon.

At SINGAPORE.—From London: Dec. 3, Alexandra. From Liverpool: 5, Rance.

At PENANG.—None.

DEPARTURES.

From YOKOHAMA.—For London: Nov. 7. Mountain Ash.

From SHANGHAI.—For London: Nov. 12, Palawan; 15, Queen of the Ocean. For Liverpool: 14, Ariadne. For New York: 23, Clara Babuyan.

From FOO-CHOW.—For London: Nov. 8, Lord Clyde; 10, Carisbrook; and 13, Blencathra. For Falmouth: 20, Conrad Henrich.

From HONG KONG and CANTON.—Nov. 16, Nornen for Hamburg (via Macao). For New York: 21, Magenta; 22, N.B. Palmer.

From MACAO.—For London: Nov. 19, Elizabeth Dawson.

From MANILA.—Nov. 10, Windward for New York.

From SINGAPORE.—For London: Dec. 1, Anna Maria. For Bordeaux: 5, Marie. For New York: 2, Magenta.

From PENANG.—For Marseilles: Nov. 20, Ocean. For London: Southern Cross.

LOADING.

At YOKOHAMA.—For London: Bacchante, Pembrokeshire, Alfred Hawley, Medina. For Liverpool: Gabalva.

At SHANGHAI.—For London: Canadian, Countess Russell, Bosworth, Delhi, Spirit of the Deep, Diligentia, Lochleven Castle, Jubilee, Anglo Saxon, James Russell, Courier, and Beufordshire. For Liverpool: Gitana, Silvia, Yorick, Isabella, Queen of the East, Royal Bride, Sailor's Home, Savoir Faire, Constance, Coringa, Her Majesty, Norah Gleame, and Roodee. For New York: Finella. For Montreal: Princess of Wales.

At FOO-CHOW.—For London: Langdale, Esperanza (full), Birch Grove, Violet, Sydney Eggers, Dilkhoosh, and Star of the North. For New York: White Eagle and Bonnie Lassie.

At HONG KONG.—For London: Juanpore. For Liverpool: Melbreck (full) and Jas. Vinnicombe.

At MANILA.—For London: Otillie. For Liverpool: Therese. For Falmouth: Amur. For New York: White Swallow.

At SINGAPORE.—For London: Earl Grey, Maury. For Liverpool: Chase, Dashing Wave, Lady Bowen. For Falmouth: Moldavian, Susanne. For Bordeaux: Marquard Family.

At PENANG.—For Boston: Borneo.

At SINGAPORE.—For London, Edwin Fox and Charlotte Jane.

PASSED STRAITS OF SUNDA.

From ENGLAND and CONTINENT to CHINA, &c.—Nov. 10, Franco Havre to Saigon; 11, Kykduin, Amsterdam to Sourabaya; 12, Diamant Sunderland to Singapore; 13, Kin Lin (str.), Cardiff to Shanghai; 20 R. de los Angelos, Cadiz to Manila.

From CHINA, &c., to ENGLAND and CONTINENT.—Nov. 12, Far East (str.); 13, E. Ronneberg, Verbena, Foo-chow to London; 14, Semper Fidelis, Bangkok to Falmouth; Ellenborough, Foo-chow to London; Rosalind, Zebu to Liverpool; 16, Avondhu, Shanghai to London; 18, Victoria, Batavia to Amsterdam; 20, C. S. Lemon, Manila to Liverpool; 22, Moneta, Singapore to Liverpool.

From CHINA, &c., to UNITED STATES.—13, Ravensworth, Foochow to New York.

FREIGHTS AND CHARTERS.

YOKOHAMA.—To London: Cotton and Tea, £3 to £4 per ton. Silk, £4 to £5 per ton of 50 cubic feet. To Shanghai, per steamer, for silk $3.50 per bale; measurement $3.00 to 5.00 per ton. To Hong Kong, per sailing vessel, $5 per ton of 40 cubic feet: per str. $7.

SHANGHAI.—The rates for London and Liverpool are lower, viz., £2. 10s., and less demand exists for tonnage. A large number of vessels are on the berth.

FOO-CHOW.—To London, £2. 10s. per ton.

HONG-KONG.—The circular of George Holmes gives the following settlements:—Juanpore (460 tons); Whampoa and Macao to London at £2. 15s. per ton; Diana (280); D. F. Weber, sen. (648); Carlotta, (376); and Colina (255); for Akyab, Rangoon, or Bassien to Falmouth for orders, at £4. To Saigon and back the rates are 35 c. to 40 c. per picul. To Rangoon and back 70 c. to 75 c.

MANILA.—Some activity is expected at fair rates for the next few months, as also at the outports. The Therese has been fixed for Liverpool at £3. 10s. per ton for unclayed sugar.

SINGAPORE.—Freights remain high, though vessels in harbour, as well as those arriving daily, are large. To London, from Liverpool the rates vary from £3. 12s. 6d. to £3. 17s. 6d.

PENANG.—Tonnage is in demand both for the rice ports and for London. To the latter the rate is £3. 5s. per ton dead weight and £4 measurement.

CASUALTIES.

JAPAN.

From Hakodadi we learn of the total loss of the British schooner Bonito on the 18th October, at Cape Saiaki, near that port. She was bound for Tien-tsin from Hakodadi, laden with a cargo of sea-weed. The wreck was sold under the instruction of H.B.M.'s Consul for the benefit of the concerned for $850.

NINGPO.

The Hamburg brig Mosquito has become a total wreck at the entrance of the Ningpo River.

COMMERCIAL POSTSCRIPT.

ARRIVALS NOT INCLUDED IN THE TABLES.—Jan. 10, at Falmouth, from Maulmain, Frederick, at Liverpool, from Manila, Gondola; 7, at Brouwershaven, from Samarang, Sverige; 8, from Batavia, Ottolina, Kortenaar, and Jannetje; 11, at Brest, from Saigon, Japan (str.)

DEPARTURES.—Jan. 9, from Sunderland for Shanghai, Coral Nymph, and Queen's Own; 11, from Liverpool for Hong Kong, Chaa Sze.

SPOKEN.—Honigby (Dutch ship), Batavia to Amsterdam, Dec. 2 off Ascension; Cornelia Adolfina, Batavia to Amsterdam, Nov. 27, 14 S., 8 W.

LAID ON AT LIVERPOOL.—For Batavia and Sourabaya, Affghan; for Singapore, Tigris.

CASUALTIES.—The Florence Braginton, Turner, from Sunderland to Hong Kong, which put into Plymouth 1st Jan., after having been in collision, had stem started, lost cutwater and head-gear, and is obliged to discharge.

CHINESE VOTING IN AUSTRALIA.—The following is from Melbourne:—Another amusing novelty in this election was afforded by our naturalized Chinamen. Many of these men were on the roll, and being thoroughly free from political opinions or prejudices, 33 of them in the borough of Beechworth were engaged by one of the candidates at 8s. a head, and tutored to say "yes" to every question put to them in the polling booth. One of the first questions asked was, "Have you voted before at this election?" Answer, "yes," from most of these Celestials, and forthwith they were unceremoniously bundled out of the booth. Two or three of them, however, passed more prosperously through the ordeal, and retired to score out the names from the ballot papers. They had been told to scratch the first three names from the paper, but unfortunately for the arrangement they got the papers upside down, and plumped for their employer's antagonist after all.

NARRATIVE OF PATRICK NELLIS WITH THE TAIPINGS.

I left Shanghai on the 25th February, 1864, with a Cantonese going up to buy silk, being engaged at $200 a trip as a guard to the boat. The destination was Chanzu, a village on the canal leading from Pingwang to Wuchufu. We found that the rebels had moved out and had occupied this place ten days previously. The Cantonese went on shore to make inquiries, and never came back, and soon after the rebels came down and took me and the crew prisoners. They put a chain round my neck, and threatened to cut off my head. A Ningpo man, who could speak English, told me to say that I could fire guns, which being translated to the chief, he asked me to stay with him. I having no alternative, said yes. I was then sent on to Wuchufu, and well treated on the way, provisions being plenty from the loot of Chanzu. At Wuchufu I was brought before Tow Wang (the Yellow Tiger), commander of the city, who was much pleased at my capture. A rifle was produced, and I was asked if I understood it. I said yes, and was taken out to fire at a magpie, and having struck the tile the bird was on, Tow Wang told me that if I liked to stop I should command all the foreigners in the place. These having accepted me as their commander, the chain was taken off my neck and I was given quarters with them. The names of the men were—English, Conroy and Dillon; Austrian, Raffaeli and Glovan; Greeks and Germans, Demetrius, Anathaseus, Palasios, Demetrius Coolis, Antonio, and Veamiscus; French, Pasquali.

They were seafaring men, and were glad to have a soldier to command them; they had come from Ningpo, Soochow, and from the silk boats. Tow Wang asked me if there were any Yang-Quitzes fighting with the Imperialists against them. I said no, that they had been withdrawn. He agreed to give me 4,000 cash a day for the men. He gave me a rank, and we were used as a sort of body-guard. I had to drill the foreigners.

Digitized by Google

This offer however did not appear to give much relief to Hudzo, who still continued to "wriggle" under his bargain.

Intelligence has been received in Paris of the death, on the 23rd of September, on board of Admiral Jaurès' flagship the *Sémiramis*, after three days' illness, of Ambroise Dieudonné, Vicomte de Loyauté, aspirant in the Imperial French Navy, aged 25 years. This promising young officer had already served in the navy nine years. He was buried in the Catholic Cemetery of Yokohama, where his fellow officers have erected a monument to his memory.

Notice is given, under date of the 1st November, that the business hitherto carried on at Yokohama, under the name of James S. Downie, will in future be conducted under the name of Fletcher and Co., Mr. James S. Downie being authorised to sign for the firm per procuration. The auction business of Mr. A. W. Hansard would from the 11th November be carried on under the style of Hansard and Co., and Mr. J. R. Black will sign the firm per procuration. The partnership between William Curtis and Joseph Viney, carrying on business as hotelkeepers at Yokohama, was dissolved on the 31st October; outstanding accounts to be liquidated by W. Curtis.

HAKODADI.

Dates from this port are to the 10th November.

So seldom do we learn anything of what is passing at this *ultima Thule* of commerce that a correspondence between Mr. Consul Vyse and Mr. A. P. Porter (Porter, Dents, and Blakiston), dated so far back as January, 1864, has but just turned up. In reply to a request from the Consul, Mr. Porter gives the following information as to the trade of the port:—

EXPORTS.—The principal are seaweed, timber of various kinds, dried fish, deer skins, deer horns, fish oil, tobacco, potatoes, charcoal and but little else. Indeed, the trade of Hakodadi is but little worth, and could be well done by one or two firms or agents, who would then make a little money, probably; but, as the goods are mostly of that cheap and bulky nature, the freights become very high to get them to a market, which makes the profit small. As we are so far away from the nearest China port, such goods as silk or tea are hardly known here. Our principal exports are to Shanghai, sometimes to Nagasaki and Tientsin. But two vessels have has yet been sent to Europe, viz., the *Sea Witch*, with a cargo of oil, and the *Alpaca*, oil and tobacco, in the year 1862. Salt is lately exported into Northern Russia, principally by the Russian Government transports.

The greatest detriment to our trade is the *Exchange*. The Mexican dollar, four years ago, was worth its weight in itzebus—a native coin, or copper cash 5,321, but to-day the market value of the dollar is but cash, iron, 3,600; consequently, in purchasing anything, we have to pay a much higher rate accordingly. For instance, sea-weed that, four years ago, we could buy for 1.60 dollar up to 7.70 dollars, we now pay 2.80 dollars; which, if not for exchange, would be equal to 1.90 dollars. Thus it is that our trade in Japan is ruined, and what ought to be the merchant's profit, according to Treaty rights—see Article X. British Treaty—is eaten up in exchange to the benefit of the Japanese Government; but, as we are here, we are obliged to bear it. In consequence of this, doubtless, the trade has not expanded so much as it might have done in the four years I have been here. I see but little difference to what it was when I first came. In speaking of exchange, I may also remark on the peculiar fact that a Mexican dollar belonging to any foreign Government official is at all times worth to the Japanese Government 3 itzebus, or 5,100 cash. It would be well if the dollars of the merchants were of the same value.

Mr. Porter considers that many of the Daimios are friendly disposed to foreigners and foreign trade, mentioning particularly four—Sengaro, on the north end of Niphon; and Xanga, Shendai, and Aitchezen-no-Kami, on the west coast. This feeling has been pleasingly evinced by their kindness in cases of wreck.

Another difficulty in the way of the merchant is the system of trading through the *banto* of a firm—the native clerk or petty broker. "In cases of contract it may be necessary to advance money; which, if on the security of the merchant himself, would probably be safe, but in his banto's or broker's name always falls through if brought before the native officials; who are sure to say he is very poor and cannot pay, although at the same time they well know the merchant who owns the goods, whatever they may be, if for sale, or who he is who may have bought from a foreigner." The Governor had lately issued an edict desiring that no credit should be given either by Japanese or foreigners, but this, Mr. Porter thinks, is safest left to the merchant's own good judgment. He recommends also that junks should be permitted to go alongside the foreign vessel and discharge at once into her, instead of having to land the goods and ship them off in cargo-boats. "About two years ago this was tried in Her Britannic Majesty's Consulate before Mr. Eusden and others, all the Consuls here at that time giving it as their opinion that the junks should go alongside foreign vessels, if required to do so; also that they could not come under the Treaty Clause VII. or Regulation II. as transshipment—as by transshipment was meant from one foreign vessel to another foreign vessel; and that junks should be considered as cargo boats, and the duty on all goods shipped by them should be paid for as any other, according to Treaty. The Consuls at that time were Mr. Eusden, Mr. Goskavitz, and Mr. Pitts, Acting United States Commercial Agent."

CHINA.

TIEN-TSIN.

Dates from this port are up to the 15th November, *viâ* Shanghai, per steamer *Yedo*.

Business in imports continued very stagnant, and little improvement can be expected until cotton goods can be laid down at a much lower figure than at present. The opium business is growing smaller every year, which is to be accounted for by the fact that the growth of the native drug is largely on the increase in the North, and this can be sold much cheaper than the foreign drug. The export of cotton continues brisk, and the price is firm at 15 taels per picul.

The Spanish legation was still at Tien-tsin. The envoy has succeeded in making a treaty, but it is not yet signed. His Excellency would leave for Peking in a few days.

The British barque *Queen of Avon* had been on shore 17 days, on the Sha-lui-teen, a dangerous and rocky point; part of her cargo had to be thrown overboard.

SHANGHAI.

The dates are now down to the 25th Nov. The English mail of 26th Sept. arrived out on the 16th, as reported in our last.

It is rumoured that Commodore Montressor, of the *Severn*, will assume the temporary command of the fleet, and that Admiral Kuper may be expected home with Sir R. Alcock.

We regret to announce that Sir Harry Parkes, while in the Consular grounds, was hurt by a deer who butted at his legs. He was able to attend the races (an account of which was given in our last) with the aid of supports.

There has been another small fire in the compound styled Teen-chung, confined, however, to servants' dwellings.

Grace, the pedestrian, has completed his walk of 1,000 miles in 1,000 hours, his 998th, in the presence of some of the consular authorities in this quarter, being done in eight minutes.

The following on docks in China is from the *Friend of China*:—

"We hear from Hong Kong that Mr. John Lamont has sold his two docks at Aberdeen (Shek-pai-wan) for $320,000, the purchasers being the Company recently started, with a limited liability, under the designation of the Whampoa and Hong Kong Dock Company. This is a large sum of money to pay on an experiment—the present amount of competition in docking business in China rendering what was once an exceedingly safe investment, a speculation not far from chimerical. The speculative part of it, however, is the business of those interested. We are only glad that Mr. Lamont, the first European to establish a shipwright's yard in Hong Kong, has made, after his quarter of a century's hard toil in China waters, a good and well-deserved property; no memoir of men who have raised themselves to positions of wealth and respect being more calculated to show what energy, sobriety, and strict principle can effect than would be that of the warm-hearted highlander known as "Jock Lamont," erstwhile carpenter of the East Indiaman the *Fort William*, and who will now, we suppose, leave the field to the ploughing of younger men.

"With regard to docks generally, besides those at Whampoa, there is one at Amoy, another, or an apology for one, at Foochow, and four here at Shanghai. One of these, the last opened, Messrs. Collyer and Lambert's, we have not seen yet; its site being so far off that a charter of the yacht *Donington* for a day's excursion is necessary before an editor, with three issues a week, can venture away so far from home. It must be a grand affair, however, or it would not be able to accommodate so long and beamy a vessel as Messrs. Dent and Co.'s *Fusiyama*, which recently underwent an overhaul in it. Next in newness is Mr. Muirhead's, or the Pootung-dock; also a dock of considerable magnitude, and extensively patronized, as shown by our shipping list during the last three months or so, and averaging an entry of one vessel in three days; a return, at the dockage rates given, most satisfactory, we conclude, to the shareholders. In this dock, too, we have another instance of what Caledonian perseverence and skill can do in the face of obstacles which people of other countries might break down under.

Digitized by Google

"Lastly, we have the Old and New American Docks, properties in which immense sums have been swallowed to make complete; yet all, as we are advised, returning respectable dividends. The Old Dock, however, was a long time in getting water-tight, and is now kept so by a caloric engine, occupying a space of under a thousand cubit feet, and going night and day. Thus, by so many docks in this quarter, the day is gone by when those in the south were employed in all cases, and made fortunes for all interested in them."

The Franco-Chinese contingent in the province of Chekeang was disbanded at the close of October, men and officers receiving a bonus of two months' pay. The force had previously been reduced to 500 men; but, by order we learn of the Futai, has now been completely broken up.

The *North China Daily News* has the following notice of the indefatigable Taotai:—"The Taotai is said to take periodical midnight walks through the city and suburbs, in order to pick up any waifs and strays of information which may fall in his way. He strolls about, disguised of course, and no doubt hears the most candid expressions of opinion with regard to himself. In thus doing, his Excellency Ting follows the example of many renowned Western potentates, and we trust that the same good results which are said to have attended the discoveries made by them will follow the Taotai's nocturnal investigations. The Chinese are now occupied with a story to the effect that a night or two ago Ting made his appearance in a gambling house, and got into a dispute with some one or another whom he detected cheating. A row ensued, but one of the party recognising the Taotai gave the alarm, and the house was quickly emptied. The individual who had got into the dispute was however captured and carried into the city, where after the wholesale administration of two hundred blows he was "warned and dismissed." We are glad to see his Excellency thus initiating a system by which he will be put in possession of many facts relative to the wrongs inflicted by the smaller mandarins, of which otherwise he would never hear."

Colonel Gordon takes his departure for England by this mail, and the merchants have recorded their appreciation of his services to the trade of China.

The British clipper ship *Jane Leech* arrived at Woosung from London *via* Amoy on the 14th November. She experienced an unusually rough passage after leaving Anjer, which place she left on the 27th August, and encountered light variable winds passing through Macclesfield Channel on the 2nd Sept. A series of south-westerly gales and strong winds were met with up to the Prata Shoal, which she passed on the 15th Sept. and sighted the coast of China on the 17th, the wind blowing strong from the N.E. Sighted the N.E. point of Formosa Island on the evening of the 23rd, bearing from N.N.E. to N.E. The wind still blowing from the N.E. and increasing, sail was shortened, the ship plunging heavily. At noon on the following day it was blowing a terrific gale, and the decks were constantly flooded, the ship behaving nobly. Lat. by obs. 26 N., long. 121.45 E., gale and sea increasing. At 6 P.M. wore the ship to the N.W. At midnight, in consequence of the fury of the gale and the current, the ship was driving fast to leeward and it was necessary to wear her to the eastward. Sunday morning the fore-top-sail blew out of the bolt ropes. At noon sighted Pinnacle Island to leeward and Craig Island ahead, but could not weather; set the fore sail and ran to the N.E. for three hours. At 3 P.M. laid the ship to again on the port tack, heading up N.E. with a tremendous head sea from N.N.E. Towards midnight, gale and sea increasing, so much so that the deck and cabin was constantly flooded.. The pumps were constantly attended to during the gale; the cross-jack and mizen royal blew out of the gaskets. Capt. Bingham, seeing that there was no chance of the gale abating, made for Lan-o Bay at the N.E. end of Formosa. At midnight the main trysail sheet parted. At 3 A.M. on Monday the spanker gaff fell and severely injured the man at the wheel. At 4 A.M. wore ship to the N.W.; the fore topsail yard got unparrelled, carrying away all the topmast and rigging, breaking the top in pieces, and seriously damaging the fore-topmast. The men being constantly on deck, were quite exhausted; the quarter boats and bulwarks on starboard side were carried away. At 6 A.M. on Tuesday, the men being so much exhausted from exposure and hard work, several were laid up, the foresail was set, which split from head to foot immediately. Having had no observation for two days, ran for Ship Island on the N.E. end of Formosa, which was fortunately sighted during the forenoon, from which place the ship was steered for Lan-o Bay and anchored. At 3.30 P.M. Captain Bingham started to the village for the purpose of obtaining a gang to come off to the ship to work; and after a great deal of difficulty succeeded in getting a gang to go on board the following day. The village lay at the foot of very steep hills which enclose the bay. The chief officer and seven of the men fell sick, and there were evident signs of the gale breaking; the remaining portion of the crew that were not disabled by sickness were engaged making ready for sea, the natives assisting. Sunday was a day of rest for the men, expecting to sail on the following day, and sailed accordingly. At 7 P.M. on Tuesday, anchored off Tamsui. On Friday 4 P.M. sailed for Amoy, Captain Paterson, late of the Hamburg brig *Matilde*, took passage in the *Jane Leech*, having lost his vessel off Tamsui during the same gale.

We find the following account of theatricals in the *North China Daily News*:—The programme announced for Miss Julia Edouin's benefit was so full, that perfect acquaintance with the different parts could hardly have been expected from the already well-worked performers. This was more especially the case, as the erection of a new proscenium must have rendered it impossible to use the stage for rehearsal on the day of the performance. The first piece, "Hard Struggles," is in itself somewhat halting. It seems to be a three act drama not very judiciously crammed into one act. Miss Julia Edouin as *Amy* won all hearts by the simplicity with which she acted. Miss Rose Edouin as *Lilian*, and Messrs. Creswick and Andrews, materially aided the success of the piece. The scene from "King John" which followed took the house by surprise. It was impossible to anticipate that the popular danseuse should so interpret the ideas of England's noblest poet, as to prove the possession of a true appreciation of the bard's meaning. Mr. Birch, as *Hubert*, acted well up to Miss Edouin's *Prince Arthur*—indeed the scene from Shakespeare was the gem of the evening, and gives promise of a future excellence in Miss Julia Edouin's case which her warmest admirers could before hardly have hoped for her. The sword dance we have seen as well performed on other boards. It was followed by the Fille du Regiment dance, which was warmly encored. We should be glad to give a favourable report of the after-piece. It is, when well put on the stage, one of the most effective burlesques in the language. One jar puts the entire fabric out of joint, and unless the prompter be very ready, a hiatus, painful to the performers and amusing to the audience, is the result. The prompter in Wednesday evening's burlesque was either not at his post, or did not pay sufficient attention, and hence one or two difficulties, which, however, served to display the extraordinary self-possession of Misses Rose Edouin and Lizzie Naylor. Miss J. Edouin and Miss Nye, as the benovolent fairies, had not very much to do, but contributed to the measure of success which attended the piece.

The meeting of the Shanghai Volunteer Rifles was singularly favoured by the weather, although it was excessively warm for the time of year. In the afternoon the sun shining full in the competitors' faces must have seriously incommoded them. The first prize shot for was

The Times' correspondent on the rebellion writes:—

"Although the remnants of the rebel forces have no recognised head, they continue, under the leadership of different chiefs, to give great trouble, and to excite lively alarm in the minds of the local authorities. A severe defeat has just been inflicted on them in Kiangsi, but they are reported to be in considerable force in Fohkien, where one band has taken the city of Chan-Chow, not far from Amoy; another is menacing Swatow; and a third, which has just issued from Kiangsi, has taken three first-class cities, almost without opposition, on the borders. Her Majesty's gunboats, *Janus*, *Flamer*, and *Dove*, and the sloop *Swallow* are lying at the former port, ready to protect it in case any attempt be made against it, and the *Grasshopper* is at Swatow. The Chinese evidently regard

Digitized by Google

the matter as grave, for they have chartered the steamers *Viola* and *Sir Harry Parkes*, and the ship *Sandringham*, to carry troops from Ningpo to Foo-chow, and have already despatched 5,000 men. But so far as I can learn, the insurgents merit the name of brigands rather than the more respectable one of rebels. They have now neither organisation nor head. The force which is ravaging Fohkien is an agglomeration of those bands which are an inevitable consequence of a great rebellion in a country like China, where the Executive is too weak and inert to vigorously stamp out the embers after having subdued the fire. On retreating from the provinces which they had so long occupied the broken bands of the Taipings found congenial spirits in the bandits, who had made their homes in the mountains of Kiangsi, and joining their strength they have contrived to render themselves formidable and exceedingly troublesome to the local authorities. It is sincerely to be hoped that the Fohkien authorities will avail themselves of the services of Colonel Cooke's contingent if the Chekiang Futai persevere in his intention to disband it. The Franco-Chinese are already a thing of the past; they were disbanded with a bonus of two months' salary at the close of last month, and their commander, D'Aiguebelle, has left China with, it is reported, a large fortune, accumulated during some fifteen months' service. They were undoubtedly of great service to the Imperialists during their brief career, but their organisation and the *personnel* of the officers were much inferior to those of the Anglo-Chinese—rough as were many of the men who served in the latter corps. It only remains for Cooke's force to be broken up, and mandarin incompetency and jealousy will have succeeded in throwing open the province again to the raid of any of the brigands who exist in such large numbers in the adjacent one of Kiangsi. Fortunately, in the battle to which I have alluded above, they lost almost the only two chiefs of note who remained unaccounted for after the fall of Nanking and Hoochow. One, Hung-yuan-chéng, a near relative of the Tien-wang, was killed in action; the second, the Yu-wang, a cousin of Chung-wang, was taken prisoner, and will, of course, be decapitated. Their army was defeated with great loss and dispersed, and having lost its two leaders is not not likely to reassemble. It will be resolved into separate bands of plunderers, each following its own chief, which will go on robbing and murdering until one by one they are exterminated. There are rumours, too, of disturbances in the neighbourhood of Loochow, a large city in the centre of Anhwei. Tsen-kwo-fan has gone thither in person with a large force to restore order. It is said that this powerful mandarin will on his return vacate his governor-generalship, and proceed to Peking to take his seat as President of the Board of War. Li-hung-chang, the present Futai of Keangsu, is spoken of as his successor. If this surmise be correct, the services of the latter in extinguishing the rebellion in this province must indeed have been highly appreciated; for the post to be vacated by Tsen-kwo-fan is to the other vice-royalties what the Governor-Generalship of India is to a Government in any of the colonies; a Governor-General from one of the less important ports is, therefore, generally promoted to it. It is to be hoped that if he do indeed gain the supreme control over Keangsu, Anhwei, and Kiangsi, Li will be as successful in treading out the remnants of the rebellion from the latter province as he was in crushing its head in the former. It is possible, however, that these reports may be premature, for grave differences in opinion are spoken of between Tsen-kwo-fan and the Seng-wang, better known to foreigners as Sankolinsin, generalissimo of the Imperialist forces. The latter accuses Tsen and Li of selfishness in having disbanded their troops directly after the fall of Nanking, instead of keeping them to suppress disturbances in other provinces.

The correspondent also notices the narrative of Europeans in the rebel forces, which will be found in full in another column.

HANKOW.

A Hankow correspondent, writing under date of the 16th inst., confirms the rumours lately current as to the approach of Nien-fei. The Chinese officials are still in a state of tremor, and endeavour to enlist the active sympathies of the foreign officials. It is in contemplation to get up one day's racing on the 8th prox., but the preliminaries have not yet been settled.

NINGPO.

We have further accounts of the rebels or banditti, and the Imperial authorities are active. They have chartered several foreign vessels to convey troops to Foochow, Amoy, and Swatow. The vessels include four British steamers—the *Sir Harry Parkes*, the *Viola*, the *Shooeyleen*, and the *Chou-pou-yuen*, and the sailing vessels *Sandringham* and *Zingari*. The soldiers are accompanied by over a dozen foreigners, including Colonel Moore, formerly of Reynolds's Contingent.

AMOY.

The advices from Amoy continue very unfavourable. The rebels still hold Chang Chow, but, strange to say, nothing definite has been ascertained concerning them. We should have supposed that the Consuls, or the missionaries, or the Chinese elders, would long ere this have opened communications with them. It is the general impression of the foreign community of Amoy, that these insurgents have obtained a firm footing in the province, and that it will require a long time to dislodge them. That they are Taipings there is no reason to doubt, that their number is increasing is positively affirmed, and that there are foreign rowdies among them is pretty well ascertained. We can learn nothing further about the reported capture of Wan-chew, a most important movement should it really have taken place. Business generally at Amoy continued at a standstill. Cotton was selling in small quantities for local consumption, being required for stuffing blankets and winter clothes. Ningpo quality was quoted $27. Rice had advanced The rebels are said to be cutting the crops around Ching-chow. The supply had, however, as yet kept time with the consumption, but a scarcity was apprehended.

HONG KONG.

The English mail of 10 Oct., which left Singapore in the *Salsette* on the 14th Nov., had not arrived out on the 1st Dec., our latest date. It is conjectured that the *Salsette* had fallen short of coal and put into Manila.

The trial of the soldiers of the 99th Regt. ended on the 28th November in a verdict of Not Guilty.

On the recal of Sir Rutherford Alcock the *China Mail* has the following :—

"We can only repeat what we have already urged, that the removal of Mr. Alcock was a mistake on the part of Her Majesty's Ministers. He has passed very many years in Japan and the adjacent Empire of China, studying, no doubt, the peculiar idiosyncrasies of both races; he was at any time prepared to advise in case of difficulty; his policy has proved to a great extent correct; and he ought to have been allowed a chance of following it up. People here say that the recalling of Sir R. Alcock is merely a device of the English Cabinet to meet the objections of the peace party at home, and to stave off attacks similar to those which were based upon the affairs at Kagosima. If this be so we should decidedly say that Sir Rutherford was in luck. The operations at Simonoseki were of an unusually mild sort, and proved as thoroughly effective as could have been expected by the peace party itself. In the meantime all continues to go well in Japan."

HONG KONG.

THE TRIP OF THE HONG KONG VOLUNTEERS TO MACAO.

We find in the Hong Kong *Evening Mail* an account of the visit of the Volunteers to Macao, from which we gather the following :—

After parading at Murray Barracks, and settling all the usual preliminaries, the corps, headed by their band, marched down to Pedder's wharf at 9 o'clock on the morning of the 19th November. In about half an hour all the guns were on board, and the *Feiseen*, skilfully handled by Captain Carroll, emancipated itself from the swarms of small craft in the harbour, and, amid the cheers of the crowds on shore, and the answering shouts of the Volunteers, left Hong Kong behind. The muster was tolerable, but owing to the dilatoriness of a certain tailor, the Rifle Company was unable to make quite so good an appearance as it would doubtless, otherwise have done. The following is the official muster:—Officers (including the Acting-Chaplain), 9; sergeants, 7; musicians, 25; trumpeters and buglers, 3; rank and file, 69;—total (including Mr. Deane, A.D.C.), 114. The armament consisted of four 3-pounder guns, and 4 2-5th inch howitzers. Everything at Macao had put on a holiday appearance where we arrived at 1 o'clock. The guns below were manned, while the Rifles and band filed along the side of the steamer. The Portuguese flag was hoisted at the fore, a salute of twenty-one guns was fired with admirable steadiness, and the band played the Portuguese National Anthem. The salute was promptly returned by twenty-one guns from the Governor's fort; at half-past one Commandant Brine and officers landed, and were received by Mr. Marques, who gave them a hearty welcome, to which Colonel Brine replied :—

Mr. Marques and Gentlemen,—In the name of the Governor and inhabitants of the Colony of Hong Kong, both civil and military, and likewise on the part of the Volunteers under my command, I beg to tender you our sincere thanks for your address, and the welcome the Governor and inhabitants of Macao propose to give us. I trust our bearing and conduct on the occasion will be such as to merit your hearty approval, for I am satisfied the same is our wish. On our parts, we shall be very thankful for any attention and courtesy you may show us, and gladly anticipate the day when it may please the battalion of Macao to make a return visit to the Colony of Hong Kong. God bless your King!

The corps having landed with their guns, were marched on to the Praya, and formed there under a hot sun. Before the Palace they saluted the Governor, and having formed to the right of the Governor's Fort, the salute of nine guns given by the San Francisco Fort was answered by 21. Three cheers were then given on either side, and the corps was dismissed at the Royal Hotel, the Macao band the while playing "God save the Queen." Here Mr. Reed had prepared every comfort, and general cordiality smoothed any little hitch that might have occurred in the general bustle. In the evening, while the Macao band played, a promenade took place in the Praya Grande, which, always attractive, was now enhanced in beauty

Digitized by Google

by the illuminations at the Governor's and the Royal Hotel, which latter boasted, among other adornments, of 2,300 lamps.

At head-quarters the dinner was served in relays, Colonel Brine presiding over one mess, accompanied by the British Consular Agent, Mr. Lanca. After dinner Colonel Brine proposed "The King of Portugal." The toast was drunk with all honours, and the national air played by the band. Mr. Lanca replied, and proposed "Queen Victoria," which was also drunk amid great cheering, and "God save the Queen" by the band.

The Commandant again rose, and referring to the pleasure, so unexpected six months ago, of dining at Macao with their own band, said he hoped to be able to repay the compliment, and proposed "The Governor and people of Macao."

Mr. Lanca returned thanks, and proposed "The Hong Kong Volunteers."

Colonel Brine then rose, and after bestowing great and well-merited praise on the military, proposed "The Regulars, coupled with the name of Captain Carey."

Captain Carey gave "Major Brine," who responded.

Dr. Murray then gave "The Rifles and Captain Coxon."

Captain Coxon in returning thanks humorously alluded to the delinquencies of the tailor and gave "Aide-de-Camp Deane," who replied in the usual way.

Lieutenant Henderson gave "The National Guard of Macao."

Mr. Lanca replied, proposing "Commandant Brine."

Captain Carey gave the "Non-Commissioned Officers" coupled with Sergeant Wilson; and Dr. Murray, in giving "The Band," alluded to their wondrous improvement and ascribed it to Sergeant Story, who in a brief speech having denied his superiority to the other members, gave way to the last toast, "The Ladies of Macao."

The grand feature, however, of the reception was the *dejeuner* in the Parade Ground. The decorations of the building and table were universally allowed to be superior to all China had as yet seen. Floral devices and flags of every description giving it a beautifully bright appearance.

The Volunteers reached the Parade Ground shortly after one o'clock; and soon after they had formed, his Excellency the Governor and staff arrived. They were received by a Royal salute of twenty-one guns; and the admirable way in which this salute was timed by Lieutenant Cohen, and fired by the battery, was the subject of general remark. The following were the manœuvres gone through before his Excellency:—Trotted past, changed front to rear on the centre, left and right reverse, formed line by right wheel, and broke off to lunch. Those who were best able to judge gave their testimony to the steadiness with which every movement was gone through. After the viands had obtained ample justice, his Excellency Governor Amaral then proposed the health of the Hong Kong Volunteers:—

Gentlemen,—If the mere thought of the gallant volunteers of Hong Kong coming, as a corps, to pay us a visit, deserves our thanks, we feel still more obliged by the delicate manner in which this their act of courtesy has been carried out.

We must hasten to add, that such a manifestation of their sympathy does not surprise us—for this sentiment exists between the English and Portuguese, and sprang up from a close alliance of the two nations, which counts ages already.

It is most gratifying to receive to-day a proof of our old friendship, thousands of miles away from our mother countries, and on the threshold of a vast empire, which we were the first to throw open, and which to powerful Albion chiefly we and other nations owe the benefits we enjoy.

Let us therefore drink to our gallant guests. Let us show, by our loud cheers, our cordial appreciation of their visit.

Prosperity to the Hong Kong Volunteers.

Commandant Brine returned thanks in the following manner:—

Your Excellency and Gentlemen,—In returning thanks for the handsome manner in which you have drunk our healths, I beg on the part of the Hong Kong Volunteers to express to you how fully we appreciate the compliment you have paid us, and the extreme courtesy shown for us both yesterday, on our arrival, and to-day. The same will be very gratifying to his Excellency, the Governor, and the inhabitants of Hong Kong. From the first the former has taken great interest in the welfare of the corps I have the honour to command, and not less so in this international visit. We can only hope for a return visit, and that shortly, when we will try to do our best and give as warm a welcome, and if possible as handsome a reception, as we have met with from your Excellency and the inhabitants of Macao, not forgetting the Chinese. As far as I am concerned, I have only to thank those around me, viz., the volunteers who have backed me up, and you who have received us. To both I feel deep gratitude, and with the permission of your Excellency and the earnest wish of the Hong Kong Volunteers, I beg to give, with all true British honours and cheers, the healths of your King, Don Louis the First, your Queen, and the Governor and inhabitants of Macao.

The last toast was received with the well known and inimitable British cheers.

The Governor, in replying to "The King of Portugal, the Queen, and the Governor and inhabitants of Macao," gave in return the health of the gallant Commandant of the H.K.V.; to which Colonel Brine replied, giving the health of "Mr. Marques and others of Macao who have given us this entertainment." (Prolonged cheers.)

Mr. Marques returned thanks.

Colonel Brine next gave the "Volunteers of Macao."

His Excellency replied in Portuguese, to the effect that the visit of the Hong Kong Volunteers would give a fresh impetus to the Volunteer movement in Macao.

Dr. Murray, in proposing the "Health of the Ladies," said he had in his time seen many a popular demonstration, but he had never enjoyed the pleasure of seeing one in which the good-feeling, hospitality, and courtesy could be compared with that which they (the Volunteers) had met with in Macao on their present visit. Amongst the din of cheers the Doctor's words were inaudible, but the ladies were observed to answer the compliment paid them by waving their handkerchiefs.

To this toast his Excellency replied, and the last toast was that of "Governor Robinson," proposed by the Governor, to which Colonel Brine replied in appropriate terms.

After this the corps, after saluting the Governor, was marched back to head-quarters.

In the evening, his Excellency the Governor and lady entertained the Commandant, officers, and several of the non-commissioned officers in the palace. Thirty-eight in all sat down to dinner. Of ten officers, two were unexpectedly absent—viz., the Acting Honorary Chaplain, Rev. Mr. T. Stringer; and the Band-master, Mr. Wagner. On the right of his Excellency sat Judge de Pinto, Captain Coxon, Governor's Secretary Captain Carey, R.A., and Commandant of the National Guard; on Lady Amaral's right were Lieutenant-Colonel Brine, the Archbishop of Macao, and Dr. Adams. On the Governor's left were the Brigadier Commandant of the Garrison, Dep.-Com.-General Maturin, Baron Antonio, Lieut. Perceval, R.A., and Mr. de Lanca; and on Madame's left were Baron do Cercal, Dr. Murray, and Mr. Marques. The spacious reception-hall and other apartments of the palace were tastefully decorated, and every honour done to the corps. The Lieutenant-Colonel Commandant lead the Governor's lady to table.

After dinner, his Excellency proposed the health of "The Queen of England, the Governor of Hong Kong, and the Hong Kong Volunteers;" which was drunk with enthusiasm.

Commandant Brine, in return, proposed the health of "Don Louis I. of Portugal and the Governor of Macao," which was also responded to by prolonged "hip, hip, hurrahs."

Several other complimentary toasts were given, and the company adjourned to the parade ground.

The fêtes of Sunday evening exceeded those of Saturday; and the illuminations were most brilliant. Both the Macao and H. K. V. bands were playing on the parade ground; and the crowds which promenaded the ground, or sat on forms or chairs, were such that one was compelled to adopt a tortuous system of navigation in going the length of the ground. The band of the volunteers here shone out very conspicuously; and it was remarked that they bore a favourable comparison with their brethren of Macao. A most extraordinary display of fireworks was set off on the parade ground, beginning about half-past nine, and lasting two hours. It was prefaced with a number of rockets and huge squibs, which served to fill up the intervals between the more ambitious parts of the exhibition. These latter took great numbers completely by surprise, as a display of such a character is very seldom seen in any part of China. The beauty of some of the devices, the ease and exactness which the various transformations were brought about, the ingenuity with which those transformation-scenes were constructed, called forth frequent expressions of applause from the spectators.

The corps turned out as a guard of honour, while the Commandant escorted Lady Amaral to the Governor's palace; after which they broke off. A sumptuous supper was, we understand, served after this to the members of the corps who chose to partake in the marquee on the parade ground.

The departure on Monday morning was a repetition of the tact displayed on the debarkation. From the deck of the *Feiseen*, however, the sight of the large barges, filled with "bushbied" Volunteers, as they neared the steamer, with the state barges of the Governor and his staff, was such that if no representative of the *Illustrated London News* was present, the metropolitan pictorial has lost an illustration, a better subject for which may not occur again for a century. As the barge

Digitized by Google

competition, and were all cleared off at rather better prices, middling to fine small Pearl 17s. 6d. to 19s. 6d.; medium 18s. to 19s.

SAGO FLOUR.—The imports exhibit a diminution of 800 tons compared with those of 1863, and though the deliveries have likewise been much smaller, the quantity on hand is 150 tons short of that a twelve-month since. In the early part, sales were difficult at 15s. to 15s. 6d.; but afterwards there was a rally of 1s. per cwt., and in June the price was 16s. 6d., after which nothing of moment took place till December, when 15s. was again accepted, and sales have since been made at 13s. 9d. to 14s. 3d.

TAPIOCA.—Penang has in general found a quiet market, and easier terms have at times had to be submitted to, but little or no variation is apparent in quotations from those current at the opening of the year. Of Singapore only trifling quantities have been received, and realised at the low prices of 1863. Pearl Tapioca, which in January was sold cheaply at 20s. to 21s., advanced to 23s. 6d. to 24s. 6d. by the month of May, but has since been only slowly purchased, and recent rates have been 22s. to 23s. per cwt.

PEPPER.—The imports have been 1,100 tons heavier than in 1863, and the home deliveries also 800 tons more, but as those for export have diminished, the stock is 700 tons above that of January last. For the first two months of the year, prices of Eastern were steadily maintained; in March a speculative inquiry, in the expectation of a probable repeal of duty, united with an export demand for America, produced an advance of ¼d. per lb., Black Singapore being sold at 3⅞d. to 4d., and Penang at 3⅞d. to 3¾d.; but on the appearance of the Budget in April, without allusion to this article, a reaction set in, and there has since been an almost continuous decline, amounting at the close to ¾d. per lb., the more recent sales having been 3 3-16d. for Singapore, and at 2 15-16d. to 3 1-16d. for Penang, with Trang at 3⅛d. The supply of Malabar kinds has been of moderate extent; good shot was at one time sold as high as 4⅛d. to 4⅜d., and light Malabar and Alleppy sort at 4¼d. to 4⅜d., but the former afterwards declined to 4¼d. to 4½d., and the latter to 3¾d. to 4d., at which they have since remained. The landings of White have been less than in the former year, and although the total delivery has somewhat fallen off, the quantity on hand is 100 tons lighter than at the end of 1863. In the early part improving rates were obtained, and middling to fair Singapore and Penang were taken at 5⅛d. to 5⅜d.; in May a reduction of ¼d. per lb. took place, and notwithstanding a partial recovery, nothing of moment occurred till August and September, when the value again receded, and by the month of October ord. to fair Singapore and mid. Penang went at 5d. to 5⅛d., on which terms, however, there has since been a rally of ⅜d to ½d. The sales of Black for the month are 15,000 bags, and prices are 1-16d. higher for Singapore, and ⅛d. per lb. for Penang, the present value of the former being 3⅛d., and of the latter 3⅜d.

HIDES AND HORNS.—The import of Batavia, Singapore, &c., has been 40,794 hides, against 33,548 hides in 1863, and 43,721 hides in 1862. From Manila 675 hides, against 2,962 hides in 1863, and 3,248 hides in 1862. Buffalo hides have generally met a ready sale throughout the year; prices showed little alteration up to August, when an advance of ¼d. to ⅜d. per lb. took place. Singapore and Penang hides may now be quoted ½d. to ⅝d. per lb. dearer, whilst Yellow Batavia are about the same price, and Dark ½d. to 1d. per lb. higher than in December last. The sales of the month have been 5,405 cow and 2,696 buffalo hides at late prices:—Cow Hides, Light, 6d. to 6½d. per lb.; Heavy, 5d. to 6d. per lb.; Small, 6d. to 6¾d. per lb.; Thirds, 4d. to 4½d. per lb.; Buffalo, best, 4⅞d. to 5⅛d. per lb.; Seconds and Light, 4¼d. to 4⅝d. per lb. The stock consists of 1,016 Singapore, 3,461 Java Buffalo Hides, against 3,699 Singapore, 971 Java, 399 Manila Buffalo Hides in 1863.

COCOA NUT OIL.—There has been recently some improvement in the demand, and the market was rather firmer last week, with less oil offering. Cochin now rules at 37s., and Ceylon at 35s. 6d. to 36s. per cwt., choice goods bringing some advance on these quotations.

Business can scarcely be said to have recommenced yet in many of the articles of import since the Christmas holidays, and to quote prices from the very limited transactions that have occurred would only lead to misapprehension.

ARTICLES OF EXPORT.

IRON.—The quotations in London are for Welsh bars, £7. 15s.; nail rod, £9. 10s.; hoops, £10. 5s.; sheets, single £11; Staffordshire bars, £9. 10s.; rails, £6. 15s. to £7. 5s.

STEEL.—Swedish keg, £16.

COPPER.—Sheet and Sheathing, £98 to £99 per ton; yellow metal, 8½d. to 8¼d. per lb.

TIN.—97s. for block; 98s. for bar. Tin plates, best charcoal, I.C., 28s. 6d. to 29s. per box.

LEAD, &c.—English pig, £20. 5s. to £20. 10s.; W.B., £21. 15s.; shot, patent, £23. 15s.; sheet, £21; spelter, £18. 15s. to £19; zinc, English sheet, £26; quicksilver, £8.

EXPORT OF BULLION TO CHINA, &c.

FRAMBY (barq.), of Amstm., for Bat., 9 days out, Dec. 28, 39 N., 15 W.
EUSTACE (barq.), Colombo to London, Nov. 13.
ILLEGONDA IDA (Dut. ship.), bound to Japan, Nov. 20, 11 S., 32 W.

FREIGHTS AND CHARTERS.

The arrivals from the Eastward have recently materially decreased, and the amount of tonnage on the different loading berths now shows a marked diminution; still, however, brokers find it amply sufficient for their present requirements. In homeward charters we have nothing to report, but ships are still wanted for coals from the outports to Manila and Point de Galle.

Current Rates of Freight for Vessels on the Berth:—To Yokohama: 50s. weight, 40s. to 50s. meast. To Nagasaki: The same. To Hankow: 60s. meast. To Amoy and Foo-chow-Foo: 50s. weight, 40s. meast. To Shanghai: 40s. weight, 25s. to 30s. meast. To Hong Kong: 40s. weight, 25s. to 30s. meast. To Manila and Labuan: 50s. weight or measurement. To Singapore: 25s. to 30s. weight or measurement. To Penang: 40s. weight or measurement. To Batavia: 40s. weight, 30s. measurement. To Bankok: 60s. weight or measurement. To Ceylon: 40s. weight, 25s. measurement.

The quotations for coal and iron from the North are as follows:—For Hong Kong: £36 to £37 and £1. 10s. For Shanghai: £45 and £2. 5s. For Manila: £1. 10s. For Ceylon: £24 and £1. 2s. For Batavia: £25 and £1. 2s. 6d. For Singapore: £25 and 22s. For Penang: £27. These rates are from the Wear or Tyne, and Newport, Cardiff, or Swansea respectively.

The Admiralty have invited tenders for the conveyance of 561 tons of naval stores from the River Teames to Hong Kong, also for 39 tons naval stores to Trincomalee.

CASUALTIES.

The Alice, Anderson, from Nagasaki to London, put into Mauritius 27 Nov., to land the master and crew of the barque Rubens, of Dunkirk, from Swansea to Calcutta, which vessel was abandoned in a sinking state, Nov. 17.

The Yesso (s), Cairns, for Shanghai, put back to New York, Dec. 14, with machinery disabled.

The Florence Braginton (barque), Turner, from Sunderland to Shanghai, was in contact Dec. 27, in the North Sea with the Superb from Shields for Alexandria, and sustained trifling damage.

The Niemen, Knight, from Hong Kong for New York, put into St. Thomas' Dec. 7, with main topmast sprung and rudder damaged; she was being repaired on the 15th.

The Oriental Queen, from Sunderland, for Shanghai, passed Anjer Sept. 3, and had not arrived at Shanghai up to Nov. 25.

HOLLOWAY'S OINTMENT AND PILLS.—Bad legs, when, from injury, feeble circulation, foul blood, or neglected chill, inflammation, succeeded by ulceration, has attacked the lower limbs, the sufferer may turn for a cure, without fear of disappointment, to Holloway's celebrated Ointment, whose fame for such disorders has resounded throughout the habitable globe, and testimonials in all languages have been received universally praising this celebrated Ointment. In all cases Holloway's Pills should be taken while his Unguent is used; both together are most effectual, and the cure accomplished painlessly and readily. Under their joint curative influence the worst wounds or ulcers assume a more healthy character, and shortly begin to fill up or contract and soundly heal.

In their annual Circular, just issued, Messrs. Neill, Brothers, and Co. speak as follows of the prospects of the coming year :—

As regards the future supply of cotton, it is as yet quite impossible to make a definite estimate for the present year with any great confidence in its accuracy. There are too many uncertain elements to be taken into account, and too few certain ones. Who can say how much American cotton will this year escape the blockade ; how much East Indian or China of last crop has been kept back in the interior in consequence of the late financial crisis; or how far the Bombay, Scinde, Bengal, and Madras crops, concerning all of which complaints have been received, have really been damaged ? A fair progressive increase may be anticipated from Brazil, Egypt, and Turkey, notwithstanding so disastrous a season in the latter country that estimates are not now one-half what might have been expected from the extent of land sown, but this can hardly be predicated of the East Indian supply, while a falling off is highly probable from America. In the absence of any facts to the contrary, it may be assumed that, after the effects of the recent crisis have been got over, a continued increase may be expected from China and Japan, and such may also be anticipated from the small miscellaneous sources. On the whole, therefore, there will be some increase, but probably not so large an increase as has occurred this year. There are already indications that in some quarters the extreme limit of cultivation, with present resources, has been reached. In Egypt it has been found for some time past that the people have, in consequence of the neglect of cereals in favour of cotton, become too dependent on foreign supplies of grain, and the Pasha has just interdicted every farmer from sowing next season more than one-fourth of his land in cotton. This is regarded at Alexandria as a most serious step, as it is believed that it will reduce next year's cotton crop into comparatively moderate compass. Indications of scarcity of food have also been observed in some parts of India, attributed to the same cause. But it must be remembered that we commence this year with an excess of stock over that of last year of 248,000 bales, a large proportion of which, however, must be attributed to diminished consumption during the late crisis, which must be gradually made up. At present the consumption is estimated to be 7,000 bales weekly in excess of last year, and, as the continental spinners have run themselves exceedingly low in stock, it is thought that they will require at least 2,000 to 3,000 bales weekly in excess of the very small quantity they took for the first three months last year, when they were kept out of the market by the Danish war and apprehensions of its extension. At the same time from the small quantity at sea, the imports promise for at least the first three or four months of the year to be on a very limited scale, and prices will, therefore, have the support of a constantly reducing stock.

ARTICLES OF IMPORT.

TEA.—We have again to record a very unsatisfactory state of affairs as far as importers are concerned. The stock at the beginning of the year was a very full one, whilst the arrivals have been nearly, if not quite, equal to our deliveries; the consequence has been that our market has been over supplied, and there has been a constant pressure to sell. The Trade have been very cautious buyers throughout, whilst in rare instances has there been any relief from speculation, and the result has been a very serious loss to importers. Notwithstanding this, and the adverse accounts sent out from this side to China, more eagerness has been displayed this season in hurrying forward teas than has ever been known before—the total of export for the first six months of the season reaching 90,000,000 lbs., and at prices which must again leave heavy losses. As long as this system of hurrying forward shipments early in the season goes on, we fear there is no hope for any rally in our markets, as the trade will not hold the stocks they used to do, finding their advantage in moderate holdings, owing to the rapidity with which they can renew their supplies. Thus the onus of holding the stock is thrown mainly on importers, who, to compensate themselves, should look to a low range of prices in China, it being very difficult to get speculators into the market, as it is often found that owing to its hurried preparation for an early market in China, Tea loses its quality by keeping, and that thus any advance in the market is lost by the deterioration which has taken place in the article. The statistics for the United Kingdom show a considerable decrease in imports, the total being 122,687,600 lbs., against 136,123,500 lbs. last year. The deliveries show an increase of 4,800,000 lbs., of which 3 250,000 lbs. is in home consumption, and 1,550,000 lbs. in export, the total being 116,800,000 lbs., against 112,000,000 lbs. The stock we estimate at 9,500,000 lbs., against 89,184,000 lbs., and the quantity afloat at 44,577,000 lbs., against 41,500,000 lbs. last year. The circular of Messrs. Mitchell and Aspinall states:—"In giving our annual retrospect of the tea market for the past year, we much regret to record it as having been one of the most disastrous in its results to importers, and unsatisfactory to wholesale dealers, that has occured for many years past. The losses entailed upon the former (consequent chiefly upon the extreme rates ruling in China), having been probably of greater magnitude than were ever before experienced, whilst the latter, instead of deriving any advantage, have on the contrary found the greatest difficulty in operating with any degree of safety, owing to the almost continuous depreciation in the value of their stock." Messrs. Shepard, Harrison, and Rehden state :—"The past year, like the preceding, has proved disastrous to importers, and to the wholesale trade the results cannot be considered satisfactory, owing to declining markets, caused by over-supply and the monetary difficulties that have happened throughout the year. The retailer, and partially the consumer, have reaped the full benefit of the reduced duty. After the results of season 1863, and with no outside elements to influence the action of the tea market here, it is difficult to account for the eagerness and apparent recklessness with which supplies have been pushed on from China during the present season, our advices during the whole of the past year being against a high range of prices. The imports, although not so large as the previous year, are still in excess of the deliveries, and have consisted mainly of the lower grades of Congou, whilst the supply of fine has again been short, and would have been much felt were it not for the increasing supply of India tea, which continues to grow more and more in favour, owing to its great strength, and which in competition with China growth may be the means of improving the curing and manufacture of the latter, which has fallen off so much of late years, there being hardly an exception where the Kaisows of this season are not mixed with old leaf.

Digitized by Google

FORTNIGHTLY REPORT.—During the past fortnight business has been very moderate, as is usual at this time, and quotations for Congous show scarcely any variation. Oolongs of medium quality have sold lower at public sale. Souchongs and Flowery Pekoes show no alteration. Scented Teas: both Capers and Orange Pekoes have been in steady demand, and prices show a further small advance. In Uncoloured Japans there is nothing new to notice. Green Teas have been fairly saleable at the decline last quoted. Canton Young Hyson of good to fine kinds sold at public sale without reserve at a decline of fully 2d. per lb.; fair qualities of Gunpowder also went lower. The public sales on the 3rd instant comprised 7,954 packages, of which 6,000 packages were sold, 5,964 packages being without reserve.

AT NEW YORK.—The market is quite dull, and prices favour buyers. The sales are 1,300 half chests Green, 200 uncoloured Japan. and 3,000 Oolong. The quotations are:—Hyson, common to fair, $1.30 to 1.50; Gunpowder and Imperial Canton made, common to fair, $1.30 to 1.50; Hyson Skin and Twankay Canton made 68c. to 70c.; uncoloured Japan, common to fair, $1.20 to 1.25; Oolong, common to fair, $1.05 to 1.12; Souchong and Congou, common to fair, 95c. to $1.10.

SILK.—China Silk: Arrivals have been small, and an improved demand having sprung up the unsold stock is much reduced, and prices of most descriptions must be quoted 6d. per lb. higher. In Japan Silk buyers showed some disinclination to operate, but more recent arrivals have been eagerly secured at advanced rates. It is to be regretted that the quality of the Mybash hitherto landed is far from good; it is to be hoped, however, that the good silk may arrive later on in the season. The deliveries for the month are 3,199 bales of China and 1,097 bales of Japan. The imports for 1864 have been 24,600 China, against 43,500 in 1863, and 11,635 Japan, against 24,050 in 1863. The stock on 1st January was 11,416 China and 3,271 Japan. The latest quotations are—No. 1, Tsatlee, 26s. 6d. to 27s.; No. 1, Taysaam, 24s. 6d. to 25s.; Mibash, No. 1, 28s. 6d. to 29s. At New York the imports are still quite small the past month, and stock unsold is held firmer on account of the high price in China, and limited supply in hand for next season. The market is quiet, with more doing in Canton Silk lately.

COTTON.—The market was unfavourably influenced last week by the excess of stock declared at the close of the year, and the business was very limited. The uncertain nature of the advices from New York also caused further depression, and prices closed heavily on Thursday with a general decline, particularly in the lower descriptions. For American there has been a moderate demand, and a reduction of ¼d. to ½d. has been submitted to from last week's rates. East India was quite neglected, and though from comparative scarcity the superior grades have better maintained their value, a reduction of ¼d. per lb. has taken place in them, and 1d. per lb. in the lower descriptions. China and Japan have been very dull of sale, and must be quoted 1d. per lb. lower. The import of China and Japan into Great Britain was 399,074 bales, containing 95,777,760 lbs. The consumption of China and Japan for the year was 52,644,000 lbs., and the export 28,382,000. The stock on the 31st December was 22,746,000 lbs. The stock, compared with last year, shows an increase of 6,836 Brazil, 3,500 Egyptian, 3,565 West India, 188,242 East India, and 61,675 China; and a decrease of 14,829 American, and 762 Turkey, &c., making a nett increase of 248,227 bales, or 74,814,978 lbs. weight. The total stock on the 31st December was 194,481,978 lbs. The official declaration of the stock turns out to be 113,500 bales above the estimate, the excess being principally in East India and China.

SUGAR.—The market closed last week with rather a dull tone, and prices are mostly 6d. per cwt. lower than before the holidays. Privately, on Friday, 3,000 bags Clayed Manila went at 29s. 6d. During the week we note a sale of 99 baskets Penang, 34s. to 35s. (duty, 10s. 6d. to 11s. 8d.). In their retrospect of the year, Messrs. Carey and Browne state—The imports of Penang have been about on a par with those of the previous year, but as little was offered after depression set in, the clearances have been scanty, and the stock is now more than double the reduced amount at the end of 1863. At the highest point in April, good brown to fine yellow grocery brought 42s. 6d. to 47s. 6d., from which a very material reduction ensued, and in November good brown to good yellow was sold at from 28s. 6d. to 35s. 6d. The arrivals of Manila have been 225,000 bags less than the abundant supply of the previous year, so that, combined with much heavier clearances for both home use and export, the quantity on hand is 190,000 bags lighter than in Jan. last. This description has likewise suffered the extreme of speculative excitement and depression, and from the unusually high rates for Clayed in March and April, viz., 42s. to 43s. 6d, duty 12s. 8d. (sales for arrival being about the same time effected at 30s. to 32s.), a severe drop to 28s. 6d. to 29s. (duty 9s. 4d.), had taken place by the beginning of December, since when there has been only a partial reaction; the comparatively moderate supplies of Unclayed have been realised at from 37s. to 38s. 6d. in March, down to about 27s. in September. Little Java has been received during the year, and the stock being insignificant, transactions have been precluded, and quotations generally nominal. The principal business in Siam was in October, when fresh imports were mostly forced off at cheap rates, low to good white 36s. to 40s. As regards the future, the most prominent fact is, that stocks generally are unprecedentedly large, and although the low prices at present ruling may be reckoned to lead to a more free use of the article, and at the same time discourage the cultivation of beet root on the Continent, as well that of indigenous plants in America, it should be borne in mind that the crops in most producing countries (with the exception of Java, which is reported to be very short) will probably be abundant. On the other hand, the powerful incentive to hurry forward supplies cannot be said to exist, and many places which import largely of Mauritius, Manila, &c., will now clear off that portion of the general production which in 1864 was directed to Europe; consequently, these markets in the coming season will not be burdened with the same extra weight of supply, and as stocks in the hands of the trade in the United Kingdom are estimated to be about 40,000 tons less than they usually hold, and those on the Continent also are believed to be light, returning confidence, followed by revived animation, may be anticipated before long.

COFFEE.—Little disposition to purchase was shown during the holidays, and holders being firm, the business done was unimportant; on the re-opening of the market, however, there was a fair inquiry, and similar rates were obtained to those current at the date of our last advice. Ceylon: 685 casks 1,035 barrels and bags Plantation at public sale found buyers as follows:—Fine ordinary to low middling, 79s. to 82s. 6d.; middling to good middling coloury, 83s. 6d. to 87s.; 254 casks 1,790 barrels and bags Native were chiefly disposed of, but at rather easier prices—good ordinary, 70s. 6d. to 71s. 6d. The amount landed in London during 1864 nearly equalled that of the previous year, as, notwithstanding some falling off in the supply of Ceylon and Mocha, most other kinds have contributed an increase, but, owing to heavier clearances, the stock, which at the beginning of October amounted to nearly 14,000 tons, against 11,470 in 1863, has since been worked down to a point 400 tons below that of the same period last year. As regards the future, the prospects of the article seem to be favourable, the most striking feature being the serious deficiency in the yield of Java, which is stated to be only one-half that of last season, and although a more extended production is expected from Ceylon, &c., together with a full average crop of Brazil, the general wants are large, so that after the bulk of the early supplies have come to hand, it is likely that an improving tendency in prices will be manifested.

RICE.—During the Christmas holidays an active demand was experienced, and large transactions took place at an advance of 3d. to 6d. per cwt. On Friday 6,824 bags fair to good pinky Madras at auction went off readily at 11s. to 11s. 6d., which is 6d. dearer than the last sale; 291 bags middling white Bengal were taken at 12s. It may be noted that of Java, during the past year, only two cargoes arrived; the first sold in April at 14s. 3d. to 14s. 9d. for middling white, the other in August at considerably reduced rates, viz., low and low middling 10s. 6d. to 12s, middling to good middling 13s. 6d. to 15s., bold 16s. to 17s. 6d. Arrivals have exceeded those of 1863 by 12,000 tons. The clearances show some falling off, but being still in excess of imports, the stock on the 31st December was rather lighter than at the end of the preceding year. The importations into Liverpool to the 31st ultimo were 82,000 tons, against 76,500 tons in 1863; the deliveries comprising 75,680 tons, against 75,000 tons, and the stock was 43,000 tons, against 36,700 tons in the previous year.

CINNAMON.—The quarterly sales in January went off without spirit at barely the previous currency, but those since held, offering only a very scanty supply, have been marked by considerable briskness, and the last in October showed an advance ranging from 4d. to 10d. per lb. on the first sales. Since then there has been little demand, and prices have a drooping tendency. With arrivals 2,000 bales short of those in 1863, the clearances have also been more moderate, yet the stock exhibits a relative deficiency of 900 bales.

CASSIA LIGNEA.—As compared with the imports in 1863, which included a large proportion of small mats, those in the past year have been light, and while the deliveries also appear to have diminished, the stock is 1,100 packages less than last year's. In the early part, the value declined about 2s. per cwt., and although this was afterwards fully recovered, a reduction of 2s. to 3s. again took place in June, so that, with a further material decline in December, present quotations (84s. to 88s. for middling to good) are fully 5s. below those of this period in 1864.

CLOVES.—The landings have been much lighter than in 1863, and notwithstanding an important deficiency in the deliveries, the stock is reduced to 6,400 packages, against 7,200 packages. In the first half of the year, fair to fine Penang were sold at 1s. 2d. to 1s. 3½d., but in July good quality was disposed of cheaply at 1s. 1½d. to 1s. 1¾d.; since which higher rates have been paid, viz., middling to good 1s. 1½d. to 1s. 3d., fine 1s. 3½d. to 1s. 4d.

GINGER.—Supplies of East India have materially augmented during the past year, but as the clearances have been about double the amount of 1863, the relative excess in the quantity on hand is only 1,400 packages. The first sales of Rough Bengal were at 45s., which showed a further depreciation, and by the middle of May there was another serious fall, fair to good quality selling at 36s. to 37s.; on the sudden advance in African, however, the value rose to 44s. 6d. in June, but from this a decline of 4s. per cwt. again ensued in September, and in December the price descended to 35s., and lately to 32s. The liberal quantities of Cochin brought forward from time to time have generally been disposed of at cheaper rates, as, notwithstanding an occasional improvement, the value in October was several shillings below that of February, small to good middling, which at first realised 67s. to 75s., afterwards selling at 62s. to 70s. On Friday 375 bags rough Bengal, meeting with no offers, were withdrawn at 32s., a decline of 3s. per cwt.

MACE.—Arrivals have somewhat exceeded those of 1863; the deliveries have been more contracted, and the stock is about the same as that of the former year. The better qualities, being mostly scarce, have commanded relatively stiff rates, while the common sorts have been of slow sale at about the previous value. During the past week 31 cases at public sale were realised at rather higher prices, middling to good red 1s. 2d. to 1s. 4d.; middling to fine bright pale, 1s. 7d. to 2s. 10d.

NUTMEGS have also come to hand more freely during the past year, and though the clearances are nearly on a par with those of 1863, the stock shows a comparative surplus of 200 packages. There have been several fluctuations in prices, generally to the extent of 1d. to 2d. per lb.; as, however, they have each been of a temporary character, quotations, excepting for the finest kinds, which are dearer, only partially differ from those at the commencement of January last. At auction last week 137 cases (of 1861 import) were disposed of somewhat cheaper; small and middling 10d. to 1s. 3d., good middling 1s. 4d. to 1s 10d.; fine, 3s. 4d. to 3s. 5d.

SAGO.—The landings of this article have been heavier than in the previous year, but with the deliveries rather larger, the stock is deficient of that at the end of 1863 by 200 tons. Prices nearly all through the year have been declining, more especially for fair to fine small Pearl, which, after fetching 23s. to 24s. in the first two months, was not worth more than 19s. to 21s. in September, and last month 17s. 6d. to 18s. 6d. The supply of medium and large grain kinds has been somewhat limited, and these have generally found buyers at tolerably steady rates, until lately, when they declined almost to the level of small Pearl. During the past week 1,935 boxes and 229 bags, offered by auction, met a more lively

Digitized by Google

turned out a number of useful public functionaries, whose names we now begin to notice as rising to the higher branches of the service; and an establishment of Student Interpreters at Peking shows that a further supply is provided for and kept under tuition at the most eligible point for the study of the language.

The Consular Service in Japan, so much younger than that in China, has also naturally had less opportunities of becoming distinguished, but the name of its veteran head, Sir R. ALCOCK, is worthy to be recorded in the same calendar with that of Sir HARRY PARKES. For meritorious services, Sir RUTHERFORD indeed had gained laurels in China when Sir HARRY was scarcely more than a lad; and if the progress of the latter towards renown has been more rapid than that of his elder contemporary, Sir RUTHERFORD has certainly added of late to his former well-established repute by the ability and firmness which have marked the tenor of his recent diplomatic action. We have already in a previous issue commented upon the rumour as to his recal from a post he so successfully fills; and, although a guarded denial of this report has been given by a Ministerial paper, we must avow some apprehension that the blind and ignorant cabal who rule over Her MAJESTY'S Ministers, and who seem bent on destroying the last vestige of English influence abroad, may have compelled the recal of a Minister who appeared too resolute to suit their peculiar notions of diplomacy. In the lower branches of the service in Japan we are not cognisant of any important changes during the past year, but it appears probable that the opening of the Straits of Simonoseki may ere long call for some fresh appointments.

DIPLOMATIC AND CONSULAR STAFF IN CHINA AND JAPAN—1864-5.

The following list is compiled with a view of affording the latest and most accurate information respecting these important departments, having been drawn up with the assistance of Consular officers in England. We shall at all times be happy to hear of any alterations that may occur in either of these services:—

CHINA.

PEKING.—Sir Frederick W. A. Bruce, K.C.B., Envoy Extraordinary and Minister Plenipotentiary (on leave); T. F. Wade, C.B., Secretary of Legation and Chinese Secretary, Charge d'Affaires; F. R. St. John, Second Secretary; Dudley E. Saurin, Third Secretary; John Mc. Leary Brown, Acting Assistant Chinese Secretary; John G. Murray, Assistant and Accountant; E. Solbé, Third Assistant; T. Watters, C. F. R. Allen, A. Frater, O. A. Vidal, Student Interpreters.

TIEN-TSIN.—James Mongan, Consul (on leave, returning this month); William H. Lay, Acting Consul; R. K. Douglas, First Assistant (on leave); J. B. Goddard, Second Assistant; N. B. Dennys, Third Assistant.

TAKU.—John Gibson, Vice-Consul (on leave); William N. Payne, Acting Vice-Consul.

TANG-CHOW (Che-foo).—Martin Crofton Morrison, Consul; H. G. Howlett, Assistant.

NEW-CHWANG.—T. T. Meadows, Consul (on leave); R. Swinhoe, Acting Consul; C. F. Gardner, Third Assistant.

HANKOW.—W. H. Medhurst, Consul (on leave); J. A. Webster, Acting Consul; W. E. King, Assistant and Interpreter; E. D. Jones, Second Assistant.

KIU-KIANG.—P. J. Hughes, Vice-Consul; George P. Thomson, Second Assistant.

CHIN-KIANG.—Frederick Harvey, Consul (on leave); T. Adkins, Acting Consul; A. Davenport, Assistant.

SHANGHAI.—Sir Harry S. Parkes, K.C.B., Consul; John Markham, First Vice-Consul; C. Alabaster, Interpreter and Acting 2nd Vice-Consul; C. Treasure Jones, First Assistant; J. T. Middleton, Second Assistant; W. G. Stronach, Third Assistant.

NINGPO.—W. H. Fittock, Consul; R. J. Forrest, First Assistant (on leave); H. F. W. Holt, Assistant and Interpreter.

FOO-CHOW.—C. A. Sinclair, Consul (on leave); A. R. Hewlett, Acting Consul; H. J. Allen, Second Assistant.

TAI-WAN (Formosa).—W. Gregory, Acting Vice-Consul.

AMOY.—W. H. Pedder, Consul; George Phillips, Assistant.

SWATOW.—George W. Caine, Consul; W. Cooper, First Assistant; Jas. J. M. Beatty, Second Assistant.

CANTON.—D. B. Robertson, Consul; Wm. Frederick Mayers, Interpreter (on leave); Chas. Carroll, Acting Interpreter; J. P. Munro Fraser, Acting First Assistant.

WHAMPOA.—H. F. Hance, Vice-Consul.

MACAO.—E. L. Lança, Consular Agent.

Officers of the China Consular Service on leave in England:—W. H. Medhurst, Consul, Foo-chow, leave expires about March, 1865; Fredk. Harvey, Consul, Chin-kiang, do.; Jas. Mongan, Consul, Tien-tsin, do.; C. A. Sinclair, Consul, Foo-chow, about July, 1865; T. T. Meadows, Consul, New-chwang, about July, 1866; Wm. Frederick Mayers, Interpreter, Canton, about April, 1865; R. J. Forrest, Assistant, Ningpo, about Sept., 1865; R. K. Douglas, Assistant, Tien-tsin, about Sept., 1865.

JAPAN.

YEDO.—Sir Rutherford Alcock, K.C.B., Envoy Extraordinary, Minister Plenipotentiary and Consul-General; Lieut.-Col. E. St. John Neale, C.B., Secretary of Legation (on leave); Richard Eusden, Interpreter and Japanese Secretary (on leave); A. A. J. Gower, Acting Japanese Secretary; Alex. von Siebold, Supernumerary Interpreter; R. Willis, M.D., Assistant and Medical Officer; John Macdonald, Second Assistant; Ernest M. Satow, and Jas. Troup, Student Interpreters.

YOKOHAMA.—C. A. Winchester, Consul; Marcus O. Flowers, Vice-Consul; Martin Dohmen, Interpreter; J. B. Walsh, Assistant; Lachland Fletcher, Second Assistant.

NAGASAKI.—F. G. Myburgh, Consul (on leave); C. E. Schmidt, Interpreter; A. A. Annesley, Second Assistant; Russell B. Robertson, Third Assistant.

HAKODADI.—Capt. F. H. Vyse, Consul; T. J. Enslie, Interpreter; J. F. Lowder, Third Assistant.

THE WRECK OF THE "RACEHORSE."

The following is the official account received at the Admiralty of this very sad affair:—

"HER MAJESTY'S SHIP 'TARTAR,' SHANGHAI. Nov. 14, 1864.

"My Lord,—It is my painful duty to report direct for the information of the Lords' Commissioners of the Admiralty that Her Majesty's ship *Racehorse* was wrecked on the night of the 4th inst., at 8.30 P.M., about five leagues S.E. of Chefoo Cape, and about two miles E.S.E. from White Rock. Only nine of her crew have been saved—three officers and six men.

"I beg to enclose a copy of a letter I have received from Lieutenant Nicholas, of the *Insolent*, giving, as nearly as he could, by desire of Commander Boxer, a description of this melancholy accident.

"The *Racehorse*, in pursuance of orders from the Commander-in-Chief, was on her way to Chefoo from this port. She left here on the 1st inst.

"Immediately on receiving this intelligence I despatched Her Majesty's steamer *Rattler* to the assistance of Commander Boxer, and now await Commander Webb's report—I am, &c.,

"J. M. HAYES, Captain and Senior Officer, North China Division.

"To Lord Clarence Paget, C.B., Admiralty."

"H.M. Gunboat *Insolent*, Teutai, Nov. 8, 1864.

"Sir,—I am ordered by Captain Boxer to report that H.M.S. *Racehorse* was wrecked on the night of Friday, 4th November, at 8.30 P.M., about five leagues to the S.E. of Chefoo Cape, and about two miles E.S.E. from White Rock, and only nine of her crew saved.

"At the time of the ship striking it was comparatively smooth, boats were lowered, stream-anchor and cable placed in cutters ready to lay out, when heavy rollers set in, swamping both cutters and gig, and breaking entirely over the ship; the masts were then cut away, and ship steamed full speed on shore, endeavouring to save life, but the wind increasing to a gale, the rollers washed away all skylights and filled the ship.

"The ship's company were then sent aft, told the position of the ship, and that if they held on till daylight there was every hope of all hands being saved. Unfortunately, the endurance of only a few was equal to this, the poor fellows dropping off one by one from the effects of the cold and the force of the sea.

"A list of those saved and lost is enclosed.

"Captain Boxer desires me to add that the conduct of the officers and men during this frightful night was most cool and collected, obeying every order smartly and energetically, especially by the first lieutenant, master, and boatswain.—I have the honour to be, &c.,

"G. TOUP NICOLAS, Lieutenant-Commanding.

"To Captain Hayes, H.M.S. *Tartar*, Shanghai."

The loss having occasioned considerable interest, we forwarded the account which we published from the *North China Daily News* to the Editor of *The Times* and other papers.

Previous to the publication of this, however, the following leading articles appeared:—

(THE TIMES.)

The accident which befel the *Racehorse* seems at present to defy explanation. The only account of it that has reached us is derived from her commander, Captain Boxer, who is happily one of the survivors, but whose report is conveyed through Lieutenant Nicolas, of the *Insolent*. We must presume that Captain Boxer was himself too ill or too much exhausted to give any description of the event in his own handwriting, and attribute to the same cause the fragmentary character of the details thus transmitted. We learn from Captain Hayes, commanding the *Tartar* at Shanghai, and senior officer of the North China Division, that the *Racehorse* had been ordered to leave that port for Chefoo—we suppose the harbour at the entrance of the Pecheli Gulf. At half-past eight on the evening of November 4, when she had arrived within five leagues of Chefoo Cape, and was about two miles east of White Rock, she seems to have struck; not that this fact is stated directly, but we infer it from the remark in Lieutenant Nicolas's letter to Captain Hayes, that "at the time of the ship striking it was comparatively smooth." It is tolerably clear, then, that stress of weather had nothing to do with the collision up to this time; but whether the rock was marked on the Admiralty charts or was unknown to seamen we have no means of judging. However, "boats were lowered, stream-anchor and cable placed in boats ready to lay out, when heavy rollers set in, swamping both cutters and gig, and breaking entirely over the ship. The masts were then cut away, and the ship steamed full speed on shore, endeavouring to save life; but the wind increasing to a gale, the rollers washed away all skylights and filled the ship." It is for nautical men to form an opinion out of these scanty materials as to the cause of the calamity and the means taken to meet it; but, whatever the cause, and whatever the means, the lamentable fact remains that a fine ship, fully manned and equipped, was knocked to pieces in the course of an hour or two by a swell rising so suddenly as is here stated. "The ship's company were then sent aft," doubtless because the fore part of the vessel was under water, or swept by the waves. They were told the position of the ship, and that if they held on till daylight there was every hope of all hands being saved." They did their best, and Captain Boxer bears emphatic testimony to the "most cool and collected" behaviour of all, both officers and men, during the horrors of this fearful night. They "obeyed every order smartly and energetically," and the

Digitized by Google

first lieutenant, master, and boatswain, of whom only the last was saved, set them a noble example. But the struggle with the elements was too much for the endurance of all but nine, and the rest "dropped off one by one from the effects of the cold and the force of the sea." We are not even informed how the few survivors escaped the same fate, or by what means Captain Boxer reached the *Insolent*. As soon as Captain Hayes received the news, he despatched the *Rattler* to render any further assistance that might be possible, and we must patiently await fuller particulars. The circumstance that ten bodies had already been recovered and buried within three days after the wreck is a strong presumption that all these lives must have been lost near the shore.

There is nothing that shocks the imagination or excites the sympathies more than a shipwreck of this kind, and we earnestly hope that it may prove to have been due to causes beyond human control. Any suspicion that some terrible loss might have been prevented by proper care and caution seriously aggravates the effect of it, not only on bereaved relatives, but on the public. Recent occurrences, tending to shake our confidence in the seamanship which was the pride of our navy when scientific navigation was in its infancy, may perhaps suggest this suspicion in the present instance. Considering how imperfect our knowledge of the fact is, we should rather suspend our judgment, and hope that no blame rests with any one, living or dead. It cannot be said of shipwrecks, as it may of railway accidents, that almost all must needs proceed from some piece of culpable neglect. There are conjunctures, as every sailor knows, against which no skill is proof, currents so variable that they cannot be calculated, quicksands so shifting that they cannot be laid down on charts, seas in which no ship can live long, especially if the wind is also blowing a hurricane, without being strained in some vital point or springing a fatal leak. His art consists, in great part, in avoiding these conjunctures by eschewing dangerous seasons and localities and running out of storms, if he is unlucky enough to get into them. Unavoidable shipwrecks represent the cases in which he is baffled by some irresistible combination of mischances, and when they do occur they are probably the highest of all tests of courage. There is nothing sublimer on record than the discipline of the troops on board the *Birkenhead*, and the finest specimens of self-sacrifice in modern times have been displayed by common sailors in shipwrecks. It is consolatory to know that this heroic spirit was not wanting among those who clung to the wreck of the *Racehorse*, and that if we have lost a fine ship and gallant crew, we have gained at least a new assurance that habits of duty are superior to the fear of death.

(DAILY TELEGRAPH.)

All we can do now is to record the fact that the crew of the *Racehorse* behaved as English sailors always do in the hour of danger. "The conduct of the officers and men during this frightful night was most cool and collected, obeying every order smartly and energetically." So writes Commander Boxer, in that curt, cold style with which the noblest deeds of heroism and gallantry are recorded in our English fashion. The sublime saying of Nelson, on the morn of Trafalgar, has been hackneyed till its real purport is almost lost to us; but on occasions like this we recall with pride that now, as then, the expectation of England has never yet been unfulfilled by her heroes on the sea. There is something strangely sad in the list of the dead forwarded to us with the news of the disaster. Good Saxon names are those of the poor fellows whose death is the only incident of their lives known beyond their immediate circle. Of the crew, ten or so were boys, and of them not one has escaped to tell the sad story of the wreck. Throughout hundreds of homes, in this fair English land, there will be mourning to-day for brothers, husbands, fathers, sons, whose bodies lie buried in the far-away shores of China, or in the depths of the pitiless sea. Sadder yet, almost, is the roll of the men—names unknown—who were on board the *Racehorse* on their way to join the *Insolent*, at Cheefoo. "Five stokers, five marines, two boys," so runs the sole record of their fate; and yet for all of these there must be somebody to whom their death will be a solemn and a painful memory. To those who have lost friends or kinsmen in this fatal shipwreck there is nothing that can be said, with the exception of commonplace platitudes which had far better be left unsaid. One consolation, nevertheless, we may fairly tender them. Let them remember, as soon as the first bitter agony of grief shall have passed away, that England is proud of her sons who died faithful to their duty, obedient to the last, and brave to the bitter end. Of the noble crew, thus miserably wrecked, she is prouder than if their dirge had been the roll of conquering cannon, and not the roar of foam-crested breakers surging in upon the night-clad coast.

(ARMY AND NAVY GAZETTE.)

The losses which Her Majesty's navy has sustained during the last few years have been numerous and severe. When we recal to mind the wrecks of the *Conqueror*, the *Driver*, and the *Orpheus*, we cannot help coming to the conclusion that in all these instances, and in that of the *Racehorse*, there was a deficiency of that fine seamanship and cautious navigation which were once almost universally the proud characteristics of the English naval officer. The remedy for the evil is in our own hands, and we must seriously go about the task of making certain that when officers are entrusted with the charge of valuable property, and, what is of far greater consequence, precious lives, they are fully equal to the task imposed upon them.

THE NEW FEATURES OF THE CHINESE GOVERNMENT.

(THE TIMES.)

If it had so happened that there had been a Parliament at Peking, and a Chinese Minister responsible to it, that Chinese minister—let us call him San-Pan-Wang for euphony—must just now be the happiest of statesmen. He would have to meet his "House" with the proud announcement that long hair has disappeared in China; that the reign of the razor is restored throughout the Empire; that all the tributaries of the earth are pouring in sycee silver at the barbarian ports; that the provinces which were lately the scene of rebellion have recovered their green and fertile aspect; that the places of the murdered men have been filled, and their houses have been rebuilt, and their widows have found new husbands; and that China has become old China again. Perhaps he might condescend to explain that tribute-bearers have been allowed to go higher up into the interior of the country than they were allowed to go in the previous reign, and he may make some passing apology for the presence of certain barbarian eyes in the suburbs of the Imperial city; but these circumstances may well be described as rewards extended by the Imperial munificence to the well-meaning and useful drudges of Europe and America, who at their own cost, awestruck by the majesty of the Imperial power, have sent fleets and armies to exterminate the rebels. This wise and happy Minister, this San-Pan-Wang, might add that all this has been accomplished not only without cost to the Empire, but without compromising the dignity or the pretensions of the Imperial Court. What was done by the barbarian arms was done without solicitation and without debt of gratitude. What was otherwise accomplished by barbarian forces was effected by mercenaries hired for the purpose and acting under local Chinese officers. He might conclude by assuring the Assembly that these mercenary bands, being now unnecessary, have been dismissed, and that China is now free to indulge her own pleasure—whether that be to go back to the ancient exclusive policy of the last reign, or to pursue the newer course which had been adopted under the temporary and adverse pressure of recent times.

This may not unreasonably be the Chinese view of the present position of that empire, and the facts give great colour to such an appreciation. We may expect, indeed, to find the Chinese Government much less tractable. The rebellion is, to all appearance, killed. A fortnight since our correspondence from Shanghai depicted the fertile plains which extend for so many leagues landwards from that city as recovering their wonted richness. The hut-built towns are rising again from their ruins, the rivers and canals are covered again with their former floating habitations, and the millions of fugitives, hurrying back from their points of refuge within the thirty-miles radius protected by our soldiers, are seeking out the old plots on which they had laboured for generations. The European capitalists who had found their account in making the foreign settlement a sanctuary, who had sold corner lots and frontages at fabulous prices, and who had let to the fugitive Chinese small sites at rents which houses in Regent-street would scarcely fetch, now complain that their customers are gone. Shanghai, relieved from the pressure, is returned to its normal state; and the crowd which paid so well for protection is gone back to cultivate cotton, and silk, and rice, and tea. For the moment there are no more massacres and no more fires, and in the name of humanity we ought all to rejoice that by small effort and comparatively little cost we have been able to produce a result which, however it may work upon the policy of a barbarian Court, has at least restored a vast tract of country to industry, and has given happiness to many millions of our fellow-creatures. To a Chinaman, whether he be Prince or peasant, sufficient for the day is the evil thereof. When the pressure of the moment is removed, the Prince returns to all his old pretensions, and *semper eadem* is as much the true expression of Eastern as of Western arrogance. When the danger is past the peasant returns to his paddy-field, his mulberry plantation, or his cotton garden, and thinks of the long-haired robbers only as of a peril not likely to happen again in his time. To lookers-on from afar, however, everything is not so bright as it appears to the Mandarins at Peking and to the cultivators of the plains near Shanghai and the silk districts round Hangchow. Eventually the same causes must produce cognate results. China will fall again into her old system of Government. The great Mandarins will "squeeze" the little Mandarins, and the little Mandarins will "squeeze" the people; and the great Mandarins will be called up to Peking to disgorge, and there will be illegal imposts on the rivers and quarrels at the Customs. Famine will fall again upon the dense populations, and the rebellion the organisation of which only has been broken, but the elements of which remain, will re-appear, not perhaps in the same, but in other districts. Already we hear of detached bands leading a brigand existence, and sometimes uniting their forces to threaten cities. They wander up and down the coast, and they extend along the great river into the interior—not now dangerous to the dynasty or threatening the Imperial power, but sufficiently numerous to make property insecure and to show that under a new chief, a new cause, or a new pretext, a new Chinese rebellion may at any moment break forth. If we have succeeded by our policy in driving away the evil from our own doors, we have done ourselves great good, and we have done all, perhaps, which we have any right to do. Even this seems doubtful, if it be true, as reported, that bands of rebels have appeared near Amoy, where it would be most difficult for us to protect our own people. But at any rate we may hope that a lesson has been read which will not be unheeded by future adventurers of the Taiping class, and that the dangerous classes of China, when they organise themselves for a great onslaught, will take care to keep beyond the European arm. Unfortunately the temptation to venture into our neighbourhood is very great, for if the danger is imminent the plunder also is alluring. Shanghai, however, ought by this time to be quite able to protect itself against all that mere brigandage can do; and we may hope that we have established a prestige which should protect our treaty ports from any more important enemy.

Sufficient difficulties, however, remain to make the post of Minister at Peking a position of first importance to the merchants and tax-payers of this country. It is at Peking that the work must now be done. Whether wisely or unwisely for their own interests, the Court of Peking has resolved to disband—which means to stop the pay of—the various European and American mercenary corps which have been up to this time in the employ of the respective governors of provinces. This very much simplifies our position. It is, in effect, a sentence of outlawry to the European rowdy element in China. While the rebellion lasted, neither we nor the Chinese were too careful to scrutinise the character of the Europeans and Americans who came forward to aid to put it down. Several things happened which were scandalous to our Western civilisation. We saw mercenary leaders changing sides, like the old German leader of Free Lances. We heard of massacres in which the bearers of European commissions were in some way implicated, and of plunderings of peaceful people by men who ought to have been civilised. Some few, indeed, like our own Major Gordon, came out of this pitchy work with clean hands and augmented fame; but generally it was not so. The natural tendency of such a market for employment is to bring the boldest and the most unscrupulous men to the front. If the governors of provinces had been allowed to go on hiring foreign adventurers each for his own local purposes, China would soon have become the rendezvous for all the ruffians

Digitized by Google

of the rest of the world, and the poor old Empire would have been torn to pieces by their dissensions and devoured in their greed. Every honest man who has a wife loving tea and silk must feel an interest in preventing this from happening, and there ought to be no difference of opinion among the Ministers at Peking as to the propriety of preventing foreigners from taking service in China. We do not retract one word or retreat one step from the course of policy which we have from early times designated and always most earnestly advocated. The taking of Canton, the advance to Peking, the opening of the Yang-tze-Kiang, and the subsequent pacification of the country by the expulsion of the Taipings, have all been pressed forward in these columns when some of them found small favour elsewhere. To these measures we owe that great flood of commercial success in China which came so opportunely to float us over the American difficulty. If we could have obtained, as we earnestly desired, the establishment of a permanent force in China, almost independent of its Government and quite independent of its officers, using European force under the guarantee of European character, and keeping the peace impartially against all offenders;—if we could have obtained this, as a security to civilisation for what civilisation has gained, then China might have vanished from our newspapers and our debates for the next ten years, while commerce was growing and the population was learning the advantages of foreign intercourse. This, however, was not to be. The attempt seems to have been almost equally mismanaged by almost every one who took part in it. Failing this hope of an auxiliary European force in China, in which we could have confidence, the next best thing is to have no European force at all in Chinese pay. We believe that all the Powers represented at Peking are at present well inclined to an agreement to this effect, and that one of the chief impediments is that want of adequate power of punishment in our English Consuls, which was stated so forcibly in the last letter of our Shanghai correspondent.

HIS NETHERLANDS MAJESTY'S GUNBOAT "HANDIG VLUG," FOR BORNEO.

(THE TIMES),

The trial trip of this vessel on the Thames was attended with circumstances of unusual interest, owing to the novelty in various points of her construction and general arrangements. The general term "gunboat" conveys to our minds the image of a vessel carrying two heavy shell guns on her low unprotected upper deck, and averaging no more than eight knots under the most favourable circumstances, a class of vessel which has figured for almost fabulous sums in our annual Navy Estimates for repairs, &c., but, nevertheless, a class of craft that has left imperishable marks of its usefulness on the rivers and seaboard of India and China. The Handig Vlug, or Nimble, is the first vessel of her class, the armour of which had been put on on the deflective principle. The Handig Vlug is, indeed an armoured vessel, inasmuch as she carries a central domed battery, although the steel protective plating of this battery is but three-eights of an inch in thickness, and therefore rifle, but not cannonshot proof. She is a little craft of only a mean draught of 3ft. of water having a length between perpendiculars of 100ft., a beam of 17ft, and a depth of 6ft. 6in. Her tonnage is 138 tons, builders' measurement. She is built entirely of steel plates. The hull of the vessel below the water-line is built of ¼ in. steel plates, but from the water-line upwards, and including her domed battery, she is built of ⅜ in. steel plates. This cupola battery occupies 61 feet in length in the central part of the vessel, the entire space being covered in with a central grating longitudinally for ventilation, and is capped with a "pilot house" 5 ft. in diameter. It is fitted with six gunports, three forward and three aft, one at each end and in a line with the keel, and the others on the bows and quarters. In addition there is breast-high, round this cupola, pierced holes with brass slide covers for rifles, the intention of the Dutch Government being to render the vessel one possessing sufficient speed under steam to outstrip a battery of field artillery if engaged with an enemy landed with artillery in a water bisected country, such as Holland, or a perfectly rifle-proof vessel when on duty in the rivers or inland waters of Java or Borneo. Speed under steam would carry the little vessel quickly out of the range of any battery moving on shore, while with her armament of 50 riflemen and two 12-pounder rifle shell guns she would prove herself a very hornet along a river's banks, or in out-of-the-way creeks in shallow waters. As she steamed down the Thames, the Handig Vlug represented a low craft, carrying a central protected battery, something after the principle of Captain Coles, in his proposed Lady Nancy rafts. The Handig Vlug, however, differs thus much importantly from Captain Coles's present turret principle that her cupola battery is a fixture, and the necessary revolving power to render it equal to the Coles' turret is given by the twin screws, which thus render the nuts of the vessel itself its gun's platform. Near as the cupola battery of the Handig Vlug thus approaches the cupola of Captain Coles, it is but an act of simple justice to say that the principle embodied in the domed central battery amidships (Mr. Reed, the Chief Constructor of our Navy, gives a square, walled battery, without roofing), and Captain Coles' giving a cylindrical form equally without roofing, is precisely the plan submitted to the Lords' Commissioners of the Admiralty for armoured central-battery ships by the Admiralty Inspecting Engineer Afloat at Portsmouth, Mr. G. Murdock. No one could have watched the Handig Vlug but must have been struck by her diminutive appearance above the water-line of her track, and equally so by the evidently dangerous look she exhibited. Granted she was but at the minimum rate of calculation a "rifle gallery," she was a "rifle gallery" possessing wonderful powers of locomotion, and, at the same time, possessed a couple of 12-pounder rifled shell guns. During our last Indian and Chines wars, the advantages that would have been given to our land forces by the aid of a fleet of some 20 or 30 of this description of vessels moving in nearly parallel lines with the troops, on shore would have been almost incalculable. She started on her trip from off Gravesend at noon for "sea-reach," a heavy N.E. wind blowing and no inconsiderable amount of sea being found on when the vessel reached the intended extent of her trial trip. The state of the weather limited necessarily the extent of the experiments, but, so far as they could be carried out, the results were as follows:—Runs were gone over at the measured mile in Long Reach, and the results of six runs thus made gave the ship an average speed of ten knots. Allowance must, of course, be made for the state of the weather, and if allowance is really made for this, the speed attained is indeed surprising. A series of experiments followed, the general results of which may be stated, as follows:—Reversing the action of the engines, the complete circle was made to starboard in two minutes and forty-seven seconds, and the circle to port in three minutes. In going ahead at full speed the course of the vessel was reversed by the altered action of the screws in one minute. The foregoing figures are facts, and all the opinions possible appended could neither add nor detract from their actual value; but at the same time they prove the worth of the double or twin screw.

The engines of the Handig Vlug averaged 220 revolutions throughout the trial, with a pressure of steam on the boilers of 30lb., and a vacuum of twenty-four inches. The engines worked with extraordinary regularity and smoothness, and there was no sign of a warm bearing at any time. Messrs. John and William Dudgeon, of Millwall, are the builders of the Handig Vlug and her engines, and the success of the vessel adds to the well-deserved reputation which they now enjoy as the practical expositors of the "twin screw principle."

LECTURE BY MR. MARTIN WOOD, AT THE ETHNOLOGICAL SOCIETY.—An outcast race yet lingers in the Island of Yesso, the most northern portion of the Empire of Japan. These aborigines are named "Aimos," or "Mosinos"—the "all-hairy people"—this last being a Japanese term which marks their chief physical peculiarity. Their number is estimated at about 50,000. Yesso is only separated from Niphon by the narrow Strait of Tsougar; but the climate of the island is unpropitious, and its soil is barren, so that the Japanese have only occupied the southern portion. They number about 100,000, and dwell principally in the cities of Mats-mai and Hakodadi. The former city is the residence of the feudatary prince who holds Yesso under fealty to the Tycoon of Yedo. To this prince of Mats-mai the Ainos send a deputation every spring, who present a tribute of dried fish and furs, and do homage, and repeat a formal convention expressive of submission to the Japanese. The Ainos live quite in the exterior of the island, and seldom show themselves at Hakodadi or Mats-mai, except when on their embassy in spring or autumn, when they come to exchange their dried fish and furs for rice and hunting gear. Of a timid and shrinking attitude, these people seem utterly crushed in spirit by their long subjection and isolation. They are short in stature, of thickset figure, and clumsy in their movements. Their physical strength is considerable, but besides that peculiarity, there would seem to be nothing by which an observer can recognise the possibility of the Ainos ever having possessed any martial prowess. The uncouthness and wildness of their aspect is calculated at first to strike a stranger with dismay or repugnance. Esau himself could not have been a more hairy, man than are these Ainos. The hair on their heads forms an enormous bunch, and it is thick and matted. Their beards are very thick and long, and the greater part of their face is covered with hair, which is generally dark in colour; but they have prominent foreheads and mild dark eyes, which somewhat relieve the savage aspect of their visage. Their hands and arms—and, indeed, the greater part of their bodies—are covered with abnormal profusion of hair. The natural colour of their skins is somewhat paler than that of the Japanese, but it is bronzed by constant exposure. The women of the Ainos, as if in default of the extraordinary endowments of their spouses, have a custom of staining their faces with dark blue for a considerable space around their mouths. The children they generally carry in a very singular fashion over their shoulders, and during a journey these tender charges are placed in a net and slung over the backs of their mothers. The children are lively and intelligent when little, but soon acquire the downcast aspect of their elders. Yet these strange people have a history, and though its details are lost, they cherish the remembrance that their forefathers were once the equals, if not the masters, of the Japanese. This is supposed to have been in the sixth century before Christ, at a period coeval with the reign of the first Mikado of Japan. The Ainos were then masters of the northern provinces of Niphon; but they appear to have become dispossessed of their land by the Japanese, and then were gradually driven across the Strait of Tsougar, into Yesso. Their final subjection was not accomplished until the close of the fourteenth century, when they were completely overcome by a Japanese general, and compelled to render tribute at Jeddo. As to the origin of the Ainos, we believe the whole college of ethnologists are at fault. Geographically considered, Yesso would seem to belong more to Kurile Islands than to Japan; and the short stature of the Ainos, together with their ordinary methods of hunting and fishing, remind one of the Kamtschatkans. Yet those tribes have none of that superabundance of hair which, being so striking a peculiarity of the Ainos, would be participated in to some noticeable degree by any race having affinity to them. Then the chief objection to a northern origin for the Ainos is, that they persist in cherishing the tradition that their ancestors came from the west; that is, from some place in the direction of the Asiatic continent. Yet no tribe now found in Corea or Mantchuria bears any resemblance to the Ainos. The interior of Asia, at least all the borders of Tartary and Siberia, have been explored by M. Huc, Mr. Fleming, or Mr. Atkinson, and as yet no hairy people have there been found. The language of this outcast race affords no clue to their origin, for there seems no known tongue—certainly none of Eastern Asia, which has affinity to theirs. They have no written characters, but have had their rude bards or sages, who, in verses orally transmitted, have kept alive the memory of their ancient heroes, and their exploits on mountain and flood. The world will not quite lose these wild strains, for a French missionary, the Abbe Mermet, is preparing a translation of them.

THE P. AND O. CO.'S SUPERINTENDENT AT SOUTHAMPTON.—Captain Engledue, who has so long filled the post of Superintendent to the P. and O. Co.'s vessels at Southampton, has, we hear, resigned that post and accepted that of manager of the Thames Iron Ship Building Co.'s works at Blackwall. It is rumoured that Mr. Bethune, the company's agent at Alexandria, will be appointed as his successor.

APPOINTMENTS.—The Queen has been graciously pleased to appoint George Brackenbury, Esq., now Her Majesty's Consul at Charente, to be Her Majesty's Consul in the Philippine Islands.

Digitized by Google

Naval and Military.

The rumours we lately referred to as to the successor of Admiral Kuper on the China station have not been revived.

The following changes have been noticed unofficially:—Lieutenant Dunlop, of the Kestrel, to command Staunch, vice Keats to Slaney, vice Lee, going home; Grant, of Argus, to command Kestrel, vice Dunlop; and Sub-lieutenant Echlin to be acting lieutenant of Argus vice Grant. The Kestrel is stationary at Yokohama.

THE "HIGHFLYER," 21, screw corvette, Captain Thomas M. S. Pasley, sailed from Spithead for the Cape of Good Hope on the 7th inst. She takes out supernumeraries for the Cape and China stations. On steaming down the Solent his vessel fired a salute of 21 guns, in compliance with the recent order, being the first vessel that has saluted Her Majesty since the death of her late lamented Consort.

Mr. John Edward Fawcett, one of the unfortunate victims in the Racehorse, who has seen much service in China, was born at Wodehouse, and educated at Leeds, where he joined the dispensary, previous to taking out his diploma in 1855. He was then appointed Assistant-Surgeon to the Waterloo, and from that ship changed to the Acorn, and in her went to China, when he again changed to the Chesapeake, and was present at the taking of Canton, Fatsan, and the Peiho Forts, and in consequence of his bravery and attention was raised to the rank of full Surgeon by Admiral Hope, and was appointed to the Racehorse just previous to the voyage to Chefoo, which resulted so disastrously to himself and many other brave men.

We (*Army and Navy Gazette*) mentioned some two months since that Sir William Mansfield was to have the command-in-chief of the army in India, and it may be as well for us to repeat the statement, inasmuch as the Indian journals just received are unanimously erroneous in assigning the post to Sir Hope Grant. We have also announced the approximate appointment of Lord William Paulet to be Adjutant-General. We may now state that Sir Hugh Rose will be recommended to Her Majesty for the command of the forces in Ireland, to be vacated by Sir George Brown in April. We trust that Sir Hugh will accept the appointment. We also learn that a similar recommendation will be made of Sir Hope Grant for the post of Quartermaster-General, about to be given up by Sir Richard Airey. The command-in-chief at Bombay, in succession to Sir William Mansfield, will, we believe, be filled by Major-General Sir Robert Napier, of the Bengal Engineers. As a compliment to the old Indian service and the scientific corps, as well as a reward to one of our most able and gallant officers in the East, this appointment is worthy of all praise. It is most probable that Sir James Yorke Scarlett will be appointed to the Aldershot command, upon the expiration of Sir John Pennefather's term of office in the early part of the summer; and, although it is not quite settled, we believe it is exceedingly likely that Sir Richard Airey will be the new Governor of Gibraltar, in succession to Sir William Codrington.

WAR-OFFICE, DEC. 30.—20th Foot: Lieut. Edward Hamilton Barlow, from the 1st West India Regt., to be lieut., vice Owen Tudor Burne, promoted to an unattached company, without purchase. Jan. 30—20th Foot: Lieut. Charles Kyrle Chatfield to be capt., without purchase, vice the Hon. Adolphus E. P. Vereker, deceased—13th October, 1864; Ens. James Whybrow to be lieut., without purchase, vice Chatfield—13th October, 1864; Gentleman-Cadet William Alfred Headeck, from the Royal Military College, to be ensign, without purchase, vice Whybrow.

ROYAL MARINES.—Brev.-Lieut.-Col. J. C. D. Morrison has been placed on the full-pay retirement of his rank, on account of ill health. The promotions on this will be First Lieut. and Quartermaster A. H. Ozzard, of the Portsmouth division, to be capt. at the Chatham division, and Second Lieut. T. Lakin (serving with the battalion in Japan) to be first lieut.

Monetary and Commercial.

We have received notices from Messrs. Finlay, Hodgson, and Co., signifying that their firm is about to be united with that of Messrs. Thomson, Finlay, and Co., of Liverpool. The names of the firms will be unchanged, but their interests identical. The interest of Mr. John William Dudgeon, in the firm of Thomson, Finlay, and Co., ceased on the 31st December last. They have likewise retired from the firms of Finlay, Scott, and Co., Bombay, and Finlay and Co., Kurrachee. The business of these latter firms, however, will be carried on by the remaining partners. The firm of Kay, Finlay, and Co., who hitherto acted in London for Thomson, Finlay, and Co., will be liquidated, Mr. D. J. Kay joining the firm of Finlay, Hodgson, and Co.

The business of Waithman, Jacomb, and Hogg, silkbrokers, will for the future be carried on under the firm of Jacomb, Hogg, and Co.

The directors of the Singapore Gas Company (limited) have issued the following circular:—"I am requested by the directors to inform you that they have great satisfaction in reporting that the works at Singapore were successfully lighted up on the 24th May last, and that at the date of the last advices from their engineer and manager, Mr. E. J. Wells (November 20th) the works and apparatus were all in good working order. The number of public lights actually laid on and lighted up was 167, and the number of private lights was 1,144 and seven stoves, there being also a great number of applications on the books not yet complied with, independent of numerous applications for gas from persons residing in districts to which the mains of the company have not yet been extended, but which extension the directors have under consideration. The accounts and balance-sheet to December 31st will be brought before the annual meeting in April next, of which due notice will be given.—ROBERT KING, Secretary."

It is stated that the Anglo-Egyptian Bank have agreed to advance to the Viceroy of Egypt as a personal loan on his estates £1,000,000, repayable at 6, 12, 18, and 24 months, at terms of interest equal to about 12½ per cent.

The directors of the International Financial Society have decided to recommend a dividend of 7s. 6d. per share, making, with the interest paid in July last, a total of 10 per cent. for the year; £5,000 will be carried to reserve fund, raising it to £23,000, and a sum of over £20,000 will be carried forward to new account. The securities are now all valued at the market price on December 31.

Some uneasiness has been felt regarding telegraphic communication between Benghazi and Alexandria. Owing to the frequent repairs of the section, and the constant deterioration going on in that part of the cable, apprehensions are still entertained as to an eventual stoppage. No confidence can be placed in the continuance of our telegraphic communication with Egypt until a new cable is substituted.

A circular has been issued announcing a final dividend of 8d. in the pound on the estate of the large firm of Reid, Irving, and Co., which stopped during the panic of 1847. This will make a total distribution of 10s. 2d.

Among the dissolutions of partnership we observe that of Dent, Palmer, and Co., as far as regards L. P. Wilson. It is announced that Mr. Henry Worms has been admitted a partner in the firm of G. and A. Worms.

Mr. Thomson, manager of the London office of the Alliance Bank, has resigned, having accepted the managership of the Bombay branch of the Bank of Hindustan, China, and Japan.

Fifty guineas premium has been paid at Lloyd's on the *Castle Howard*, from Shanghai to London.

A prospectus has been issued of the Nowgong Tea Company of Assam, with a capital of £250,000, half to be first subscribed in shares of £10. The object is to purchase 13 estates, consisting of 12,000 acres, of which 2,182 are planted. The price is £163,000 in instalments, extending over six years.

The biddings for 30,00,000 rupees (£300,000) in bills on India took place at the Bank of England. The proportions allotted were:—to Calcutta, 17,33,000 rupees; to Bombay, 12,00,000 rupees; and to Madras, 67,000 rupees. The minimum price was, as before, viz.: 1s. 11½d. on Calcutta and Madras, and 1s. 11¾d. on Bombay. The applications within the limits amounted to 71 lacs (£710,000). Tenders on Calcutta and Madras, at 1s. 11¾d., will receive about 7 per cent., and on Bombay, at 2s., about 76 per cent.; above these prices, in full.

The number of new joint-stock companies in 1864 was 282. The total capital proposed for subscription was £106,523,000. Of these many have proved abortive. In 1863 there were 263 companies, with a proposed capital of £78,135,000.

From a circular of Messrs. Pixley, Abell, and Langley we extract the following:—

Statement of the imports of gold from Australia and America during the past seven years:—From Australia: 1858, £9,725,108; 1859, £9,830,944; 1860, £6,659,590; 1861, £6,474,451; 1862, £6,316,500; 1863, £5,164,752; 1864, £2,426,400. From America: 1858, £5,304,896; 1859, £14,560,062; 1860, £8,677,294; 1861, £83,450; 1862, £9,865,610; 1863, £7,874,179; 1864, £7,465,103. The export of gold to the East Indies and China during the same years is also shown:—From London: 1858, £168,305; 1859, £788,270; 1860, £1,612,900; 1861, £591,392; 1862, £971,582; 1863, £3,104,000; 1864, £1,255,208. From the Mediterranean: 1858, £165,230; 1859, £142,144; 1860, £765,138; 1861, £367,788; 1862, £139,172; 1863, £147,400; 1864, £4,450,210.

The amount of bullion by the P. and O. Co.'s steamer *Delhi*, from Southampton, on the 4th inst., was, in gold, to Alexandria, £7,600; to Madras, £602. In silver, to Madras, £29,000; to Yokohama, £600; to Shanghai, £500. Total, in gold, £8,202; in silver, £30,100.

LAMPLOUGH'S PYRETIC SALINE.
EFFERVESCING AND TASTELESS, ITS CONSTANT USE IS ESPECIALLY CALCULATED TO MAINTAIN HEALTH.

HER Majesty's representative, the Governor of Sierra Leone, in a letter of request for an additional supply, states, "it is of great value; it should be in the hands of all Europeans visiting the tropics." Is an agreeable effervescing remedy, of great efficacy in all kinds of Fever and Blood diseases, especially those occurring during hot weather. Dr. Gibbon, Staff-Surgeon in the Crimean war, states that European residents in hot countries find that the use of this refreshing beverage prevents exhausting perspiration and its alternative deadly fever. It acts by purifying and lowering the temperature of the blood, hence its great importance to all persons seeking to reside with safety and comfort in tropical countries subject to unusual heat.

The elegance, purity, and usefulness of the preparation has been certified by some of the most eminent physicians in the Army, Naval, and Hospital service of Great Britain.

Lieutenant-Colonel Murray, 1st West India Regiment, Sierra Leone. "I have enjoyed uninterrupted health since I have taken your Pyretic Saline."

Dr. Sparks, the Government Medical Inspector, port of London, bears cordial testimony to its efficacy in chronic forms of Gastric complaints and Febrile dyspepsia.

William Stevens, Esq., M.D., D.C.L., states in his work on West India fevers, that wherever the saline treatment is adopted the fatal yellow fevers are deprived of their terrors.

Testimonials and directions for its use in disease accompany each bottle. To be obtained from H. LAMPLOUGH, 113, Holborn, London, and any of the Agents of this Paper, in bottles at 4s. 6d., 11s. and 21s.

List of Passengers.

PASSENGERS INWARD.

By this mail to Marseilles, per P and O. Company's steamer Delhi, arrived Jan. 24.—From Yokohama: Mr. Biava, Messrs, Agenzizero, Sempi, and K. Giro, Lieut. Brownlow, R.N., and one second-class passenger. From Shanghai: Mr. Sluyt, Capt. Van Duyn. From Hong Kong: Messrs. Watson, Peneida, and De Argan. From Singapore: Capt. Casunbroot. To Suez.—From Hong Kong: Mr. and Mrs. Camo, child, and servant. To Alexandria.—From Penang: Capt. Grave.

To Southampton, per Nyanza, expected to arrive Feb. 1.—From Shanghai: Two second-class passengers. From Hong Kong: Mrs. Harper, two children, and servant, Messrs. Thompson, Bannatyne, and Teare, seven second-class passengers, and three soldiers. From Singapore: One second-class passenger.

PASSENGERS OUTWARD.

Per P. and O. steamer Poonah, Jan. 20, from Southampton.—To Singapore: Mrs. Scott, Mr. E. Hill. To Hong Kong: Mrs A. Boardman, Miss Winkworth, and native servant, Mr. J. L. Southey, R.N., Mr. J. Pittis, R.N., Mr. Turner, R.N., Sub-Lieuts. Joliffe, C. A. Tucker, and F. N. C. Hall, Mr. J. A. Fraser. To Shanghai: Mr. T. F. Hughes. To Ceylon: Mrs. Tranchell and two children, Mr. R. A. King, Mrs. Clark, Mr. Lawrie, Mr. White, and two 2nd class passengers. To Calcutta: Mrs Cotton, child, and Eur. servant, Mr. and Mrs. D'Oyley, infant, and Eur. servant, Major S. B. Cookson, Mr. Jones and native servant, Miss Thompson, Miss Taylor and Eur. servant, Lieut.-Col. Fooke, Major and Mrs. Radcliffe, infant, and Eur. servant, Miss Rind, Lieut. Holdich, Miss Denham, Mrs. Read, infant, and Eur. servant, Surgeon Reade, Miss Henty, Messrs. Gubbins, W. Barlow, F. Girardot, Turner, A. B. Harvey, W. P. Wright, Trevor Lloyd, G. A. Lloyd, Milner, W. A. Singer, Strafford, and A. C. Johnston, and eleven 2nd class passengers. To Madras: Mrs. Estill, two infants, and native servant, Mrs. A. P. Clark, Lieut. W. D. Robertson, Capt. and Mrs. Morris and infant, Mrs. Viccajee, child, and native servant, Capt. and Mrs. Ward, Capt. P. H. Reade, Messrs. S. S. Duval, H. Cornish, Dashwood, and A. Revello and three 2nd class passengers. To Alexandria: Messrs. E. Watson and Williams.

From Marseilles, Jan. 28.—To Hong Kong: Mr. J. W. Escherich. To Singapore: Lieut. Hatchell, Mr. J. J. Greenshields, Mrs. D. T. Hatchell. To Shanghai: Mr. C. L. Simpson, Mr. Whittaker, Mr. F. H. Bell. To Ceylon: Mr. E. Strong. To Calcutta: Messrs. Dow, J. M. Lowis, F. Wigram, G. Porter, W. Macpherson, Sawers, Firebrace, J. A. Beale, Gould, J. Steel, J. Knowles, Peters, Overbury, J. Mackintosh, jun., P. Nebrich, S. Marsh, and Holway, Lieut. P. Dalmahoy, Mrs. Pollock, Rev. J. and Mrs. Barton, infant, and European servant, Lieut. R. M'Kenzie, Rev. A. O. Hardy, Lieut.-col. Gompertz, Major Annesley, Dr. Duka, Dr. E. Taylor, Lieut. T. B. Savi, Miss E. K. Anderson, Mr. and Mrs. St achey and European servant, Miss Coddington. To Madras: Mr. Garrett. To Alexandria: Mr. and Mrs. E. Smith and maid servant, Messrs. Pfenninger, W. G. Simpson, and Henry Hadow and servant. From Suez.—To Calcutta: Mr. W. B. Jones, Dr. and Mrs. Cheke and two Misses Cheke.

Per P. and O. steamer Pera, from Southampton, Feb. 4.—To Shanghai: Mr. John Carnegie. To Hong Kong: Messrs. W. B. Chalmers, J. S. Young, McDonald, and W. Findlay, Mrs. Stewart and infant. To Singapore: Mr. J. W. Witham. To Ceylon: Mr. Elles, two Misses Price, Surgeon W. Jeever.

From Marseilles, Feb. 12.—To Hong Kong: Mr. and Mrs. R. Eusden, Mr. G. W. Schwemann. To Penang: Messrs. F. S. Brown and F. Palmer. To Shanghai: Mrs. Brown and two daughters.

Per P. and O. steamer Delta, from Southampton, Feb. 20.—To Hong Kong: Sub.-Lieut. D. M. Smith, R.N. To Ceylon: Mr. N. G. Layard.

From Marseilles, Feb. 28.—To Hong Kong: Mr. and Mrs. Trantman, Mr. A. Milsom, Mr. and Mrs. H. Dickinson, Col. Knox, C.B. To Ceylon: Mr. and Mrs. Armitage and two infants.

Summary of News from the Far East.

JAPAN.

YOKOHAMA.

Advices hence are to the 1st December. The English mail of the 26th September arrived out on the 23rd November.

The papers now delivered bring us the details in reference to the murder of Major Baldwin and Lieutenant Bird, intelligence of which was received on the 19th inst., via San Francisco and New York. We take the following account from the *Japan Herald*.

THE MURDER OF TWO BRITISH OFFICERS.

On the morning of the 21st November (Monday), Major George Walter Baldwin and Lieutenant Robert Nicholas Bird, both of the 2nd Battalion of H.B.M.'s 20th Regiment (two, who amongst all the respected and beloved of the officers of that regiment had, by their gentle inoffensive natures and sterling worth gained the foremost ranks in the affectionate regards of all who knew them), left Yokohama on horseback for an excursion to Kamakura and Daiboots. About half-past ten they arrived at Enosima, which place, after exchanging courtesies with other excursionists they met there, they left about twelve o'clock, with the intention of proceeding to Daiboots. The same night, information from the district authorities was sent in to the Governor of Yokohama, that two foreigners had been assaulted at or near Kamakura, that one was dead, but the other yet alive. This information having been communicated forthwith (about two o'clock in the A.M. of the 22nd, Tuesday) to the Foreign Consuls, Dr. Lindau, the Swiss Consul, Mr. Von Brandt, the Prussian Consul, and in various parties other foreign residents, started, at about 4 o'clock, towards the place indicated; Lieut. Woods, with a party of mounted artillery, and Mr. Lachlan Fletcher, interpreter to the British Legation, being ordered to proceed thither in all haste. A little after daylight they arrived at the three-fold road leading from the Great Temple, Hatchuma, where it divides into three smaller roads, one leading to Daiboots to the right, the second straight on to the sea, and the third into the country to the left. Near this spot, and between a miserable tea-house and a hut for horses, under two small sheds of mats propped up by bamboos, and disposed on mats laid on the ground, were found, most horribly mutilated, the bodies of the two unfortunate gentlemen; the pistol of one of them—one barrel of which appeared to have been recently discharged,—by his side, that of the other yet undrawn from his belt. All the inquiries made by Mr. Fletcher (and we all know how perseveringly and discreetly he would push them to the utmost) failed to elicit any information. No one knew anything but that there the bodies were—and that one of the deceased, the younger one, who said his name was Bird, had lived for several hours.

The bodies were brought in by water, and the inquest—a full report of which we annex—was held.

It would not be wise here (whilst the murderers yet remain undiscovered) to point out certain extraordinary antitheses between the medical evidence and that above referred to. Horrible as the deed is known to be—surpassing in cowardice

Digitized by Google

and bloody murdering spirit all that even those who, like ourselves, have been in close and constant contact with a nation called cannibal and savage, have ever witnessed or heard of—there is,—we shudder whilst we say it,—great room to fear, that it may have been yet more brutal, more cowardly, more blood-thirsty, than yet is known. The deceased were buried with full military honours, on Thursday; the mournful cortége forming, without doubt, the most imposing spectacle ever witnessed in Yokohama. We noticed there the British, French, American and Dutch Ministers and all the Consuls in full uniform; the Governor of Kanagawa and suite; the officers of all the men-of-war of all nationalities in the harbour; the officers of all the land forces of all nationalities; and we believe we may say that every male resident of Yokohama was there. The profound solemn silence that prevailed; the sad (though stern) countenances of all this concourse so formed,—was a tribute to the memory of the slaughtered British officers which will reach higher than the highest mausoleum ever erected. We trust it may reach; with some consoling tone, the hearts of their relations—their brother officers—their fellow soldiers, and all who knew these two estimable men, from whom they have been for ever in this life severed in so sudden and afflictive a manner.

The coffins, which were on artillery carriages, drawn by the men of that corps, were first followed by Lieut.-Col. Browne, as chief mourner; the pall of that enclosing the remains of Major Baldwin being borne by Colonel Penrose, R.M.L.I.; Major Miller, 67th; Major Ord, 20th; Major Wray, R.E.; and that of Lieut. Bird by Lieuts. Fraser, Webster, Wahal, and Barlow, all of the 20th. The firing party consisted of 240 rank and file of the 20th, under command of Captain Rochfort.

We must not, however, omit to add for the information of the friends of the deceased, who will doubtless desire to acknowledge for themselves the considerate condolence, that not only were there present, as we have said above, the Ministers, Consuls, and naval and military officers of all foreign Powers, but that a detachment of 150 men of H.I.M.'s *Semiramis*, under command of Lieut. Mict, formed a part of the mournful cortege.

And now, having "buried our dead," we rejoice to be able to add here intelligence which will, we doubt not, be received with universal gratification. We know from the best authority that Sir Rutherford Alcock is resolutely determined, by every means at his command, to urge and if necessary compel, the Japanese authorities to do their utmost to discover and deliver up the murderers. Let none therefore imagine that in that quarter there can be any irresolution, torpidity, or disinclination sincerely to follow this matter to its end. We believe Sir Rutherford Alcock would value this discovery, this retribution, more than he ever valued any honours or praise which have been showered upon him—we believe his heart is in it. We rejoice, too, to be able to say that we have the best authority for believing that the charge which we have so often heard generally made, even in official as well as in far less influential quarters, that "the Japanese authorities make it their policy to shroud and conceal offenders against foreigners," is now, for this time at least, being most satisfactorily disproved. The Japanese authorities are, we know, professing to do their very utmost to bring the assassins to justice. We have good ground for the belief that they are sincere in their professions.

THE INQUEST.

On the afternoon of Tuesday the 22nd November an inquest was held in the ante-room of the mess apartments of the 2nd battalion of H.B.M.'s 20th regiment, before C. A. Winchester, Esq., H.B.M.'s Consul, to nquire into the manner whereby Major George Walter Baldwin, and Lieutenant Robert Nicholas Bird, both officers of H.M.'s 20th regiment, 2nd battalion, came by their deaths.

Captains Charles Rochfort, Conroy Fahie, and John Aldridge, all of the 20th regiment, were duly sworn in as jurors.

The jurors having viewed the bodies the inquest was adjourned, to be resumed at H.B.M.'s Consulate the following day, Wednesday 23rd, at eleven o'clock, on which day the adjourned inquest was resumed.

Present: Charles A. Winchester, coroner, Captain Charles Rochfort, Esq., 20th regiment, Captain Conroy Fahie, Captain John Aldridge, jurors.

R. Lindau, Esq., Swiss Consul, sworn: Yesterday morning at 2 o'clock A.M., two officers came to me and told me that two men had been killed or attacked at or near Kamakura. My first apprehensions were that it might prove to be two gentlemen who were staying with me, who were then absent on an excursion. I went to the Custom-house with Mr. Von Brandt, the Prussian Consul whom I met; we found all in a bustle, and the Governor there. He told us that he had received a communication that two men had been attacked; one was killed, and the other had said he was an Engli-h officer. We determined to go down and ask the Governor to give us an escort; he did so, and gave us four officers, and we left about a quarter-past three. We lost them at the first gate, they evidently were disinclined to go with us; but my betto and one of the escort's betto followed us. At Kanasawa I inquired, but could learn nothing as to what had occurred, but was told that the wounded men were still at Kamakura. We arrived at the first tea-house and there saw the Vice-governor and Sinagawa, and several of the officers. We were then four foreigners, Mr. Von Brandt, Mr. Stearns, and I think a man named George, and I. We rode forward, Sinagaway accompanying us. At the end of the valley where the roads divide into three, at the road which leads from the Great Temple—one leading to Daiboots to the right, the second straight on to the sea, and the third to the country to the left. Near where the road divides on the right going to Kamakura there is a miserable tea-house and a stand for horses, there we saw two ponies tied up, and between the stand and the tea-house lay two bodies under a kind of shed or tent formed of mats. The bodies lay on mats and mats overhead. I believe Mr. Stearns saw the bodies and could identify them. Mr. Bird was lying on his back on a mat. Near the left hand of Mr. Bird was a revolver, the barrel of which next the capped one was discharged. The right arm was by his side, the left arm stretched out, the hand closed, two forefingers cut off an inch or two from the hand—it struck me as with care, as though to make it look natural. The long barrel of the revolver was full of dirt, as though he had fallen with it. When we had made these first examinations Mr. Woods (R.A.), Mr. Fletcher, and others arrived. [Revolver produced and recognised by witness.] The revolver was covered with blood. Major Baldwin was lying on his back, with the hands clenched. On consultation with the others who arrived we came to the conclusion that the bodies had been removed there. Their watches and other property was found on them. Major Baldwin's watch was still going. I said to the Vice-Governor I did not believe these gentlemen had been killed there: we removed the mats, and found only a small quantity of blood under both, not an amount proportionate to the hemorrhage which must have ensued from such wounds. The Vice-Governor said he knew nothing about it, and could say nothing; the people had been in the fields working and found the bodies there. Mr. Von Brandt, some 15 or 20 paces off, found some traces of blood on the road going to the sea. Evidently there the wounds had been inflicted, because we found blood on some of the bushes, and an old mat on the road which slopes to a bank, which evidently had been laid upon, was also stained with blood. We tried to find the traces of blood—but they were not very evident; we were led, however to a small tea-house—by something; a mat with a weight upon it, for instance, had been dragged along the road. This led us about 100 yards further out, but no blood there. On following these traces to another small hous on the left hand of the road it seemed to finish there. There was an old woman there, and the house was carefully examined, but nothing to give us any information or clue was found. We remarked distinctly marks of European boots leading to and from the sea. We concluded that these were of the murdered officers, but afterwards heard that others had passed and repassed the same road the previous day.

Mons. de Vecchy, in the service of the King of Italy, sworn, said: Early the day before yesterday morning I was with my party at Enosima. Major Baldwin and Lieut. Bird came about half-past ten. The Japanese priest in charge of a large tea-house at the foot of the large temple refused to give us a place to take breakfast, at the same time some Japanese officers came past and Mr. Beato in a loud voice called out to them to give us a place, otherwise, he said, we would take it. This was to a party of three or four Yakonins, going past the tea-house towards the temple. . . . A few minutes after these officers past towards the temple Major Baldwin and Lieut. Bird said they had only a short time to spare, and proceeded towards the temple. About ten minutes after the Japanese officers returned and repassed the tea-house, and one looked very savagely at us, and threw back his robe as though to show his sword. I put my hand upon my revolver; I believe the other did the same. I did not draw my revolver, but got it handy. The Japanese then marched on. The three chief men were dressed in silk; I did not observe any crest. After this party had passed we went across the island to a cave on the other side, and at the cave we met Major Baldwin and Lieutenant Bird; I tried to insist upon Major Baldwin coming back to Fusisawa with us, but he said he must see Daiboots before anything. I went along all the temples. They went to the tea-house and got a glass of beer, and started for Enosima about twelve o'clock. I said good-bye to Major Baldwin, and did not see him again, but heard from my servant that they had gone to get a bottle of beer, and had then left without saying anything else. This officer whom I say looked savagely at us was . . .

[The appearance of the men described, but we think best not to publish it at present.]

Lieut. Wood, R.A.: I was ordered out with a party of mounted artillery to bring in the bodies of two foreigners reported to have been killed at Kamakura. We started about 4 A.M. with Mr. Hensman, assistant-surgeon, and Mr. Fletcher, interpreter. We arrived at Kamakura shortly after daylight. We had three or four Japanese officers with us who kept up with our party. I found the bodies of Major Baldwin and Lieut. Bird about 1,000 yards from the Great Temple. There is a three-fold road which divides. They were lying on the left-hand side going down towards the sea, just where the road to Daiboots turns off; on the road, in front of a little tea house, under two little mats, propped up with bamboo. I have heard the first evidence about the position in which the bodies were found. I can corroborate the whole of it. There were two horses in the shed, with European accoutrements. There were only a few drops of blood on the left side of Major Baldwin's saddle-bags. I did not see any blood on the horse pointed out to me as Major Baldwin's. The horses were tied up and feeding. I did not notice that the reins of either bridles were cut. [Bridle produced, a few spots of blood found on it.] Mr. Bird's saddle had much blood on it, especially on the left stirrup. My impression from the position in which I found these bodies was that they had been carried there. I searched for traces of blood elsewhere and found them, as has been already stated, on the right side of the road. On the side of the road about twenty or thirty yards the leaves of the trees were marked with traces of blood. I staved with the bodies. The watches of both the deceased were going. Their shirt pins were all right. I did not search the

Digitized by Google

pockets. Major Baldwin's revolver was in the case attached to his waist and all the chambers undischarged. Mr. Bird's was lying as stated by Mr. Lindau. The pistol was so smeered with mud and blood that it was not possible to tell if it had been recently discharged or not. There were no riding-whips found, tho' I believe they both started with them. My own first impression was that at the time they were attacked they were both leading their horses. There would have been more blood if they had been wounded whilst on their horses—there was blood on the saddles on the near side, and on the back of the saddle-cloth. The horses themselves were unhurt. My impression now on inspecting more closely the saddles and saddle-cloths is that they may have probably been riding. The nose-band of Major Baldwin's pony is covered with mud as though he had been down, but that may have occurred in many other ways. I think the pony has dirted the bridle himself. Both these gentlemen were wounded in both arms. Mr. Bird had a wound on the left knee almost cutting it through. I think that could scarcely have been done on the saddle without also cutting the saddle. It would have been a very clever cut to have inflicted that wound without injuring the saddle or stirrup-leather.

Mr. Charles Wirgman, being sworn said: I went out on an excursion on Friday morning. On the first night I slept at Kanasawa. Between Saturday and Sunday and Sunday and Monday, I slept at Kamakura. Monday night at Fusisawa. My party consisted of myself, Mons. Beato, Major de Vecchy, the Marquis de Bonnet, Mons. Rousen and Francisco, Major de Vecchy's servant. During the two days I was at Kamakura we lived at the first tea-house. We had no difficulties — on the contrary, they were extremely polite. We saw one man, a Hotomoto, stopping with his retainers the first night we were there, at the same tea-house; he was very polite to us, and left us the next (Saturday) morning, starting apparently in the direction of Daiboots. We all spoke to him, and all our intercourse was of a very friendly character. We saw no other parties of two-sworded men. I was sketching about the great temple, Hatchimang-sama, the avenue and thereabouts, without molestation. Monsieur Roussen and myself were together principally. He is also a sketcher. I first saw Major Baldwin and Mr. Bird on Monday morning when I was sitting on the steps leading down to the grotto at Enosima. It was about 10½ or 11. Beato came down with Major Baldwin and Mr. Bird. Beato had his photographic apparatus at a little tea-house. Major Baldwin asked to be allowed to sketch his tent. By and-by I saw them again as they were going away, and they bade us good bye. There were two parties of Japanese officials. Before I saw Major Bird I saw one party come up the main-street of Kagosima, go up towards the redwood pagoda, and come down again; but where they went I don't know. I looked at them and stood on one side. They were very well dressed. There were two officers and three servants. Shortly after the first a second party ascended the hill. I met them on the hill as I was coming down. They staid away a long time. The party consisted of four or five. They appeared to be very quiet. So far as I know they showed no signs of displeasure or offence. The first party only had the stolid look of Yakonins who don't care about foreigners. I first heard of this catastrophe in the evening at Fusisawa, while I was in the tea-house. I was in the tea-house about 7 o'clock. It was said that two English officers had been attacked. One had had his head cut off—the other both his arms, but he was not dead. We laughed at the report; we made inquiries of our own Japanese servant; he said he had heard it from a betto; next morning a Yakonin came down from Yokohama and said it was true. We returned next morning to Yokohama along the Tokaido. The distance between Enosima at the tea-house where the Major's servant was left and the spot where these two bodies were found was about six miles, I think. The distance between the same place and Fusisawa is say twelve to fourteen miles. It took us about three hours' ride. The two parties of Yakonins had left about two hours before Major Baldwin and Mr. Bird.

Francisco Quaranta being sworn said: I remember Monday last. I was attending upon my master who was on an excursion. I remember Enosima. I saw two English officers there. They arrived after the party in which I was—probably three-quarters of an hour after. I saw them arrive and saw them go away. They went away about twelve o'clock. They were talking with me a quarter of an hour before leaving. I asked them if they would take something; all they asked for was a glass of beer each. They said they were not hungry; that they had already eaten something; they were only thirsty. Then they went away. I did not see them get out their horses. I only saw them go out at the door. It was about twelve o'clock when they left; it could not have been more than ten minutes more or less. I saw a party of Yakonins going up the hill; I just looked at them once but took no great notice.

Sig. F. Beato, being sworn, said: I was on an excursion with others (as related before). I remember seeing Major Baldwin and Mr. Bird at Enosima. I saw and spoke with them the first. I think this was about half-past ten. They arrived before our horses were tied up. I last saw them on the island. I offered them my bettoes to take charge of their ponies. I took them then up with me to the second temple, and there I left them, after pointing out to them a Japanese man of the place to show them over the place. After that I put my things in a tent, and saw them again, and had nearly fifteen minutes' talk with them, and showed them my views; and I asked them to come with me to Fusisawa, that they would be less tired than if they went back to Yokohama; but they said they had their horses on the way at Kanasawa, and wished particularly to see Daiboots, which they had not seen in coming. I asked them to stay to tiffen with us, but I persuaded them to go and get some refreshment from the servant, and they said perhaps they would go and take a glass of beer, but were anxious to go on. They then left, and I did not see them again. It was about half-past eleven when I last saw them. I think they left the place about twelve o'clock. It was not a tea-house, but the head-quarters of the priest. I consider the distance from Enosima to the place where these gentlemen were killed five miles. I have done it in half-an-hour. From Enosima to Fusisawa is about four miles. I arrived at Fusisawa about half-past three or four o'clock. I stopped the night there. I had some fun with the children; they took a fancy to throw at the tea-house. About half-past six o'clock my servant came to me and told me quietly that he thought the two friends (meaning Major Baldwin and Mr. Bird) had been killed. He described to me the appearance of those he meant. I asked him who told him? He said some bettoes who had come from Kamakura had told him. He said one of the men had had his head cut and was dead, the other had had his hands only cut and was not dead. I did not believe him and sent him away. The next morning very early there came some Yakonins, saying they were looking for some men—"loonins"—who had killed some foreigners, and they were very sorry. It was these who told me these two men had been killed. At Enosima we had great difficulty in getting a tea-house. They shut them all; but we went to a large house and got hold of the head man and told him we must put our horses in, and asked him why these difficulties? As this was occurring a party of five Japanese officers passed us, and looked angrily at us. I did not like their appearance at all. They were not Yokohama officers. After this they gave us the place. Always before I have found the place very civil, but this day they were not so. I fancied these Yakonins had put them up not to give us anything except at Kamakura.

J. M. Woodward, surgeon 2nd battalion of the 20th Regiment, sworn (the coroner handed to him a paper): This is my report upon the wounds of the deceased. The opinion I have formed from the examination of the wounds is, that some of them were inflicted whilst the deceased were riding, and some on the ground. The wound of Major Baldwin on the cheek I call number one. I think very likely inflicted whilst he was riding. I consider all his wounds were inflicted whilst he was riding except that on the back, which must have been inflicted whilst he was lying on his face. With respect to Lieutenant Bird, I think that all the wounds on that gentleman, except that on the back of the neck, were inflicted whilst he was riding, that last-named wound must have been inflicted whilst lying on the ground on his face. Death in the case of Mr. Bird, after the wound on the back of the neck must have been instantaneous. It is possible that Major Baldwin may have lived for two or three hours after the receipt of those injuries; but I do not think it could have been so with Mr. Bird. If the spine is severed high up as in Mr. Bird's case death must be instantaneous. The wound near Major Baldwin's spine in the back is so low as to be compatible with a short continuance of life. From the nature and description of the wounds they could only have been inflicted by a sharp and heavy instrument like a Japanese sword. And the wound in Major Baldwin's back must have been inflicted by a two-handed sword; and the wound in Mr. Bird's neck also must have been inflicted by the same description of weapon—not by any weapon that I have ever seen of a less formidable kind. Looking at the wounds on the arms, I am of opinion they were inflicted as they were raised in defence, and that they were attacked on both sides. In respect to the wounds in Mr. Bird's neck it must have inflicted instantaneous death; it was between the second and third cervical vertebra, both of which were cut through, and the spinal marrow completely severed. It is not possible that he could have lived for three hours, and to drink water with such wounds.

REPORT.

Description of wounds on the body of the late Lieut. Bird, 2nd Battalion 20th Regt., murdered at Kamakura, Japan, on the afternoon of the 21st November, 1864.

1st. An extensive incised wound between 4 to 5 inches in length at the back of the neck dividing all the soft parts and two of the cervical vertebra.

2nd. A long oblique wound about 8 inches in length running from the acromial process of the right scapula to its base dividing the bone.

3rd. Extensive wound on the inner surface of the left forearm running into the elbow-joint, completely dividing the joint and cutting the articular surfaces of both bones away.

4th. Index and middle finger of the left hand cut off a little below the phalangs metacarpel articulation, the ring finger same hand only holding on by a small piece of skin.

5th. A long oblique wound at the lower posterior third of the right forearm, cutting through both bones, and all the soft parts, held together by a small piece of skin.

6th. A long oblique wound about six or seven inches in length on the inner surface of the left knee joint, running from above downwards and outwards, laying open the knee joint and cutting away the internal condyle of the femur.

Description of wounds on the body of the late Major Baldwin, 2nd Battalion 20th Regiment. Murdered at Kamakura, Japan, on the afternoon of the 21st November, 1864.

1st. Large wound on the left cheek, extending from the angle of the mouth to the ear, completely cutting away the cheek, only held on by a few shreds.

2nd. Left arm and forearm frightfully hacked, bones cut through in several places.

3rd. Long wound on the outer aspect of the right elbow joint, cutting through both bones of forearm, forearm frightfully mutilated.

4th. Desperate wound on back sixteen inches in length, to the right of the spinal column and extending from the middle of the back to the base of the sacrum, dividing all the soft parts and three of the false ribs close to their articulation into the abdomen.

Liver exposed but not injured.

(Signed) JAS. M. WOODWARD, Surgeon 20th Regiment.

Yokohama, Japan, 23rd Nov. 1864.

Marquis du Bonnais, being duly sworn, said: I first saw the two officers at Enosima when they arrived about ten to half-past ten o'clock. I did not observe anything extraordinary with any party of Japanese. I thought the people of the place received us rather queerly. When the party of five Yakonins passed by to the temple they seemed to stop for a moment, as though surprised to see us there, but nothing else particular struck me as to their manner. I saw the deceased gentlemen the last time at half-past eleven; they came out of the grotto as I was going in. I was afterwards told they left about twelve o'clock. I observed at several times on previous days in passing the spot where the deceased were found several parties engaged in agricultural employments. I think it scarcely possible that, considering the number of people about, there should not be some one who could give a good account of the whole transaction.

Lachlan Fletcher, Esq., being duly sworn, said: I went as interpreter with Lieut. Wood to the locality of the murder. I arrived at Kamakura,

Digitized by Google

where the road branches off, shortly after daylight. It was my impression, from the manner in which the bodies were upon the mats, that they had been disposed there. I sought for traces of blood, and found some about thirty or forty yards down the small avenue that leads to the sea, on the right hand of the road. There is one place at the end of the thirty yards and on a parapet or bank some one and a-half or two feet high where there was a quantity of blood, but not a continuous line of blood; but in the spot I have described it is visible as where it fell on the leaves of the trees, and the bushes and bank and road, and starred as though it had trickled down from a distance. I afterwards went to the house of an old woman down this avenue leading to the sea, perhaps about 150 yards down. Between where we noticed these traces of blood and this spot we noticed a track as though something heavy had been trailed along the ground; it might have been a mat with a weight upon it; in some places the defined edges were perhaps two feet or a yard apart, but I saw no blood. It was a dry sandy part and I don't think blood would have been very visible. I did inquire of various peasants about the circumstances, but all I could get out of them was that they knew in the evening that two foreigners were killed, and they knew nothing further about it. The old woman in the house could give no information—nor during the whole time I was on the ground could I get any explanation—but the people all said they had been working in the fields. What the officers told me was the same. The Vice-Governor's interpreter, Sinagawa, I understood to say there was some disturbance in the village—I drew the inference that he meant in which these gentlemen were concerned, but I thought probably as he spoke in English that he did not convey his ideas correctly to me, and thought from his confusion of manner that he was mistaken, and still think so. I could find nothing from either officers or villagers further than that these gentlemen had been killed the previous evening. I got every assistance that the party required. The chiefs of the village were called and I was furnished with their names. This morning I have been engaged in taking down the evidence of the Japanese as read over to me by the Vice-Governor. I produce the translation. [Read.] They precisely correspond with that I heard on the ground, save that they contain the statement about the two officers praying in the temple and the finding of the hat.

STATEMENTS OF THE JAPANESE.

Yasnyomon, the name of the proprietor of the house on the spot, states about English 10 A.M.

Yasenyemon is a peasant, and went out to work into the fields about 10 A.M. at a distance with my wife and boy, and about 4 P.M. another man, Kikiuero, came and told me while working that two foreigners were lying dead opposite my house. I forthwith went home with my wife and boy and the chief of the village was there when I arrived. A report was immediately made to the Governor. I knew nothing whatever of who committed the murder. One of the officers was still alive when I arrived and he said he was an English officer, and the Vice-Governor said his name was Bird. He died soon afterwards.

Ki iuero, the inhabitant of the opposite house.

I went two days before to a temple to saw timber. A temple called Jimbugi in Kamakura and did not come home to my own house in the night time. A peasant called Yasungoro came to me and told me that two foreigners were killed before my house this evening. I immediately returned to my own house. My wife went to a neighbouring place, I found, in the morning to work in the fields.

Se, a widow woman living at Kinoshita Mura.

I went out to keep a stand of sweetmeats at the gate of the temple, and about three o'clock two two-sworded Japanese came to the temple to pray, one was about thirty-four years of age and had on the loose trousers of an officer and had a bamboo stick in his hands. The other officer was about twenty-four or twenty-five years and had on the dress of an officer, coat and trousers—he had on a large bamboo hat (a hat was discovered on the spot by one of the Yakonins from Yokohama corresponding to the one described here) and also wooden shoes. They did not sit down at the temple but departed immediately down the avenue towards the sea.

Takagiro. The chief of the village of Omatchi mura (the nearest to where the officers were killed). I went in the morning a little distance off to look after my rice fields, and was there all day till about four o'clock. My servant came to tell me that two foreigners were killed opposite to Yasnyomon's house. I immediately went back to my own house, and from there direct to where I heard the foreigners were cut down, and met there the chief officers of the temple, and immediately determined on sending a messenger to Yokohama.

Gembi, the next officer in rank to Takagiro in the village of Omatchi mura. I was at home in my house on the 22nd, and a man came to inform me that two foreigners were cut down opposite Yasnyomon's house, and I immediately went to the spot.

Kitchigoto, Betto, Euwaso, Betto to the officers that were killed.

Their evidence amounts merely to their having heard at Kanasawa (where they were desired to remain with fresh horses) that two foreigners were killed, and they immediately went to the spot.

FINDING.

That Major George Walter Baldwin and Lieut. Robert Nicholas Bird were cruelly murdered near the town of Kamakura on the 21st November, instant, about four in the afternoon.

That from the evidence brought before them, the jury have no doubt that this atrocious crime was the act of Japanese swordsmen unknown.

The jury further find that this attack must in all likelihood have been made on both sides simultaneously, and by a party of five or six ruffians at the very least, but possibly of even greater numbers.

The jury are further of opinion that the Japanese evidence read in Court is utterly worthless, and that there must be ample testimony in the possession of the Japanese authorities, or attainable by them, descriptive of the whole circumstances of the tragedy.

(Signed) G. ROCHFORT, Capt. 20th Regt.
" CONROY FAHIE, " " "
" J. ALDRIDGE, " " "

Approved,

(Signed) CHARLES A. WINCHESTER, Consul and Coroner.

The *Herald* observes:—"If anything could have rendered this sad incident more deplorable it is the reflection that it comes like a sudden blight upon the fairest prospects of a coming harvest of improved relations with the Government at Yedo. Not only an altered policy there, but a renunciation of hostility at Kioto, and of such powerful members of the Daimio class as Satsuma and Choshiu, have all been the fruit of the last nine months of patient effort. Are these all to be lost because no means can be found either to restrain or punish the more vicious of the two-sworded men who infest the country? We would fain hope not, but the answer must come from the Tycoon, and that promptly, or it may be too late."

A Shanghai contemporary remarks that there is a remarkable contradiction between the testimony at the inquest and the statements made by the local authorities in their report to the Governor, which, slight though it be, may afford some clue to the discovery of the culprits. According to the evidence of the village guards, Lieutenant Bird was alive at 10 P.M., whereas it is clear from the wounds inflicted, one of which severed two of the cervical vertebræ, that death must have been almost instantaneous; and yet there is native testimony to the effect that the assault was committed at 4 P.M. It is not surprising, under these circumstances, that the jury of officers which sat on the inquest expressed an opinion that the Japanese evidence was utterly worthless; and that, as other circumstances direct suspicion to the Yakonins at the Temple gardens, it should be generally believed that the district authorities can, if they choose, supply every detail necessary for the arrest of the criminals.

The *Japan Commercial News* reports that the Mikado refuses to sign the Treaty Convention lately entered into between the Tycoon and the Foreign Plenipotentiaries at Yedo, and also withholds his sanction for paying any indemnity. The Japanese are organising another embassy to Europe, which is not likely (says the journal quoted) to meet with a welcome reception at any of the European Courts—more especially with France—from the manner the last treaty was ignored by the Tycoon and his Gorojio. Unless the recent treaty is signed by the Mikado, and all the engagements of the treaty fulfilled, the ambassadors are not likely to obtain very favourable credentials from the Foreign Plenipotentiaries accredited to the Court of the Tycoon to the various Courts of Europe.

Sir Rutherford Alcock has addressed a communication to Mr. Consul Winchester on "the subject of the sanitary and municipal arrangements imperatively demanded in the settlement," accompanied by a "note on the Municipal Government of Foreign Settlements in Japan." This note, he says—

"May be of some utility in fixing your attention and that of your colleagues on what seems to be the main points for consideration. The progress of the municipal institutions at Shanghai, from their origin, you will see, has been traced with a view to draw such instruction as the history of a foreign settlement in very analogous circumstances is calculated to afford. It would obviously be very idle to run the same course without profiting by the experience of others; or to begin *de novo* upon a basis already found to be defective. By avoiding on the contrary the errrors, and beginning where a sister colony now is, free from the greatest of all their complications, the intermingling of a native population,—a mistake from which this community has hitherto been happily preserved—it may fairly be hoped that the task will be easier, and final success more certain of attainment. I would suggest that you should give the enclosed note as much publicity among those interested in the issue as you conveniently can; and in concert with the Consuls of other Treaty Powers invite the Foreign Community to meet together, and ascertain if they can propose a scheme of municipal administration which shall meet the 'requirements of the place' and be satisfactory to themselves. I can only say that the concluding paragraph of Sir Frederick Bruce's letter to the Committee, named by the Foreign Land Renters of Shanghai, exactly describes the object to be attained here; and I shall be glad to the best of my power to assist you and them in securing so legitimate and desirable an end."

The Yokohama hounds had a splendid run after a dog fox on the 19th November. There is to be a meeting every Saturday during the season, on the Bluff adjoining the camp of the 67th Regiment.

We observe in the *Japan Herald* an advertisement announcing the sale by auction of the effects of Sir Rutherford Alcock, including his "furniture, plate, small travelling library, valuable photographs, and various works of art and vertu from the Great Exhibition of 1863." Are we to gather from this that his Excellency will not return to Japan?

CHINA.

CHEFOO.

H.M.S. *Rattler* arrived at Shanghai from Chefoo on the 3rd December. She brings no additional particulars as to the loss of the *Racehorse*. The latter is a total wreck, and now lies embedded in sand, stem on to the shore, and so high up that at low water her upper deck is left dry, and the space between her

Digitized by Google

and the shore can be easily traversed on foot. Her main and fore masts were cut away, but her mizen-mast is still standing. It is said that she will be sold as she now lies. The *Rattler* succeeded in saving all her guns, anchors, and cables, together with a large quantity of clothing and personal property. The latter is much damaged by salt water, and is almost useless. Up to the time of the *Rattler's* departure, fifty-six bodies had been recovered and buried. The survivors have been brought down to Shanghai.

SHANGHAI.

The London Mail of 10 Oct. had not arrived out, in consequence of the *Salsette* putting into Manila. The news by this mail from China is extremely meagre.

The bodies of Lieut. Farquhar, Dr. Fawcett, Mr. Crabbe, and thirteen men belonging to the *Racehorse*, have been recovered by the gun-boat *Insolent*. Comr. Boxer has received severe injuries in his arms through falling spars, &c.

The steamer *Dorrington* was advertised for a trip to Soochow.

Consequent on the long continued drought, the city authorities at Soongkong have resorted to the usual mode of propitiating the pluvial dieties, viz.—closing one of the gates. The absence of rain is serious, and unless we have a downfall on an early occasion, the Yangtse will be so reduced in volume that only three of the usual Hankow liners will be able to run—viz., the *Express*, the *Fusi-yama*, and some other craft, the name of which we are not certain about.

A Consular meeting was held on the 29th November, to read a proclamation issued by the Taotai as to the evil results of gambling. The assembled Consuls passed the following resolution :—

"That they concur with the Taotai as to the dangerous character of the gaming houses, and the evils attendant on their existence, and are of opinion, therefore, that they should be suppressed throughout the city, suburbs, and the several divisions of the foreign settlement. They also approve the Taotai's Proclamation, which they consider should be issued at once, and carried out immediately after a month's notice, and they recommend that in the various divisions of the foreign settlement it should be put in force with the aid of the foreign police.

"Resolved : That the chairman communicate this minute to the two Municipal Councils."

A meeting of the Branch of the Royal Asiatic Society was held in the Reading-room of the Shanghai Library, on the 29th November last, with Sir Harry Parkes in the chair. The routine business having been closed, the paper by J. M. Canny, Esq., on "The Amoy River and Island of Saghalien," was read. Mr. Kusst, on the conclusion of the statement, fully corroborated it, and the chairman, after a few appropriate remarks, proposed a vote of thanks for the pleasure afforded them. Dr. Lamprey then exhibited a quantity of Japanese books, and among them a dictionary and some works on botany. Mr. Hanbury produced some of the famed Magnesium wire, and the meeting came to a conclusion with several votes of thanks.

CHIN-KEANG.

On the 18th December an attack was made upon two English gentlemen (Messrs. Baldwin and Smith), who had started on a shooting excursion from this place. During the night Mr. Baldwin was awakened by a scuffling on deck, and rushing up with a loaded gun in his hand, he found that his crew were repelling a number of men, among whom were several Imperial soldiers. Mr. Baldwin was unable to fire his gun, it being wrested from him, and on his demand to be taken before the Mandarin, supposed to be in command, he was only beaten and insulted the more. On the dispersion of the assailants it was discovered that no lives had been sacrificed in the fray.

AMOY.

A correspondent under date the 12th Dec. writes :—

"You will have heard from various sources of the sudden near approach of the Taiping rebels to this port some few weeks ago. On the news reaching Amoy from Chang-chow-foo (a large city distant 30 miles inland from this, and of which Amoy is the sea port), a serious panic seized the native population. Fortunately for us two gunboats were here, which were the means of allaying their fears to a certain extent, and preventing the low mob of natives (which this place is infested with, from setting fire to the town. Mr. Pedder, our Consul, deserves great praise for the manner in which he made certain resolutions for the safety of life and property in the event of any sudden attack on the part of the rebels. Imperial troops have been sent from Foo-chow to assist in retaking the above city. Three or four attempts have thus been made, and every time the Imperialists have been severely defeated ; the last attack was made ten days ago, when they were driven to within ten miles of Amoy. The Imperial troops, of whom there are 20,000, do not intend molesting the rebels again until they receive more force. The Taepings are supposed to number 15,000 men.

"For the protection of foreign residents there are at present at anchor in harbour the following vessels of war :—H.M.S. *Pelorus*, Captain Kingston ; H.M.S. gunboats *Flamer*, *Cockchafer*, and *Janus ;* also H.I. Majesty's schooner *Vindex*, Captain B. Caw ; she formerly belonged to Messrs. Dent and Co., and if called upon would do good service, as she is a beautiful craft, armed to the teeth, and commanded by a very able officer. It is quite necessary to have all these vessels, should the rebels come, as it is fully expected they will, as they have so many places to attack from. Should they leave, it would be a great inducement for them to pay us a visit. We all, however, have great confidence in Captain Kingston's ability in protecting us ; already he has done much good for the port and its residents. H.M.S. *Tartar* arrived here from Japan on the 10th. She merely called in to see how the state of affairs was, being on her way to England ; she left this morning, and calls at Hong Kong.

"Business, ever since the first report reached us of the rebels being near, has been entirely stopped, and even now but very little is doing. Small purchases of tea are made, though there is very little more left to buy. The British barque *Ariadne*, from Shanghai bound to Liverpool, put in here on the 26th November, with the captain sick, and left again on the 29th, captain going on in her, he being better. The British barque *Falcon*, Captain Packer, left for New York, calling at St. Thomas's, West Indies, for orders, on the 4th inst., with 400,000 lbs. Oolong tea. The Danish brig *Theodore and Julie* left for same destination on the 8th Dec., with 169,700 lbs. Oolong tea.

"There are no vessels loading either for England or America."

HONG KONG.

The overdue English mail of October 10 arrived out per *Salsette* on December 3, having put into Manila short of coals. The French mail of October 17 arrived on December 9, and the English mail of October 26 on the 10th.

The telegraphic communication between the town and Messrs. Jardine, Matheson, and Co.'s had been opened.

The tutelary saint of Scotland was duly honoured in this colony by a public dinner in the new club on the evening of the 2nd Dec. About sixty "brither Scots" sat down, and one or two English guests were also present. The chair was occupied by the Hon. W. T. Mercer, Colonial Secretary ; and amongst those present were a goodly number of the most active public men of this colony. The arrangements for the occasion included some appropriate reminders of the national object which had brought the company together. Immediately behind the chairman was a full-length portrait of the venerable Saint Andrew, which, partially lighted up from behind, presented a tolerably conspicuous and romantic appearance. In front of the chairman, again, was placed a large vase, filled with thistles, the sturdy national flower—a unique and unexpected bouquet for such an isolated part of the world.

A subscription is being raised for the widows, orphans, and others dependent on those who perished in the ill-fated *Racehorse*. The mere mention of such an endeavour is, we are certain, quite enough to call forth a hearty response from this community ; and a single word in its favour would be simple waste. One thing, however, ought to be noticed ; and that is, that the fact of the idea being taken up by brother officers and men on the station does both credit to themselves and to the service to which they belong.

On the introduction of gas we find the following :—

We have much pleasure in congratulating the Hong Kong Gas Company on the success they have attained in illuminating the city of Victoria, as well as on the most remarkable speed with which the work has been performed. Mr. R. Witty, the company's engineer and manager, is entitled to have his services honourably mentioned in connection with this affair. No practical man of the smallest experience in Hong Kong is ignorant of the provoking difficulties that attend the carrying out of any public work ; and the attempt to do so by an entire stranger is, as we all know, surrounded with troubles on every side. Of Mr. Witty it may be said that "alone he did it." In saying so, we have no wish to

Digitized by Google

detract from the credit due to those under his direction. They have evidently done their work well; and they have certainly done it most promptly. The gas is now in full working order in the office of this paper; and a purer fluid could not, we are sure, be produced in England.

Major Brine, R.E., Colonel Hong Kong Artillery Volunteers is under orders for home. He received directions from the Horse Guards to proceed to England without loss of time, the same day he was struck down with small pox; we are glad however to state that the crisis has passed, and the gallant major is on the high road to recovery. His successor, we hear, on his passage to this place has had a sun-stroke, and is detained in consequence at some of the ports.

The *Evening Mail* gives the following items:—The Volunteers have again claimed the greatest attention during the past week. The Prize Meeting on the Race-course lasted some four or five days, and the shooting was, on the whole, good—in some cases particularly good; and, moreover, involving keen and close competition. The meeting was closed by the presentation of prizes in the Public Gardens, which ceremony was performed by Lady Robinson on Tuesday evening, before a pretty numerous company of spectators and the paraded volunteers. The pretty cups, the crimson covering on the terrace steps, the band, and the pleasant scene of the occasion, made it a lively and pleasing little display. The scores made by the best shots, and the winners of the various prizes, will be found detailed in another column. Robberies are still rife, and one appears this week, on a lady, fortunately unsuccessful; it is to be hoped, however, that this case was of a local character, instigated by a discharged coolie. Things cannot go on long at the same rate as now, and the burglars must be fully met some day. The great event in our municipal affairs last week was the partial lighting up of the city with gas. This may have some effect on the burglars' movements. With theatricals and other amusements, we are likely to be well supplied during the Christmas week.

COCHIN-CHINA.

SAIGON.

The *Courier de Saigon* notifies that on the last voyage of the *Allom Prah* from Saigon to Bangkok, she found a rock not marked on the charts, situated in latitude 12 deg. 25 min. 30 sec. North, and longitude 90 deg. 19 min. East from the meridian of Paris. The buoys which were situated on the Donnai, twenty miles south of Saigon, have been raised, and replaced by beacons on the bank of the river, in a manner so as to indicate the course to avoid the bank, on which vessels may touch at low water. One buoy still remains on the centre of the bank.

On the 1st October the receipts of the taxation for 1864 exceeded three millions (of francs), including the value of the rice paid as tribute. The receipts exceed the expenses by upwards of a million. The expenditure included in the budget for 1865, which is about to be published, exceed four millions, without including the value of requisitions and corvees which it has not been possible as yet entirely to suppress.

About 500 kilometres of roads have been constructed or repaired. The most part of these roads are permanent and well frequented. More than 500 Cambodian carts carrying cotton, tobacco, and other produce, have passed Tay-ninh and have embarked their loads at Trambang for Cholen.

Eighteen primary schools for teaching the European characters have been opened at the pressing desire of the population; a thousand natives already spell the French alphabet, and there are numerous applications for the opening of new schools. Conversions are numerous, now that the natives appreciate the greatness and the excellence of Christian morality.

The new King of Cambodia has paid a visit to Saigon. He arrived on the 25th October in a French gunboat, and left on the 27th. He visited all the different establishments and made numerous inquiries regarding what he saw, and especially as to objects which he thought might be useful in his own country. He was particularly impressed by the Imperial printing-office and the electric telegraph. He had his portrait taken by photography and made purchases in different shops, not forgetting some articles of fashion, destined no doubt to set off the beauty of the ladies of the Court of Houdon. The more immediate object of the King's visit seems to have been to renew the assurances of his devotion to France, which had become rather doubtful, if we may believe the *Saigon Courier*, as it asserts that the existence of a secret treaty between the King of Siam and the King of Cambodia had been discovered by accident, annulling the treaty with France, and transforming the kingdom of Cambodia into a Siamese province.

SIAM.

The British Consul attended at the Royal Palace at Bangkok on the 2nd December to present an autograph letter from Queen Victoria to his Siamese Majesty.

JAVA.

BATAVIA.

Dates hence are to the 15th December. The mail from Europe of the 26th October arrived out on the 5th December.

H. M. André Wiltens, Esq., Governor of the Moluccas, has been appointed Governor of Celebes and dependencies. Lieutenant Colonel G. M. Verspyck, of the 11th battalion of Infantry, has been appointed Commandant of Batavia. Major J. H. Donleben, of the 12th, has been promoted to the vacant lieutenant-colonelcy. Lieutenant-Colonel A. E. Waszklewiez, surgeon N.I. Army, has been made a colonel of the medical service.

From a quarterly statement of the Government Java Produce Crops of 1863 and 1864 we extract the following:—

	1863.	1864. Probable crop.
Coffee	1,100,891 pic.	479,946 pic.
Sugar	1,104,256 „	1,116,726 „
Indigo	518,849 lbs.	446,748 lbs.
Tea	1,139,189 „	575,617 „
Pepper	18,699 „	No report recd. yet.
Cinnamon	159,373 „	169,505
Cochineal	8,872 „	15,000
Tobacco	9,050	Reports favourable.

The coffee and tea crops show a falling off of no less than 620,945 pic., and 563,572 Amsterdam pounds respectively. The failure in the crop of the former article is to be attributed to the heavy and continuous rain during 1863.

The same paper gives the following statement of the private crops during the same period, including the deliveries to Government:—

	1863	1864 Probable crop.
Coffee	137,818	84,220
Sugar	1,008,209	797,488
Indigo	206,646 lbs.	199,085 lbs.
Cochineal	16,000 lbs.	Not yet known
Tobacco	132,485 pic.	46,594 pic.

Showing a difference in the two first articles of 53,598 pic. and 210,721 respectsvely. If we take the difference of the Government coffee crop between 1863 and 1864 at an average rate of 38½f. per picul, we find the Government a loser by 23,906,382. Add to this 130,000f.—, the export duty on 53,598 piculs private coffee, at the same average valuation, which would otherwise have flowed into the Treasury, but which is now lost,—we get the enormous sum of twenty-four millions, thirty-six thousand, three hundred and eighty-two guilders, a dead loss to the Government in the matter of Java coffee alone.

The Chamber of Commerce had held a meeting which was attended by the members of the Vereeniging, to petition the Government in disapproval of the increased export duties on sugar and coffee, proposed in the draught of the new Customs tariff. The President of the Chamber moved that the mercantile community should join him in his intention. The Vereeniging immediately resolved that a committee be chosen to carry out the wishes of the Chamber of Commerce.

At the Government sale of sugar and coffee held on the 10th December 79,000 piculs sugar averaged fr.16.57; and 25,000 do. coffee averaged fr.39,53

The three men and one woman belonging to the *Gazelle*, reported in one of our former issues, as having arrived in an open boat at Bonthain, are now in custody at Batavia. There is a strong suspicion against these people; and, if report speaks true, one of them, the serang, has already partially confessed that there has been another of those scenes of piracy and foul murder, now becoming so frequent in these seas, and which make the blood boil to think of.

The Portuguese transport *Martinho de Melho*, with troops from Macao for Lisbon, put in on the 11th November, for fresh provisions, and would proceed on her voyage in a few days. The Belgian ship *Leopold*, from China to Havanah, with 400 Chinese coolies on board, has put in here for water. The British barque *Douglas*, from Melbourne, brought a cargo of horses, cows, and dogs—without exception, the finest lot ever seen imported into Batavia. The Mecklenburg ship *May Queen*, from Cardiff, having sprung a leak on her voyage, would proceed to Sourabaya to repair.

Digitized by Google

His Netherlands Majesty's steamship *Medusa* arrived from Japan on the 15th November. The *Java Bode* says that it is intended to give the officers of this vessel a public ovation.

We have just been told (says the *Java Times*) one of the most horrible stories we have heard for several years past. It seems that whilst a party of gentlemen were on an excursion in the neighbourhood of Meester Cornelis, a couple of weeks ago, they lost their way in the woods there, and in their endeavours to extricate themselves from this dilemma, they were attracted to a certain part of the forest by the cries of a human being. Hastening to the spot, they were horrorstruck with the sight before them. A native woman, almost nude, and diminished to a skeleton, in all the agonies of insanity, and chained to the ground by an iron chain fastened round her ankles, was the spectre that met their eyes. As soon as they could get out of the forest, they gave information to the police, who proceeded to the place indicated, and released the poor creature. An inquiry was immediately instituted, and after much trouble it was discovered that the poor woman, who formerly possessed a great deal of property, had been served in this manner by her husband and brother, and had been three years in that situation, during which time her scanty meals were brought her regularly by her inhuman husband, who had built a small bamboo shed for his victim. Fifteen persons, who are said to be implicated in this barbarous act, are in custody.

MALACCA STRAITS.

SINGAPORE.

Our dates are to the 22nd December. The London mail of the 10th November, by the P. and O. Company's steamer *Carnatic*, arrived out on the 14th December. The Messageries mail, with London dates to the 17th November, had not made her appearance. The Messageries steamer *Alphee* arrived on the 11th December from Saigon, disabled, having broken her screw-shaft shortly after starting from Saigon to Hong Kong. The *Alphee* left Singapore on the 23rd November with the Marseilles mail of the 19th October. She reached Saigon safely on the 27th, and started for Hong Kong again on the 28th, one day after which her screw-shaft gave way, and she had to return to Cape St. James under canvas. There being no facilities at Saigon for repairing the damage, she had to come down to Singapore. Her mails and passengers were sent on from Saigon by the French Government transport *Sarthe* on the 4th December.

The British steamer *Kin Lin*, Captain Bramwell, from Cardiff, the 30th June, arrived on the 14th December. The *Australian Messenger*, from Melbourne, the 1st November, arrived on the 19th December, having spoke the Peruvian barque *Alberto* in the Straits of Banka, from Rio de Janerio, having put in there dismasted; out 90 days, bound to Singapore, and wished to be reported. The steamer *Indore* arrived on the 21st December. Shortly after leaving Hong Kong some derangement occurred to her screw, which would not revolve, though the shaft continued to go round. She will have to be docked to ascertain the precise injury, and to repair.

The election of a Municipal Commissioner, to sit for three years in place of the retiring member, ended in the return of Mr. Vaughan, the police magistrate, at the head of the poll. Considerable disapprobation with this result is expressed by the European section of the community; first, because Mr. Vaughan is a Government official, and his presence at the board gives a majority there to the Government; second, because during the meetings of the Council he must absent himself from his magisterial duties; and thirdly, because as a commissioner he will be unable to try any of the many cases in which the commissioners are prosecutors. Mr. Vaughan will, we believe, be required by Government to get another magistrate to act for him in the two last contingencies; but it seems doubtful whether this will get over the difficulty; for, as the commissioners receive all the fines levied at the Police Court, it will be impossible for Mr. Vaughan while he is a commissioner, by a well known principle of law and justice, to award any punishment in the nature of a fine.

All attempts to get the *Hydaspe* off proved fruitless, so that she was abandoned, and the wreck sold in Singapore for some 2,000 dols. The vessel has since been stripped of all that was valuable within reach, and the purchasers of the wreck will probably realise a fair profit on their venture. The wreck lies on the reef with her stem sticking up at an angle of about 35 deg., and the sea at low water up to her main mast. We believe (says the *Straits Times*) the vessel was altogether uninsured.

Births, Marriages, and Deaths.

(Announcements for Subscribers are made free of charge.)

BIRTHS.

ESSEX—On the 30th Nov., at Shanghai, the wife of E. C. Essex, of a daughter.

OZORIO—On the 8th Dec., at Gough-street, Hong Kong, the wife of C. A. Ozorio, jun., of a daughter.

PROBST—On the 26th Nov., at Shanghai, the wife of Wm. Probst, of a daughter, still-born.

PEEL—On the 3rd Dec., at Ningpo, the wife of James Peel, of a daughter.

MARRIAGES.

AUSTIN—FUNG.—At his residence, Honque, Shanghai, by the Rev. Elliott H. Thomson Mr. John Austin to Miss Kung Fung.

DE VOS—DIECKMANN.—On the 10th Dec., at St. Andrew's Church, Singapore, by the Rev. Mr. Waterhouse, Mr. D. De Vos, of the firm of Becker, Belder, and Co., of Singapore, to Miss Johanna Louise Dieckmann, of Hamburg.

FIELDEN—MCCORD.—On the 27th Oct., at Greenville, South Carolina, at the residence of T. K. Sass, Esq., by the Rev. Thomas S. Arthur, rector of Christ Church, Captain Henry Wemyss Fielden, A.A.G.C.S.P. Army, second son of Sir Wm. Henry Fielden, Bart., Feniscowles Hall, Lancashire, to Miss Julia McCord, daughter of the late David McCord, of Columbia, C.S.

MENDEL—COOKSON.—On the 17th Jan., at Grasmere, Westmorland, by the Rev. Dr. Cookson, Master of St. Peter's College, and Vice-Chancellor of Cambridge, brother of the bride, assisted by the Rev. Edward Jeffries, rector of Grasmere, Sam Mendel, Esq., of Manley Hall, Manchester, to Mary, youngest daughter of Mrs. Cookson, of How Foot.

TOWSE—HOOPER.—On the 18th Jan., at St. Magnas the Martyr, by the rector, the Rev. A. J. McCaul, M.A., William Wrench Towse, of 89, Great Tower-street, and South Norwood, Captain L. R. V. B., eldest son of William Beckwith Towse, Esq., of Fishmongers' Hall, to Emily, only child of Bartlett Hooper, Esq., of King William-street, city. No cards.

DEATHS.

BALDWIN—BIRD—On the 21st Nov., at Kamakura, near Yokohama, Japan, most barbarously murdered by Japanese, George Walter Baldwin, Major of the 2nd Batt. 20th Regt. of Foot, late in the 31st Regt., aged 35, son of the late Major Baldwin of the 31st Regt., who was killed in battle at Chillianwallah: also Robert Nicholas Bird, Lieut. 20th Regt. of Foot, aged 23, son of —. Bird, of Kinsale, near Cork, brother of Lieut. J. S. Bird, H.B.M.'s Royal Marine Artillery, and of Lieut. G. B. Bird, of H.B.M.'s 51st Regt.

CAMPBELL—On the 20th Jan., most deeply lamented, John Shaw Campbell, of 5, Lyndhurst-square, Peckham, and of the Peninsular and Oriental Company's Service, eldest son of the late Dr. Campbell in his 38th year.

DAVIDSON—On the 26th Nov., at the French Hospital, Shanghai, Capt. Charles Davidson, late of the Chinese steamer Hyson, aged 38 years, native of Ireland.

GRAVES—On the 11th Dec., at Hong Kong, Eva M. Graves, wife of R. H. Graves, of the Southern Baptist Canton Mission, and daughter of the late Dr. A. Mills, of Albion, New York, U.S.A.

KOCH—On the 14th Jan., Robert Koch, Esq., H.B.M.'s Consul at Frankfort-on-the-Maine, aged 57.

MASON—On the 26th Nov., at Shanghai, John Martin, eldest son of Alexander John Martin Mason, aged 4 years and 4 months.

NICHOLL—At the Vulcan Foundry, Honque, Mr. Nicholl, formerly of the P. and O. service, superintending engineer.

PROBST—On the 29th Nov., at Shanghai, Alma, the beloved wife of Wm. Probst, aged 29 years.

PATRICK—On the 29th Nov., at Shanghai, on board the American barque Nabob, Capt. George M. Patrick, aged 34 years, of Chelsea, Massachusetts, U.S.A.

ROBERTSON—On the 20th Jan., at 14, Westbourne-square, Hyde-park, Anna Maria, relict of the late Captain C. C. Robertson, of the Bengal Army, and daughter of the late Major-General James Manson, H.E.I.C.S.

TUMBLETY—At Shanghai, of dysentery, Mr. Tumblety, Colonel in Gordon's force, and late proprietor of the Clarendon Hotel.

COMMERCIAL REPORT.

CHINA IMPORTS.

COTTON YARN.—Remains without the slightest inquiry being manifested on the part of the native dealers, and the only transaction reported is the sale of 10 bales of 16 to 24 taken for re-export to Japan at $70 per picul. Grey Shirtings: The business transacted in this description of manufactures during the past fortnight is confined to the purchase on foreign account of 5,000 pieces, and about 1,000 pieces purchased by native dealers. The sales by auction amount to 150 pieces. White Shirtings: Sales of 450 pieces are reported since the beginning of the month, and in Canton 750 pieces have changed hands. T-Cloths: Remain quite uninquired for, and not a single transaction has taken place since the departure of last mail steamer, if we except 225 pieces of damaged cloth sold by public auction. American Drills: There are not any of these goods on the market. White Spotted Shirtings, Dyed do., Brocades, White and Coloured: The sales of these goods are confined entirely to dyed Brocades, transactions in which are put at 1,750 pieces during the past fortnight. Damasks: There are not any sales reported. Handkerchiefs: A moderate amount of business has been transacted in these manufactures since the beginning of the month, and the sales which have taken place are estimated at 3,500 dozens.

WOOLLENS.—Spanish Stripes, Medium Cloths, Ladies' and Habit Cloths: There have not been any sales of these manufactures reported since the departure of the last mail steamer, and quotations remain unchanged. Long Ells: Are quoted slightly lower than under date of last report, and sales of the past fortnight are put at 1,800 pieces, consisting principally of Scarlet, which have been moved off at $8.30 per piece. Camlets: 240 pieces of these goods have found purchasers. Lastings: The sales of the past fortnight amount to 520 pieces. Blankets: Have again met with a moderate inquiry and 400 pairs have changed hands.

METALS.—Iron, Flat, &c.: The value of the various qualities of Iron imported continues to be well maintained, although the transactions of the fortnight in this Colony are confined to purchases of Nail Rod, which has been taken to the extent of 3,400 piculs. In Canton sales 2,500 piculs have taken place. Lead: The dealers in this Colony hold large stocks, which they find it difficult to move off, and the market for this article continues extremely depressed. There are not any sales to report. Tin: The settlements of the fortnight amount to 320 slabs. Tin Plates: 260 boxes have changed hands.

CHINA EXPORTS.

TEA.—Canton: Three more chops of country Congous have arrived, but no settlements have taken place. The holders are desirous to sell, but they will be heavy losers, and demand far more than their teas will fetch in London. In Cantons Congou trifling settlements have been made at previous rates. Scented Teas are rather in better request. Canton Greens are in full supply and tend down. About 3,000 half

Digitized by Google

chests of Country Green have arrived but have excited little or no attention. The following are the settlements of the fortnight:—Canton Congou, 500 boxes at 21 to 32 taels; Scented Orange Pekoe, 3,000 boxes, at 22 to 30 taels; Scented Caper, 6,000 boxes, at 12½ to 30 taels. Canton Greens, 3,000 boxes Gunpowder at 16 to 23 taels, and 1,000 boxes Imperials at 17 to 24 taels. The stock is as follows:—Country Congous, 22 chops; Refined and Canton do., 3,000 hf. ch.; Souchong, Pouchong, and Oolong, 4,000 hf. ch.; Scented Orange Pekoes, 5,000 boxes; Scented Caper, 15,000 boxes; Canton Green, 30,000 boxes; Country Greens, 2,800 packages.

SHANGHAI.—Black: A fair amount of business has been transacted during the fortnight, and prices have again been somewhat irregular, many of the settlements showing an advance of one tael on previous quotations. During the past two days, holders, in consequence of the advance in Exchange, have been more anxious to realise but no decline can be at present quoted. Settlements have been: 7 chops Oopack at Tls. 23.50 to 24. 50; 8 chops Oonam at Tls. 18 to 20; 5 chops Ningchow at Tls. 22 to 23; and 4 chops Hohow at Tls. 16 to 17. Settlements on the market, 24 chops, or 9,538 ch. as above. Re-shipped on owners' account, 14 chops, or 6,451 ch.; together 38 chops, or 15,989 ch., making total to date 346,323. Stock waiting shipment and for re-sale, 50 chops or 21,026 ch. Quotations: 3rd crop Oopacks, Tls. 23.50 to 26.50; Ningchow, Tls. 20 to 23; Oonams, Tls. 18 to 22; Hohows, Tls, 16 to 20. Green: One large chop of Moyune Country Tea belonging to a foreign firm, containing over 1,700 packages, has been settled at Tls. 35, but natives will not accept similar rates, so the market cannot be reported as fairly opened. Stocks both here and at Kiukiang are steadily increasing. A few small parcels of Shanghai packed have been taken at previous rates. Re shipments and settlements, 3,804 hf.-chests Fychow, &c.; 1,382 hf.-chests Pingsuey; 1,337 hf.-ch. Japan and Shanghai packed. In all, 6,323 hf.-ch.; making total to date 119,972 hf. ch. Stock of Green Tea is estimated at 38,000 hf.-ch. Fychow, &c.; 12,000 hf.-ch. Shanghai packed Japan; 2,493 hf.-ch. Pingsuey; total, 52,483 hf. chests.

FOO-CHOW-FOO.—During the fortnight there has been a quiet market for Congou, the demand being moderate at former quotations. The teamen, encouraged by the reduced stock, are firm holders. The bulk of the settlements are for Australia. Fine qualities are very scarce, and have been taken at very irregular rates. Oolongs sell freely for shipment to New York, and tend up. In other kinds there is no alteration to notice.

AMOY.—Owing to the disturbed state of the neighbourhood, supplies have been very scanty. Oolongs have continued in fair inquiry for New York, but are too firmly held to admit of much business being done—besides, the stock is very small. The market has been swept of Congou by the settlement noted below. In other sorts there have been no transactions.

KIUKIANG.—Green Teas: No transactions had taken place, and teamen were steadily holding their stocks, which had reached 110,300 packages. Very few buyers were in the market, but offers had been advanced to taels 32 to 34 for fair to good Moyunes and refused. Total settlements and shipments:—22,230 half-chests, against 73,600 half-chests. last year. Black Tea: Eight small parcels, 2,900 chests, of fair Ningchow had been settled at taels 16 to 18. Supplies were nearly exhausted, and only 4 chops were left in stock. Quotations, Ningchow: Medium to fair taels 16 to 20. Hohow: Common to Good taels 14 to 18 per picul. Total settlements and shipments: 105,500 chests, against 101,400 chests last year.

HANKOW.—A fair amount of business had been done, chiefly in common Oonams at previous rates. Supplies were beginning to fall off, and the stock was reduced to 6,000 chests, whilst future arrivals would probably not exceed 10,000 chests. Settlements for the fortnight amounted to 29 chops or 12,000 chests. Quotations: Oopacks, Common to Medium, Tls. 20 to 23; Oonams, Common to Medium, Tls. 13.00 to 19.50 per picul. Total settlements and shipments.—712 chops, or 355,300 chests, against 352,000 chests last year.

YOKOHAMA.—The transactions during the month have been rather extensive, and in the face of a large supply rates have advanced fully $2 per picul. For the better kinds there is a brisk inquiry. The settlements for the month may be estimated at 4.800 pls., the unsold stock being 3,000 pls. The following are the current quotations: Fine, $28 to 31; Medium, $25 to 27; Common, $17 to 24. The export of the season to date is 2,093,774 lb., against 2.884,782 lb. same period last season, and 5,811,991 lb. the season before.

NAGASAKI.—There is none on the market.

RAW SILK.—SHANGHAI.—The settlements are estimated at 300 bales; the high demands of dealers, and poor selection now in stock, as well as an advanced rate of exchange, having caused more caution on the part of operators. There has been no change in prices, and as the quantity of unsold Silk is reduced to a limited amount, without the prospect of any considerable supply for the remainder of the season, the Chinamen continue firm. About 300 bales have been brought down from the interior, so that there is no alteration in the estimate of stock. From Japan 883 bales have arrived. The latest advices from Yokohama report that the supply was coming forward less freely, and this, added to a reduced rate of exchange, had caused prices to advance to $705 per picul for best Mybash. The settlements of the fortnight are reported at 300 bales, against 1,400 bales corresponding fortnight of last season, and 3,000 bales of season previous. The present unsold stock is stated at 1,500 bales, against 8,500 same period last season, and 7,000 bales the season before. The following are the latest quotations:—Tsatlee, Tls. 450 to 460 per pcl.; Taysaam, No. 1, Tls. 440 to 450.

YOKOHAMA.—The receipts during the early part of the month were on a liberal scale, and a fair business resulted, the decline in exchange stimulating the demand. Latterly, supplies have fallen, not averaging 75 pls. per diem. Prices have continued steadily to advance, and have attained a point showing an advance of $40 to 50 over last mail's quotations. Settlements for the month reach 3,000 bales, the stock being reduced to 100 bales. The following are the current quotations: Ida $655 to 710; Maibash and Sinshiu $645 to 705; Oshiu $570 to 660; Coshiu $555 to 610; Hatchojee $480 to 520. The exports from 1st July to date amount to 6,077 bales, against 9,079 bales corresponding period last season.

RAW COTTON.

The demand continued languid for some days subsequent to last report, and prices receded one or two dollars. On receipt of advices by the 26th October mail, with telegrams to the 2nd November, communicating an advance in cotton at Liverpool, the Chinese commenced purchasing, and sales were reported of new Shanghai at $22 to 24½, and of Ningpo at $24½ to 26½, at which rates about 4,500 bags have been placed. For shipment to England nothing is doing. Supplies from the north have been small, and as the native demand is likely to continue, present rates will probable be maintained for a time. The closing rates are:—Shanghai, $23½ to 24½; Ningpo, $25½ to 27. The stock is estimated at about 11,000 bags.

YOKOHAMA.—The advices of the depression in the London market have had the effect of entirely checking business in this staple. The native holders, finding the articles unsaleable to foreigners, have been shipping to the interior, and sales are said to have been effected at $24 for good quality. The stock on hand is 500 piculs. The shipments from 1st July to date amount to 15,348 bales, against 20,464 bales same period last season and 10,933 bales the season before.

EXCHANGES ON LONDON.

[For dates, see first page.]

CASUALTIES.—The Hochelaga, Arey, from Batavia for Amsterdam, put into Plymouth Jan. 13, with loss of sails, &c.

Continental Intelligence.

(FROM OUR OWN CORRESPONDENT.)

ROTTERDAM, JAN 24.

As the discussions on the budget are terminated, and the second Chamber of the States-General has not yet reassembled, an unusual calmness has succeeded the more interesiing events which we have witnessed of late in the political world. This quiet is only broken occasionally by some remarks of the one or other "*oud gast*," which are brought forward to keep up the colonial agitation. The *Dagblad* has occupied itself in commenting on the late discussions, and has not refrained from odious and sometimes insulting remarks respecting Liberal members.

Though quiet reigns at the Hague, the contrary is the case in the capital. In Amsterdam the Canal Company is still the topic of the day, and on every tongue. Last week a very uproarious meeting took place, which, however, elicited no information beyond that furnished by previous *soi-disant* communications of the directors. The fact of the Board having broken off their contract with the original contractors, has caused many subscribers to refuse payment of the first instalment of ten per cent. It is supposed M. H. R. Baron van Hoevell, will be nominated as Government Director, and he has declared himself to have taken shares to a considerable amount. This assertion will, without doubt, be received in India with as much surprise as it was here. He returned as a poor Reverend from the Indies, became M.P. with an income of 2,000f. per annum, and has now been some months Member of the Council of State.

The sensation caused by the article inserted in the *Gids*, by Mr. Busken Huet, about which I spoke in my last, is still increasing. The next member of that periodical is looked for with great interest, as a reply against the accusations brought against the author may be expected therein.

The late Baron van Heemstra, M.P., is replaced by Mr. G. A. Fokker, as Member of the Second Chamber of the States-General for Middelburg.

The revenues of the State for the year 1864 amounted to f. 64,161,345. 06½ c., against fr. 62,203,842. 33½ c. in 1863.

Mr. E. Jacobson has been appointed Consul for Hesse at Samarang.

COMMERCIAL.

COFFEE.—The market remains very inactive, waiting for the first auction, which will be announced by the Trading Company. The quantity that will be offered is still unknown. The transactions were limited to those for consumption, and amounted to 1,800 bales.

TEA.—There is much inquiry, and before the auctions business to a fair extent was done privately. At the public sales the following prices were paid:—Fine Oonam Congou, 106 to 108c.; fine Ningchow Congou, 116 to 117c.; extra superfine Oopack Congou, 110 to 114c.; superfine New Season's Oopack Congou, 132 to 134c.; finest New Season's Moning Congou, 65c.; finest Pingsuey Young Hyson, 120c.; extra fine Pingsuey Imperial, 155 to 159c.; finest Imperial, 72 to 106c.; finest Pingsuey Gunpowder, 119c.; extra fine Pinsuey Gunpowder, 136c.; finest Pingsuey Gunpowder, 99 to 147c.; finest Imperial, 50c.; extra fine Gunpowder, 52c.; finest Gunpowder, 51 to 66c.; Pingsuey Young Hyson, 136 to 137c.; Pingsuey Imperial, 51. to 140c.; Tegel, 37c. Open leaf: Black, 50 to 56c.; Green, 25 to 101c. The market remains in a very firm condition.

SUGAR.—The market remains in an unsatisfactory condition. Only 3,500 kr. just arrived from Java, and 2,000 kr. ex Majestic; 1,144 kr. ex Nation's Hope, at prices that did not transpire, but which are thought to be about 4f. under those of November. It seems however, that there are more orders, but sellers are not inclined to operate at the actual quotation. Refined sugar with much demand at lower rates, 400 to 500 tuns B and H were trucked against raw. Prices now quoted are:—Surinam, 24f. to 31f.; Brazil, white, 33f. to 36f.; yellow, 29f. to 32f.; brown, 24f. to 28f.; Havannah, white, 36f. to 42f.; yellow, 31f. to 35f.; brown, 25f. to 30f.; Java, white, 35f. to 40f.; grey, 33f. to 34f.; yellow, 30f. to 32f.; brown, 24f. to 29f.; Manila. grey, 29f. to 33f.; brown, 24f. to 28f.; Mauritius, grey and yellow, 29f. to 33f.; brown, 24f. to 28f.

RICE has experienced an advance, notwithstanding there has been no speculative inquiry since our last report, and scarcely any demand for consumption. In comparison with the markets abroad, prices here are still the lowest.

SPICES extremely dull; only Cinnamon could be sold at higher prices, but there is no stock in the first hand.

TOBACCO.—The market is rather more active. The 174 p. Manila Cagayan offered in auction were sold as follows:—37 p. 1a from 110½ to 171c.; 135 p. 3a from 43½ to 78c.; 5 p. 4a from 26 to 28c. In the first days of February, several parcels Java will be offered at public sales.

COTTON has had a reaction; some parcels, amounting to 2,000 b., were sold at lower rate for export.

BANCA TIN at 56f. and 56½f. Several transactions took place. Sellers now decline to operate under 57f.

HIDES.—2,000 p. Java Buffalo ex Three Bells, were sold at prices kept secret.

INDIGO remains firm. Several parcels Java have arrived, but are still unloaded.

DRUGS.—There are no transactions to report.

COCHINEAL firm, with much demand.

CURCUMA.—Good Java is offered at 11¾f.

MONEY.—Discount: Bank rate, 5 per cent.; acceptances, 5½ per cent.; open market, 5 per cent.; N.W.S., 2½ per cents., 62⅜; 3 per cents., 73 9-16ths; 4 per cents., 96⅝; Amort. Syndic, 90; Handelmaatschappy, 142½. The stock market is generally dull, but, although the supply of most kinds of securities is ample, the easy state of the money market encourages holders to wait the turn of events. Home railway stocks were somewhat higher; financial and bank shares flat. The bulk of the recent purchases seems to have been for account of a weak class of speculators.

Several new companies have issued their prospectuses at Amsterdam. Amongst them one proposes to clean the canals of that town for the manure, another to facilitate the labouring capital.

CHANGE.—London: 3 mo., f.11.53½; 2 mo., f.11.59; short, f.11.70. Paris: 3 mo., f.45.91; 2 mo., f.46.10; short, f.46.35. Hambro: 3 mo., f.34.65; 2 mo., f.34.75; short, f.35.15.

SHIPPING.

ARRIVALS.—Jan. 16, at Brouwershaven, from Batavia, Hendrika; at Texel, from Tjilatjap, Helena and Anna (much damaged); Jan. 20, at Texel, from Batavia, Hochelaga; Jan. 21, Bellatrix; Johanna Maria Christina.

DEPARTURES.—Jan. 22, from Hellevoet to Hong Hong, Adelina.

LOADING AT AMSTERDAM.—For Kanagawa and Decima, D. T. Visser, Jacqueline, and Elise; for Macassar, Quatre Bras; for Batavia, Ferdinand Louis, Almelo, Sliedrecht, India packet, Staatsraad van Ewyck, Krimpenerwaard; for Batavia and Samarang, Galilei, and Madura; for Batavia and Sourabaya, Anna and Sophia; for Samarang, Stad Leyden and Estafette; for Samarang and Sourabaya, Koning Willem II.; for Sourabaya, Capella, Baltimore, and Petronella.

FREIGHTS.—Quotations from the circular of Messrs. Fauchey and de Vletter, shipbrokers, at Rotterdam:—For Batavia and Samarang, Whampon, 462 tons; Marie, 746 tons; Catharina Wilhelmina, 1,083 tons; Maria Adriana, 718 tons, 18f. to 20f. for B., and 25f. to 30f. for S.; for Batavia and Sourabaya, Delft, 735 tons; Grootmeester Nationaal, 755 tons, 20f. for B., 25f. for S.; for Batavia, Minister Fransen van der Putten, 1,500 tons; Kortenaer, 971 tons; Copernicus, 742 tons, 18f. to 20f.; for Sourabaya, Salatiga, 448 tons, 25f. to 30f.; for Samarang, Maria Magdalena, 403 tons; Vyf Vrienden, 337 tons, 25f. to 30ft; for Frederik Hendrik, 611 tons, 40f.; all per last of 2,000 ks. or 120 cubic feet Amsterdam, and 15 per cent.; for Melbourne, Nereus, 665 tons, 40f. to 45f., and 5 per cent. per 1,000 ks., or 40 cubic feet English; for Singapore and Hong Kong, Gouverneur van Swieten, 352 tons, 30f. to 35f. for S., 40f. to 45f. for H., both of 1,000 ks., or 40 cubic feet English, and 15 per cent.

PASSENGERS INWARD.

From JAVA.—Per Hendrika, Captain van der Valk: Mr. P. G. de Bus and daughter, Mr. W. van Leyden, and Mr. H. P. van Dyck.

HAMBURG.

(FROM OUR OWN CORRESPONDENT.)

JAN. 23.

In consequence of the war with Denmark, the trade of this port suffered considerably last year, though the Elbe was not officially blockaded, nor were hostilities actually declared between the German Confederation (as such) and Denmark, notwithstanding which a good many vessels with their cargoes, belonging to Hamburg, Oldenburg, Hanover, and other States of Northern Germany, were captured, and conveyed for adjudication to Copenhagen, which naturally frightened away a good deal of trade that would otherwise have come to this port. The falling off in the number of vessels was more than 500, being a loss of about 10 per cent., for the shipping returns show that only 5,012 arrived from foreign parts against 5,543 in 1863. The tonnage returns are more favourable, the falling off being only 45,921 tons, or about 3 per cent. less, which shows that the smaller class of vessels were more affected by the war than the larger, the tonnage for last year being 1,397,727 tons against 1,443,648 in 1863. With regard to the trade with the Far East, the difference in the number of vessels that arrived here with cargo is comparatively trifling, the number being 27 (against 33 in 1863 and 44 in 1862), of which seven came from China, two from the Philippine Islands, one from Netherlands India, one from Singapore and Baly Badong, fifteen from Siam and British East Indies, and one from the Sandwich and Navigators' Islands.

From Berlin we hear that the Emperor of China has instituted an Order of Military Merit in commemoration of the suppression of the rebellion and the victory of his troops over the Taipings. A specimen of this new Order has been received at Berlin from the Prussian Ambassador in China. It consists of a gold medal about the size of a five-shilling piece, and is worn suspended by a yellow ribbon and two clasps. Col. Gordon, who commanded the European troops of the Emperor during the late war, has been entrusted with the distribution of the new Order.

The *Commercium*, or Chamber of Commerce, of this city celebrated on the 19th inst. the two-hundredth anniversary of its existence, on which occasion the exterior and interior of the Exchange were gaily decorated with the flags of all nations, amongst which appeared, for the first time, the Siamese flag, consisting of a white elephant in a red field, Siam being the latest country with whom commercial and diplomatic relations have been opened, a Treaty of Commerce and Navigation between the two States having been recently negotiated, signed, and ratified.

The Prussian steam corvette *Gazelle*, that arrived at Brest on the 10th of December last on her return from Japan, was unable to proceed to a Baltic port on account of the ice, and therefore put into Cherbourg, where she is now undergoing a thorough overhauling and repair in one of the Imperial dry-docks.

COMMERCIAL.

COFFEE.—The thaw having continued without any further interruption since last report, a large number of homeward-bound vessels, detained at Cuxhaven by the ice in the Elbe, have been able to come up to this port to discharge cargo, which has caused the usual bustle and animation by the river's side. The market has been rather calm, as holders are not inclined to sell at present quotations, anticipating a further rise when greater activity prevails and orders to buy come in. Sales of the week, 6,000 bags.

SUGAR.—A further depreciation has taken place for raw, and the dealings were not extensive. Refined dull, and also a shade lower.

RICE.—In rough grain nothing has been done; clean is in demand, and full prices are willingly paid.

SPICES.—An increased demand has arisen for Cinnamon, and prices have somewhat improved. Of Cassia Lignea 1,000 chests in warehouse here have been sold at 9¼ Sch. Bco., but the quality was not first-rate. Cloves continue to be sought after, and prices are well supported. In Pepper no alteration.

SPELTER.—Very dull, and no sales reported.

DISCOUNT.—4½ to 5 per cent.

SHIPPING.

ARRIVED.—Queen Bee, from Singapore; Alexandra, from Bassein.

SAILED.—Hoffnung, to Singapore; Jeannie, to Singapore.

SIBERIA.

(FROM A CORRESPONDENT).

The *Government Gazette*, published at Tobolsk in Siberia, brings the interesting piece of intelligence that, owing to the direct communication recently established between the river Obi and the new port of Petchora, some British vessels had arrived at the latter with cargoes of merchandise, which they bartered with the natives for graphite Meleze wood, and other articles, with which they sailed for London. The official organ mentioned above recognises in this first arrival of foreign vessels at Petchora not only an evident proof that the means of communication opened in the northern parts of Siberia are perfectly practicable, but greets it as a happy omen of the approaching development of foreign trade, and a significant mark of the satisfactory state of the internal commerce of that part of the Russian dominions.

The St. Petersburg *Gazette of the Academy* contains the following letter from Irkutzk:—"According to intelligence received from the districts situated beyond Lake Baikal, the Russian paddlewheel steamer had ascended the river Sungoura, a tributary of the Amoor, as far as the Manshurian city of Guirine, the most distant city of the province, and the residence of the Governor of the district. The Sungoura in its course south to north traverses nearly the whole of Mandschuria, and its banks were found to be pretty densely populated. The city of Guirine contains a population of 100,000 souls. The authorities received the strangers with some suspicion, but the inhabitants of that and other cities that they passed flocked round the Russians, caring very little for the whips used rather freely by the local police in order to disperse them. What most particularly excited the wonder and curiosity of the masses was the, to them, novel sight of the steamer successfully breasting the current of the river by the aid of its side wheels. Such is the result of the first visit paid by the Russians to the country traversed by the Sungonra, a visit that had for the present a purely scientific object. It was discovered that the river is navigable and has deep water during its whole course up to its confluence with its tributary the Nani-Oula; but further up sandbanks and shallows were encountered. It is at present unknown if the Nani-Oula be navigable or not. Thus the first step towards exploring the province of Mandschuria has been successfully accomplished, and the second will be much more easy; for among the Chinese a precedent is considered as a point of law. As the Russians have once been at Guirine they will experience no difficulty in going there again, and the next trip will have a commercial object. The Chinese residing at Irkutzk, form three distinct companies or associations, and deal chiefly in tea and other commodities of Chinese produce and manufactures."

The *Siberian Messenger* states as a striking proof of the lively interest taken by the inhabitants of the Government of Yennessensk in the development of public education, that the subscriptions towards the fund to be raised for building a high school at Krasnoyarsk amount already to more than 25,000 silver roubles. It also mentions the formation of an association at Irkutzk for the increase of primary instruction, and that a fifth parochial school had just been opened at that capital.

The cotton sent from Bokhara for sale at the fair of Nijni Nowgorod, not having found purchasers owing to the exorbitant prices demanded, has been forwarded to Moscow to be disposed of there.

THE ARMY PATRONAGE.

In our number of the 10th inst. we noticed several important changes. These with others have been commented on by the *Globe*, which we may remind our readers is under Government patronage:—

Among the reforms in our military system, adopted some ten years ago, was a rule providing that Staff appointments should be held for five years only. The fulfilment of this rule happens this year to vacate most of the principal military posts to which the senior officers of the army aspire. The list, indeed, includes the great majority of the good things open to the profession. The command-in-chief in India, by far the most lucrative prize, and inferior to none in point of responsibility, becomes vacant; also the chief command in the Bombay Presidency, and not less than four or five of the divisional commands, which are as remunerative as Indian Judgeships. At home we find a clearing out of the head-quarters Staff scarcely less complete than that of a Ministry ejected from office by a vote of censure. The rule has been held not to apply to the officer who may be commanding-in-chief, and he, with his military secretary and personal Staff, remain untouched by it. But the Adjutant-General and his deputy retire, so do the Quartermaster-General and his deputy, together with other officials of minor station. The Quartermaster-General has been nearly double his allotted time in office, for some reason we know not of; and one of the deputy Adjutant-Generals has held his place for about eight years, also upon inexplicable grounds. But it is announced that the former is at last to leave, and though not announced it must be in reason and justice assumed that the latter will also make way for a successor—if, indeed, it should turn out that there is any occasion for continuing the place at all. The Inspector-General of Cavalry retires. The commands of the Northern, Western, and South-western districts all fall vacant. The Aldershott command and all the infantry brigades in that camp of instruction are also vacated. In Ireland the command of the troops, the Dublin and Cork districts, with one or two other Staff appointments, have to be filled up. In the colonies, the chief command in Canada, the military post of

Digitized by Google

Governor of Gibraltar, and the command in Ceylon, will be transferred to other hands.

There is scarcely an appointment abroad which may prove of greater consequence than the Canada command; and the officer who is to fill it, Sir John Michel, has earned the thorough respect and confidence of the army by the manner in which he has discharged responsible duties under trying circumstances, at the Cape, in India, and in China successively. To the chief India command it is understood that Sir William Mansfield succeeds. He is a politician as well as a soldier, and has sought to school himself in statesmanship as well as in more purely military duties. That he unaccountably violated the law in the case of the Mhow Court-martial is unfortunately a matter of record. But as on that occasion his general high reputation saved him from official censure, so it would be unfortunate now if the recollection of this one error were to deprive him of an advancement to a post for which he possesses rare fitness. A gallant and very able soldier of the old Indian army, Sir Robert Napier, is understood to be designated for the Bombay command, while it is believed that Sir Hugh Rose, who is on the eve of retirement from the highest military post in India, in which he has left many enduring monuments of his wisdom and vigour, will take the command of the troops in Ireland. Lord William Paulet, whose administrative capacity is said to have been well proved during the Crimean war, and who was before known as an excellent regimental officer, will now have an opportunity of exhibiting these good qualities in the important post of Adjutant-General; while another favourite general, Sir Hope Grant, is likely to become Quartermaster-General, with Colonel Wetherall, one of the most accomplished officers of the army, as his deputy. Of the other appointments we believe it can be said that they are all justified by the merits of the recipients, and that they are of a character to give every hope of a good administration of the respective departments during the period for which they are made

LOSS OF THE "RACEHORSE."

(ARMY AND NAVY GAZETTE.)

We are still without the full particulars attendant upon the wreck of the *Racehorse*; and with that respect we would desire to feel for the memory of the dead, we shall refrain from imputing blame to the master for the calamity which fell upon him and so many of his lamented ship-mates. We will merely say that, if it should come out before the court-martial that he exhibited any want of intelligence and judgment, the fact will go to prove that we have been pursuing a wrong course in having confined the cultivation of navigation, pilotage, and seamanship to one class of officers. It is argued by persons of an old-fashioned turn of mind that no ship should be allowed to proceed to sea without having a master on board. We will not stop here to criticise the anomaly which these gentlemen thus perpetrate, further than to remark that it is more strange they should deny to so valuable a character the right to aspire to increased pay and to a more elevated rank. This is a contradiction which must necessarily in time work its own cure. We are, however, desirous of pointing out that further delay in carrying out the recommendations of a committee appointed by the present Board of Admiralty is working to an injurious extent upon the *personnel* and *matériel* of our Navy. The most eminent and intellectual officers have openly expressed their opinions to the effect that it would be conducive to the best interests of the Navy to make an alteration, and that the time has now arrived when it is no longer desirable that such a rank as master should be continued. After an observation of many years, they have arrived at the conclusion that the institution of Master acts as a clog upon the intelligence and energies of the younger race of officers. They argue that, if an improved pay were granted to the last named, and greater chances than now exist of advancement in their profession were held out to them, there would be no want of candidates to aspire to the honour of being recognised as navigating commanders and lieutenants, and that the new class would be infinitely superior to the old, from the simple circumstance that the door of hope would not be closed upon them. Man without hope is at all times but a miserable creature, and it is indeed a matter for wonder that the masters are so zealous and trustworthy as they unquestionably are at present. It is too much to expect of frail human nature that a desire to please should always, in the face of heavy discouragements, exist in the breast of man. The chief difficulty which, as we have on a previous occasion stated, stands in the way of the Duke of Somerset and his colleagues in carrrying out a useful reform, is the manner in which the staff-commanders and masters now on the *Navy List* are to be disposed of. We have yet to learn that there is any valid reason why the staff-commanders and masters who may be unfit for active duty, or who may have earned an honourable retirement, should not be removed to a separate list, with increased rank and a proportionate remuneration. Those officers whom it may be desirable to retain might then be made commanders and lieutenants as the case might be, and continue to perform the same scale of duties which now fall to their charge, and in the meantime other officers might have the opportunity of qualifying themselves to succeed, or in fact competing with them for possession of the prizes of the profession. A positive saving in point of money would be effected by the abolition from the *Navy List* of staff-commanders, masters, and second masters, as we certainly should not require a very large increase of commanders, lieutenants, and sub-lieutenants to undertake the vacant duties. There are just now 408 commanders on the list, of whom only one-half can be employed. Some are in line-of-battle ships, frigates, contract steam-vessels, training ships, on the Coastguard, and one is governor of a naval prison, but still the doors of the Admiralty are besieged by those who are compelled to be idle. If the idea which we have thrown out be adopted, we shall be much disappointed if we do not have for the future a more efficient and a more contented body of naval officers than we have now to maintain.

On this subject Captain Osborn writes

(TO THE EDITOR OF "THE TIMES.")

Sir,—On behalf of an old friend and brother officer allow me, through your columns, to beg the press to stay judgment on the unfortunate burning of Her Majesty's ship *Bombay* until a court-martial investigates the affair and awards praise or blame to the captain, officers, or crew. I am moved to do this in consequence of the very unusual course pursued in the case of the wreck of Her Majesty's ship *Racehorse*, near Chefoo, in which it appears to me that upon a most lame report, coming not from the commander, for he was, I believe, too shattered-from a night of frightful exposure to be able to hold a pen, a sort of loose sentence of condemnation has been passed upon that officer's judgment, seamanship, and qualities as a navigator. Indeed, some of our professional papers have been good enough to bewail the decadence of naval seamanship, founding their alarm upon the wreck in question.

If it was more generally understood by the public how terrible the loss of his ship, whether by battle, fire, or wreck, is counted by the captain of a man-of-war, I am sure there would be more forebearance shown. It is the first thing instilled into us to remember that we are intrusted with an emblem of England's sovereignty, that it is to be used for her honour and glory, not to be surrendered to her enemies, and, under peril of all an officer can hold dear, not to be wantonly risked or injured.

Fancy, then, what it must be to be condemned unheard by one's countrymen when such a sorrow as the loss of his ship falls upon a wretched commander. For my part I only wonder we have had so few wrecks on that dangerous coast of China, where as yet there is not a single lighthouse, and hardly a beacon; and the burning of the *Bombay* can be no matter of astonishment to officers who are aware that in the present day every ship is using in cabins, messroom, &c., those dangerous oils extracted from petroleum. The burning of the Spanish flagship in Peru ought to have been a caution to us.—Believe me, Sir, yours truly,

SHERARD OSBORN, Captain.

THE NOMADIC TRIBES OF THE ANGARA IN SIBERIA.

At a late sitting of the Imperial Geographical Society at St. Petersburg, an interesting paper by Lieut. Orloff was read on "The Wandering Tribes of the Angara." A large part of the valuable furs brought to the Russian markets are derived from native tribes inhabiting the extensive districts of the Angara, the Tunguska, and their tributaries, but without any fixed residence, and spreading over the mountains and plains, according to the season of the year. They are generally known in Siberia by the name of the Nomadic Tungoose, and maintain themselves by the produce of the chase and the fishery, bartering their furs for clothes, tobacco, brandy, powder and shot, with the Russians, who carry on the trade with them at stated periods and at fixed places. Without any idea of the advantages of civilised or even social life, they have formed a system of their own as regards religion, law, and the computation of time. Thus they divide our solar year into two lunar ones, the summer and the winter year, each containing six moons, with the additional one thrown in to the one or the other as it may happen. Their summer year corresponds to our months from March to August inclusive, and the winter year contains the other six months. These crude notions suffice to render them sufficiently exact in the payment of the *Jassak* or annual tribute they have to contribute to the Russian Government for the right of fishing and shooting, and for their annual barter of produce for the few articles they require for their existence. In the first month of their summer year (March) the surface of the snow is still sufficiently hard to permit them to traverse it securely with their long snow shoes, whilst the feet of the wild animals sink deep into it. This period is therefore favourable for the chase of the deer, the musk, the wild goat, and the elk. Their second month (April) melts the icy coverings of the rivers, and permits them occupying themselves with the fishery, which in all the rivers of Siberia is very abundant, and supplies them not only with their daily food, but enables them to lay by large stores for the winter, drying the fish in the sun and burying them in *cáches* known only to themselves. The third month (May) is devoted to another description of chase. In the preceding autumn they have taken care to burn extensive tracts covered with good grazing grass in certain valleys within the limits of their wanderings, where as soon as the snow begins to melt the grass sprouts up with great luxuriance, which attracts the beasts of the forest, who come there at night to feed, and fall an easy prey to the hunters concealed behind rocks and trees. Their fourth month (June) is exclusively passed in the chase of the deer, whose skins at that period are covered with a short thick wool, much in request by the Chinese, and which fetch such high prices that these tribes could afford, if they chose, to remain idle for several months.

In the fifth month they employ themselves partly with fishing and partly in the chase of the elk, as these animals come down at night to the rivers and lakes to feed on a certain water-plant, of which they are very fond, and whilst half immersed in the water become an easy prey to the spears and guns of the hunters. In the last month of the summer year (August), they turn their attention to the birds that frequent those inhospitable wilds, where innumerable flocks of wild swans, geese, ducks, and other aquatic birds come to the lonely banks of the lakes and rivers to build their nests, lay their eggs, and brood. In the dead of the night they glide noiselessly in their little fragile canoes amongst the reeds on the margin of the lakes, and spear the old birds, whilst they secure without difficulty the young ones and the eggs. This not only furnishes them with immediate food, but supplies a valuable stock of feathers and down, which they sell to the traders.

In the first month of their winter year (September) the Tungooses repair to the wooded valleys, where they know they are sure to find plenty of game, such as deer of different sorts, accompanied by their young ones. The end of the month is again devoted to fishing, when they complete their stores for the winter, which being accomplished they plunge into the depth of the forests and spend the two following months in the chase of the sable, fox, bear, lynx, martin, squirrel, and glutton, which furnish a valuable supply of furs. At the beginning of their fourth month (December) these wild nomadic tribes repair to the places agreed on, to pay their annual tribute to the officers of Government, and sell the produce of their chase. This tribute is levied on all the males of the Tungooses between the ages of 18 and 50 years, and amounts to about two silver roubles per head, which they pay pretty regularly, and mostly in furs of different sorts. They afterwards return to their native wilderness, and pass their time in hunting, till the returning spring calls them to commence again their usual annual round of active employment. The whole number of those subject to the payment of the tribute amounts to about 1,250, from which we may infer that their total number is not more than 4,000 or 5,000 souls.

LONDON, THURSDAY, JAN. 26, 1865

OVERTRADING IN TEA AND SILK.

OUR readers in China will have gathered from our last issue, in the ample commercial statistics laid before them, that the trade in tea and silk during 1864 has been as unsatisfactory to importers and exporters as that of the previous year, and even in some features presents a more unprofitable result to all foreigners, especially Englishmen, connected with these formerly lucrative branches of commerce. The careful and *substantial* merchant, in comparing the healthy and profitable returns of former years with the past two seasons in the staple commodity of tea, when the imports to England were not more than half what the last returns present, turns with dismay to the increase of prices in China, which entail such enormous losses on the legitimate trader, that if continued for another year commercial ruin must follow. Although it is difficult to arrive at a correct calculation of the actual loss sustained on the tea trade of the past two years, yet from inquiries in reliable quarters we have made an approximate estimate that will show our readers in China the gigantic losses sustained by overtrading. During the season of 1863-64 this was not less than £1,450,000, and the present season will not close without a deficit on the profit and loss account of upwards of *one million sterling*. Taking the value of the imports into the United Kingdom in round numbers at ten and a half millions sterling, here is a dead loss of fifteen per cent. in the former season and ten per cent. during the latter. This state of things cannot go on, or bankruptcy must soon follow the reckless traders who have brought the China trade to such a pass. It behoves, therefore, every one interested in that trade—bankers, merchants, tea-inspectors—to "put their shoulders to the wheel" during the ensuing season, to restore this branch (in which the public, from the peer to the peasant, are consumers), once more to its position on the credit folio of the Ledger. As far as our humble labours in this field can be serviceable we cheerfully give it our most serious attention, and shall endeavour from time to time to lay the result of our experiences before our readers *pro bono publico*.

In an article which appeared recently in these columns entitled "NO MORE BANKS FOR CHINA," we touched upon the monetary question of overtrading, and pointed out the injurious effects caused by the facilities afforded to inexperienced and speculative traders by some of the Banks in purchasing teas at exorbitant prices for the sake of rivalling old established firms—which we have reason to believe has been appreciated, and had a wholesome effect in the quarters intended, on this side. We shall now deal with the commercial phases of this important topic, and remonstrate with overtraders in China in more emphatic terms. If these sanguine but injudicious merchants have carefully studied—as they ought to do—the annual reviews of the tea market in London, they will perceive at a glance that while they were recklessly paying the greatly advanced prices asked by the more astute native teamen, the consignees could not realize, even by forced sales, within ten or twenty per cent. of what they paid for the same teas in China. From this it may be concluded that whatever prices be paid there, whether high or low, they do not rule the quotations in Mincing Lane. It is the duty therefore of the buyer in China to be firm in refusing to give more for certain qualities of teas than will leave a marginal profit on the home quotations. If he supposes that when he pays a large price at the place of production a corresponding increase will be obtained in the market for consumption, he is utterly mistaken, as the monthly circulars from London issued by the brokers plainly show. Moreover, while the buyer is foolishly taking all the teas of the season which the cunning Chinese know how to bring forward, here is the consignee in London selling in vain by auction "without reserve," to clear off the heavy stocks on hand, which at the close of the year accumulated to 96,000,000lbs., or ten months supply for an increasing consumption. Under these circumstances, it is sheer folly to continue heaping up unsaleable stock in bonded warehouses, where the charges will in time approach the cost of the article, especially as it is the new teas that are most eagerly bought by the dealers, leaving the old stock to be every day more and more unsaleable. In the judgment of the most experienced merchants in the home trade, the fact that *quantity* is the chief evil to contend with in restoring a profitable equilibrium becomes more apparent; whilst *that* remains, the trade must be ruinous. Hence importers *must* hold stock. They try to force it off by sale "without reserve"; but in so doing, they fail to induce the trade to purchase more than their actual wants. Do these facts not prove that *quantity* is the great evil to contend with? Here is a simple illustration of the well known rule of political economy regulating supply and demand. Consumption goes on steadily, but does not increase as rapidly as people in China expect, who calculate upon an augmented re-export to the continents of Europe and America. To the former it is now well known that where the reduction of the duty in Russia, and other contingencies, would lead to increased orders on England, nothing worth noticing on that point has taken place; and the Continent is not likely to take more than it has done—for two or three years at least—and it is just possible that it may take less. The exports to the United States during the past six months have been NIL, and are not likely to be resumed this year. It is clear, therefore, that the causes which have rendered the tea trade unprofitable, and it may be ruinous to many, is entirely attributable to the folly of those in China who have disregarded the advices from this side, and persevered in overtrading, in the face of losses which in two years can scarcely be covered by the enormous deficit of two and a-half millions sterling. It must also be taken into consideration that Assam and other Indian teas are competing favourably with China teas. The quantity brought into this market increases rapidly, and so good is the quality that prices also advance steadily, while the profit to the importer is *very large*. These are all questions for the serious consideration of our readers in China, and we trust they will accept them as intended for their benefit. Why should they waste their health and strength in an inhospitable country and climate to ruin credit as well as constitution, for the benefit of the Chinese only.

SILK.

We shall now revert to the trade in raw silk during the year 1864, as another source of loss to the importer in England and on the Continent; arising in a great measure from injudicious transactions between buyers and native silkmen in China, wherein the latter reaped all the benefit, to the detriment of the foreign merchant. Certainly the losses on silk have not been so heavy in proportion to those on tea during the past two years, but they have been sufficiently so to render this branch of trade with China unprofitable to all engaged in it on this side. Indeed, it has been simply a calculation with the importer, not as formerly, how large a margin of profit he will have, but how small he can average his losses for the year. This was especially the case for the first six months of the past year; and coming as it did upon the losses of previous years, the silk market was in a state of great depression up to the month of July, when a favourable turn took place, which gradually improved prices, so that by the close of the year silk was paying the importer a small profit. Now, as that improvement was chiefly caused by diminished imports, it is a practical illustration of the principle laid down in our remarks on tea, that *quantity* is the true cause of depression. Notwithstanding a diminished delivery of China silk of 9,300 bales during the year—the de-

Digitized by Google

crease in import being 17,400—there was a margin of 8,100 bales, to clear off the heavy stocks on hand. This gave a fresh impetus to sales, and prices were slightly advanced, but not enough to furnish a fair profit on the high rates ruling on the other side. It is not possible that these can be maintained during the ensuing season, as we must reasonably look forward to a large increase in the next crop, seeing that the silk-producing districts are happily free from the desolating presence of the Taiping rebels. As far as we can see, all the circumstances bearing on the production of this article point to a considerable reduction in prices. If such does not take place at the opening of the market in May or June we can assure our readers in China that the importers on this side most conversant with the trade consider that heavy losses will again accrue, and depression set in as in previous years. Buyers on the other side have the matter entirely in their own hands if they are firm in resisting the demands of the Chinese, and unite together for that purpose if necessary, rather than rush into competition for parcels of silk brought by driblets into the market. In fixing prices at the opening of the season they must not be guided by the quotations of sales on this side, as these must keep as high as at present, perhaps higher, until the crop in Europe is in the market, or at all events until it is known what that may be in quantity and quality.

It must also be borne in mind that China silks do not rank now so high in the market for quality as they formerly did while Indian silk is improving in both quality and quantity, at prices which leave the importer a handsome profit. Perhaps this depreciation is only temporary, and caused by the hurried manner in which bales were made up during the disturbed state of the country. Be that as it may, the best class of *Tsatlee* silk is no longer seen in the importations at a time when its quality was being more than ever appreciated, while *Haineen* sorts of the best staple are no longer sought after by consumers, even at very reduced prices. Hitherto China silks of every description were deemed of the finest class by the manufacturers, but now it is evident that they are verging towards a second rate scale, which will materially affect their value. Buyers in China should see to this, and trace the causes of depreciation in quality, with a view to its improvement, in order that the best kinds may again assume their position at the top of the list. On this point silk inspectors in China would do well to study the quality of Japan silks, which, although hurriedly got up at times, are in high favour with manufacturers, and always command first rate prices. Not only is this article preferred by the consumer, but the growers of silk on the Continent are importing largely the eggs of the Japanese silk-worm, to replace the seed of the European insect destroyed by the unknown malady which has prevailed during the past three or four years. Great efforts are being made in importing that and other exotic seeds to secure a good crop in Europe during the ensuing season, which should again induce caution on the part of buyers in China. If the yield approach anything like what existed previous to the spread of this disease, it will seriously affect the export of raw silk from England to the Continent, which has continued steady during the past year, as it did the one previous; so that our manufacturers do not fear foreign competition, which may not be the case in the event of the new seed producing a crop. These drawbacks and probable contingencies that affect the profitable pursuit of the raw silk trade in China, if persevered in as heretofore, we have no doubt will have their full weight with our readers in China who are interested in this important branch of native produce. There is ample time before the opening of the new season for them to come to some understanding as to their future operations. It is well known that the Chinese silkmen unite in their guilds to regulate the sale of the new crops. Why do not buyers and inspectors take a leaf out of their book, and combine for the legitimate purpose of restoring the silk trade to a profitable and safe branch of commerce, to foreigners as well as natives.

THE CHINA COOLIE.

THE foreign demand for Chinese coolies increases—a natural result of the appreciation by various countries of the value of their labour. We find the French Consul at Canton urging on the authorities the adoption of means for a better supply of coolies for the French colonies. Cuba will take any number that can be delivered. Our own West India islands also find them the best importation. Paraguay, Brazil, and the Argentine Confederation will presently come to demand their services; and if the valleys of Mexico, with their high temperature and dry heats, are to be cultivated and railways constructed, the China coolie must be relied on. The golden drifts of California and Australia have ceased to reward free Chinese emigration; but compensation may yet be found in the cultivation of tea in the one country, and of cotton in the other. We advert to the subject for the purpose of calling attention to the terms on which the Cuban trade is conducted. Coolies are virtually sold into slavery for the advantage of unprincipled dealers, and the countries in which they are landed. The price given by a Cuban planter for a coolie, from £75 to £120, according to his condition, bears no due proportion to the cost of his conveyance in an overcrowded vessel, or to the value of his services, represented, as far as he is concerned, by the payment of 16s. per month for eight years. It would need little effort on the part of the Chinese authorities to circulate information among the Chinese population that would induce emigrants to put themselves, so to speak, at a premium to begin with, and so secure a portion of the money now passing into the hands of strangers who sell them like slaves, as a commodity which is worth whatever it will bring. The number of Chinese coolies at present in Cuba is no less than 14,000, for whose eight years' services upwards of £1,200,000 have been paid. Last season, 2,600 were shipped from Macao alone, for Cuba, of whom 600 died on the passage. Canton supplied also a large number. As to the second point, we have to observe that the Chinese authorities who have begun to countenance Chinese emigration,—for traditional policy in this matter has been entirely subverted,—might be induced to enforce to a larger extent the system that they carry with them their wives and children. Notwithstanding the atrocities committed on the Imperial as well as the rebel side during the late war, the Chinese authorities have never been indifferent to motives of benevolence; and finding, as they do, that few of the exported coolies return, they might thus be induced to ameliorate their condition.

PURCHASE OF STEAMERS BY JAPANESE DAIMIOS.

THE late active purchase of steamers by Japanese DAIMIOS need not have occasioned the surprise that has been expressed; *The Times'* correspondent from Shanghai having even gone so far as to characterise the desire for the possession of these vessels as a mania. Considering the wealth of the leading DAIMIOS, there is nothing extravagant in the aggregate amount expended for this purpose. These steamers are not purchased as mere toys. The two steamers belonging to SATSUMA, burnt by our fleet at Kagosima, were loaded down at the time with sugar. The Japanese are of too practical a turn of mind not to be disposed to put their money to the best account. Our only surprise is that a greater number of steamers should not have been acquired, looking to the large extent of coast pertaining to that archipelago, the activity of the trade carried on in junks, together with the violence of the currents, the cross seas and adverse winds which obstruct sailing craft. These steamers will answer also what, for the sake of clearness, we may term inland revenue purposes. DAIMIOS, as well as the MIKADO, have tolls to collect; jurisdiction is exercised by the maritime Princes over the water frontage of their domains; and the increase of smuggling suggests a further use to which such vessels may be put. Political purposes, too, whether involving combination among the Princes themselves, or facilitating a reference to Yedo or Miako, will thus be answered. Besides, steamers have become necessary State appendages, symbols of wealth and power, and so aid in keeping alive the awe and respect of wondering subjects. The Japanese rulers have always been ready to appropriate whatever is valuable or useful in the way of inventions. We shall no doubt find the telegraph introduced at no distant date.

THE RETURN OF COLONEL GORDON.

WE are glad to welcome back to his native country, in good health and spirits, Colonel Gordon, whose exploits in China we have so often had occasion to record. One would naturally suppose that, after the very arduous and harassing duties which he performed in China, he would now be disposed to settle down for a little quiet. Not so, however, for we find that, notwithstanding the number of persons who have called on him at his Club, they are daily informed of some new locality. Shortly after his arrival in London by the Marseilles route, on the 13th inst., he quitted for Southampton to visit

Digitized by Google

his father, General Gordon; but before he could be seen at Southampton we hear of him at Woolwich, on a visit to his brother; next at the quarters of Sir Frederick Bruce; and next (on the 20th) starting again for Southampton. Considering the great risk he was exposed to in China, we trust that he will appreciate his preservation, and not endanger his health by over-activity in this country—at least for a season.

THE CONSUL AT BANGKOK.

IN our last issue we noticed the appointment of Mr. KNOX as representative of British interests in Siam. Statements have reached us for many months past of the high-handed and rude manner in which Mr. KNOX has behaved while in the discharge of his duties, but as we concluded it would be but for a short time, and that a gentleman—trained in Europe to the formula of a Consulate—would be appointed to succeed Sir ROBERT SCHOMBURGK, we were content to wait. As that event has not come to pass, we cannot longer refrain from noticing the remonstrances we have received. The following is one of the letters we have received on the subject, from which it appears quite evident that Mr. KNOX does not possess that necessary qualification for a consul, the *suaviter in modo* with the *fortiter in re*. Indeed, it is hardly to be expected from Mr. KNOX'S antecedents. If we are rightly informed, Mr. KNOX was an officer in the Indian army, and having left that service (why we do not know), went to Siam, where he passed the earlier portion of his sojourn in a very precarious position. His occupation was that of a drill-sergeant to the troops of the King of SIAM, for which he received a stipend, certainly insufficient for his support as an officer and a gentleman, and it is notorious that he was dependant to a great extent on the hospitality of the foreign residents in Bangkok. During this connection with the Siamese Government, Mr. KNOX naturally enough acquired some knowledge of the language, and, through the interest of his friends at home, he was attached to the Consulate as Interpreter and Vice-Consul until, by the resignation of Sir ROBERT SCHOMBURGK, he was raised to the post of Consul, in which capacity he is in a position to endanger our friendly relations with the King of SIAM. What opinion can the KING have for our Government when it accredits such a person as our representative? Assuming that Mr. KNOX discharged the duties in an exemplary manner, it was a very unwise act on the part of the Foreign-office to appoint a man who had held such a position under the very eyes of the Siamese. We can hardly believe that Lord JOHN RUSSELL would have bestowed the appointment on him had he been aware of the manner in which Mr. KNOX comports himself towards the Siamese Government.

(To the Editor of the *London and China Express*.)

DEAR SIR,—The affairs of Siam, Cochin-China, and Cambodia have been so much commented upon in your late issues that I deem it may be interesting to your readers to be informed of the cause which renders our political standing so weak in that quarter, more especially when opposed, as it is, by the able diplomacy of the French.

It can no longer be concealed that our Consulate in Siam does not occupy that position which would entitle it to the respect of the Government, and invite its confidence; and although the Siamese, alive to the importance of possessing our friendship, have been solicitous for its maintenance, yet it is evident that an estrangement has taken place, which, if allowed to contjnue, will seriously affect our relations with that country. I regret to observe that Mr. Acting Consul Knox has been gazetted as Consul in the place of Sir Robert Schomburgh, retired. It is the opinion of most persons acquainted with the affairs of Siam that Mr. Knox is responsible for these difficulties by his want of ordinary courtesy in forcing demands upon the Government in a manner it is difficult to assign any reason for, seeing that this has been mostly done in native cases, which have occurred in far territories bordering upon British Burmah, and therefore little if at all serving the interest of British trade in Bangkok.

It may be remarked that among the many Eastern nations our commerce has connected us with, the Siamese stand pre-eminent for the friendly spirit with which they have met foreign intercourse. Since the opening of the country, life and property have been universally respected, and a sense of justice evinced that cannot but be commended. With such a disposition on their part, it is to be deplored that the policy pursued is so ruinous to our prestige.

I am, Sir, your obedient servant, SIAM.

MURDER OF TWO OFFICERS IN JAPAN.

It is with great regret that we have so soon a new cause for further demands on the Japanese Government. By way of San Francisco and New York we have received the following intelligence from Yokohama, under date the 24th November. "Major Baldwin and Lieutenant Bird, of the 20th Regiment, have been murdered while out on a shooting excursion." It is stated that the assasssins were unknown, but that the Government had shown every desire to trace and bring them to justice. We trust that the matter will be promptly adjusted, and not be allowed to remain over and gather strength, as in the case of Richardson. With all our experience of China during the past twenty years, it should be comparatively easy to shape our course in Japan. We never found any advantage in "waiting" the good pleasure of the Mandarins. While we urge prompt steps for the satisfaction of our claims, we urge equal promptitude in acknowledging if these officers should have been on ground out of the limits assigned. Major George Walter Baldwin entered the army as ensign in April, 1846, was made lieutenant on the 20th July, 1849, captain on the 31st October, 1851, brevet major in April, 1863, and major on the 30th June, of the same year. He served in the 31st Regiment, in the Crimea at Sebastopol and at the taking of the Redan, and all through the campaign in North China; was present at the battle of Sinho and the taking of the Taku Forts, the which he obtained a medal. Mr. Bird entered the army on for 30th Aug., 1859, and was made lieutenant in Dec., 1862.

THE HONG KONG ROYAL MINT.

With reference to the new British dollar for China, the Secretary of State has decided that the dollar shall have a milled, and not a lettered edge. It is found that to place a lettered edge upon the dollar would require a complicated and expensive addition to the coining-presses, which would be very difficult to work, and liable to disorder. At present it is uncertain whether any of the dollars will be coined here for shipment. Captain Kinder and staff will, most probably, leave England by the mail, and arrive at Hong Kong about the end of June.

THE POSTAL SERVICE TO INDIA AND CHINA.

The protest which was made some three years since to the Post-office in reference to the irregularity of the arrival and departure of the mails has again been revived, and the following memorial presented to the Postmaster-General. We may add that there is little chance of the project being carried out until the railway is completed between Bombay and Calcutta, and even then it is very doubtful:—

"TO THE RIGHT HONOURABLE THE LORD STANLEY OF ALDERLEY, HER MAJESTY'S POSTMASTER-GENERAL.

"71, Old Broad-street, London, Jan. 20.

"My Lord,—I have been requested to place in your Lordship's hands the accompanying memorial from the principal merchants and bankers of this city engaged in the trade with the East, in which your Lordship's attention is drawn to the loss of time and general inconvenience attending the despatch of the mails on fixed days of the month, but varying days of the week; and a suggestion is made that instead thereof, for reasons which are strongly felt, the mail *vid* Marseilles shall be despatched on the evening of Friday in every week.

"I venture to express the hope that the unanimity of opinion upon the subject in question, indicated by the number and character of the signatures attached to the memorial, will secure your Lordship's co-operation in carrying the proposed change into effect.

"I have the honour to be,

"Your Lordship's obedient servant,

"R. W. CRAWFORD, M.P."

"'TO HER MAJESTY'S POSTMASTER-GENERAL, POST-OFFICE, LONDON.

"'London, January 11, 1865.

"'My Lord,—We, the undersigned, merchants, bankers, and others, engaged in commercial and monetary transactions with the East, wish to bring under your Lordship's notice the inconvenience attending the present system of despatching the East India, China, and Australian mails, and to submit for your consideration a proposal for changing the times of their departure.

"'The East India mails, *via* Marseilles, are now despatched on the 3rd, 10th, 18th, and 26th of each month. This arrangement causes the mail day to fall on a constantly changing day of the week, and when that day is a Sunday, the mail is postponed until the following Monday, thus causing a loss of not less than three days, because the business transacted on Saturday and Monday is of a very restricted character, and the really important intelligence to be transmitted is that of the preceding Friday. This loss happens practically in the case of nearly one half of the mails despatched in the course of the year.

"'It is suggested that a weekly mail, to be fixed on one convenient day, will be far more suitable to the habits and arrangements of men of business, especially those who have fixed weekly engagements, and for the regular and methodical transmission of mercantile correspondence.

"'The despatch of the American mails by the Cunard steamers is an instance in point.

"'If the Indian mails were invariably despatched on Friday evening, the letters they carry would contain the Bank of England weekly account and all the financial and market intelligence of the week up to the latest moment; no transaction of importance being effected on Saturdays, Friday appears to be in every way the best day for selection.

"'The proposed arrangement will involve the despatch yearly of four additional mails to India, two to China, and one to Australia, and a like additional number from each of these places. Your memorialists have no

Digitized by Google

doubt but that the countries named will be very grateful for the additional postal communication with England which they would thus enjoy.

"'We have the honour to be,

"'Your Lordship's obedient, humble servants,

"'Crawford, Colvin, and Co.; Forbes, Forbes, and Co.; Finlay, Hodgson, and Co.; Matheson and Co.; Baring Brothers and Co.; N. M. Rothschild and Sons; Fruhling and Goschen; Dent, Palmer, and Co.; Arbuthnot, Latham, and Co.; Gregson and Co.; Daniell and Co.; Finlay, Campbell, and Co; Scott, Bell, and Co.; Gledstanes and Co.; Alexander Fletcher and Co.; R. and J. THE DEVELOPMENT OF SIAM.

IN the issue of the *London and China Telegraph* of the 3rd inst. we inserted a letter that appeared in the *Siam Times* on "Railways to China," in which the writer complains of the preference given to rumours rather than the truth respecting the capabilities of Siam, and of the indiscriminate manner in which foreigners ask for concessions, and having obtained them, proceed no further in the matter. Since then we have received the following letter:—

(TO THE EDITOR.)

Sir,—The sovereign of Siam may be somewhat unreasonable in his complaint that after granting a concession ofa railway across the narrow Malay peninsular, the requisite capital for one or other should not have been forthcoming; what I chiefly allude to are the capabilities of that country for agricultural development, and the materials it offers for successful mining enterprise. The tariff rates prescribed under Sir John Bowring's treaty afford all requisite commercial encouragment to investments. The Government itself has extensively imported machinery for sugar manufacture. Manufactures and arts in Siam, however, are low, but with a fer tile soil, continually renovated by the inundation of the great river, and producing abundant crops, with an industrious people possessing a temperament which disposes them to appreciate those comforts and luxuries which can be only gained by means of commerce—it is a mine of wealth for those who are able to work it. Of the articles it could produce in large quantities are sugar, rice, cotton, gum, oil, pepper, and timber, dye woods, ivory and shellac can be obtained in large quantities. It has all the luxurious fruits of the forests, and extensive forests of teak. Mining companies might find their account in working its ores of gold, iron, copper, zinc, lead, antimony, and tin. As to commerce, the chief articles hitherto required by the Siamese in exchange for their products are arms, ammunition, anchors, cutlery, piece goods, crockery and mirrors; but the list of these articles might be greatly increased.

Your obedient servant, EAST INDIA MERCHANT.

THE LOSS OF THE "HYDASPE."

THE directors of the *Messageries Imperiales* have not decided on replacing this vessel, but in the meantime the Dutch Government will provide for the service between Singapore and Batavia.]

TRADE BETWEEN TRIESTE AND HONG KONG.

A regular trade between Trieste and Hong Kong is about to be essayed. The difficulty that still exists in Austria in bringing about combinations for mercantile purposes is remarkable, and we find the Austrian journals chronicling as an important event the first trading venture to the Far East. The Mercantile Company of Fiume has chartered, for this purpose, through the agency of a Hamburg house, the Bremen barque *Ernest et Marie*, originally with the intention of loading her with 3,000 barrels of flour. Only 2,000 barrels, however, will be taken, and the balance of cargo be made up by 400 cases of wax candles, 25 hogsheads of beer, 25 casks of Austrian wine, 50 packages of soap, and 200 packages preserved provisions. For the next outward passage there are already offered a large assortment of Moravian cloths and other national manufactures, including article of bijouterie, furniture, carriages, and varieties of the celebrated *liquers maraschino*.

PREPARATION OF CHINA TEAS FOR THE RUSSIAN MARKET.

(To the Editor of the *London and China Express.*)

SIR,—Allow me to throw out the suggestion through your columns that the Russian market for our teas might be improved, and competition better kept up with the Kiachta teas, were our importers to send out instructions to their agents in China to have teas prepared according to the fashion of the caravan teas, that is, pressed in the form of tiles (not English bricks) and packed 136 to a chest. The complaint with last serson's teas were that they were hurried forward too quickly, and lost flavour on this account; may not compression be a means of preserving their flavour in all conditions? This flavour can be of little consequence to Kirghis, Kalmucks, and other races who stew their tea with buttermilk and salt, but it is the prime test of quality at the northern and southern Russian ports with which we have to do. I am not for turning all our Russian exportations of tea into tiles, but the tile form would evidently suit the views of a large class of Russian traders in the article.—Yours, &c., CANTON.

City, January 17, 1865.

THE BISHOP OF VICTORIA.

The Right Reverend Dr. George Smith formally resigned the Bishopric of Victoria (Hong Kong) in the early part of the present month. Bishop Smith first arrived in China in the year 1844, and on his return to England published, in 1847, his "Narrative of an Exploratory Visit to the Consular Cities of China and the Islands of Hong Kong and Chusan, on behalf of the Church Missionary Society, in the years 1844, 1845, and 1846." In the year 1849 he returned to China as the first bishop of the newly-created see of Victoria. He published, in 1861, a volume entitled "Ten Weeks in Japan," containing his observations on that newly-opened country and people; a work favourably reviewed at the time in the pages of this journal.

The bishopric is endowed with a payment of £1,000 a-year from the Colonial Bishoprics Fund, and is in the patronage of the Secretary of State for the Colonies, who in such cases generally seeks the recommendation of the Archbishop of Canterbury. The late bishop is in the fiftieth year of his age, and retires on a pension of £300 a-year voted by the Legislative Council of Hong Kong, and subject to reduction by the amount of preferment received in England, in accordance with the local regulations of the civil service of the colony.

We believe that no successor has yet been named for the vacant post. It is understood that the nominations to the vacant colonial dioceses of Victoria, Rupert's Land, Nelson, and the new see of Grafton (New South Wales), are likely to be delayed until after the judgment of the Judicial Committee of Privy Council on the Colenso case has been delivered, which may render some change necessary in the wording of the new letters patent of colonial bishops.

WAREHOUSING OF CHINESE SILKS.

Some months since, it will be remembered, an ineffectual effort was made by City merchants and others to bring about a reduction in current rates of insurance on goods. These rates, whatever their amount, necessarily vary with the risk: to reduce the risk, is, in all cases, to reduce the cost of a policy, and it may be safely left to competition to lower the scale of charges to that point which, whilst securing reasonable returns to companies, will give a maximum of benefit to the public at a minimum of cost. One means to this end, as far as warehoused goods are concerned, and we refer more especially to China silks, would be found in a better classification of the Dock system of warehousing. At present, inflammable or combustible goods entered and charged for by insurance companies as hazardous and extra hazardous, are frequently placed in proximity to China and Japan silks, on which, from this cause, the rates of insurance are proportionably increased. These silks are not unfrequently stored in the same building with saltpetre, hemp, flax, cotton, and even tallow and oils. If we add to this that many of the warehouses are of a character to invite conflagration to do its worst, we discover the reason for the heavy charges on policies constantly imposed. The miscellaneous storage resorted to is unnecessary, as answering no purpose that might not be otherwise better met.

THE COTTON PROSPECTS.

(ECONOMIST.)

The apparent aggregate increase of supply since the commencement of the cotton famine is greater than the real one, as shown at least by the trade accounts, inasmuch as the average weight of the bales has been steadily decreasing. The following table gives the full statement of the imports:—

	bales.	Average weight. lbs.	Aggregate in lbs.
1860	3,366,000	.. 425 ..	1,430,550,000
1861	3,036,000	.. 415 ..	1,259,940,000
1862	1,445,000	.. 370 ..	534,650,000
1863	1,932,000	.. 364 ..	703,248,000
1864	2,587,000	.. 347 ..	897,689,000
1865 (estimated)..	2,900,000	.. 341 ..	988,900,000

The import last year was considerably greater than the manufacturers could consume at the existing prices, and the consequence was a considerable increase of stock in the ports—viz., 575,000 bales, against 327,000 at the close of 1863. The weekly consumption has been as follows:—

	bales.	lbs.	lbs.
1860	48,500	.. 425 ..	20,612,500
1861	45,500	.. 415 ..	18,882,500
1862	22,800	.. 370 ..	8,436,000
1863	26,500	.. 364 ..	9,646,000
1864	30,900	.. 347 ..	10,722,300

The export during the past year has been 732,000 bales: it is expected to reach 800,000 in 1865—leaving 2,100,000 for our own consumption without any diminution of stock. This would allow a weekly consumption of about 40,000 bales, or 13,640,000 lbs. The sole questions re

Digitized by Google

maining for consideration are, first, whether this supply will suffice to employ our mills and to produce as much cotton yarn and cloth as the world will buy? and, secondly, what effect on prices this supply will probably produce?

In 1860, when all factories were fully employed and every man was producing as much as he could, the apparent weekly consumption reached 48,500 bales; but as at the end of that year the stocks in the hands of the trade were unusually large, the real consumption was probably only 47,000 bales of 425 lbs. each, or about 20,000,000 lbs. For 1865, we have a supply available of 40,000 bales of 341 lbs. each, or 13,640,000 lbs.;—and as we may, perhaps, set off the dirtier character of the cotton now used against the greater economy in its use, and the various substitutes or rather auxiliaries employed to eke it out,—we may say that we shall virtually have *two-thirds* or 66 per cent. of the quantity we used up in our briskest and most prosperous year. But the present character of most of the cotton employed, being so much shorter and dirtier than formerly, requires a much greater amount of manipulation. The same number of spindles and looms cannot produce the same same quantity of yarn and cloth, the cotton has to be passed through more processes and a greater amount of machinery, and the machinery has to run slower than before. It is not easy—perhaps not possible—to estimate the amount of this change; but we shall probably be safe in assuming that all the factories existing in 1860 could not now work up more than 18,000,000 lbs, instead of the 20,000,000 they did work up then. Now, since that date, numbers of old concerns have been broken up or gone into such complete disrepair that they will never start again:—others no doubt have been created, and perhaps the one may be set against the other. In that case, we only want 18,000,000 lbs. a week, and we have 13,640,000 lbs., or as nearly as may be 75 per cent. of the extreme quantity we want, or could use.

Now few persons, we believe, who are aware of the great amount of disorganisation and dispersion which has occurred among the factory population during the last three or four years,—the number who have migrated or emigrated, the number who have gone to service, the number who have sought and found other occupations, would consider that more than 80 or 85 per cent. at the outside of the former factory population is now extant or to be found in Lancashire or Cheshire, available for their old work. And when we add to this the further consideration that more hands as well as more machinery than formerly are required to spin and weave a given quantity of the inferior cotton now alone attainable,—we think there is every reason to hope that, before the end of 1865 very nearly the whole of the manufacturing population, strictly so called, will or may be in full employment. The *subsidiary* trades,—the carriers, dyers, bleachers, printers, &c.,—will of course not recover so completely;—since 13,640,000 lbs. will not furnish to *them* as much employment as 20,000,000 lbs.

That prices of cotton must fall, as indeed they are falling, there can we apprehend be no doubt;—though at what rate they may decline, or at what point they may stop, we should be sorry to hazard any confident conjecture. Thus much, however, is certain. The production of cotton goods in 1860 was notoriously in excess of the aggregate demand of the world, even at the comparatively low prices then prevailing, for stocks accumulated in every market. Now, is it probable that if the world could not consume 20,000,000 lbs. a week when Orleans was at 8d. and Surats at 5d. per lb., it will be able to consume 13,640,000 lbs. with Orleans at 24d. and Surats at 18d. per lb.? As soon as prices reach a moderately ow limit, there can be no doubt that both production and demand will ncrease, for all the markets of the world are bare of stocks and need to eplenish them;—but what "moderation" is, whether 12d.—or 9d.—for East Indian cotton, no man can venture to pronounce.

APPOINTMENTS.—The Queen has approved of M. Henri Du Chesne as Consul at Hong Kong for the Emperor of the French.

Naval and Military.

Rear-Admiral George St. Vincent King, Commander-in-Chief of the Indies and Cape of Good Hope stations, has been appointed to succeed Rear-Admiral Sir Augustus L. Kuper, K.C.B., whose time of service has expired, as Commander-in-Chief in China.

Lieut.-Col. J. W. Lovell, C.B., principal instructor in field fortifications at the Royal Engineer establishment, Brompton Barracks, Chatham, having been appointed Commanding Royal Engineer in China, is succeeded at the Royal Engineer establishment by Major F. H. de Vere.

By direction of the Admiralty, the officials connected with the Steam Reserve are engaged in making a careful survey of the various steamers composing the Anglo-Chinese flotilla in the Medway, in order to enable them to arrive at the exact value of each vessel, including all machinery and stores.

We have to record the death of Capt. Robert Harris, R.N., which took place at his residence at Southsea, Portsmouth, on the 16th inst. We learn from O'Byrne that the deceased officer entered the Royal Navy in 1822 as a volunteer on board the Euryalus, 42, and in 1824 was employed at the blockade of Algiers. He afterwards served on board the Ferret, the Royal George yacht, and the Onyx and Pantaloon tenders to the yacht. In the Excellent gunnery-ship, as a lieutenant, his scientific acquirements secured him the highest possible certificate. In the Melville, 72, bearing the flags for some time of Admirals Sir Peter Halket and the Hon. George Elliot, Lieut. Harris served for four years as gunnery-lieutenant in North America and the West Indies, on the Cape of Good Hope and China stations, and took part in various military operations. Capt. Harris's last services, however, were the most important in his career, and with them his name must always remain indissolubly connected. This was the organisation and introduction into Her Majesty's service of the naval cadet and boys' training-ship system, a task for the execution of which Capt. Harris was specially selected by the Admiralty. How this arduous task was carried out is best exemplified by a reference to the means placed at Capt. Harris's disposal in the one ship (Illustrious) for the joint scheme at its commencement, and the present admirably arranged Britannia, with a college in prospective, for the naval cadets, and a training ship for boys now in every naval port in the kingdom. For several years he laboured at this duty, and none but his personal friends can know the amount of zeal he brought to bear upon it, or the tact with which he worked out the important plans entrusted to his care.

Major-General Lord William Paulet, C.B., will retain the Lieutenant-Governorship of Portsmouth, and the command of the South-west military district, until July next, when he will succeed Sir James Yorke Scarlett, C.B., in the duties of the Adjutant-General's office at the Horse Guards.

Commander Horatio L. A. L. Maitland joined Her Majesty's 5-gun vessel Landrail, commissioned at Woolwich for service on the South coast of Africa, to assist in the suppression of the slave traffic. The Landrail has been thoroughly repaired.

Lieutenant-Colonel Morrison has retired from the Royal Marines. This officer joined the Service on the 18th of October, 1842. On the 5th of April, 1845, he embarked on board Her Majesty's ship Vernon, and proceeded in that ship to the River Plate, where he was actively employed at Monte Video, and was present on the 20th of November, 1845, at the attack on the batteries at Punto Obligado. From the River Plate he went in the Vernon to the East Indies, where he was employed until the end of 1848. He was promoted to first lieutenant 27th July, 1845; appointed quartermaster at Plymouth 13th January, 1853; from thence transferred as adjutant to Chatham, 18th February, 1854; and promoted to captain 21st February, 1855. In August, 1857, he proceeded with the brigade to China, was present at the capture of Canton, served as Provost-Marshal to the forces, and afterwards as deputy assistant-adjutant-general to the garrison at Canton, in 1858 and 1859. On the formation of the expedition to the North of China he was on the staff of the garrison at Hong Kong, which appointment he resigned for the purpose of accompanying the battalion of his corps attached to Sir Hope Grant's force; was present at Sinho, Tongoo, siege and capture of North Takoo Fort, and the whole of the subsequent operations. He was gazetted brevet-major 15th September, 1858, and lieutenant-colonel 15th February, 1861. Since his return to England he has been employed on the recruiting staff of the corps, latterly in charge of the London district. His departure from the Service is much regretted by the whole of his old friends and comrades, and he carries with him their best wishes for his future welfare and prosperity.

The paddlewheel steam-sloop Virago, 6, Commander William G. H. Johnstone, from Bermuda, arrived in Plymouth Sound on the 20th inst. When entering Burmuda from Halifax, Dec. 4, and being about eight or nine miles from the island, she struck on an outlying rock, one of the Bermuda Reef. The Virago was at the time under steam, and going from six to seven knots per hour. Her timbers were started from the stempost as far up as the six-foot mark, the keel of her stem was started, and the bolts driven back; two or three streaks of copper were ripped off, and the whole of her starboard side severely shaken. Had the sloop been a sailing vessel she would have sunk in less than three hours, but being a steamer she was kept afloat by the action of her bilge ejection pipes. She entered Bermuda the next morning, and was repaired by a diver alongside the jetty. The Virago left Dec. 31 for England, in company with the screw steam corvette Challenger, 22, Captain John J. Kennedy, C.B., but parted from her four days afterwards. On the homeward voyage heavy gales from south-west, veering to north-west, were experienced, and on Saturday, Jan. 14, the first gig was washed away, carrying with it part of the starboard paddlebox.

Major-Gen. R. S. Armstrong, of the Royal Artillery, is to have the "distinguished service" reward of £100 per annum, vacated by the appointment of Major-Gen. Dupuis, C.B., Col.-Commandant of a Brigade; and a similar reward, vacated by the death of Major-Gen. Palliser, has been conferred on Major-Gen. Francis Warde. The annual pensions of £91. 5s. held by Major-Gen. Armstrong and Major-Gen. Warde have been bestowed on Major-Gen. Burke Cuppage and Major-Gen. J. St. George, C.B.

We learn that orders have been issued to stop the manufacture of Parrot guns in the United States, and a commission has been appointed to inquire into the causes of their failure. There are about 1,000 of them in the Federal arsenals.

The *Army and Navy Gazette* furnishes the following, in its usual monthly list, as the names of vessels of the Royal Navy on the China and Japan Station:—

Acorn, hospital sh., Mast. Com. Henry Hutchings.
Algerine, 1, sc. gunvessel, Lieut.-Com. T. C. Tucker.
Archer, 13, sc., Capt. Francis Marten.
Argus, 6, st. v., Com. H. L. Round.
Barrosa, 21, sc., Capt. Henry Boys.
Bouncer, 2, sc. gunboat, Lieut.-Com. F. Lewis.
Bustard, 2, sc. gunboat, Lieut.-Com. R. Adams.
Clown, 1, sc. gunboat, Lieut.-Com. T. S. Tonkin.
Cockchafer, 2, sc. gunboat, Lieut.-Com. E. M. Dagrel.
Conqueror, 78, sc., Capt. W. G. Luard.
Coquette, 4, sc. gunvessel, Com. A. G. R. Roe.
Cormorant, 4, sc., Com. C. M. Buckle.
Coromandel, 5, st. v., Lieut. D. G. Davidson.
Euryalus, 35, sc., Capt. W. M. Dowell, flag ship of Admiral Kuper.
Flamer, 2, sc. gunboat, Com. Alfred Eaton.
Grasshopper, 2, sc. gunvessel, Com. E. D. Morant.
Hardy, 2, sc. gunboat, Com. G. Morice.
Haughty, 2, sc. gunboat, Lieut.-Com. K. H. A. Mainwaring.
Havoc, 2, sc. gunboat, Lieut.-Com. E. Backley.
Hesper, 4, sc. st. sh., Mast. Com. A. F. Boxer.
Insolent, 2, sc. gunboat, Lieut.-Com. G. T. Nicholas.
Janus, 1, sc. gunboat, Lieut.-Com. G. Powys.
Kestrel, 1, sc. gunboat, Lieut.-Com. Hamilton Dunlop.
Leopard, 18, st. v., Capt. C. T. Leckie.
Leven, 1, sc. gunvessel, Lieut.-Com. H. P. Knevitt.
Manilla, sc. st. v., Mast. Com. H. W. Burnett.
Melville, hosp. sh., Honkong.
Osprey, 4, s.c., Com. Menzies.
Pantaloon, 11, sc., Com. F. R. Purvis.
Pelorus, 21, sc., Capt. W. H. Haswell.
Perseus, 17, sc., Com. C. E. Stevens.
Princess Charlotte, receiving ship, Capt. C. S. Nolloth.
Princess Royal, 73, Capt. W. Gore Jones, flag ship of Admi. G. St. Vincent King.
Rattler, 17, sc., Com. J. W. Webb.
Rifleman, 5, sc. st. sh., Com. John Ward.
Saracen, tender to above.
Scylla, 21, sc., Capt. R. W. Courtenay.
Severn, 51, sc. frigate, Com. F. B. Montressor.
Slaney, 1, sc. gunboat, Lieut.-Com. W. F. Lee.
Staunch, 2, sc. gunboat, Com. T. S. Keats.
Swallow, 9, sc. st. sloop, Mast. Com. E. Wilds.
Tartar, 20, sc., Capt. S. M. Hayes, ordered home.
Vigilant, 4, sc. Com. W. R. Hobson.
Weazel, 2, sc. gunboat, Com. Lieut.-Com. H. G. Hale.

According to the official list, the following regiments are now in China, Japan, and Ceylon :—

9th Foot (2nd batt.), China.	67th Foot, China.
20th do. do. Japan.	99th do. do.
25th do. do. Ceylon.	Ceylon Rifle Regiment, Ceylon.

LOSS OF HER MAJESTY'S SHIP "BOMBAY."

Lieutenant Stirling, one of the survivors of the ill-fated Bombay, arrived at the Admiralty, and shortly after the Secretary of the Admiralty sent out to the various daily papers the following communication :—

"H.M.S. Stromboli, Monte Video, Dec. 15, 1864, 8 A.M.

"Sir,—I much regret that I have to report the total loss by fire of H.M.S. Bombay. She left this anchorage under sail at 7 A.M. yesterday when I transferred my flag to the Triton. About 5 P.M. of the same day I received intelligence that the Bombay was on fire near the English Bank, or Flores Island, about 13 miles from this place. I immediately despatched the Stromboli to her assistance, and proceeded myself in the Triton, but so rapidly had the fire extended that the ship had been deserted long before assistance could reach them. The ship's company had been at general quarters in the afternoon till a little after 3 P.M., the foremost lower deck guns were then told off for divisional exercise, but firing had not commenced from them, when about ten minutes after the retreat had been beat, fire was reported to have broken out in the after part of the ship, about the after hold ; the fire bell was immediately rung, and with the greatest order and promptness an abundant supply of water was obtained ; but the fire appears at once to have spread with uncontrollable rapidity, which gives me the impression that it originated very close to the spirit room, and that the spirit casks must almost immediately have burst and ignited. At 3.35 P.M. the fire was reported. At 3.52, finding the fire was quickly gaining, the boats were hoisted out. At four P.M. the boats were out, with the exception of the second launch, when the flames coming up the hatchways, the awnings and sails having been burnt, rendered it impossible for the men to work. The sick had already been passed into the boats, and the rest of the ship's company now followed. At a quarter-past four the mainmast went over the side, the boats then being scarcely clear of the ship, and many officers and men were still holding on to ropes alongside, and to the fore part of the ship, and others floating on the spars, &c. Soon after the mainmast fell, the stoppers of the anchors being burnt through, the anchors fell, and it seems many men who were upon or near them must have lost their lives. The ship was under sail, hove to, when the fire occurred, steam not having been up. At 8.25 the after-magazine blew up, and the ship sunk in about 8 fathoms.

"Among the officers, Mr. John K. Smallhorn, Assistant-Surgeon, is the only one missing, and who was drowned alongside.

"The French mail-packet being at this moment on the point of departure, I am not able to give a more detailed report ; but I am endeavouring to ascertain the number and names of men missing, which, I am sorry to say, amounts to about 93 ; but the boats having been picked up by vessels proceeding to different places, we cannot as yet get a correct return.—I have the honour to be, &c. (Signed), CHAS. G. J. B. ELLIOT, Rear-Admiral and Commander-in-Chief. To the Secretary of the Admiralty."

No list of names has been received at the Admiralty, and whenever any further information is received it will be made public.

The *Navy List* represents the Bombay as 2,782 tons (flagship), and 400-horse power. Her officers were—Rear Admiral the Hon. Charles G. J. B. Elliot, C.B. ; Flag-Lieutenant Henry N. Hippisley ; Secretary, Stephen H. Moore ; Clerk to the Secretary, Charles E. Collins ; Assistant Paymaster, Charles R. Drew ; Captain, Collin A. Campbell : Commander, Charles Wells ; Lieutenants, Edward Kelly, Francis Sterling, Charles A. Vidal, Henry J. Carr, James Buchanan ; additional Lieutenants, for disposal, Charles R. Forrest and John R. T. Fullarton ; Master, James S. Watts ; Captain of the Marines, William A. Delacombe ; First Lieutenant of Marines, Cyril Frampton ; Second Lieutenant of the Marine Artillery, James S. Bird ; Chaplain, Rev. John Erskine, M.A. ; Surgeon, Frederick W. Blake ; Paymaster, James D. Gilpin ; Naval Instructor, Thomas H. Johnson ; Chief Engineer, Robert J. Hay ; Sub-Lieutenants, Edward F. Keppel, Henry A. Mandeville, Arthur S. Philpots ; Second Master, Frederick Hunter ; Assistant-Surgeons, John R. Samuelson and John Simpson ; and Assistant Paymaster, Henry M. Harrison.

LOSS OF THE "RACEHORSE."

(*Army and Navy Gazette.*)

In noticing the apparent decadence of seamanship in the Royal Navy we arrived at the conclusion from the fact that, of late years, an unusual number of Her Majesty's ships have suffered total and disastrous wrecks. We must not, however, be misunderstood ; we have no desire nor intention to visit with any degree of unnecessary severity those officers who, to their misfortune, were prominently connected with the losses in question. The few remarks which have appeared in the columns of this journal on the melancholy destruction of the Racehorse can in no way affect Commander Boxer's position, as a court-martial will, in all probability, have long since determined whether he was or was not liable to blame for the course which ended in the annihilation of much valuable property, and in the painful and lingering death of nearly one hundred of our fellow-creatures. We are fully aware of the suffering which a captain or commanding officer, if he possess the ordinary feelings of our nature, must endure when his vessel is suddenly snatched from under his feet, especially when that catastrophe, as in the case of the Racehorse, is accompanied by the removal from life of almost the whole of his shipmates, who only a few hours previously were full of health, energy, and activity. We should indeed have great reason to blush for ourselves if under such circumstances we could, without sufficient reason, be so callous as to lacerate the feelings of any man, particularly one placed in the position of Commander Boxer. All that we did say rested upon a fact published in the China papers, viz., that the Racehorse made for Lung Mun Bay instead of for Chee-foo. Now, considering that the latter place is twelve miles to the eastward of the former, we do not think that we said too much when we imputed blame to some one on board. We are prepared to admit that the two places resemble each other very much, but that, we should imagine would serve rather to induce caution than boldness. We are informed that Commander Boxer is a capital seaman, as his father was before him, and we shall hail with satisfaction his entire acquittal from blame in connection with the loss of Her Majesty's late vessel.

EXTRAORDINARY ATTEMPT ON THE LIFE OF A CHINA MERCHANT.

Robert Atkin, forty-five, who had been a ship captain, but was now described as a farmer, and who gave an address in Crawford-street, Bryanston-square, was placed at the bar before the Lord Mayor, on Saturday the 21st inst., charged with extorting £90 odd from Mr. Brown, a merchant in Fenchurch-street, by threatening to shoot him.

Mr. Denton, from the office of Messrs. Freshfields, the solicitors to the Bank of England, conducted the prosecution.

The complainant, Mr. William Seton Brown was called. He said : I am a merchant, and reside at Homedale-house, Nutfield, Surrey. I formerly resided at Shanghai, as a member of the firm of Birley, Worthington, and Co., of that place, merchants. I left Shanghai in April, 1858, and returned to England. I use the office of Mr. Lidderdale at 34, Fenchurch-street, in this city. The prisoner, accompanied by a woman, called upon me there about 1 o'clock on Friday, and they were shown into a back room by an office boy. As soon as I entered the room to speak to them the prisoner went to the door, and putting his back against it, drew a revolver from his pocket, and said, "My name is Atkin, and I want my money." I replied that I did not owe him any money. He repeated the same words more than once, still holding the pistol in his hand, not pointing it at me, but holding it downwards. He said, "I am a desperate man, and must have my money before I leave this room." After some further parley I told him I should pay him the money and give him into the custody of a constable. I tried to get to the door to open it. He repeated that he must have his money before he left the room. I suggested that the woman who accompanied him should call in my friend, meaning Mr. Lidderdale, who would probably pay the money. The woman left apparently for that purpose, and presently returned, accompanied by Mr. Lidderdale, who, on hearing what had passed, wrote a cheque for £91. 2s. on his bankers. The cheque was sent to the bank and cashed. Mr. Lidderdale himself paid the prisoner the money. The prisoner had previously demanded upwards of £100 of me. The woman showed me some papers which I handed to my friend Mr. Lidderdale, and he in turn handed them to the prisoner. They appeared to me to be accounts and documents relating to the ship *Dennis Hill*. The prisoner eventually agreed to take £91. 2s. The money was placed on a table with that view, and he took it up, signing immediately afterwards the receipt produced. Every now and then, until he got the money, he kept drawing the pistol out of his pocket.

A police-officer at length came in with Mr. Lidderdale, and they were present when the money was paid to the prisoner. I was under the belief that the prisoner would have fired the pistol at me if I had attempted to leave the room, or if I had not paid him the money. I am now liable to Mr. Lidderdale for the amount of the cheque. I was in bodily fear, and but for that I should not have paid the prisoner the money. At the very beginning of the interview I told the prisoner that my firm had nothing to do with the freight of the vessel in question, and that they had only acted as agents in chartering her. About a year and a half ago I saw the prisoner. He then called on me at the same office. Up to that time I had not heard or known anything about the freight of the *Dennis Hill* Besides, the question of freight was no business of mine. On that occasion the prisoner told me that he had been the master of the ship *Dennis Hill ;* that the vessel had some years before been chartered to go from Foochow to New York ; that she was required for the firm of Birley and Co., of Foochow, of which house I was not nor am now a partner ; and that on our arrival at New York some dispute arose about the freight. I said I could make inquiry into the matter, and that if I found there was anything due to him I should endeavour to get the money for him. I told him I was not a partner in the firm of Birley and Co., of Foochow, that I did this as a friendly act, and I asked him to call again in a day or two. I made inquiries, and he called again. I then told him he had been trying to perpetrate a fraud on the consignees at New York, and that I declined to interfere at all in the matter. He became insolent, and I requested him to leave the office, which he did. This was about the middle of July, 1863. A day or two afterwards I received a threatening letter bearing his signature, which I can produce. From that time until Friday I had not seen him. I had instructed my solicitor to defend me against the proceedings which the prisoner had commenced against me.

Mr. William Lidderdale : I am a merchant at 34, Fenchurch-street, and partner in the firm of Rathbone Brothers, of Liverpool. A few days ago the prisoner called upon me with his wife and asked for Mr. Brown, giving as his name "Mr. Johnson." I told him Mr. Brown was out, upon which the prisoner left, but did not return that day. On Friday the prisoner called again. I was out at the time, and on my return I heard high words in the back room, which my friend Mr. Brown occupies. Soon afterwards the prisoner's wife came out of the room calling "Chaplin," the name of the office boy. The boy went in and brought a message to me, upon which I entered the room where the altercation was going on. I could not get in for a minute or two, as some one appeared to be pressing against the door from behind. The door was opened by the prisoner, and I found him standing with a pistol in his left hand. Mr. Brown said, "Here's a man who threatens to shoot me if I don't pay a claim he has made upon me." Turning to the prisoner, I said that was an extraordinary way of enforcing a claim. The prisoner replied that he was a desperate man and had been driven to it, that he was very hard up, and had been a long time trying to get the money. I argued with him a few minutes, and then his wife produced some papers, some of which were handed to me. I looked at one or two of them, and amongst them was what appeared to be the copy of an affidavit made in New York by Messrs. Weston and Grey, in which they had declared they had tendered to the prisoner 383 dollars and 42 cents, and that he had refused to receive the money. The

Digitized by Google

affidavit seemed to be in connection with the freight of the ship *Dennis Hill*. Mr. Brown then said it was not worth while going any further into the documents, and that he thought he had better pay the money and have the prisoner apprehended. I warned the prisoner myself that he would be given in charge if he demanded the money. The reply was that he was quite prepared. Mr. Brown assured the prisoner more than once that he had nothing to do with the ship, He then asked me to pay the money for him, upon which I wrote a cheque for £91. 2s. upon my bankers. The prisoner refused to take the cheque, lest, he said, I should play some trick upon him. I then sent the cheque to be cashed, and the messenger returned with the money, a policeman entering the room at the same time. The money was put into my hands, and I passed it to the prisoner, who then, in my presence, wrote the bottom part of the receipt produced in these words:—"As part payment of the freight (*sic*) earned by barque *Dennis Hill*, Robert Atkin." Over these words the following had been previously written:—

"Received from W. S. Brown, Esq., £91. 2s., the equivalent at 4s. 2d. exchange of $383, with interest at 5 per cent. for two years and ten months.—London, 20th Jan."

The prisoner had the pistol all this while, sometimes in his pocket and sometimes in his hand. As he was leaving the office Mr. Brown gave him into custody.

Police-constable Cushnie deposed that on Friday, about half-past one o'clock, he was called to the office of Mr. Lidderdale. On going there Mr. Lidderdale went into a back room with him, and witness saw the prisoner standing there near the door. The prisoner said once or twice, "Pay me my money, and then you can give me in charge." I saw Mr. Lidderdale pay the prisoner £91. 2s., and the prisoner sign a receipt, Mr. Brown at the time protesting against paying him the money, as he never owed it. He told witness in the prisoner's hearing that the prisoner had a pistol on him. Witness asked him if that was so, and the prisoner replied in the affirmative. Mr. Brown gave the prisoner in charge, and witness took him to the Seething-lane police-station. There the prisoner took from his left overcoat pocket the pistol produced (a revolver with six chambers), telling witness that it was loaded. The charge, which was afterwards drawn, consisted of six bullets, and the pistol was ready-capped. On searching him witness found £91. 2s., the sum paid him by Mr. Lidderdale, and 5½d. in copper besides, with some papers.

By the prisoner: I saw you several times before I went into the room, the door being open. You looked very much excited. You said to Mr. Brown, "Pay me the money you owe me, and then hand me over to a magistrate." You gave a receipt as soon as you got the money. On the way to the station you told me you had become a desperate man from having fallen into bad circumstances, but that you had no intention to shoot Mr. Brown.

Charles Newman, assistant-messenger from the Court of Bankruptcy, Basinghall-street, produced the proceedings in bankruptcy of the prisoner, Robert Atkin, described as of Chapel-hill, Walthamstow, farmer. The petition, he said, was filed by the bankrupt on the 2nd of November, 1864, and he was adjudged a bankrupt on the same day. On the 22nd of December the examination of the bankrupt was adjourned *sine die*, because of no account having been rendered. The object of the last witness's evidence was to show that even if his claim against Mr. Brown, the prosecutor, was well founded, the prisoner, being then a bankrupt, was not in a position to receive it. At the request both of the solicitor for the prosecution and of the prisoner himself, who wished to obtain professional assistance in conducting his defence, the Lord Mayor remanded the prisoner until Tuesday, declining at the same time to entertain his request to admit him to bail.

THE JAPANESE PEASANTS.—A correspondent of the *New York Tribune* writes:—"I have seen the soil about Nagasaki, Hakodadi, Yedo, and Kanagawa, and it is all the same; yielding bounteous returns only to painstaking labour. And this labour the Japanese peasant faithfully bestows till all the country laughs with fatness. For him there are no ambitions beyond honest toil; the conditions of his life are fixed irrevocably; he is haunted by no dreams of power, pursued by no restless avarice, and so his human machine runs on gently without many frets or breaks. His wife is industrious like himself, her spinning-wheel sings by the door, and the shuttle of his daughter's loom flies by the window. In the rice culture and the cotton picking they labour by his side. His children have full run of the streets for their earlier years—the girl plays with dolls and dresses, the boy snares birds, robs bird's-nests, dams up the little rills, sails his tiny boat, bakes his mud pies in the sun, and tears his trousers—till such times as he is able to go to the woods for fuel, or to the fields to hoe and weed. But one thing is to be remembered, to school he must go, and the sun is hardly up before he is off to school with shining brown face and the roll of paper which makes his copy-book in hand."

CAPTAIN SHERARD OSBORN read a paper at the meeting of the Geographical Society on Monday evening on explorations in the Polar regions. He pointed out that the dangers of Polar expeditions were not so great as had been thought, and he urged another expedition to explore the region round the North Pole. He named Captain M'Clintock as the most fitting man to command the expedition, and said the Admiralty would give two small vessels for the purpose if they were asked. The suggestion was approved by the speakers in the discussion which followed.

Mr. Vane (from Ceylon) had an interview with the Right Hon. Edward Cardwell at the Colonial Office yesterday.

Monetary and Commercial.

The following letter has been received by the *Standard* with respect to the British and Netherlands India Bank (Limited). It is understood out of doors that the directors propose to return the money, not only without deduction, but with some allowance for interest, having employed it profitably for the shareholders.

(TO THE EDITOR.)

The British and Netherlands India Bank (Limited),
28, Cannon-street, London, Jan. 11, 1865.

Sir,—Referring to the paragraph in your impression of the 9th inst., detailing the views of various shareholders of this company, I am instructed by the directors to state that so soon as certain advices are received from abroad, and which are shortly expected, a meeting of the shareholders will be convened for the purpose of affording them the opportunity of considering and determining the best course to be pursued.—I remain, Sir, your most obedient servant, B. W. BALL, Secretary *pro tem.*

The biddings for £300,000 in bills on India took place on the 18th inst. The proportions allotted were—to Calcutta, £165,000; to Bombay, £120,000; and to Madras, £10,100. The minimum price was, as before, 1s. 11½d. on Calcutta and Madras, and 1s. 11¾d. on Bombay. Tenders on Calcutta and Madras at 1s. 11⅞d. will receive in full, and on Bombay at 1s. 11⅞d. about 13 per cent.; above these prices in full. The results indicate a diminution in the demand for bills both for Calcutta and Bombay.

A final call of £5 is to be paid by the 8th Feb. on the shares of the Commercial Bank Corporation of India and the East, allotted on the terms of the prospectus issued in April last.

At the half-yearly meeting of the London Joint-Stock Bank the available total, including a previous balance of £26,976, was stated at £171,125 and the usual dividend was recommended at the rate of 12½ per cent. per annum, with a bonus of £1. 17s. 6d. on each share with £10 paid, leaving £21,125 to be added to reserve, which now amounts to £298,069. The liabilities on deposits, &c., are £20,252,926, and the paid-up capital is £1,080,000.

The amount of bullion by the P. and O. Co.'s steamer *Poonah*, from Southampton on the 20th inst., was—in gold, to Alexandria, £17,500; to Madras, £561; to Singapore, £2,000. In silver, to Singapore, £52,650; to Hong Kong, £10,940; to Shanghai, £2,790. Total: In gold, £20,061; in silver, £66,380.

ARTICLES OF IMPORT.

TEA.—During the past fortnight our market has shown no activity, but there has not been much fluctuation in prices, importers generally having given support to the market. The public sales which commenced on the 17th inst. were larger than for some time past, the quantity without reserve exceeding 30,000 packages; these have occupied the attention of the trade to a great extent, and have tended to curtail business by private contract. Low and dusty kinds of Congou have sold a shade easier. Fair to good common show no material alteration. Flavoury kinds of old import have sold to a small extent at about previous prices. Fair qualities of new season have sold rather lower; good to fine kinds have been well maintained, and finest have been taken in small parcels for export at fully previous prices. Common to fair black leaf

Digitized by Google

kinds, both old and new import, have been difficult of sale, and show a decline of ½d. to 1d. per lb. All the better kinds remain much as before, finest being still without inquiry for export. Tayshan and new-make Canton kinds show no alteration. Common to fair Oolongs are without change; there is rather more inquiry for the good to fine kinds at slightly improved prices. Souchongs show no improvement, and quotations are in a great measure nominal. A few fresh arrivals of Flowery Pekoe have found buyers at full prices. Scented Teas continue in demand, both Capers and Orange Pekoes, especially the Foo-Chow kinds of the latter, which are very scarce, and prices have a hardening tendency. Uncoloured Japans have been inquired for at 1s. 1d. to 1s. 2d. per lb., but there are few to be met with at that figure of sufficiently good quality. The public sales of India tea did not go off with the usual, spirit, a large proportion being withdrawn for want of offers nevertheless fine qualities commanded extreme rates. Green Teas have sold to a fair extent, and prices have again ruled rather in favour of buyers for good to fine kinds, whilst the common to fair kinds have sold 1d. to 2d. per pound lower both in Young Hysons and Gunpowder. Hysons, on the other hand, have been in demand, and prices show an advance of about 2d. per lb. In Canton-made kinds there is no alteration to notice, they still being difficult of sale. Besides the usual trade there are 10,500 hf. chests Oolong, 750 coloured and uncoloured Japan, 1,000 Green at about previous rates, 150 common Souchong, 45 cents in bond. The quotations are: Hyson, common to fair, $1.30 to 1.50; Young Hyson, common to fair, $1.15 to 1.35; Gunpowder and Imperial, common to fair, $1.30 to 1.50; Hyson Skin and Twankay, common to fair, $95 to 1.10; uncoloured Japan, common to fair, $1.05 to 1.12; Souchong and Congou, common to fair, $95 to 1.10.

SILK.—See "Latest."

COTTON.—The Liverpool market closed on Saturday the 21st with declining prices. China and Japan had been abundantly offered, and, with a limited inquiry, a reduction of 1d. per lb. was submitted to. This week there has been more inquiry, and business has been done at steadier rates. The London market was characterised by a similar dulness and decline. During the week a sale of 250 bales Japan was quoted at 15d. for fair, and 15¼d. for fully fair. A more active business has been since reported, and prices are ¼d. to ½d. per lb. higher.

SUGAR.—The general decline at the end of the week was fully 1s. and in some cases 1s. 6d. to 2s. per cwt. 1,085 bags Penang were about two-thirds sold, fine brown to low middling yellow, 28s. 6d. to 31s. On the 20th 2,000 bags Manila went at 27s. 6d. No quotable change in value has been effected during the present week.

COFFEE.—Prices have ruled in favour of the buyer. 959 casks, 1,090 barrels and bags Plantation Ceylon in public sale, went without spirit, at a decline of about 1s. per cwt., fine ordinary to low middling, 78s. to 82s., middling to good middling, 83s. to 86s. Only 220 bags native have been offered, which sold rather cheaper, fine ordinary, 71s.; privately, about 1,000 bags have been placed, good ordinary at 69s. to 70s. 100 bags Singapore, fair Bally, 62s. 6d. to 63s., and common, 57s. Of Mocha, at auction, 139 bales mixed clean garbled brought 83s.

RICE.—Extensive transactions have taken place at an advance of 3d. per cwt. On the 20th, 14,674 bags Nakrenzie, offered by auction, were chiefly withdrawn at 9s., only the damaged portion being sold rather cheaply at from 7s. to 8s.; of 2,429 bags Bengal, the sound part, white, was bought in.

CAMPHOR.—Had fallen at the end of the year 7s. 6d. per cwt., but 5s. of the decline was afterwards recovered. Of 1,225 cases China at auction, nearly half sold at 85s. to 87s. 6d. in lead, and 82s. 6d. to 85s. tin; and at these prices the market is at present firm: 48 tubs Japan retired: private business very moderate.

CASSIA LIGNEA.—First quality, being comparatively scarce, has nearly maintained its former value; all other classes are 2s. to 5s. per cwt. cheaper: of 3,595 boxes at auction, half sold at 77s. to 88s. per cwt. for 3rd to 1st pile. Buds: Firm, with inquiry; little offering.

COCOA NUT OIL.—Prices have advanced as much as £2 per ton, with a large business doing, and the market remains very firm. There are buyers of Ceylon at 37s. 6d. per cwt.

DRUGS.—Cubebs: At a decline of 15s. per cwt. have sold largely; and of 1,032 bags at auction three-fourths sold at 74s. to 80s. per cwt. for good. Dragon's Blood: Dearer; and 32 cases at auction sold at £16. 5s. per cwt. for reed; and £5 to £10. 10s. middling to good block. Galangal Root: Steady: 500 bags sold at auction at 15s. to 16s. 6d. per cwt. for good quality. Rhubarb: An active speculative demand arose at the close of last year; a large quantity changed hands, and prices rose 9d. to 1s. per lb. Latterly the market (remaining firm) has become quiet: of 88 chests at auction, one-third sold at 3s. 10d. to 5s. 11d. per lb. for ordinary to fair.

GUMS.—Benjamin: Remains steady; but of 93 cases Sumatra at auction a small portion only sold at £12. 12s. 6d. to £12. 15s. per cwt. for fair 2nd quality. Damar: Very firm; 81 pkgs. sold at auction at 46s. to 47s. per cwt. for fair picked, and 40s. to 40s. 6d. sorts. Gamboge: Remains scarce, and firm; of 17 cases at auction one-third sold at £9. 2s. 6d. to £9. 5s. per cwt. for middling mixed pipe.

GUTTA PERCHA.—Remains very flat; only 3 tons at auction, and two tons sold at 6½d. to 6¾d. per lb., being very cheap. Indin Rubber: Auctions confined to 140 baskets Penang, retired, and 143 bags Assam sold at 9½d. per lb. for middling ball, being a high price: privately about 30 tons have been sold in the month at 1s. 3d. per lb. for fine Singapore, and 1s. 1¼d. to 1s. 2d. middling to good Penang.

HEMP.—Manila: This market has been very animated; large business, partly speculative, done, and prices £2 to £3 per ton higher, and it remains firm at £31 for Sorsogon, and £27. 10s. to £30 common to good roping. 822 bales at auction (chiefly damaged) were mostly quitted upon the advanced terms. 500 bales Lupez retired.

JAPAN WAX.—42 boxes taken in, ordinary and middling saucer at 66s. to 66s. 6d.

OILS.—Anniseed: Has further improved; Business to some little extent done up to 6s. 3d. per lb., at which price the oil is now quiet, with sellers rather than buyers. Of 8 cases at auction, one sold at 6s. 3d. per lb. Cassia: Is dearer, and has sold moderately up to 8s. 6d. per lb, subsequently relapsing to our present quotations of 8s. 3d. to 8s. 4d. Cinnamon: Two cases sold at auction at 2s. 4d. to 2s. 5d. per oz. for good. Mace and Nutmegs: Three cases at auction retired at 3d. per oz. 10 cases Nutmeg Paste sold at 1d.

SPICES.—Cinnamon: We quote 1st sort 1s. 10d. to 3s., 2nd sort 1s. 6d. to 2s. 6d., 3rd sort 1s. 6d. to 2s., 4th sort and jungle 1s. 3d. to 1s. 7d. per lb. Little doing. The quarterly sales are advertised for 30th inst. Cloves: Quiet: one case Penang sold at auction at 1s. per lb. for fair; and 179 bags Zanzibar retired; 6 casks Amboyna sold at 6½d. per lb. for good. Ginger: Steady: only 51 cases at auction, sold at 60s. per cwt. for ordinary wormy. Mace: Firm; and of 57 cases Penang, and 8 cases Singapore at auction, two-thirds sold at 1s. 8s. to 2s. 10d. per lb. for middling palish to good pale, and 9d. to 1s. 6d. inferior red to good reddish. Nutmegs: Are again generally 1d. to 2d. per lb. cheaper; and of 266 cases Penang, and 6 cases Singapore at auction, the bulk sold at 3s. to 3s. 8d. per lb. for very fair to good bold, and 10d. to 1s. 7d. ordinary small to good medium. Pepper: Black is ½d. per lb. higher in value, in consequence of good general demand. 5,908 bags Singapore at auction, most sold at 3½d. to 3¾d. per lb., and of 8,089 bags Penang half sold at 3d. to 3¼d. The market closes firm for Sumatra, but quiet for Penang. White is again ½d. per lb. dearer; and 918 bags Sincapore at auction mostly sold at 5¾d. to 6d. for fair to good; and of 667 bags Penang two-thirds sold at 5¼d. to 5¾d. for ordinary to fair.

SAGO.—At length shows some recovery, and 3,800 packages at auction sold at 17s. to 20s. per cwt. for ordinary to very good small, and 18s. to 20s. 6d. middling to fair large. Flour: Is considerably cheaper; 1,721 bags, of recent importation, sold at auction at 13s. 9d. to 14s. per cwt; subsequently considerable business done at 14s. 6d. Tapioca: Of 660 bags good middling Penang, in public sale, about half was taken at 2¾d.; and 36 cases stained Singapore at 1½d. per lb.; 100 boxes pearl tapioca, were bought in above the value. 219 cases Tapioca Flour were only a small part sold at 2¾d. to 3d. per lb.

SHELLAC.—This market remains in the same depressed state that was described in our issue of the 26th ult., and prices have further fallen 5s. per cwt. for all sorts excepting good Garnet, which, being in comparatively moderate supply, retains its value; of 1,808 packages at auction, two-thirds sold; Orange at £6. 2s. 6d. to £6. 7s. 6d.; Livery Orange, £5. 15s. to £6; thin Red Orange, £5. 2s. 6d. to £5. 5s; Liver, £5. 2s. 6d.; Garnet, £5. 12s. 6d. to £5. 15s.; Button, £4. 10s. to £7.; Native, £4. 15s. to £5; and Block, £3. 12s. 6d. to £5. 12s. 6d. Private operations small.

TERRA JAPONICA.—Cutch Pegue: Has contined very flat, with scarcely any business ever since our last; but there is now a little more inquiry. 362 packages at auction all retired. Gambier: Had been very flat, and rather lower; but recently has experienced decided improvement; large operations have taken place, especially for arrival, and prices are now quite as high as when we last wrote; inquiry continuing. Of 1,790 bales at auction, two-thirds sold at 22s. to 22s. 6d. per cwt. middling blocks, and 25s. to 27s. cubes.

MISCELLANEOUS.—Galls: China and Japan firm; of 428 cases China at auction, rather more than half sold at 55s. to 64s. per cwt. for ordinary broken to very good; and 345 packages Japan nearly all sold at 50s. 6d. to 51s. per cwt. for fair rather stalky. Musk: Dearer, especially the better kinds; and 129 caddies at auction, all sold at 22s. to 32s. per oz. for middling to very good Tonquin, and 19s. to 21s. 6d. pickings. Of 8 tins grain, 3 sold at 48s. to 56s. for good to fine Rattans: Large heavy canes in less demand; small of ready sale; 3,155 bdls. Singapore retired, and 3,790 bdls. Penang sold at 4s. 9d. to 11s. per 100. Sapan Wood: Firm, 16 tons Siam sold at auction at £9. 17s 6d. to £10. 10s. per ton; and 32 tons Manila at £7. to £8. 2s. 6d. Mother o'Pearl Shells: Auctions have embraced 306 cases Singapore; two-thirds sold at £7. 7s. 6d. to £7. 10s. per cwt. for good, and £4. 15s. to £6. 2s. 6d. ordinary to middling; of 85 cases Manila, only ten sold at £5. 10s. Soy: Remains firm, and scarce. Star Anniseeds: Again rather dearer: recent importations, 200 cases, at auction three-fourths sold at £6. 5s. to £6. 10s. per cwt. for good, and £5. 15s. to £6 slightly mouldy. Sticklac, Siam: Continues dull, but not without inquiry, although only at low prices. Tortoise-shell: Only three cases Singapore brought to auction, two sold at 12s. 6d. to 15s. per lb. for ordinary to middling. Turmeric: No China offering, as before; nothing doing in Java. Vermilion: Dearer, and in demand; 10 boxes sold at auction at 2s. 8d. per lb., and still buyers thereat.

MANCHESTER MARKETS.

The cotton market has been dull. The Liverpool market has been the immediate cause of depression here, prices having given way in cotton. It is worthy of notice, however, that exporters of cloth do not appear to feel much confidence in the maintenance of prices in these goods in the face of a stock of cotton at Liverpool returned at 509,000 bales (against 264,000 this time last year), in addition to considerable quantities in London and Havre; and a circular, issued privately under the signature "Veritas," headed "Impending fall in Cotton," has evidently done much to produce doubt and depression among the business men in this market.

The Circular of Sam Mendel of 24th says:—

"The market continues quiet, with prices still irregular, and favouring buyers. Stocks are increasing, especially of the lower sorts of yarns and goods. Quotations are, Grey Shirtings, 7lb., 15s., 8lb., 18s. 3d.; Cotton Yarn, Nos. 16 to 24 are at 2s. 3d. to 2s. 4d.; Maddapolams, 6s. 9d.; T-cloths, 11s.

ARTICLES OF EXPORT.

IRON.—The quotations in London are for Welsh bars, £7. 10s.; nail rod, £9; hoops, £10; sheets, single £10. 15s.; Staffordshire bars, £9; rails, £6. 15s. to £7. 5s.

STEEL.—Swedish keg, £16.

For Batavia and Sourabaya: Affghan. For Manila: Sales, Peerless. For Colombo: Lizzie Scott. For Colombo and Tuticorin, Liverpool. For Galle: Braunstone, Disraeli.

At GLASGOW.—For Batavia and Singapore: Maythorn.

At NEW YORK.—For Hong Kong: Brem. brig Marianne. For Hong Kong and Shanghai: Br. ship, Christian Matthias. For Singapore: Gen. Cobb. At Boston, for Hong Kong: steamer Scotia.

FREIGHTS AND CHARTERS.

But little has been doing in export business during the past week, and it is hardly probable there will be much improvement until the year is more advanced. The rates for coal to Manila and Galle are firm, and freights are more freely offered. Homeward freights remain in the same inanimate state, but 75s. per ton has been offered for moderate sized ships from Java to the Continent.

Current Rates of Freight for Vessels on the Berth:—To Yokohama: 50s. weight, 40s. to 50s. meast. To Nagasaki: The same. To Hankow: 60s. meast. To Amoy and Foo-chow-Foo: 50s. weight, 40s. meast. To Shanghai: 40s. weight, 25s. to 30s. meast. To Hong Kong: 40s. weight, 25s. to 30s. meast. To Manila and Labuan: 50s. weight or measurement. To Singapore: 25s. to 30s. weight or measurement. To Penang: 40s. weight or measurement. To Batavia: 40s. weight, 30s. measurement. To Bankok: 60s. weight or measurement. To Ceylon: 40s. weight, 25s. measurement.

The quotations for coal and iron from the North are as follows:—For Hong Kong: £34 and £1. 10s. For Shanghai: £44 and £2. 2s. 6d. For Manila: £1. 10s. For Batavia; £23 to £24, and £1. 2s. 6d. For Singapore: £26 and £1. 4s. 0d. For Penang: £27. For Galle: £26 and £1. 1s. These rates are from the Wear of Tyne, and Newport, Cardiff, or Swansea respectively.

The Admiralty have engaged freight in the Taeping for the conveyance of Government stores from the river Thames to Hong Kong.

OTTO, 1st. d.p., No. 9,270, Newcastle to Java, Nov. 12, 41 N., 14 W.

CASUALTIES.

The Maria Veronica, Schol, from Batavia, arrived at Texel Jan. 7, leaky, with loss of anchors, chains, bulwarks, sails, and other damage, and had pumped up water impregnated with sugar, having been on a lee shore.

The Staatsraad V.D. Houven, Heymericks, from Batavia, arrived a Texel, Jan. 7, leaky, with loss of sails and other damage.

The Lewe van Nyenstein, Borchers, from Tjilatjap and Plymouth arrived at Texel, Jan. 7, with loss of boats and damage to bulwarks, having met with severe weather.

At Table Bay, Nov. 25, from Foo-chow-Foo, John Temperly, Liddle, and sailed 28th for London; 30, from Sarawak, Ione, Brown, and sailed 1st Dec. for Queenstown; 21, Sydpolen, sailed for Batavia.

The Mina (Astrom), from Newcastle for Hong Kong, was towed into Jersey Roads, Jan. 16, with wheel and sails carried away.

The Ferdinand (Brit.), from Bordeaux for Singapore, put into Rio Janeiro, Dec. 12, leaky, having been in collision with the Buenos Ayres, bound from Valparaiso to Havre, which latter vessel sunk with 17 of her crew.

The Disscuren, of and from Hamburg for Hong Kong, put into Rio Janeiro, Dec. 16, with foremast broken, having been struck by lightning.

According to a telegram from Lisbon, news has been received there from Buenos Ayres, under date Dec. 12, to the effect that the Geelong (British barque), Ferrier, from that port to Batavia with mules, in leaving, with a pilot on board, on the night of 8th Dec., struck the stern of the Champlain (Am. ship) and made 8½ feet of water. She had been surveyed and was discharging.

The Helena and Anna, v Aalborg, from Tjilatjap, which arrived at Texel 15th Jan., was leaky, had lost sails, part of bulwarks, and nearly everything off the deck, having encountered a heavy gale from S.S.W. to N.W., 5th Jan., off Egmond, during which she shipped much water and strained considerably.

According to advices from St. Helena, bearing date 2nd Dec., the Luisita, Gordia, from Manila to Cadiz, which had put into that island 23rd Nov., leaky, and discharged about 100 tons of her cargo, had reshipped it, but appeared to be making a quantity of water; she had taken an extra pump and was to sail on the following day.

The Washington (s.), Magrat, from New York for China, put into Rio Janeiro, Dec. 23, for coals.

RADLEY'S HOTEL,
SOUTHAMPTON.

IMMEDIATELY OPPOSITE THE RAILWAY TERMINUS AND DOCKS.

THIS FIRST-CLASS HOTEL, so well-known to most Travellers from the East and West Indies, China, the United States, Brazils, &c., is admirably situated for their convenience, Mr. RADLEY having, by careful organisation, made those arrangements that have tended so much to establish its reputation.

Mr. R. employs no touters or paid agents, but his Porters are always in attendance to meet passengers on arrival, with carriages, &c., as usual. Rooms may be engaged by letter from Malta.

WALKER'S CRYSTAL CASE WATCHES.
PRIZE MEDAL, 1862.

JOHN WALKER,
CHRONOMETER, WATCH AND CLOCK MAKER,
(BY APPOINTMENT), TO THE
English, Indian, Foreign, and Colonial Railways,
68, CORNHILL, AND 230, REGENT STREET, LONDON.

J. W. SOLICITS the attention of Military and Naval Officers and the Public of China to his CRYSTAL CASE WATCHES, as they are especially adapted for foreign use.

The CRYSTAL CASE WATCH is so constructed that it entirely obviates the necessity of a Hunting Case Watch, as it is much stronger and cannot so easily get out of repair. Description Pamphlets with List of Prices on application.

GOLD AND SILVER WATCHES, GOLD CHAINS AND JEWELLERY, AT REDUCED PRICES.
ORDERS EXECUTED TO ALL PARTS OF THE WORLD.

DYER'S £6. 16s. GOLD LEVER HUNTING WATCHES ARE THE WONDER OF THE TRADE.—Jeweled in 10 holes, ¾-plate, Chronometer Balances, Sunk Seconds, &c., adapted for India; also ditto Open Face ditto, £4. 18s. each; and Fashionable ¾-plate Gold Watches, four holes jewelled, &c., &c., £3. 10s. and £4. 6s. each; ditto Hunters ditto, £5. 18s. each; elegant Solid Gold Guard Chains, 52 inches long, 19s. 6d. each; ditto ditto Albert Chains, with Gold Keys attached, £1. 1s. each; Gold Signet, or Gem Rings, 5s. 6d. 9s. 6d., and 14s. 6d. each; Gold Brequet Pencil Cases, 1s. 6d. each; Gold Bracelets, £1. 1s. each; 22-Carat Gold Wedding Rings, 5s. 6d. each, or £5. 10s. per ounce; Gold Guard Rings, 4s. 6d. each; Portable 8-day Clocks, 12s. 6d. each; ditto, with Alarums, 19s. 6d. each, ditto, carriage ditto, 32s.; Silver Watches in Hunting Cases, £2. 2s., £3. 3s., £4. 4s., £5. 5s., and £6. 6s. each.

GEORGE DYER, Goldsmith and Watchmaker, 90, Regent-street, London, in advertising the above Selections from his Printed Price Lists, does so to show the difference between the prices usually charged and those he executed orders at. Practical knowledge, combined with great experience in every branch of his trade, gives him advantages of manufacturing superior to all others who supply the markets of India, China, and the Colonies. Merchants, Shopkeepers, and Private Purchasers may rely on having their Orders (per remittances only) promptly executed to all parts of the world. Price Lists may be had of Messrs. Fogg and Co., Shanghai. Remittances can be made through the Agra and Masterman's Bank.

DR. DE JONGH'S
(KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM.)
LIGHT-BROWN COD LIVER OIL

Universally recognised to be Incomparably Superior to every other kind.

Prescribed by the most eminent Medical Men throughout the world as the safest, speediest, and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, GENERAL DEBILITY, RHEUMATISM, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, and ALL SCROFULOUS AFFECTIONS.

In cases of **EXHAUSTION** and **PROSTRATION** produced by the debilitating diseases of unhealthy climates or resulting from Tropical Disorders, DR. DE JONGH'S COD LIVER OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of those had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and humilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and when its use is steadily persevered in, its peculiar nutritive and reparative properties entirely restore health and strength to the most feeble and deteriorated constitutions.

SELECT MEDICAL OPINIONS.

SIR HENRY MARSH, BART., M.D.,
Physician in Ordinary to the Queen in Ireland.

"I consider Dr. DE JONGH'S Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

SIR JOSEPH OLLIFFE, M.D.,
Physician to the British Embassy at Paris.

"I have frequently prescribed Dr. DE JONGH'S Light-Brown Cod Liver Oil, and I have every reason to be satisfied with its beneficial and salutary effects."

DR. LAWRANCE,
Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

"I invariably prescribe Dr. DE JONGH'S Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, *and not a manufactured compound in which the efficacy of this invaluable medicine is destroyed.*"

DR. LETHEBY,
Medical Officer of Health and Chief Analyst to the City of London.

"It is, I believe, universally acknowledged that Dr. DE JONGH'S Light-Brown Cod Liver Oil has great therapeutic power; and, from my investigations, I have no doubt of its being a pure and unadulterated article."

DR. LANKESTER, F.R.S.,
Coroner for Central Middlesex.

"I consider the Cod Liver Oil sold under Dr. DE JONGH'S guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

DR. GRANVILLE, F.R.S.,
Author of the 'Spas of Germany.'

"Dr. Granville has found that Dr. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, *and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil.*"

*** DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL *is sold* **ONLY** *in bottles, each bottle being sealed with a stamped metallic capsule, and bearing beneath the pink outside wrapper a label with* DR. DE JONGH'S *stamp and signature to these capsules and marks purchasers are earnestly requested to pay particular attention.*

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.
FULL DIRECTIONS FOR USE ACCOMPANY EACH BOTTLE.

BARCLAY AND SON'S

IMPROVED

Enamelled Punkah Lamps for China,

AS SUPPLIED TO THE INDIA OFFICE.

(TRADE BB MARK.)

SHOW ROOMS,

170, REGENT-STREET, LONDON.

THESE Lamps are wrought into many beautiful designs, having on the surface a coating of the Patent Enamel. By this process the most beautiful marbles and stones—as Malachite, Lapis Lazuli, Brocatella, Pale Sienna, Jasper, and Pink Granite—are imitated to a nicety.

Advantages of these Lamps over ordinar India Lamps:—

1st.—They are unaffected by damp, heat, alkali, or oil.

2nd.—The more they are rubbed the better the polish: in this respect they are the reverse of bronzed or lacquered lamps.

3rd.—They offer no temptation to the natives to remove the outer surface; and were they to endeavour to do so they would signally fail.

4th.—They are free from liability to fracture.

5th.—The enamel never wears off, nor changes in colour or appearance.

PRICES, from £4 10s. to £5.

Ornamental Glasses, 7s. 6d. extra.

Ordinary Lamps, in bronze, bronze and relieved, and lacquered, from 38s.

May be obtained of the makers, BARCLAY & SON, or through the Cape, India, and China Agency, of whom Illustrated Prospectuses may be obtained. Orders sent direct must be accompanied by a remittance.

BOYVEAU LAFFECTEUR'S ROB.

The only one authorised and adopted in France, Belgium, Austria and Russia.

THIS Vegetable Syrup, prepared and guaranteed genuine by the signature of Dr. GIRAUDEAU DE ST. GERVAIS, is very superior to the purifying syrups. It effects a radical cure, without mercury, of all affections of the skin, scurf, scrofula, &c., and symptoms arising from the acrid state of the humours. The Rob is especially valuable in diseases which have resisted the effect of mercury or iodide of potash. The general entrepot is 12, RUE RICHER, PARIS.

Sold Retail.—London: Jozeau, Hannay. New York: Fougera, Gaudelet, Milhau. Gibraltar: Patron and Danilo, wich. Malta: Dr. Pirotti, Bugeja, Magri, and Rolando, Esperanza. Alexandria: Bellamore, Galette, Perinie, Bombay Framjee Nesserwanjee and Co. Singapore: Martin and Little. Batavia: L. Platon and Co. Macao: J. D. Freita.

DOCKS.

HOLLOWAY'S OINTMENT AND PILLS.—FEAR NOT.—Though surrounded by circumstances disadvantageous to health, these remedies properly applied, will cut short fevers, influenza, inflammation, diphtheria and a host of other complaints always lurking about to seize on the weak, forlorn, or unwary. The superiority of Holloway's remedies over others for subduing disease has been so widely and fully proved, that it is only necessary to ask the afflicted to give them a trial, and if the instructions folded round them be followed, no disappointments will ever ensue, nor dangerous consequence results. In hoarseness and ulcerated sore throat, the Ointment should frequently be rubbed in the neck and top of the chest. It will arrest the increasing inflammation, allay disquietude, and gradually cure.

To Ceylon: Mr. N. G. Layard, Mr. R. Cunningham, Mr. and Mrs. A. G. Anderson, Mr. H. Marsden, Mr. D. Saumarez.

From Marseilles, Feb. 28.—To Hong Kong: Mr. and Mrs. Trautman, Mr. A. Milsom, Mr. Odell, Col. Knox, C.B. To Shanghai: Messrs. Detring, Allin, and Vernimb, Dr. and Mrs. J. Watson. To Singapore: Mrs. Rigg. To Ceylon: Mr. and Mrs. Armitage and two infants, Mr. Ratcliffe.

Per P. and O. Steamer, from Marseilles, March 5.—To Hong Kong via Bombay: Mr. and Mrs. H. Dickinson.

Summary of News from the Far East.

JAPAN.

YOKOHAMA.

Dates are to the 18th December. The London mail of the 10th October arrived out on the 13th December.

Two of the accomplices in the murder of Major Baldwin and Lieutenant Bird were executed on the 16th December. The actual perpetrators were said to be still at large, but the authorities were on their track. Various measures were also being matured for the purpose of giving greater security to life, by rendering the whole population in the vicinity of any murderous outrage responsible, if they neither succeed in averting a catastrophe or arresting the offenders. There was reason to believe that the decree would be promulgated prior to Sir Rutherford Alcock's departure, and all complicity with the perpetrators of such deeds, before or after their commission, publicly denounced as a crime punishable by law and with the utmost rigour. The official procés verbal in reference to the criminals executed, and the text of the public announcement posted up on the prison, the custom-house, and other places in Yokohama, could not be obtained in time for transmission by the present mail. The execution took place at two o'clock on the day named in the prison yard. The following is an account of the death scene:—

"A considerable number of foreigners walked or rode out in the direction indicated. The very small space of the inner yard of the prison was shortly filled with spectators, a great number of whom were military and naval men, but sprinkled also with several civilians of all classes. At one end of the inner yard of the prison, on the side opposite to where a slight rope of straw indicated the spot to which spectators were to confine themselves, two holes were dug, with a slight elevation of earth covered with mats on the further side. By the side of each hole was a bucket of water, and these were all the primitive arrangements for the awful ceremony about to be performed. A few small officials strutted about and smiled blandly, or looked with stoic indifference about; but none looked in the slightest degree moved by any impression of sadness. The assembly waited with more or less patience until three o'clock, by which time Messrs. John Macdonald, Willis, M.D., and Alexander Siebold arrived from H.B.M. Legation; shortly after three one criminal, quite a young man, perhaps twenty-two or twenty-three years of age, was led in, arm-bound, and eyes bandaged, by four or five attendants. Conducted before one of the holes he was made to kneel upon the mat; his arms were held back; his head stretched forward; the hair pushed over the head away from the neck; a head-executioner strutted forward, drew a large bright two-handed sword from its scabbard; handed it to the actual executioner, who poured a small quantity of water over the blade, and with one sweep in the air brought it down with an amount of precision and effect wonderful—and horrible—to behold; the dissevered head fell into the gaping hole before the eye of the spectator could be closed against the sight. The other criminal was brought forward. He, however, had to be carried; the same followed; his head fell too into the hole prepared for it, and in a few moments the ground was cleared, and those who had witnessed this first act of retributive justice upon the murderers of our departed countrymen were on their return home."

Home readers have already heard, by electric telegraph, of the homicidal attack on two French sailors. The following is the account of the affair given by the *Japan Daily Herald*:—

"We regret to have to report that on Thursday evening a fracas occurred down in the native settlement, in the Gankey quarter, which terminated fatally to one, and, it is feared, probably to a second French sailor. It seems that large numbers of these men had obtained shore-leave during the last three days, it being the French sailors' festival of St. Barbe. Some of these men had resorted to the disreputable quarter we have named in a state of intoxication, and had committed violence at some of the houses. They were assaulted, and, we hear, pursued by a large mob of Japanese, small yakonins, coolies, &c., &c., armed principally with short tomahawk sticks, and by them so barbarously handled that one man was killed on the

Digitized by Google

spot, and another dangerously wounded. We hear that the Custom-house authorities have already secured the whole of the mob engaged in this affair, numbering some hundred of the lower classes, and about fifty small yaconins, and that they have now handed over to the French and English authorities some twelve Japanese guards who appear implicated in the matter."

Our contemporary considers that two lessons should be derived from the incident:—"First, the necessity of impressing the Japanese authorities with a just appreciation of the view which European nations take of manslaughter even by the hands of officers of the peace, committed whilst in the exercise of their office, in suppressing riots, defence of property, &c. In all such cases with us where death ensues upon the action of the officers, those officers may be tried for murder, and failing proof that no more force was used than absolutely necessary for securing and bringing to justice the rioter or other offending party, or that it was otherwise possible to secure him or cause him to desist from his riotous behaviour, the great chance would be that such officer would be found guilty of murder. And secondly, that our naval and military authorities should perfect to some greater degree any arrangements for watching and superintending the hordes of men who are continually let loose to reel in drunken bestial insensibility about the Settlement, to the scandal and disgust of our residents—to the almost necessity for the seclusion of our ladies—to the danger of their own lives, and to the risk of the most dangerous collision with the people amongst whom we dwell."

Sir Rutherford Alcock did not, as was anticipated, leave by this mail, and he would probably obtain a man-of-war to be placed at his convenience for proceeding direct to Hong Kong. An address had been presented to him by the British merchants, the only defect in which is that, as complained of by the local press, it should have been sent in as from the "British residents," in which case it is observed, "there is not a British subject in Japan whose name would not have appeared as endorsing the expressions in the text of regret at Sir Rutherford's early departure, and gratitude for the beneficial results of his course of policy." The address, and Sir Rutherford's reply, were as follows:—

"Yokohama, 20th October, 1864.

"To Sir Rutherford Alcock, K.C.B., H.M.'s Plenipotentiary and Envoy Extraordinary to Japan.

"Sir,—We learn with sincere regret that it is probable you will soon leave Yokohama, and we are unwilling that you should do so without receiving from us an expression of gratitude for the beneficial results your course of policy has brought to our commerce. It is unnecessary for us to refer to the difficulties of your position since your return at the commencement of this year. Suffice it to say that you arrived at a time when the Japanese Government entertained ideas of forcing foreigners to abandon Yokohama, and had placed such restrictions on trade that this port was virtually closed. The precautionary measures you immediately adopted tended greatly to increase the security of our persons and property, and your determined but wise policy has at last restored trade (that had dwindled away to a nonentity), to its usual channels with unwonted vigour. The principal triumph, Sir, of your success, lies in the fact that you have accomplished all this, not only without causing a collision between H.M.'s Government and that of the Tycoon of Japan, but by actually strengthening the Government from which you obtained the concessions, as well as by acting in such a way as to secure the cordial co-operation of the Foreign Ministers resident at this port.—We have the honour to be, Sir, respectfully your most obedient humble servants,

"S. J. Gower, Agent for Jardine, Matheson, and Co.; N. P. Kingdon, Agent for Dent and Co.; Geo. Barnet and Co.; James S. Downie, Agent for Fletcher and Co.; Louis A. Joseph, Agent for David Sassoon, Sons, and Co.; Macpherson and Marshall, J. M. Jaquemot, Ross, Barber and Co., Aspinall, Cornes and Co., p. pro. G. R. Davies, W. R. Adamson and Co., Jarvie, Thorburn and Co., p. W. Young, Hooper and Clarke, Hughes, Willgoss and Co., p. pro. Shaw, Cull and Co., A. Winstanley, W. Kemptner and Co., Charles S. Bland, H. L. Boyle, Wilkin and Robison, Strachan and Thomas; J. G. Rickard, Agent Oriental Bank Corporation; C. L. Westwood, John W. Henderson, Agent for the Central Bank; Wm. MacDonald, R. Brett, Manager Mercantile Bank; Charles S. Lynell, Agent Commercial Bank of India; Glover and Co., p. T. Smith."

"Yokohama, October 21st, 1864.

"To Messrs. S. J. Gower, N. P. Kingdon, and others:—

"Gentlemen,—I have the honour to acknowledge the receipt of your letter of the 20th inst., signed by the representatives of British firms at this port, and to thank you very cordially for the flattering expressions of your regret at my early departure. It is very true, as you state, that on my return to my post after a prolonged absence, I found our position in the country unsatisfactory to the last degree. Menaced with attack and expulsion from this port, and all the interests of trade both here and at Nagasaki seriously compromised, it was evident that some determined and consistent action could alone avert a catastrophe. The increasing violence and arrogance of the anti-foreign party threatened Japan with all the calamities of a war, both internecine and foreign; and nothing had more directly and obviously tended to bring on this state of affairs than the long continued immunity of the Prince of Nangato, and the apparent weakness or timidity of the Foreign Powers in checking and punishing his outrages on their flags and commerce. I had the good fortune to find my colleagues, the representatives of France, the United States of America, and the Netherlands, disposed to take the same view; and loyally to unite their efforts to mine to put a stop to this downward descent, and to concert with me the necessary measures to be taken, in communication with the Tycoon's Government. The result of these united efforts has been in many respects all that could be desired. The Prince of Nangato has ceased all hostile action; the Straits of Simonoseki have been opened in a permanent manner, thus relieving the trade of Nagasaki from obstructions which had nearly destroyed it. The Sako party has been greatly discouraged by the evidence afforded of our irresistible superiority in the field; and with corresponding increase of strength and courage to the more moderate and enlightened party in the country favourable to the maintenance of friendly relations with foreign Powers. The opening of this port, which for the three preceding months had been virtually closed by the stoppage of silk, the main staple of its trade, is the first material evidence of an improved position. And recent communications with the Government at Yedo give good hope for further material changes in the whole policy of the country as respects foreigners. I am glad, therefore, before my departure, to be able to congratulate the British residents here and elsewhere in Japan, not only on the attainment of a state of security never before enjoyed, but of renewed commercial activity and promise of continued improvement in all directions, a promise which I earnestly hope may be fully realised after I have left the country, by a continuance of the same combination of firmness and moderation, to which I believe the efforts of my colleagues and myself during the past six months mainly owe their success.—I have the honour to be, Gentlemen, your most obedient humble servant, RUTHERFORD ALCOCK,

"Her Majesty's Envoy Extraordinary and Minister Plenipotentiary in Japan."

The *Herald* denies in the most formal manner the statement, made it appears by the *Japan Commercial News*, on which was based the line in the telegraphic summary to the effect that "the Mikado repudiates the late convention." The former journal expressly names as the authority for the contradiction no less a personage than Her Majesty's representative, Sir Rutherford Alcock. The *Herald* says:—

"So far from insisting upon the foreigners leaving Japan from *any* reason, the direct reverse is the fact. The Mikado's opposition to the treaties, it is generally understood, if not already formally and publicly withdrawn, *is practically at an end*, and the Tycoon's Government have given up all idea of a further mission to Europe with the object of obtaining the withdrawal of foreigners from Yokohama; thus formally abandoning the prosecution of a hostile policy in accordance with former decrees for their expulsion. As to the *endeavour by them to evade engagements entered into by the Japanese, which they had promised to carry out, by simply stating the Mikado withholds his consent*—all this is pure invention—sensational—nonsensical invention. The Mikado's withholding his consent in reference to the recent removal of obstructions to the Silk trade, has never been mooted, or in any way referred to as a cause of difficulty."

A fire that broke out in the servants' quarters, at the rear of the bowling alley attached to the United Service Club, burnt down the whole range of building occupied by the club. The village of Omura, also—the long straggling village situated opposite to the settlement, on the hill side of the creek—has been the victim of a conflagration that left three-fourths of the inhabitants houseless. A list of contributions for their relief (first started by Sir Rutherford Alcock) has been circulated; though it is to be feared without avail, for the Japanese authorities always make a point of thanking us, but expressing their ability and readiness in all such cases to make ample provision for their own people.

Progress is making towards municipal institutions. The residents have now got the length of arrangement as to how delegates shall be nominated, who shall appoint a committee if they think the municipal scheme can be worked.

A Yokohama Institute, having for its objects the same ends as those of Literary Institutions, Athenæums, &c., elsewhere, has been formed and is getting into working order.

The *Herald* of the 3rd December states that the small-pox had again broken out with some virulence, and remonstrates on the fact that no efficient accommodation has been provided for those suffering under it, the natural consequence of which is the increased danger of infection to all; a building, it appears, was some time ago given up by the military authorities to the Consul for the reception of small-pox patients, but it is "not yet organised," and though sufferers may go into it, there is no one to take care of them. One poor Calcutta boy, a servant of the Rev. Mr. Bailey, "was taken up, with bed and bedding, and there left, but—it will scarcely be credited in a community of Christian men—without any one in whose charge to leave him; and but that Lieut.-Col. Brown, with that kindness of heart which so distinguishes him, readily permitted the attendance of the Military Hospital-Sergeant and orderlies, there would have been none to hand him even a drop of water."

Digitized by Google

Our local contemporary proceeds :—"Let us not be understood as intending to convey any insinuation of neglect against Dr. Jenkins, the only Civil medical man in the community; on the contrary, he has in all this as in other cases we have ever heard of, in which he could be of service, been the Good Samaritan, and gratuitously given his valuable time and advice. Dr. Willis, the medical officer attached to the Legation, too, we know, would have most willingly rendered service, but as he had no appointment, no authority—as 'the Hospital had not been yet organised'—he could do nothing. And thus, but for the aid of those medical-men, upon whose self-denying and laborious aid the community have already made such heavy calls, and the spontaneous private aid hurriedly gathered together when the danger was actualiy upon us, these poor sufferers would have been obliged to bear unrelieved and unsuccoured their distressing sickness; and not only so, but would have had no resource against communicating their sufferings to all around them: and this would have lasted until it pleased the Consuls to 'organize' the Small-pox Hospital, a building for which had been placed at their disposal."

Under date "Nov. 30" notice is given that the business heretofore conducted in Yokohama by C. D. Mugford, as agent for Messrs. Augustine Heard and Co., of China, will after that date be managed by Mr. Arthur O. Gay. Under date "Dec. 1," J. Eisler and Co. notify that the interest and responsibility of Mr. J. C. Huffnagel in their firm ceases from that date, and that J. V. B. Fagg and G. Batteké, Jun., are admitted partners.

NAGASAKI.

Seven men-of-war, namely, two English, three Russian, one French, and one Dutch, were lying in Nagasaki harbour, so the residents may congratulate themselves on being well protected. The *Argus* had gone to Simonoseki to look after the movements of Chosiu, as it was rumoured that he was reconstructing his batteries.

A correspondent writes a glowing account of an entertainment given on board H.M.S. *Scylla* to the residents at this port. The proceedings opened with a theatrical performance, enlivened by the band of a Russian vessel, which was lent for the occasion, and wound up with a splendid supper amidst a deluge of rain. The pieces performed were "The Village Murder," and "All that Glitters is not Gold." The acting was excellent, and nearly brought down the ship, and its attraction was still further enhanced by the Russian band. The rain, which fell in torrents at supper-time, appears rather to have added to than detracted from the general enjoyment. As our correspondent justly remarks, the only culpability that attached to the hosts in respect to the rain-fall, was through their omission to include it in the programme. Midnight chimed before the band struck up "God save the Queen," when the guests left the ship deeply impressed with the courtesy of their hosts and with the pleasant entertainment that had been provided for them.

Notice had been given that the ground at Desima, with the extensive buildings thereon, having a frontage on the Bay of Nagasaki, formerly the residence and offices of H.N.M's. Consul-General in Japan, would be sold by auction on the 15th January.

CHINA.

SHANGHAI.

The English mail of the 26th Oct. arrived out on the 17th Dec. The dates are now down to the morning of the 26th. The weather had been very changeable, including a snow storm. The thermometer has not, however, gone below 32 degrees.

The case of the owners of the *General Meslin* against the owners of the *Promise* had been heard, but the verdict was deferred until the 28th Dec.

A report has been made by the Consul at Newchwang, T. T. Meadows, on the silk produced at that district as suitable (although coarse) for export to Europe. Mr. Major, a silk inspector at Shanghai, in a report says :—

Besides this it is requsite to ascertain—

1st. How often does this worm sleep while feeding.

2nd. Is the worm fed on the mulberry leaf, of which Mr. Meadows speaks, of this same species (that feeds on oak leaves), or bred of the usual China silkworm eggs. I should much like to see a few cocoons of worms fed on mulberry leaf there.

3rd. An experiment ought to be made of this breed (eating oak leaves) to ascertain what they come to when fed in a more congenial climate on mulberry leaves. If I could get an ounce of eggs of the first (July) crop, I would willingly attend to their feeding myself. The eggs ought to be sent here during the winter, protected from frost, but not kept near a fire or in a too warm cabin, 66 degrees Fahrenheit would be too hot, or the utmost they would bear.

It strikes me that this species of silkworm may turn out of the greatest consequence in restoring the silk worm breed in Europe, now quite lost, and even in restoring the silkworm of China, which I find also greatly deteriorated, to a more healthful state (this, however, is almost hopeless, considering the Chinese character). In all nature, too much and long continued culture degenerates a breed; then new strength and vigour is acquired by cross breeding with a healthy kind of the same species.

Now this worm gives me the impression of being very strong and healthy. It would be a great boon to the silk trade and industry to introduce any such means.

New seed has for years been tried from all parts of the world in Europe, but to no effect: the whole family of one and the same race seems to have outlived itself by constant generating in the same family at an enormous rate, to supply our augmented and constantly growing luxury.

In Naples I tried, during three years, cross-breeding the old European breed with the usual China worm, and that with very good success. When I left for China I gave all the seed I had thus collected to an English gentleman, who, I fear, has not persevered, or I should have heard something of it; people look too much to immediate benefits.

If this new family is to be introduced for cross breeding, I should recommend feeding them in their first and second stages on oak leaves, and after that only on mulberry leaves.

I beg leave to conclude with my opinion, that great thanks are due to Mr. Meadows for making so great an exception among the consuls in China, by turning his eye and mind towards what may be advantageous to the commerce and industry of the country he represents, and thereby, also, to the country he occupies.

The correspondence between Mr. W. G. Howell, late of Shanghai, and the Foreign Minister, on the subject of the plans, &c., drawn by Mr. Gilbert Scott for the church at Shanghai is published in the *North China Herald* of the 10th Dec. The plans were approved, and the sum of £2,000 contributed by the Home Government.

The case of Rawson v. Russell, for short delivery of goods, ended by the following verdict :—

Judgment: The Court considers that the defendant has not proved delivery of the missing bale marked three i's No. 17, and is therefore responsible for its value. The Court does not hold that the chief officer of the *Canadian* was bound to fill in the boat note sent by Messrs. Wheelock and Co., but having done so, and having made no mention of the bale in question, while he was careful to particularise the delivery of 88 other packages, the said note is *prima facie* evidence that the missing bale was not delivered with the other 88 packages, and the defendant has failed to convince the Court by other evidence that the said bale was put into Wheelock and Co.'s boats as is alleged.

This decision does not carry in the mind of the Court any other imputation against the character of the chief officer than that of carelessness, caused possibly by the haste and difficulties attending the discharge of his duties. The Court has to bear in mind, however, that this want of care on his part was calculated to mislead Messrs. Wheelock and Co., and to deprive them of the opportunity of otherwise tracing the missing property, as it amounted to an assurance from the person most qualified to give it; that no other goods than those named in the boat-note had been given into the charge of their servants. The judgment of the Court is, therefore, for the plaintiff, with costs.

The seventh meeting of the Royal Asiatic Society were held on the 13th December.

Sir Harry S. Parkes, K.C.B., President, in the chair, Dr. Henderson V.P., C. T. Jones, Esq, Acting as Secretary; Dr. Lamprey, 67th Regt., Messrs. C. Alabaster, T. W. Kingsmill, C. Jamieson, W. Gamwell, R. Alex. Jamieson, and others not members. The following gentlemen were then proposed and seconded :—

Proposed by Mr. Alabaster, seconded by Mr. Kingsmill :—W. Cochran, Esq., and R. C. Brown, Esq.

Proposed by Mr. Jamieson, seconded by Mr. Jones :—The Rev. C. H. Butcher, J. McL. Brown, Esq., and W. Saunders, Esq.

Proposed by Mr. Jones, seconded by Mr. Jamieson :—E. Solbe, Esq., and W. H. Tapp, Esq.

Proposed by Dr. Henderson, seconded by Sir Harry S. Parkes :—J. M. Taylor, Esq.

Proposed by Mr. Gamble, seconded by Doctor Henderson :—J. Battison, Esq.

The routine business having been concluded, the paper for the evening by Thos. W. Kingsmill, Esq., on "The Geology of Kuang-tung and the adjacent Provinces," was read and attentively heard. After some interesting remarks by the President and Doctors Henderson and Lamprey, the thanks of the meeting were unanimously voted to Mr. Kingsmill for his valuable contribution to the society's records.

Mr. Jamieson laid on the table a series of barometric and thermometric observations taken by Messrs. Hollingworth and Piry of the Imperial Maritime Customs at Kiu-kiang, with a view to determine the height of the Liu Shan. A description of the scenery was given, and the capabilities of the mountain as a sanitarium enlarged upon. The height of the summit has been found to be 5,040 feet.

Colonel Hough has returned from Yokohama and resumed

Digitized by Google

command of the garrison. The *Scylla* has arrived from Japan, to relieve the *Rattler*.

A man named Dodd awaits trial for having shot a native boatwoman, in a moment of passion at finding a crowd of boats in his way. They did not get out of his way fast enough, so he fired his pistol into the midst of the crowd at random and wounded an old woman so severely that she died shortly after.

Two thousand padded coats have been placed by the Taotai in the hands of a mandarin named Yeh, for distribution amongst the poor in the foreign settlements. From the Yunan province we learn through a native source that the Miao-tsze have seized the city of Tien-choo-hsien. The Taotai of Ye-tung, the commander-in-chief of the province, and two mandarins, have marched with a large army to recapture the place.

In a late number we mentioned that the merchants had prepared a memorial to Colonel Gordon. The following is a copy of the document:—

Shanghai, 24th November, 1864.

To Lieut.-Col. Gordon, R.E., &c., &c.

SIR,—On the eve of your departure for your native country, we the undersigned, mostly fellow-countrymen of your own but also representing various other nationalities, desire to express to you our earnest wishes for a successful voyage and happy return to your friends and the land of your birth.

Your career during the last two years of your residence in the East has been, so far as we know, without a parallel in the history of the intercourse of foreign nations with China; and, without entering at all upon the political bearings of the great question with which your name must ever remain so intimately connected, we feel that we should be alike wanting towards you and towards ourselves were we to pass by this opportunity without expressing our appreciation and admiration of the line of conduct which you personally have pursued.

In a position of unequalled difficulty, and surrounded by complications of every possible nature, your have succeeded in offering to the eyes of the Chinese nation, no less by your loyal and, throughout, disinterested line of action than by your conspicuous gallantry and talent for organisation and command, the example of a foreign officer serving the Government of this country with honourable fidelity and undeviating self-respect.

It is by such examples that we may trust to see many of the prejudices which warp the Chinese mind as regards foreigners removed, and from such experience that we may look forward with hope to the day, when, not only in the art of war, but in more peaceful occupations of commerce and civilization, the Chinese Government may see fit to level the barriers hitherto existing, and to identify itself more and more with that progressive course of action which, though springing from the West, must prove ultimately of equal benefit to the countries of the East.

Once more wishing you a prosperous voyage, and a long career of usefulness and success,

We remain, Sir, your obedient servants,

Jardine, Matheson and Co., Dent and Co., Russell and Co., Smith, Kennedy and Co., Turner and Co., Shaw, Bros. and Co., Augustine Heard and Co., Gibb, Livingston and Co., David Sassoon, Sons and Co., Siemssen and Co., Lindsay and Co., Gilman and Co., Thorne Bros. and Co., Hogg Bros., Olyphant and Co., Birley, Worthington and Co., Geo. Barnet and Co., Reiss and Co., Dow and Co., Jarvie, Thorburn and Co., W. R. Adamson and Co., Fletcher and Co., Glover and Co., Reid and Co., Philip A. Myburgh, Chapman, King and Co., Alfred Wilkinson and Co., Watson and Co., Overweg and Co., Johnson and Co., Remi Schmidt and Cie. Bank of Hindustan, China and Japan, C. Colnett, Manager; Central Bank of Western India, Wm. G. Cuthbertson, Agent; Commercial Bank of India, Aug. White, Sub-Manager; Chartered Mercantile Bank of India, London and China, R. B. Baker, Manager; Agra and United Service Bank, Ed. Morriss, Manager; Comptoir d'Escompte de Paris, Ed. Morell, Acting Manager; Oriental Bank Corporation, David McLean, Acting Agent; Chartered Bank of India, Australia and China, J. P. Lynill, Manager; Wheelock and Co., Wm. Pustau and Co., L. Josephs, John Forster and Co., W. Watson, G. Cumine, Sam. Breoull, Bower, Hanbury and Co., Carter and Co., E. M. Smith, Holliday, Wise and Co., Ellissen and Co., Bourjau, Hubener and Co., Mackenzie and Co., Rothwell, Love and Co., Trautmann and Co., Hall and Holtz.

REPLY.

Shanghai, November 25, 1864.

Gentlemen,—I have the honour to acknowledge the receipt of your handsome letter of this day's date, and to express to you the great satisfaction which I feel at the honourable mention you have made therein of my services in China.

It will always be a matter of gratification to me to have received your approval, and, deeply impressed with the honour you have paid me,—I have the honour to be, Gentlemen, yours obediently,

C. E. GORDON.

To Messrs. Jardine, Matheson and Co., &c., &c., &c.

The following from Soochow, &c., is from the *North China Herald*:—

The rigid virtue of Li Futai is well known. We are now informed of a proceeding on his part which some will think extremely wise and others extremely foolish. It appears that the police system in Shanghai has lately proved so fatal to the comfort and pecuniary well-being of brothel keepers, that a large number migrated to Soochow, where they hoped, Wu Tang *regnante*, to increase and flourish. To this end they leased a number of houses and fitted them up with every Chinese luxury. As soon, however, as Li Hung chang resumed the seals of the Futaiship, he had the entire number arrested, and after threatening them with death sent them back to Shanghai.

From Nanking we learn that Tseng Kuo-fan, whose recall to Peking for the receipt of honours and dignities had been officially announced, has been ordered to again assume the Governor-generalship. Li Hung-chang, who had been nominated to the vice-royalty, has resumed the seals of the governorship, and Wu Tang ceases to act as Futai. No reason has been given for this change in the intention of the Government, but it may safely be looked on as ominous of some decadence in the fortunes of Tseng and Li. For some time the tide of prosperity has not set so determinedly as before in favour of these men or of the great families they represent, and it is therefore possible that the Court may have been induced by the northern faction to check Tseng Kuo-fan's and Li Hung-chang's too rapid rise in wealth and fortune.

Natives' accounts from Yunan report that the Miao-tsze, or wild hill tribes, have made a descent into the plain and seized the city of the T'ien Choo-hsien. The Taotai of Yi-tung, the Commander-in-Chief of the province, and two other Mandrians, have put themselves at the head of a large army and marched to attack the place.

House property and the value of land have experienced another severe check by the exodus of Chinese, since the fall of Nanking. It is estimated that nearly one-third of the houses stand empty.

A giant of about 8 feet was detected and captured in the act of committing a burglary. There was a talk of buying him up, and sending him on show to Europe.

Mr. James Cock, a partner in the firm of Watson and Co., absconded to Hong Kong, but it is reported from thence that he has agreed to return at the advice of his friends. Mr. Cock was reputed to have made a fortune at the last races. Perhaps he did, but it was not reported that he lost it. In our article on the excess of prices paid in China for teas, we did not plainly state that it was attributable to speculations, or rather gambling in horse-racing, but there is, we know, a connection, and perhaps the *exposé* of Mr. Cock's affairs will prove it.

HONG KONG.

The English mail of 10th Nov. (bearing the Christmas presents) arrived in good time on 24th Dec. The dates are now down to the morning of the 1st January. The weather had been very seasonable, with the thermometer ranging at 55 to 65 inside; a temperature thoroughly enjoyable.

The *Evening Mail* notices the erection of another theatre. The performance opened to a very crowded house, commencing with Tom Taylor's "Ticket of Leave Man," a drama of high repute on the London stage. This was the first appearance of the Thorne Troupe since their return from Calcutta; and, if we judge by the greetings of the audience, they are held in high esteem by the play-goers of Hong Kong. Generally speaking, the acting was a success. *Bob Brierly* (Mr. Thorne, junr.) was given with perfect ease; and, considering that Mr. Thorne is an American, his rendering of the Yorkshire dialect, peculiar to this character, was excellent; and the *Jem Dalton* of Mr. E. F. Thorne, in all of the different characters he has to assume, was carried out in a very masterly style. The impersonation of *May Edwards* by Mrs. Alicia Thorne was most gracefully and pathetically executed; and, as regards the *Mrs. Willoughby* of Mrs. Hattie Thorne, the audience was thrown into convulsive fits of laughter. The boy *Sam Willoughby* (Mr. Faylor) was done with considerable credit, but we must say that his "get up" seemed anything but juvenile. The drama was succeeded by the aria buffa Largo al Factotum, from "Il Barbiere" (in character), by Signor Grossi, a well-known artist; he, however, seemed a little out of voice on this occasion. The evening's amusement concluded with the ballad of Barney O'Hea, by Mrs. Alicia Thorne. Although there was no addition to the orchestra, their performance was a considerable improvement on the preceding evening's.

Considerable discussion has been created by the report that an Englishman named Stewart, who died on board the French mail steamer *Labourdonais*, had been quietly committed to the deep without the other passengers being informed at the time. An action has been laid, we understand, against the *China Mail*, and subscriptions have been offered by the public to defray the expenses.

The arrangements of the New Dock Company had not been finally completed—at least, in time to announce in the papers.

A row took place between some Shanghai men and a vendor

Digitized by Google

of fruit, at the corner of Pottinger and Stanley-streets. It appeared that a boy went to purchase some oranges, and being defrauded in the amount of change returned to him, he called his friends to his assistance. After some words, the fruit-vendor received a blow on the left side of the head. Four Chinese are in custody. The inquest held on the body was adjourned. The European constable who was stabbed in an affray with a West Indian died from the effects of the wound. An inquest on the body was held, and a verdict of manslaughter given against two of the three apprehended.

It is pleasing to note, says the *China Mail*, the strides this colony is making in the march of improvement. The city of Victoria has been supplied with water and with gas in the most successful manner possible, notwithstanding the numerous obstacles that stood in the way of both undertakings. Nor is this all. Arrangements of the most satisfactory sort have been made for the erection of a City Hall on a site that is likely to prove the most convenient which could possibly have been obtained; and the fund for its erection show very well indeed.

The following notification has been issued in regard to the new bank :—

The provisional committee have to intimate that the final date for receiving applications for shares having expired, the allotment of stock is now in course of being carried out, and the result will be made known to applicants as soon as possible.

The bank's offices in Hong Kong will be Wardley House, next door to the Chartered Mercantile Bank.

Mr. V. Kressur will assume the management in Hong Kong on the 1st January, and the bank will open for the transaction of public business at an early date.

The British barque *Glendower*, Captain Wulshaw, was lost on the night of the 7th Dec. The vessel speedily filled with water after striking; and the captain and crew had to take to their boats, soon after which they were picked up by a junk, and brought on to Hong Kong. A Spanish ship in company also drifted ashore close by, and quickly went to pieces. There was a dead calm at the time, and the strong tide drifted them helplessly on the rocks.

A committee has been formed at Hon Kong, for the purpose of relieving those who were made widows or orphans by the wreck of the *Racehorse*. We are unable, however, to state the total collection, as the mail left before the list was completed. The committee intend forwarding a remittance by the next mail.

The Hong Kong police are gradually awakening to a comprehension of the present drain-operations of Chinese burglars, and positively gave notice of an attempt about to be made upon the premises of Mr. D. Lapraik. The passage was found, upon examination, to be quite prepared for an entry into the premises at a moment's notice, and it was evidently intended to perpetrate the robbery when the inmates were absent on a Sunday. Some time ago it was suggested that the drains should have a complement of police to guard them, and the practicability of this rather unsavoury plan was evinced by sundry constables themselves taking the proposed course of the thieves, and arriving at Mr. Lapraik's premises at a moment when several revolvers were in waiting for the expected visitors, which disagreeable welcome they narrowly escaped. Some strong measures ought to be taken at once to put an end to a system of pillage which so effectually does away with all feeling of security.

SIAM.

Special efforts have been made to increase the crop of cotton for the coming season. The profits to the cultivators on this important staple, for the past two years, have stimulated the people to give it greater attention. But with every possible effort, it is not probable the increase can add more than one-fifth to the last crop. The cultivators are too few to expect more than that. According to the Custom-house returns, 17,710 piculs have been exported during the year from Bangkok, up to the 14th November, amounting to 2,334,339 lbs., and worth at a moderate estimate, say 500,000 dollars. The season (in mercantile language) is now over, but it is possible that the whole export for the year may reach 18,000 piculs. Of the amount consumed in the country, it is difficult to estimate, but probably not less than 4,000 piculs. Of the export mentioned above, 3,937 piculs went to Hong Kong; 1,660 to Singapore; 498 to Falmouth; and 11,615 to Hye Lam.

The Government has notified to the foreign Consuls that the embargo has been taken off the importation of fire-arms, and a Royal proclamation has been issued denying any Government interference with the sale or export of paddy and rice, which remains unrestricted.

The British barque *Donna Anna*, of Liverpool, has been wrecked on a reef, on her voyage from Saigon to Hong Kong, attempting to pass between the Cornwallis South Reef and the Cay Merino Reef. The captain (G. Nowell) and crew were picked up near the Natunas, and brought to Bangkok by the Dutch barque *Sophia Louisa*. A Court of Inquiry held at Bangkok had decided that "no blame can be attached to the captain or any other person on board for what occurred."

Messrs. A. Markwald and Co.'s Circular dated "Bangkok, Nov. 24," states :—

Rice has further advanced up to famine prices, and the article has now become so scarce that there is hardly any obtainable. Ticals 104 have already been asked for common to fair cargo rice, and ticals 101 for paddy and we are afraid that prices will go higher still. More reliable news has also been received from the interior. Our former hopes of a good average crop would have been realised, if rains had fallen whilst the grain was beginning to ripen; but for several weeks we had remarkably dry weather, and by all accounts the prospects are now very unsatisfactory, so much so, that no more than three-tenths of the yield of last year's crop are expected this year. Vessels have already been offered large sums, up to 30 cents per picul for cancelling the charter-parties, which were accepted in some instances, whereas others prefer to lay out the rest of their lay days. By far the greatest number of the vessels which are now in port will have to sail during the next two or three weeks, either in ballast or only partly laden.

MALACCA STRAITS.

SINGAPORE.

Dates hence are to the 7th January. The London mail of the 26th November did not reach till the morning of the 4th January, having been detained about one day at Alexandria, and several days on the way from Suez to Galle, owing to the slow passage made by the steamer *Golconda*. The Messageries Homeward mail arrived from China on the 4th January, and was despatched the same evening. The Messageries steamer with the London mail of the 17th November arrived on the 28th December.

A fire, a somewhat unusual event at Singapore, took place shortly after midnight of the 30th December, and completely burned down one of the European godowns and seriously damaged several others. Singapore has had a singular immunity from disasters by fire, and this is the first that has yet occurred, since the settlement of the island, to the European section of the town. The damage may be thus described :—Messrs. McAlister and Co.'s store and all its contents completely destroyed. The value of the stock it contained is estimated at $45,000, and it is covered in three companies to the extent of $30,000. Mr. Brennand's goods in godown almost entirely destroyed, partly by fire and partly by water; value uncertain, but fully covered by insurance. Messrs. Wilson and Co.'s sail loft and contents destroyed, loss unknown. Messrs. Mansfield and Co. have also lost, by water, pillage, and destruction, the entire contents of their spare godown, in Flint-street; loss entirely covered by insurance. Messrs. Hartwig and Co.'s store in Battery-road was also broken open, and considerable damage done by water and removal. Col. Macpherson, Mr. Dunman, Mr. Vaughan, Capt. MacNair, Capt. Mayne, Mr. Robertson, beside the officers of H.M.'s ships and of the Royal Artillery were present nearly the entire night, and did their best to preserve order and protect property.

The monsoon in the China sea had been blowing with uncommon violence for the last ten days; and several vessels (some of them steamers) which tried to make way against it, had to put back. The weather in Singapore had also been rainy and squally. The British barque *Swiftsure*, Captain Struckmann, which left for Saigon on the 14th December, put back from stress of weather, and arrived in the harbour on the 6th January. The Sarawak steamer *Rainbow*, Captain Howat, which left for her destination on the evening of the 6th, put back, from stress of weather, and arrived in the harbour next morning.

The following gentlemen will form the Board of Municipal Commissioners at Singapore for the year 1865 :—The Resident Councillor, President (ex-officio); Captain Jasper Otway Mayne, R.E., appointed by the Governor to hold office for one year; Mr. Robert Carr Woods, who holds office for two years; Mr. Robert Little, who holds office for one year; Mr. Jonas Daniel Vaughan, who holds office for three years.

The Governor has made the following changes in the Jail department :—Serjeant W. Boyd, Jailer Convict Lines and House of Correction, Malacca, to be Head Jailer Convict Lines and House of Correction, Singapore, vice Mr. S. Burnett, re-

Digitized by Google

signed. Serjeant J. Carmoody, Overseer Convict Department, Penang, to be Jailer Convict Lines and House of Correction, Malacca.

Her Majesty's steamer *Tartar*, Captain Hayes, arrived from Hong Kong on the evening of the 30th December.

A summons was issued on the 23rd December, by the Marine Magistrate, against Gerard Peter Schmidt Weymans, pilot, who is charged with wrecking the French mail steamer *Hydaspe*. The defendant holds a certificate of competency as master (No. 209) from the Straits Government.

Intelligence has been received of the wreck of the British barque *Eugenie* on Tree Island. The vessel was commanded by a Nacodah who holds a certificate of competency as master, and left for Penang on the 29th Dec., and became a wreck on the 31st. The crew are saved.

PENANG.

The following gentlemen will form the board of municipal commissioners at Penang for the year 1865:—The resident councillor, president *ex officio*; Captain William Somerville Mitchell, appointed by the Governor to hold office for one year; Mr. Lawrence Nairne, who holds office for two years; Mr. Stewart Herriot, who holds office for one year; Mr. John James Erskine Brown, who holds office for three years.

The distribution of the Indian mutiny medals to the men of the 35th Regiment M.N.I. took place on the Parade Ground, on the 19th of December. It being a matter of considerable interest, there was a very large attendance, and most of the Volunteer Rifle Corps attended in their uniform. The resident councillor, the Hon. Colonel Man, before distributing the medals, addressed the men in Hindustanee.

Births, Marriages, and Deaths.

(Announcements for Subscribers are made free of charge.)

BIRTHS.

BURN—On the 3rd Jan., at Tanglin, Singapore, the wife of Capt. James Burn, Bengal Staff Corps and Resident Councillor of Malacca, of a son.

BARNICOTT—On the 22nd Dec., at Hong Kong, the wife of Wm. Barnicott, of a son.

COUPER—On the 13th Feb., at Whampoa House, Aldwick, Sussex, the wife of J. C. Couper, Esq., of a son.

CHAPMAN—On the 29th Nov., at Foo-chow-Foo, China, the wife of T. H. Chapman, Esq., of a daughter.

CHALDECOTT—On the 7th Feb., at Beomond, Chertsey, Surrey, the wife of Dr. Chaldecott, late of Hong Kong, of a son.

COBBOLD—On the 16th Jan., at the Cliff, Ipswich, Mrs. J. P. Cobbold, of a daughter.

GARDNER—On the 21st Dec., at Canton, the wife of the late John Endicott Gardner, of a son.

HEYDE—On the 29th Dec., at Adelheid Lodge, Singapore, Mrs. F. Von der Heyde, of a daughter.

MURRAY—On the 9th Feb., at Edinburgh, the wife of J. Ivor Murray, Esq., M.D. F.R.C.S.E., F.R.S., H.M.'s Colonial Surgeon, Hong Kong, of a son.

PEREIRA—On the 26th Jan., at 4, Upper Portland-place, the Hon. Mrs. Edward Pereira, of a son and heir.

PUSTAU—On the 31st Jan., at Altona, Palmaille S.S., the wife of William Pustau, Esq., late of China, of a daughter.

PEDDER—On the 24th Nov., at Ten-tsin, the wife of J. N. Pedder, of a son.

ROBERTS—On the 2nd Feb., at Marseilles, the wife of Captain W. H. Roberts, Peninsular and Oriental Co.'s service, of a son.

SANFORD—On the 25th Jan., at Grove Villa, Park-road, Stockwell, the wife of Heaums Sanford, Esq., of a daughter.

SILLAR—On the 17th Dec., at Upper Norwood, the wife of R. G. Sillar, Esq., late of Shanghai, of a daughter.

VAUGHAN—On the 22nd Dec., at Singapore, the wife of J. D. Vaughan, Esq., of a daughter.

MARRIAGES.

AINSLIE—WILSON.—On the 26th Nov., at H.M.'s Legation Chapel, Peking, by the Rev. T. M'Clatchie, acting chaplain, Thomas Alexander Ainslie, M.D., M.R.C.S., Edin., to Helen Elizabeth, eldest daughter of the late John Wilson, Esq., Bagrien, Berwick-on-Tweed.

BAPTISTA—RANGEL.—On the 7th Feb., at the Roman Catholic Church, St. Mary of the Angels, Bayswater, London, by the Rev. Harmas Denny, Joas Severe Baptista, Esq., of Macao, late of Foo-chow-Foo, in China, to Anna Maria, daughter of Fortuno Antonio Rangel, also of Macao, late of Hong Kong, in China, and now of London. No cards.

LAFRAIK—THOMPSON.—On the 28th Dec., at St. John's Cathedral, Hong Kong, by the Rev. J. J. Irwin, D.D., Colonial Chaplain, John S. Lafraik, to Clara, eldest daughter of R. Thompson, of Chelsea, London, and niece of the late Sir John Briggs, R.N. No cards.

MITCHELMORE—THOMPSON.—On the 28th Dec., at John's Cathedral, Hong Kong, George Mitchelmore, to Elizabeth Thompson, both of the ship Music.

STOCKLIN—LEVICK.—On the 5th Jan., at the British Consulate, Cairo, Egypt, by the Rev. Brehon T. Wright, chaplain, Monsieur Jules Stockelin, C.E., of Colmar, to Miss Emma Levick, second daughter of Henry Levick, Esq., H.B.M.'s Packet Agent at Suez. No cards sent.

DEATHS.

BARCHAM—On the 2nd Feb., at Thurgarton Norfolk, of diphtheria, Ellen, the beloved child of Robert and Ellen Barcham, late of China, aged three years and nine months.

COLLINGS—On the 25th Dec., at Hong Kong, Thomas Collings, late of the Water Works, aged 36 years.

CHAPMAN—On the 24th Dec., at Fahchau, Edith Margaret, infant daughter of Thomas H. Chapman, aged 3 weeks and 4 days.

CANNAL—On the 15th Dec., at Hong Kong, on board of H.M.S. Melville, Robert Cannal, stoker of H.M.S. Jumna.

FILBERT—On the 17th Dec., at the Civil Hospital, Hong Kong, George Filbert, constable, from wounds received in a row in Hollywood-road on the 7th inst.

HARPER—On the 15th Dec., at Kowloon, William Henry Harper, infant son of Sergeant Harper Commissariat Staff Corps.

HOOKER—On the 22nd Dec., at the Government Civil Hospital, Hong Kong, —. Hooker, seaman.

HOGG—On the 2nd Feb., at Far Headingley near Leeds, Charles, son of the late Edwd. Hogg, Esq., of Northand-square, Notting-hill, in the 41st year of his age.

M'ARTHUR—On the 13th Dec., at Hong Kong, on board of H.M.S. Melville, James M'Arthur, Quarter-master of H.M.S. Conqueror.

MOYLE—On the 3rd Dec., at Tanjong Katong, Edith Elizabeth, eldest daughter of Mr. J. M. Moyle, aged 15 years.

NICOL—On the 8th Dec., at Shanghai, George Glass Nicol, late of Banffshire, N.B., and senior of the firm of Messrs. Nicol and Co., of Hong-que, aged 35.

SMITH—On the 25th Dec., at the Seaman's Hospital, Hong Kong, H. D. Smith, seaman, late of the barque Julia Ann.

STEWART—On the 1st Jan., at his residence, 64, Pleasant-street, Halifax, Nova Scotia, in the 71st year of his age, the Hon. Alexander Stewart, Companion of the Most Honourable Order of the Bath, and Judge of the Court of Vice-Admiralty of that Province.

TURNER—On the 24th Oct., on board the ship Ben Lomond, from Hong Kong, Thos. Turner, Esq., Registrar-General of Hong Kong, and "Protector of the Chinese," eldest son of the late Thos. P. Turner, formerly of Bedford-row, Esq., and of Mrs. McGregor, of Ampthill square, N.W., aged 37.

WILLIAMS—On the 15th Dec., at the Seaman's Hospital, Hong Kong, Frederick Williams, seaman.

WILSON—On the 13th Nov., at the Yokohama Hospital, William Wilson, formerly of San Francisco, aged about 35 years.

SHIPPING INTELLIGENCE.

ARRIVALS.

At YOKOHAMA.—None.

At SHANGHAI.—From Liverpool: Dec. 12, Morning Star. From Cardiff: 13, Dolphin. From Shields; 19, Thomas Dryden. From Newcastle: 23, William Melmuish. From New York: 13, Resolute.

At HONG KONG.—From New York: Dec. 25, Kahlamba.

At MANILA.—None.

At SINGAPORE.—From Cardiff: Dec. 24, Albatross. From Sunderland: Thurso.

DEPARTURES.

From YOKOHAMA.—None.

From SHANGHAI.—For London: Dec. 9, Lochleaven Castle; 10, Diligentia. For Liverpool: Nora Greame; 13, Coringa.

From FOOCHOW.—For London: Dec. 21, Violet, and Birchgrove. For New York: 14, White Eagle.

From HONG KONG and CANTON.—For London: Dec. 14 (*via* Macao): Juanpore.

From MANILA.—For Liverpool: Dec. 7, Therese, and *via* Lebu, Express of India. For Falmouth, 10, *via* Lebu, China.

From SINGAPORE.—For London: Dec. 28, Edwin Fox. For Falmouth: 23, Mathilde.

LOADING.

At YOKOHAMA.—For London: Alfred Hawley, Pembrokeshire, Medina and Bachante. For Liverpool: Gabalva.

At SHANGHAI.—For London: Canadian, Countess Russell, Bosworth, Spirit of the Deep, Naomi, Spirit of Trade, Spray of the Ocean, Jubilee, Anglo Saxon, James Russell, Courier, and Bedfordshire. At SINGAPORE.—For London: Maury, Charlotte Jane, and Alexander. For Liverpool: Sharpshooter, Restless, Indiaman, and Lady Bowen. For Cowes: Boreas. For Copenhagen: Maria Aguste.

PASSED STRAITS OF SUNDA.

From ENGLAND and CONTINENT to CHINA, &c.—Confucius, Dec. 10, Sunderland to Singapore; 15, V. D. Palm, Rotterdam to Samarang; 16, Marinus Willem, Newcastle to Batavia; 17, Hebe, Newcastle to Batavia; 18, Peiho, Newcastle (order); 20, Yokohama, Amsterdam to Japan; 24, Johana Maria, Rotterdam to Batavia.

From CHINA, &c. to ENGLAND and CONTINENT.—Dec. 10, Anna Maria, Japan to London; 14, Esperanza, Foochow to London; 16, Obey, Singapore to Glasgow; 19, Bernard and Agnes, Batavia to Holland; 19, Marie, Singapore to Bordeaux; Norden, Macao to Falmouth; Suzenne, Singapore to Falmouth; 20, Persia, Foo-chow to Falmouth; 21, Marie, Hong Kong to Bordeaux; Therese, Manila to Liverpool; Otilie, Manila to London; 22, North, Lebu to Liverpool; 23, Langdale, Foochow to London.

From CHINA, &c. to UNITED STATES.—Dec. 19, Bonnie Lassie, Foo-chow to New York.

FREIGHTS AND CHARTERS.

YOKOHAMA.—To London, cotton and tea, £3 to £3. 10s.; silk, £4 per ton of 50 cubic feet.

HANKOW.—To Shanghai, per steamer, 2 taels per ton; better rates were shortly expected.

SHANGHAI.—To London and Liverpool, £3 per ton; little demand for tonnage.

FOO-CHOW.—To London, the rate has declined to £2 per ton, with very little freight offering.

HONG KONG.—The circular of George Holmes gives the following settlements:—Hindoostan (1,262 tons), for Portsmouth, with invalids and troops, £5,500 in full; Welf (335 tons), to Hamburg, £3; Lombard (450 tons), Macao to Havana, with coolies, at £12. 10s. per head. To Rangoon or Bassein and back: Several charters have taken place at 70 to 75 cents per picul, 20 to 25 cents extra if ordered north. To Saigon and back the rates are 37½ to 40 cents per picul.

MANILA.—There are no settlements to report for the United Kingdom. The current rates, which are nominal, are £3. 10s. for sugar and £4. 10s. per 20 cwt. for hemp, being those last paid. The American ship Game Cock loads for New York at $10 and $17 currency for sugar and hemp respectively.

SINGAPORE.—There is less demand for tonnage, owing to large arrivals and unfavourable news from the rice ports. The rates to London for dead weight is £3 and £3. 15s. to £4 measurement of 50 cubic feet.

CASUALTIES.

JAPAN.

The British ship Ashmore, which left Hakodadi on the 14th of November, was wrecked on the 24th on Low Island, about twenty-five miles distant from Hakodadi. The British and American Consuls left for the scene

Digitized by Google

of the wreck on the 27th, and up to the 2nd of December these gentlemen had not been heard of. The captain and crew are supposed to be safe on the island.

FOO-CHOW.

An explosion took place on board the steamer Zingari, supposed to have been occasioned by powder concealed in the forecastle by the crew. The fore part of the vessel was destroyed by the explosion. She was afterwards burnt to the water's edge, and sunk. Five Chinese died from the effects of burns.

The British barque Glendower, from Bangkok, and the Spanish brig Perfecta, from Manila, have been lost on the Pratas shoal; the former on the 7th and the latter on the 8th December. Four of the crew of the Perfecta were lost; the remainder of the crews arrived safely at Hong Kong in a China boat.

SINGAPORE.

The British schooner Julia Ann, Captain Asmussins, from Cheefoo, has arrived at Singapore, under jury rig, she having lost her masts in a typhoon five months ago, reports having experienced very severe gales throughout.

COMMERCIAL.

CHINA IMPORTS.

COTTON YARN.—The only transaction reported during the fortnight in this article is the sale of 5 bales No. 16 at $66 66 per picul, and prices remain as previously quoted. Grey Shirtings: The sales of these manufactures in this colony during the past fortnight have reached a moderate amount, and consist of about 12,000 pieces; a considerable portion of these have, however, been taken by a foreign buyer, and an advance of 5 to 10 cents per piece may be quoted on the qualities most in consumption. Sales of 950 pieces 8¼ lbs. goods are reported from Foochow at $5.20 per piece. White Shirtings: There have not been any sales effected in the Hong Kong market, but from Canton we hear of 550 pieces having changed hands. T-Cloths: The bulk of the fortnight's transactions in these goods consists of the public sales of Spotted and Mildewed Cloths, and the total sales amount to about 8,000 pieces. American Drills: The market continues quite bare of these goods. White Spotted Shirtings, Dyed do., White and Coloured: All these goods have remained without any inquiry during the past fortnight, and there is not a single sale to report; quotations remain nominally unchanged. Handkerchiefs: A small sale of 1,600 dozens of these goods is reported, but prices are very low when compared with the rates ruling for other goods of cotton manufacture.

WOOLLENS.—Spanish Stripes, Medium Cloths, Ladies' and Habit Cloths: The sales of these fabrics which have been reported during the past fortnight amount to not more than 72 pieces of Spanish Stripes, and 90 pieces of Medium Cloths. Long Ells: A moderate amount of business has been transacted during the fortnight in these goods, but there is not any improvement to notice in quotations. Settlements are put at 1,500 pieces. Camlets: There are not any sales to notice. Lastings: Have remained entirely without inquiry, and prices are nominally as before. Blankets: The sales of the fortnight are confined to 100 pairs at previous rates.

METALS.—Iron Flat, &c.: Without change to notice in value, the sales of Iron amount to 850 piculs of Nail Rod, and there are not any sales to report from Canton. Lead: The price of Lead continues extremely low, and there is hardly any inquiry for the article, the sales in this colony are limited to 270 piculs, and 700 piculs have found buyers in Canton. Tin: The settlements of the fortnight amount to 280 slabs. Tin-Plates: 100 boxes have changed hands.

CHINA EXPORTS.

TEA.—CANTON.—Congous: Two more chops of country tea have come to hand, making 34 chops in all for the season to date. The holders are more reasonable in their demands than they were, but they still ask much above home rates. They have no doubt had to pay excessive transit dues. Canton Congous and Scented Teas have been quite neglected. In Canton Greens a little business has been done in Gunpowder at previous rates. Country Greens continue to come forward, but are firmly held at higher rates than exporters can pay. The quantity likely to come forward may exceed 30,000 pkgs. The following comprise the settlements of the fortnight. Canton Gunpowder: 200 half-chests, and 3,000 boxes at 14 to 19 taels. Stocks are reported as under. Country Congous, 24 chops. Canton and refined do. 3,000 half-chests, Oolong, &c. 4,000 half-chests. Scented Orange Pekoe 5,000 boxes. Scented Caper 15,000 do. Canton Gunpowder and Imperial 30,000 boxes. Country Greens, 6,000 half-chests.

FOOCHOW.—The commoner grades have remained about the same as last advised. Supplies from the country have for the moment almost ceased, only 400 ch. having come down for the past week. Compared with the last season, the arrivals to date of Congous and Souchongs fall short some 52,000 chests. The settlements of the fortnight are reported as under:—Congou: 11,940 ch., 12,111 hf. do., and 400 boxes, at 6 to 13½ taels for dust and broken leaf; 13 to 16½ taels for common to good common; and 15½ to 20½ taels for flavoury to good flavoury. Souchong: 406 ch. and 230 hf. do., all common, at 15 to 17¾ taels. Pekoe: 145 ch. common to fair, at 17 to 20 taels. Oolong: 10,565 hf. ch. and 629 boxes, at 12½ to 13 taels for inferior; and 14½ to 17 taels for common to fair cargo.

SHANGHAI.—Black: The settlements immediately after the arrival of the 26th October mail, of two chops of second crop Oopacks at 23 tls. to 25 tls., established a decline of fully one and a-half taels on previous quotations, but purchases made within the last few days are again fully up to last mails prices. Settlements have been: 9 chops Oopack, at 23 tls. to 26½ tls., 7 chops Oonahm, at 17⅓ tls. to 18½, 17 chops Ningchow and Howhow, at 17 tls. to 24½ tls., in all 33 chops: the reshipments on owners' account amount to 14 chops, making together the transactions of the fortnight 47 chops or 18,500 chests. The stock awaiting shipment and for resale amount to 18 chops or 5,200 chests. The quotations are hird crop Oopack, 23 tls. to 26.5.0 do.; Ninchow, 20 tls. to 24.5.0 do.; Oonahms, tls. 17.5.0 to 22 do.; Hohows, 16 tls. to 20 do. The stock which is now over 5,000 chests, is firmly held. Green: A fair amount of business has been transacted for the Montreal market during the past fortnight, and 7,000 quarter chests have been taken at 36.5.0 to 40 taels proportion for common to fair Moyune teas. The demand is, however, limited, and in the face of such a large stock lower rates are expected. In Pingsuey and Shanghai packed little has been doing, as supplies are now falling off. Reshipments and settlements: 6,976 half-chests Fychow, &c., 1,483 half-chests Pingsuey, 2,794 half-chests Japan and Shanghai packed; in all 11,253 half-chests, making total to date 131,225 half-chests. Stock of Green Tea is estimated at 41,000 half-chests Fychow, &c., 6,000 half-chests Shanghai packed Japan, 2,300 half-chests Pingsuey: Total, 49,000 half-chests.

HANKOW.—Dates from this port come down to the 17th inst, the Tea market might be considered closed, only three chops having been settled during the fortnight at a considerable rise, which was compensated by the fall in Exchange on Shanghai. Nine chops remained in stock, most of them under advance to foreigners. Teamen were looking forward to the rebel movements in Fohkien causing a considerable decrease in the supplies to Foochow and Amoy next year. In the absence of business quotations are useless. Total settlements and shipments: 363,000 chests or 36,200,400 lbs., against 358,000 chests or 34,880,500 lbs., last year.

KIUKIANG.—Green Teas: A very few purchases had been made for Canada at prices which had not been published; Tls. 32 to 34 were said to have been given for medium Moyunes, but there was very little general disposition shown to operate at these prices. Teamen were paying such high interest for their advances and were becoming so hard pressed for money, that they would without doubt have to give way shortly, and a large business at low prices might be expected before next mail, if foreigners remained firm.

YOKOHAMA.—The demand for this staple has steadily kept up although no great amount of business has been done. In the earlier part of the fortnight the high prices which the teamen continued to demand checked business somewhat. Prices for the better grades have ruled slightly higher, the inferior remaining unchanged.

RAW SILK—SHANGHAI.—After the receipt of 26th October mail, dealers became anxious to realise, and have since submitted to a reduction of about 5 tls. to 10 tls. per picul. The settlements estimated at 600 bales have been confined to Tsatlees and Taysaams; the unfavourable home advices for Yuenfas and Hainings having caused them to be neglected. The receipts from the interior have amounted to 1,000 bales, the late high prices having induced the growers to hurry forward all available supplies.

YOKOHAMA.—The business within the past fortnight has been of a more quiet character. The firmness of the Japanese dealers as well as the extreme elevation of prices have alike contributed to check the demand. Nothwithstanding the favourable nature of the advices received by the last mail from Europe and the continuation of low exchanges, very few of the buyers are disposed to go on at the present rates. We estimate the settlements to date at 8,000 bales, against 11,400 at the same time last season. The unsold stock on the market amounts to about 500 bales. The coarse kinds of Silk are excessively scarce; in default of them some houses are turning their attention to Dappionis and other lower stuffs, which bring now prices more than double those of last year.

COTTON.

SHANGHAI.—A small business has been transacted at 16 to 16½ taels for fair quality, the difficulty of obtaining the staple dry being still felt. There is but a small stock of desirable cotton now at market, but there is little doubt that the article would come forward freely should any advance in rates take place.

NINGPO.—The article is neglected, and no reliable quotations can be given.

HANKOW.—In full supply and difficult of sale. The nominal quotation is taels 16½ to 17.

HONG KONG.—The demand for native consumption still continues; supplies from the northern ports have fallen off, and the demand fully keeps pace with the supply. Quotations are about the same as those last given. There is no vessel on the berth for Liverpool, and very little is under shipment for Europe. The exports will certainly exhibits a considerable falling off as compared with last season's tables—unless something unexpected should occur, the export of this article from China will hardly be half what it was last year.

YOKOHAMA.—There has been an entire absence of demand for this staple, and none of the new crop has been brought forward. The stock consists of a few parcels of old, and the nominal quotation is $26 to $26½. The export has been 22,780 bales this season, against 37,800 do. same period last season, and 4,600 the season previous.

EXCHANGES ON LONDON.

[For dates, see first page.]

		Bank.	Private.
At Shanghai (per Tael.)	6 months sight.	6s. 5d. to 6s. 5½d.	6s. 6d. to 6s. 7d.

COMMERCIAL POSTSCRIPT.

ARRIVALS NOT INCLUDED IN THE TABLES.—Feb. 6, at Texel, from Batavia, Mathilda, Loevesteyn; from Tjilatjap, Batavia; 9, at Falmouth, from Hong Kong, Jupiter; 9, at Plymouth, from Nagasaki, Great Western; 9, off Torbay, from Japan, Castleton; 9, off Folkestone, from Shanghai, Sarah Newman.

Digitized by Google

DEPARTURES.—Feb. 5, from Rotterdam, for Batavia, Burgemeester Hoffman; 8, from Plymouth, for Hong Kong, Florence Braginton; Jan —, from Amsterdam, for Batavia, William Hendrick; Feb. 9, from London, for Singapore and Penang, Ferozepore; 8, from Harwich, for Hong Kong, Diamond (after repairing); 9, from Liverpool, for Manila, Peerless.

SPOKEN.—Zelia (Dut. barq.), Rotterdam to Batavia, 11 Jan., 6 N., 26 W.; Watergeus, Newcastle to Singapore, 19 Nov., 9 S., 30 W.; Abeona (Fch. ship), Batavia to Nantes, 25 Nov., 36 S., 21 E.; Arab Steed, London to Hong Kong, 24 Nov., 30 S., 32 W.; Mount Stuart Elphinstone, Hong Kong to Liverpool, 7 Nov., in Gaspar Straits; Brazilie Packet, Batavia to Middelburg, 42 days out, 12 Dec., 35 S., 20 E.; Zes Gezusters, Batavia to Amsterdam, 29 Dec., 10 S., 12 W.; Maravi, Shanghai to London, 2 Jan., 5 S., 18 W.

CASUALTIES.—The Diamond, Robertson, from Newcastle for Hong Kong, which was towed into Harwich December 18, after having been in collision, has been repaired there, and on the 8th of February proceeded for her destination.

The Mathilda, Fekkes, from Batavia, arrived at Texel, February 6th with decks swept and other damage.

The Loevesteyn, Hulshof, from Batavia, arrived at Texel, February 6th, with loss of sails, bulwarks, and other damage.

Nothing has been heard of the Castle Howard since her departure from China for London in July last. Eighty guineas premium has been offered at Lloyds, but has been refused.

Laid on at Liverpool for Manila, Labrador. For Shanghai, Sarah Scott.

DESPATCHES ON JAPAN.

The following despatch from Earl Russell to Sir R. Alcock dispels the doubts which exist as to the approval of the attack on Simonoseki.

Foreign Office, Jan. 31, 1865.

Sir,—I have received your very full and able despatch of the 19th of November.

Your former despatch contained a satisfactory justification of the course which, in co-operation with the representatives in Japan of the other Treaty Powers, you have so successfully pursued. Your despatch of the 19th of November makes this justification complete.

The despatches from this office of which you speak, were written in the belief at that time that trade was uninterrupted, and that no serious attack on Yokohama was in contemplation.

Circumstances on the spot were of a totally different complexion. The energetic course you pursued in concert with the representatives of the other Treaty Powers in these altered circumstances has been entirely approved by Her Majesty's Government, as you will have found by my despatch of the 2nd of November.

You were ordered home that you might in person give to Her Majesty's Government fuller information as to the state of things in Japan than mere despatches could convey, and that thus Her Majesty's Government might be able to come to a satisfactory decision as to the course of policy which it might be best to pursue with respect to Japan; but the order given to you to return home for that purpose was by no means to be understood as implying your removal from your post.

On the contrary, after hearing from you your explanation of the present state of affairs in Japan, I shall wish you to return at once to Yokohama, to perform in Japan such additional meritorious services as may be expected from your tried ability and long experience.—I am, &c.,

(Signed) RUSSELL.

SIR R. ALCOCK'S DESPATCH.

(*Standard*—Opposition.)

The last despatch of Sir Rutherford Alcock, written, as he says, on the eve of his departure from Japan, is a sad commentary on the whole infortunate history in which that zealous diplomatist has taken so energetic a part. The barbarous murder of two British officers—one a man in the crime of life, the other a mere youth—whilst riding together on an excusion of nineteen miles to a well-known and much-visited spot in the vicinity of Yokohama, is a confirmation of the melancholy admission of the British Minister, that "every foreigner who comes to Japan carries his life in his hands." The tokaido of Kanagawa and the precincts of the Embassy at Jeddo have been stained with the blood of Englishmen; the temple of Kamakura has now attained the same sad celebrity, and the colossal image of Buddha has been propitiated by a human offering. Whatever the Japanese Government may do or say, whatever anxiety the Tycoon may feel, or profess to feel, to carry out the treaty and maintain the security of Europeans, whatever apologies Hidano Kami may be instructed to offer for outrages which cannot be atoned for, it is clear that in the hearts of the great majority of Japanese there exists the most invincible repugnance to the presence of foreigners in their country. Every two-sworded ruffian who swaggers along the high road seems to think that he is only doing his duty to himself and his country if he can waylay and hack to pieces one of the hateful strangers whose presence in Japan he looks upon as an intolerable insult which is only to be wiped out in blood. Before the murder of poor Major Baldwin and Lieutenant Bird there had been no less than twelve murderous attacks made upon foreigners between Yokohama and Jeddo during the short time that has elapsed since Lord Elgin's mission. This murder makes the thirteenth in the bloody catalogue, and the last mail informs us of the assassination of two French sailors.

The Government of the Tycoon has always professed the utmost willingness to give redress, but with such indifferent success has it proved its zeal that in none of the murders preceding that of Baldwin and Bird have any of the assassins been executed, or even arrested. Three men, it is true, were beheaded for the attack on the legation—that is to say, on the British Minister was informed that that was the cause of their execution; but the Government in exposing their heads did not venture to declare their crime to the people as having consisted in an attack upon foreigners; and there is reason to believe that they were criminals who had already been tried and condemned for some other offence. The two men who, we are told, have been executed for the murder of these two officers, may, for all we can tell, have no more to do with the outrage than the man in the moon. The British functionaries at Yokohama and Jeddo have to take the word of the Japanese authorities in all such matters, and the communications of those personages are couched in such mysterious phraseology, are such grotesque Oriental exaggerations of the dispatches of the "Circumlocution Office," that the simple European mind is utterly at a loss in the effort to comprehend them or gainsay them. Our dealings with the Japanese have taught us as much as this—that this people is treacherous, cruel, revengeful, and barbarous at heart. It is beyond the power of our diplomatists to enter the lists against such duplicity and cunning. The retiring Minister, who knows more of Japan than most men, tells his Government that if our position in these islands is to be maintained at all, its security must be assured "by other means than any yet resorted to." What does Sir R. Alcock wish, and what does he advise? Are we to emulate the exploits of the American officers at Wilmington, and explode some mine which shall blow these forty millions of Japanese into another world? Are we to send a mighty army and fleet to Japan, bombard its seaports, pillage its towns, devastate its fertile fields, massacre its population, behead the Tycoon, and carry off the Mikado to Hong Kong? Are we to make a desert solitude of a country that was happy before we came there, that amidst charred wastes and smoking ruins we may establish ourselves and be at peace? To place matters on a satisfactory footing we must do something desperate of this sort. The alternative is in long years of trouble and strife, Englishmen assassinated and outraged armies and fleets set in motion in the vain effort to avenge them, the murderers escaping, the wrong men put to death or self-immolated by the "happy dispatch," Japanese and foreigners growing daily more hated and more hateful, the foreigners gaining ground, the natives dying out of the world, till the drama of Indian empire is repeated, or the tragedy of Australian or American aborigines finds its parallel on a large scale. It becomes clearer and clearer every day, that neither Chinaman nor Japanese can long exist on a footing of equality or in the same polity with the European. Once bring them in contact and the struggle of race begins—the struggle that can only end in the extermination of the weaker, or the cruel supremacy of the stronger breed of man. Let it end how it may such a contest is an evil—a disgrace to us, and we not unnaturally ask, for whose advantage is it commenced or carried on? For the men to whom human life and happiness are of small account when put in comparison with the possible acquisition of wealth; who see, with Mr. Bright, in the expansion of trade and commerce the millennium of mankind. The British Government can earn no honour or glory in these wars with barbarians. It may be put to an immense expense in carrying them on, its officers and servants may lose their lives in obedience to its behests, but in the sequel no one will be benefited but the trader, who, for selfish reasons of his own, has thrust himself into this *terra incognita* of the Eastern seas.

There was a period in English history, between the days of Elizabeth and the latter part of the reign of George the Third, when these remote enterprises were carried on at the sole cost and risk of the persons who alone could gain by them. There was once a "Company of Merchants trading to the East Indies," which, without aid of any kind from the British Government, built up an Empire for which Alexander and Tamerlane sighed in vain. If our rich merchants of to-day desire to carry on a trade with China and Japan, why do they not relieve us of the responsibility of making yearly encroachments upon the territories of those ancient empires? Why are they not suffered to take matters into their own hands, establish a Chinese and a Japanese Company, wage war as they please on their own account, accepting, without reference to us, the sweet fruits of victory or the sour apples of failure? The old independent system of aggression in the East was far more advantageous to the Empire than the modern method of making the central Government pay for all, bear all, and suffer all, involving it in manifold danger and trouble for the benefit of the merchants who may find various black and brown potentates in the way of their trade. For the moment it is demanded, and not without good reason, that the latest outrage in Japan shall be avenged in an exemplary manner. For the future we object on principle to any appropriation of Imperial money, any use of Imperial forces, in the eternal quarrels between our merchants and the peoples of China and Japan. Those who trade in these parts should count the cost as well as the gain; they should be prepared to defend themselves, and maintain by their own sacrifices the position which they have assumed. If we hesitate to spend a million of money, and sacrifice a thousand lives or so, that they may earn a million by their traffic, and gain a thousand acres, they cannot fairly find fault with us. The system of Lord Palmerston's Government has been radically wrong, and a reconsideration of the whole subject is necessary. It is melancholy to think that we are dividing our force, and frittering away our strength in these miserable conflicts in remote and semi-barbarous countries. There is a great British fleet in the waters of China; there is a powerful naval force in the Bay of Jeddo; and why? Because it seems likely enough that the central Government of Japan, or its officers, has been implicated, directly or indirectly, in this murder of two Englishmen; because, however friendly the Tycoon may seem to be, the Mikado, or spiritual ruler of Japan, and the Daimios, or nobles, are known to be inspired by the most deadly hostility to foreigners; because the local officials who sent to Yokohama the news of the attack on Baldwin and Bird, were not only guilty of equivocation, but waited until such time as they were assured that the victims were dead; because there is distinct evidence that after Lieutenant Bird had been groaning and weltering in his blood for eight long hours he was deliberately finished by a swordcut across the bones of the neck, being at the time in the keeping of the local officers at a sort of public hostelry. It is because all Japan seems in league against us, and banded together in this and other cowardly outrages, that we seem called upon to strike some blow in self-defence that shall resound through the length and breadth of the East. But why did we ever go there, or, being there, did we not retire when we found that our visit was so unwelcome? It is the rule with gentlemen in most European countries, when they find their company undesired, to refrain from pressing it further on an unwilling host. The custom which prevails in private life might be carried out between nations, with much advantage to the peace and comfort of the world.

COTTON SUPPLY FOR 1865.

(ECONOMIST.)

Our estimate of the probable supply and consumption of cotton during the year just commenced appears to be regarded by those qualified to judge to be as correct as such conjectural calculations ever can be. On two points only have we received criticisms which appear to suggest some slight modification of the anticipations we expressed.

1. We are reminded that a considerable proportion of the increased supply which we have obtained from the three Indian Presidencies since 1860 is owing not altogether, nor perhaps principally, to increased production, but in a very considerable measure to the diversion to our markets of the large quantities which used to be exported to China, but which during the last four years have been attracted hither by our high prices. For example, the real increase of exports from Bombay has not been from 508,000 to 1,043,000 bales, but only from 710,000 bales to 1,043,000; and a similar remark may be made with even greater force in reference to the Madras and Bengal exports. It is probable, therefore, that the augmented growth in India may not be as large as has been believed, and that our calculation of the supply thence may be a little over sanguine.

2. It is thought by some competent observers that we have over-estimated the dispersion of the factory population by migration and permanent absorption into new occupations. The most careful inquiries have, we are informed, only been able to trace the disappearance of about 40,000 persons; and this number includes young children as well as actual factory hands. Still, we incline to doubt whether the residual numbers could work up more than 40,000 bales a week of such cotton as now constitutes the average of our imports.

(MONEY MARKET REVIEW.)

Up to 1860 the sum paid by Europe for the cotton exported from India did not exceed seven millions a year. In 1860-61 the bullion imported into Bombay alone, for the most part in payment for cotton, exceeded six millions; and, in the four years since that, the amount of the precious metals thrown into that one city has been at least sixty millions sterling, and nearly all for cotton. To India combined, Europe has of late paid about forty millions a year, of which more than half is in bullion for cotton. The effect of this new state of things in Western India is described by the *Times'* correspondent in his letter of the 30th December, and his description is pregnant with instruction alike to the dealer in cotton and the dealer in money. We are told that in Bombay many Parsee and Hindoo, and a smaller number of English, or rather Scotch, merchants find themselves possessed of sums which are reckoned by millions, and speak with contempt of so small an amount as a lac of rupees, or £10,000. Hindoos and Parsees, who were a short time ago petty brokers or shopkeepers, are now millionaires. A Hindoo clerk, recently employed in an English counting-house at £30 a-year, has become suddenly possessed of about two millions sterling. The second son of Sir Jamsetjee Jeejeebhoy has become the millionaire of Bombay, his capital being computed at 2½ millions sterling; and if the present price for raw cotton should continue for another two years, this 2½ millions may be doubled. These are only two cases out of twenty of the same nature, and all classes have grown more or less rich out of our cotton famine. The peasantry are rolling in wealth, and the occupation of the usurer is gone, while the housing and feeding of the agricultural class put England to shame. One agricultural labourer prides himself on his fine breed of bullocks, for which he has paid five times the old price; another rides his horse, a third makes the tires of his cart wheels of silver, and a fourth carries large bags of rupees at the ends of poles in a festive procession. Even in Kandeish, the only country not recovered from the Mahratta devastations, the *Times'* correspondent saw a crowd of peasants squatting round two agents from Bombay, one with 40,000 rupees and the other with 30,000, "paying for the growing crop at enormously high rates."

Parliamentary Intelligence.

OPENING OF PARLIAMENT.

The seventh session of the present Parliament was opened on the 7th Inst. As it was known that it was to be opened by commission there was not that interest that is usually manifested when Her Majesty herself presides at the opening of the great council of the nation. Notwithstanding the drizzling rain which had been falling all the morning, a few hundred persons had assembled in Parliament-street, Palace-yard and Westminster-hall, curious to see the members as they passed in. In the House of Lords three of the back benches on the Opposition side were filled with ladies in morning costume, as was also the gallery, but the attendance of peers was scanty. At two o'clock, when the Commissioners made their appearance, there were not more than ten or twelve peers present, amongst whom we observed the Archbishop of Canterbury, the Archbishop of York, and the Bishops of Lincoln and Ely, the Earl of Dalhousie, Lord St. Maur, and Lord Redesdale. The Lords Commissioners were the Lord Chancellor, the Duke of Somerset, Earl of St. Germans, Lord Stanley of Alderley, and Viscount Sydney.

The Commissioners having taken their seats, the Lord Chancellor requested the attendance of the Commons, to hear the Royal speech read, and a minute or two afterwards a tumultuous noise was heard, and the Speaker of the House of Commons, accompanied by a number of members, appeared at the bar.

The LORD CHANCELLOR then read, as follows—

THE QUEEN'S SPEECH.

"*My Lords and Gentlemen,*

"We are commanded to assure you that Her Majesty has great satisfaction in recurring again to the advice and assistance of Her Parliament.

"The negotiations in which the Emperor of Austria and the King of Prussia were engaged with the King of Denmark were brought to a conclusion by a Treaty of Peace; and the communications which Her Majesty receives from Foreign Powers lead her to entertain a well-founded hope that no renewed disturbance of the peace of Europe is to be apprehended.

"The civil war in North America still unhappily continues. Her Majesty remains steadfastly neutral between the contending parties, and would rejoice at a friendly reconciliation between them.

"A Japanese Daimio, in rebellion against his Sovereign, infringed the rights accorded by Treaty to Great Britain and to certain other Powers; and the Japanese Government having failed to compel him to desist from his lawless proceedings, the Diplomatic Agents and the Naval Commanders of Great Britain, France, the Netherlands, and the United States of North America, undertook a combined operation, for the purpose of asserting the rights which their respective Governments have obtained by Treaty. That operation has been attended with complete success; and the result has afforded security for foreign commerce, and additional strength to the Government of Japan, with which the relations of Her Majesty are friendly.

"Papers on this subject will be laid before you.

"Her Majesty regrets the conflict with some of the native tribes in New Zealand has not yet been brought to a close, but the successful efforts of Her Majesty's regular forces, supported by those raised in the colony, have led to the submission of some of the insurgents, and those who are still in arms have been informed of the equitable conditions on which their submission would be accepted.

"Her Majesty has had great satisfaction in giving her sanction to the meeting of a Conference of Delegates from her several North American Provinces, who, on invitation from Her Majesty's Governor-General, assembled at Quebec. Those Delegates adopted resolutions having for their object a closer union of those provinces under a Central Government. If those resolutions shall be approved by the Provincial Legislatures, a Bill will be laid before you for carrying this important measure into effect.

"Her Majesty rejoices at the general tranquillity of her Indian dominion, but Her Majesty regrets that long-continued outrages on the persons and property of subjects of Her Majesty, and for which no redress could be had, have rendered it necessary to employ a force to obtain satisfaction for the past and security for the future.

"Her Majesty deeply laments the calamity which has recently occasioned great loss of life and property at Calcutta and at other places in India. Prompt assistance was rendered by the officers of the Government, and generous contributions have been made in various parts of India to relieve the sufferings which have thus been occasioned.

"*Gentlemen of the House of Commons,*

"Her Majesty has directed the estimates for the ensuing year to be laid before you.

"They have been prepared with every attention to economy and with due regard to the efficiency of the public service.

"*My Lords and Gentlemen,*

"Her Majesty commands us to inform you that the general condition of the country is satisfactory, and that the revenue realises its estimated amount. The distress which prevailed in some of the manufacturing districts has greatly abated; and the Act passed for the encouragement of public works in those districts has been attended with useful results.

"Ireland, during the past year, has had its share in the advantage of a good harvest, and trade and manufactures are gradually extending in that part of the kingdom.

"Various measures of public usefulness will be submitted for your consideration.

"Bills will be laid before you for the concentration of all the Courts of Law and Equity, with their attendant offices, in a convenient site; a measure which Her Majesty trusts will promote economy and despatch in the administration of justice.

"The important work for the Revision of the Statute Law, already carried to a considerable extent by recent Acts of Parliament, will be completed by a Bill that will be laid before you. Her Majesty hopes that this work may be a step towards the formation of a digest of the law.

"Bills will also be submitted for your consideration for the amendment of the laws relating to patents for inventions, and for conferring on the County Courts an equitable jurisdiction in causes of small amount.

"Your assistance will also be invited to give effect to certain recommendations made to the House of Commons, after inquiry, directed by that House, into the operation of the laws regulating the relief of the poor.

"A Bill will be laid before you founded on the Report of the Commission for Inquiring into Public Schools; and Her Majesty has directed that a Commission shall be issued to inquire into endowed and other schools in England which have not been included in the recent inquiries relating to popular education.

"Her Majesty commits with confidence the great interests of the country to your wisdom and care; and she fervently prays that the blessing of Almighty God may attend your councils, and may guide your deliberations to the attainment of the object of her constant solicitude—the welfare and happiness of her people."

CHINA, JAPAN, AND SIAM.

Mr. S. FITZGERALD gave notice that on the first supply day he should move for a return of the expenses of the diplomatic and consular establishments in China, Japan, and Siam, since the date of the treaty of 1842, of the indemnities received from the Japanese Government, of the expenses of military operations in China, and of the fees received by Her Majesty's consular and other servants in China.

THE CHINESE COOLIE.—In our last issue we noticed the increased demand for Chinese coolies, and by the mail since arrived we have advices of the despatch of a vessel with 337 for Tahiti, on behalf of the Tahiti Cotton and Coffee Company (Limited). About 250 acres of cotton have been planted, and a cargo may shortly be expected here. It appears probable that at no very distant period a direct trade will spring up between China and the Pacific ports of Mexico. An active trade formerly existed between Acapulco and Manila, and with the rising fortunes of Mexico, a certain increase in European and American immigration to that country and the further development of its resources, there is no reason why commercial relations should not be extended to the Eastern continent. Good roads lead from the Pacific ports both to the city of Mexico and to Vera

Digitized by Google

Cruz, touching on the route at numerous important towns. There is every probability, too, that a demand for Chinese coolies will shortly be created for the cultivation of cereals and other products in the great longitudinal valleys—a work for which this race is eminently suited.

OUR NAVAL YARDS.—Mr. King has lately published his report for the Government of the United States. He was deputed to make an examination of our yards. Mr. King, the Federal Commissioner, addresses his observations principally to the resources we possess for the construction and equipment of an iron-clad navy. He does, it is true, describe the situation, extent, and general capacities of all our national establishments, and he gives an account of our navy and its composition as necessary to the completeness of his report; but the object of his inquiry, as we shall presently explain, was a special one, and it is curious to see the manner in which it is reached. His admiration was evidently excited by the resources of our private yards. He enumerates the great commercial companies engaged in iron shipbuilding, and says that no such establishments are to be found out of Great Britain. The yards on the Thames actually produce, he observes, 117,000 tons of iron vessels yearly; those on the Clyde, 120,700 tons; those on the Mersey, 80,000. Altogether, and including smaller establishments, our private yards could turn out in a single year iron ships to the extent of 400,000 tons and upwards; indeed, Mr. King is of opinion that the actual product of the kingdom in the year last past was not less than 500,000 tons. At Millwall the Commissioner found ten heavy iron vessels on the stocks at once, the largest being the *Northumberland*. In Messrs. Laird's yard he found six such ships, with the *Agincourt* at their head. "In the event of war," says he, "the British Admiralty could have at command and employed in the construction of iron ships more than forty extensive iron shipbuilding yards, and as many engine factories, besides any number of iron rolling mills." Nevertheless, despite the impression produced by these spectacles, the Commissioner's thoughts are evidently elsewhere. His heart is set upon a great Government establishment, and, after candidly describing the resources of our private yards, he carefully adds that we regard them as insufficient, and have established a public yard by way of check or supplement. Chatham delighted him, and he expatiates with infinite zest on the qualities of the *Achilles*. She was "the first iron ship," he tells us, "built in a British dockyard;" in fact, with the exception of two French frigates, the *Couronne* and the *Héroine*, she is "the only iron ship built in any public yard." Yet she is a miracle of success. "She has been afloat ten months, and during that time, I am informed on reliable authority, not as much as a wineglass of water has leaked into her. This is a circumstance unparalleled in the history of shipbuilding, and unless she should be run on a hard bottom there is no reason why she should not remain tight for many years." Here Mr. King evidently finds his ideal of a dockyard realised. He frankly admits that Messrs. Laird's yard has advantages even over Chatham but he is not content with private yards at all. As for his own country, "under existing circumstances," he says, "the best of our private yards could not construct one such vessel as the British frigate *Achilles* within three or four years; several iron gunboats which were contracted for more than two years ago are not yet completed, and will not be for some months." Indeed, he declares that "the capabilities of all the iron yards" in America are not equal to those of the best private yard on the Thames.

THE ISTHMUS OF SUEZ CANAL.—The following letter has been forwarded by M. Ferdinand de Lesseps to all the chambers of commerce in Europe:—"Paris, Jan. 31st—Gentlemen,—A first communication is now open between the Mediterranean and the Red Sea. Since the 1st of January a daily boat service has been established from Port Said to Suez, and between Ismaila and Zagazig. At the same time it serves all the intermediary stations of the Isthmus. I have recently made several journeys along the line of works. During each of these I have established the facility of transit and have also clearly obtained its recognition by the numerous visitors who have done me the honour to accompany me. In a large barque carrying from 25 to 30 persons and tugged by a steamer, for which the company is indebted to the liberality of his Imperial Highness Prince Napoleon, we accomplished the 150 kilometres separating the two seas in 24 hours. These facts appeared to me of a character likely to attract the attention of the different chambers of commerce which, in so many ways, are interested in the completion of the Suez Canal. The time has arrived when commerce must be prepared for the opening of this maritime canal to vessels of large burden, and the Suez Company calls upon it henceforth to study with it the means of making use of a boat service, which can already transport goods and passengers between the two seas along a continuous line of water at least one metre twenty inches in depth and fifteen metres in breadth. With this object, gentlemen, the administration of the company has the honour to propose that you make choice of a representative to proceed to Egypt in order that he may report to you upon the actual state of the works, upon the prospects presented of their approaching conclusion, and more especially upon the resources at present furnished to commerce by the establishment of a daily service for the transport of persons and merchandise. In view of these operations the company has ordered six small steam tugs, to be delivered upon the spot in four months. I trust these circumstances will arouse the attention of the Chamber of Commerce of ———; and if it will afford us the assistance asked for, it would be convenient that the delegate it may choose should be at Alexandria upon the 6th of April next. I myself shall be in Egypt to receive the delegates, and shall endeavour to afford them every facility for inspecting the works on the Isthmus, and will place at their disposal all information which they may judge necessary for the accomplishment of their mission. Receive, gentlemen, the expression of my sentiments of high consideration.—(Signed) Ferdinand de Lesseps, President of the Universal Company of the Suez Canal." This circular has been addressed to the chambers of commerce of twenty-eight cities. London, not possessing a chamber of commerce, an analogous letter has been addressed to the Lord Mayor, with a request to communicate it to the Common Council of this city.

FATAL ACCIDENT ON BOARD THE "FAR EAST."—Mr. Richards held an inquiry at the Spotted Dog Tavern, Poplar, respecting the death of Edwin Godolphin, aged twenty years, who was killed on board the China steam-ship, *Far East*. Mr. Wm. Stephenson, the chief officer of the ship, said they arrived in the Thames from China. The deceased, who was an ordinary seaman on board, was ordered to go aloft to reef the signal halyards that the flags might be displayed. For that purpose he went to the extreme top of the mast, a height of 189 feet, and while engaged in his duty he fell off and came headlong down on to the deck. He pitched on his head on to a boat which was bottom upwards, and so great was the force with which he fell that he smashed in the bottom of the boat. His skull was crushed in, and he was of course killed on the spot. The witness did not know how the deceased came to fall, unless it was through the extreme cold having benumbed his hands. The jury returned a verdict of "Accidental death."

THE SUEZ CANAL.—The *Moniteur* contains the following statements:—The city of Suez appears destined to assume considerable importance within a short time. Four great companies have already constructed workshops there, and one of them, the Egyptian company, the Azizié, formed for working the commerce of the Red Sea, has its principal establishment at Suez. Numerous houses are being erected to supply the wants of an ever-increasing population of merchants, assistants, and workmen from all countries. It is easy to foresee, however, that the future city will not be built on the present site. A bank which becomes dry at low water extends for a mile and a quarter opposite Suez, and at the extremity of this bank the maritime canal will empty itself; and here also the Messageries Company will build its basin for the repair of its vessels. A jetty which is finished will soon bring the basin into communication with the Cairo railway by means of a tramway. All these works constitute the nucleus of a new city which will be established on the bank itself, and, thanks to the development of the shore, under circumstances more favourable to commercial interests. Suez owes its growing prosperity principally to the Universal Company of the Isthmus of Suez and to that of the Messageries Impériales. The portion of the fresh water canal which the first of these companies has to construct is terminated, with the exception of the sluices, in the formation of which no time is lost. Their speedy completion will allow merchandise to be conveyed by the canal from Port Said to Suez in vessels of a light draught of water. The company of the Messageries Impériales, which, with eleven steam vessels, conveys traffic from India and China, has been in regular operation from Oct. 27, 1862, and has no occasion to envy the rival service of the English company. The two places where the repairs of vessels are principally carried on are Suez and Saignon. At Suez a basin for repairs, capable of receiving vessels of the largest size, will be finished in fifteen months. A large workshop has been established in the midst of the sands, and surrounded by workmen's cities for both Europeans and Arabs. From the present time the company will possess the means of effecting the most important repairs of machinery. Fresh water from the canal is conducted to the workshops and into the city by pipes a mile and a quarter in length, and in a short space of time fountains will supply every person with all the water he may need, to the great astonishment of the Arab population.

WRECK OF THE "ASSAYE."—A very disastrous shipreck has taken place on the extreme portion of the south coast of Ireland, in Ross Bay, near Galley Head, between Cape Clear and the old Head of Kinsale. The unfortunate vessel was a fine large teak-built ship, called the *Assaye*, originally constructed as a steam frigate for the East India Company. She was launched at Bombay, and was of more than 1,500 tons burden. The *Assaye* left Bombay, with a most valuable cargo of East India produce, for Liverpool in the course of last October, and nothing was heard until the receipt of the telegram on the 30th ult., intimating that the ship had been cast on the rocks in Ross Bay early that morning, and that the commander had been drowned in endeavouring to reach the shore. The first despatch left some hope that the cargo would be saved, but a subsequent telegram announced that the ship had gone to pieces. The cargo, which comprised 6,254 bales of cotton, 556 bales of wool, 200 bales of jute, 99 tons of linseed, and other merchandise, is strewn on the shore for miles. The ship was valued at £40,000. Both vessel and cargo were largely insured at Lloyd's, and in the different marine insurance-offices in London, Liverpool, and Glasgow. The *Assaye* was the property of E. M. de Bussche, Esq., late of Shanghai, and others.

HENRY DALGLEISH, LATE OF HONG KONG.—ONE HUNDRED POUNDS REWARD.—To Hotel, Lodging-house keepers, Shipping Agents, and others.—Absconded, in May last, having in his possession about £3,000, the property of his employers, the Borneo Company (Limited), Hong Kong, Walter Henry Dalgleish, formerly their clerk. He arrived at the International Hotel, London-bridge, on the 29th of April last, and left for Scotland on the 5th of May; he went to Glasgow, where he passed under the name of Ralph Ensign, thence to Ayr, where he assumed the name of Charles Walter Thorne; he afterwards re-appeared in London about the 22nd of May as Henry Grey and Henry Browning, staying at a private hotel near King's-cross in the latter name; he then went to Canada in company with a female, about 18 years of age, and of small stature; while at Canada he purchased some bills of exchange in the name of Henry Raleigh; he then appeared on 25th of August at Cork as Henry Stewart, Henry Hudson, and Henry Raleigh; from thence he appears at Dublin, Belfast, and Kingstown, and at the last mentioned place, where he was on the 17th September, at which time he had in his possession (it is supposed) about £1,500 in Scotch bank notes, was known as Henry Pollard, and it is supposed that he has gone to Canada or some other colony. Description of Dalgleish—age 25 years, height 5 feet 11 inches, dark complexion and hair, slight beard and moustache, very dark eyes, slight scar on side of nose or over the eye, in delicate health. The above reward will be paid by the Borneo Company (Limited), 7 Mincing-lane, London, to any person giving such information as shall lead to the apprehension and conviction of the said Walter Henry Dalgleish. Information to Sergeant Palmer, detective department, Great Scotland-yard, London.

S. GREGSON, ESQ., M.P.—This gentleman, so well known as the founder of the house of Gregson and Co., in the East India and China trade, and chairman of the East India and China Association, died on the 8th inst., in his 70th year. He had attended in his place at the House of Commons the previous evening, had dined at the House, and returned home apparently in his accustomed health and spirits, but died in the morning at four o'clock.

A COURIER'S DANGER IN COCHIN-CHINA.—A letter from Cochin-China mentions that the arrival of letters at Barriah from Saigon was recently delayed by a singular incident. The native who acts as courier being some time overdue, the commander of the place sent a detachment to see what had become of him, when, after an hour's march, the troops found the unfortunate Indian perched at the top of a high bamboo, while two enormous tigers were at the foot rolling over the letter-box. The courier was then released from his uncomfortable position, and enabled to continue his journey.

THE REBELS AT AMOY.—The following extract from a letter has been published in *The Times*:—"I dare say you know from ——'s letter that we have got the Taipings very near us; in fact they are now within 15 miles of this place. They have defeated the forces of the native authorities in two engagements, and there is nothing (as far as they are concerned) to prevent their taking Amoy as soon as they please. We have four boats and a large corvette for the defence of the foreign community. I don't see, if the Taipings land on Amoy and set fire to the city, what is to save the Hongs, especially as the prevailing winds at this time of the year are generally north-east, which would blow the flames right upon them. The only way to save them would be to land a sufficient force of marines and blue-jackets to blow up the Chinese houses in the immediate vicinity of the Hongs. In the event of there being a disturbance at Kulangsen a party of marines are to take the women and children up to the Consulate, the entrance to which is defended by an Armstrong 12lb. gun. I suppose, in such a case, the inhabitants and marines would have to try and prevent the other houses on the island from being plundered. These are all measures of precaution which I hope may not be needed. Still it is necessary to be prepared for whatever may occur."

THE REBELS NEAR AMOY.—The following letter has been published dated Amoy, Dec. 12, 1864. You have heard lately of the taking of Changchen by the rebels. They still hold the city in force, and not a single one of those native Christians who were in the city when it was taken has succeeded in escaping. About ten days ago the rebels made a sally in force, and attacked the Imperial forces, who were posted near Chioh-bey. The rebels completely routed them and scattered them in all directions. Of course such a defeat as this caused a complete panic over all the region near the scene of battle. Chioh-bey is almost completely deserted, and only one or two persons remain of what was a flourishing church in that place. As to Amoy we have little fear, for at present we have four gunboats and one large man-of-war to protect us. It is needless for me to say that the present state of matters proves very hindering to every part of our work. The country is in such a very disturbed state that access to most of our stations is for the present entirely out of the question. We can still visit, with comparative safety, the Pechnia and the Bay-pay regions, but beyond we dare not go. We have no definite idea of what the rebel force is, as to numbers, but we fear they are much more numerous than we were at first inclined to believe. The mandarins seem to be incapable of grappling with a danger of such magnitude, and there seems to be no call for foreigners interfering any further than is necessary for the protection of life and property, so that at present, in these circumstances, we cannot form any opinion as to what the result may be. Notwithstanding all this, I have news of a most cheering and encouraging character to communicate. Sabbath, the 4th inst., was a day long to be remembered in Bay-pay. It was our Communion Sabbath there, and Mr. Cowie, Mr. M'Gregor, and I went there together. You have heard that for some time past there has been a large influx of interested persons at Bay-pay, and you were also made aware of our hopes and fears in regard to them. We feared much that in the present disturbed state of the region numbers of them would have drawn back. Such, however, has not been the case; they come in the usual numbers without any abatement. I can imagine with what feelings of joy you, Sir, would have looked upon our congregation on the 4th inst. Our little chapel was not merely crowded; it was packed by a body of nearly 200 persons. There was not an inch of room to spare, and all these were persons who are in the habit of keeping the Sabbath and attending the means of grace. In the forenoon I baptised five male adults, and in the afternoon Mr. Cowie dispensed the Communion. It was a cheering sight to us and our native brethren. May it stir up all our dear friends at home to more prayer on behalf of this mission! I cannot help saying in one word more that the whole aspect of things at Bay-pay is something for which the committee have great reason to thank God, and more especially as time and trial are most severely testing those who desire to cast in their lot with the people of God.—W. S. SWANSON.

THE HORRORS OF WARFARE IN CHINA.—A letter from a gentleman in China, dated "Amoy, October 27, 1864," contains the following:—"You will be surprised when I tell you that the Nankin rebels have appeared in large force in this immediate neighbourhood, causing the greatest excitement both among Chinese and foreigners. On the 14th instant the large district city of Changchow, one tide only distant from Amoy, fell into their hands, and that place is now one mass of blood and fire. The place contained some 700,000 people. The rebels got into the city in disguise, and when their time was come, they closed all the city gates, and commenced an indiscriminate slaughter, at the same time firing the city in several places. A few have escaped to tell the tale of horror. The place is still burning, and dead bodies fill the streets—in some places four feet deep. The rebels, in their march, take all the young and good-looking girls as cooks and mistresses; the young and able-bodied men as coolies to carry their luggage; while the ill-looking or less-favoured women, and the sick, old, or infirm, of both sexes, they slaughter without mercy. We fully expect and have been looking for their appearance here for some time, and would not feel surprised any night to be aroused by the alarm of fire. We are, however, preparing to receive them. We have formed ourselves into a volunteer corps, and every afternoon go through the regular manual and platoon exercises. Every afternoon we meet on the jetty, and march up to our house with the rifle and bayonet. Our appearance, we fondly imagine, is calculated to strike terror into the minds of the unsophisticated yet lawless natives. The commissioner is our drill-sergeant, he having been connected with the volunteer movement in London since its commencement. We are divided into watches throughout the night. On Sunday Her Majesty's ship *Adventure* called in, on her way to Japan, with instructions to wait and see if any assistance was required. Her Majesty's gunboats *Flamer*, *Opossum*, and *Janus*, will be here in a day or two, so we have now material aid quite sufficient to protect us from everything but fire and assassination. The Chinese themselves are utterly helpless. The mandarins collect the thieves daily, and give them each a quantity of cash to be 'good boys' at the present time. The Chinese merchants are preparing to flee, chartering vessels at exorbitant rates in order that they may save themselves and treasure at any moment. Foreigners, too, have their office-books in small boxes for convenience of carriage; and their treasure is likewise packed ready for shipment at a moment's notice. Trade has quite stopped, and this port, only last month one of the most prosperous in the south of China, is now quite paralysed, and will take a long time—some think years—to recover."

THE MURDER OF MAJOR BALDWIN AND LIEUT. BIRD.—The following is an extract from a private letter from Shanghai, dated Dec. 8, 1864:—"The news from Japan which has come to hand is dreadful. Two officers—Major Baldwin and Lieut. Bird—of the 20th, were on a visit to Daibooto, which is a temple at Kamukura, about twenty miles from Yokohama. They were attacked while sketching in the ground, and cut to pieces. There was no Tokaido business. They were where they had a right to be; and the murder is one of the most atrocious yet in the annals of our intercourse with Japan. Sir R. Alcock, the British Minister, has not left, and I am glad to think he means to take strong measures. Yedo ought to be destroyed. If the Summer Palace was destroyed at Peking for the murder of Brabazon and others, most distinctly should some such steps be taken in regard to this affair. A man's life should not be valued at so many dollars. For, if the Japanese think we will only ask them to pay so many thousands for a man being cut down, these hideous murders will always be on record. This one is a horrid business. It is worse than Richardson's—and that was bad enough; but for two gentlemen, beloved by all who knew them, to be butchered in cold blood, and cut and hacked to pieces in a manner too disgusting to narrate, is a fate no one would wish to meet with. There is no need now to treat with the Mikado, the Tycoon, or the Gorojio; it is useless. Strong retaliation, swift vengence, and severe punishment should be the award for such a people. I am not inclined to be hasty; but this is too much. And if our Home Government does not order immediate steps to be taken, then the lives of all of us in Japan are not worth a rush, and the fiendish spirit of the Japanese will only be shown too often if we accept dollars as the redress for men murdered in cold blood, and for no cause."

SALE OF CHINESE ARTICLES OF VERTU.—Some time since we noticed a correspondence of Sir Frederick Bruce in expelling a gentleman who was engaged in and near Peking in making purchases of curiosities. A sale was lately held at Mr. Phillip's rooms, New Bond-street, which constituted a portion of this collection which was much admired by the gentlemen in London who are acquainted with this branch of rare goods. It included a selection of objects of the rare Cloissonné enamel, and other pieces of fine quality, peculiar to the country. Among the more valuable specimens, the following are worthy of notice:—Lots 32 and 5. A pair of turquoise vases, 13in. high, of rare quality; a suite of five richly enamelled porcelain joss ornaments, on a delicate green ground, with coloured raised flowers; a pair of oblong incense-burners, of similar design, with covers and kylinhandles, pencilled in dragons and other devices; and a porcelain bottle, with beautifully pencilled flowers and quails in colours, on a delicate green ground engraved over—£61. 15s. (Woodgate). 50. A superb Pilgrim's bottle, of the rarest Cloissonne enamel, the sides beautifully enriched with flowers and other devices in lapis, with metal handles and rim, 19in. high, on carved wood stand—£80 (Addington). 51. A pair of china fonts, richly enamelled round the belts and borders—20 guineas (Russell). 55 and 56. A picture in Cloissonne enamel, of exquisite workmanship, representing buildings, intersected by a river and gardens; in the foreground are portrayed dogs, poultry, &c., another similar in subject forming the companion—£82 (Wareham). 60-1. A suite of porcelain ornaments comprising a centre urn, a pair of vases, a pair of candlesticks, richly pencilled over in raised flowers; a circular font of the rare turquoise porcelain, 11in. deep; and a pair of richly enamelled jardinieres—£44. 5s. (Welch). 70. A pair of splendid square enamelled bottles with high necks, formed of the finest Cloissonne work, inlaid all over with white daisies, and chased gilt panels introduced into the sides, on wood pedestals—£69 (Marks). 71. A pair of magnificent figures of warriors, dressed in rich costumes, and wearing the insignia of office, the whole formed of the richest Cloissonne enamel, mounted on costly stands of the richest character; these splendid figures may be regarded as unique—£155 (Wareham). 72. An elegant pair of fish fonts, of porcelain, with ornaments in colours, borders, &c., 13in. deep—22 guineas (Page). 76. A magnificent circular table top, formed of the rarest Cloissonne enamel, in which are introduced a number of figures in conference, seated in the foreground, various buildings filling up the background, 3ft. diameter—£85 (Durlacher). 79, &c. A pair of noble china vases, with large figures and other devices, 3½ft. high; a suite of costly joss decorations as a centre for incense; a pair of altar candlesticks; a pair of vases, very richly designed, and enamelled with various devices; and a large Cloissonne enamelled vase, inlaid with flowers on blue ground—£53. 10s. (Nixon).

COLE V. THE AGRA AND MASTERMAN'S BANK.—Mr. Selwyn (with whom was Mr. Begg) moved for an injunction in this case to restrain the Agra and Masterman's Bank from prosecuting an action against the plaintiff, Colonel Arthur Lowry Cole, in respect of a three-months' bill for £10,000, which Colonel Cole, a Mr. Druce, and Messrs. Shield, the railway contractors, made themselves jointly and severally liable to pay. The application was based on a statement by the plaintiff that the manager of the bank, at the time the note was negotiated, distinctly understood that Colonel Cole was not to be looked upon as further responsible on the note than to see that it was eventually paid out of the Daventry Railway Company's funds, when such company should be sufficiently established to honour the advance made upon the security in question. This representation of the plaintiff was distinctly denied by the defendants, and the plaintiff's counsel not being instructed to undertake to pay the money into court to abide the issue, his Honour refused the motion without hearing the other side. Mr. Baggallay and Mr. Dickinson appeared for the Agra and Masterman's Bank.

LONDON, THURSDAY, FEB. 16, 1865.

THE JAPANESE POLICY OF INTIMIDATION.

IN our issue of the 26th ult., we briefly commented on the terrible tragedy enacted in the environs of Yokohama, expressing the hope that matters would be promptly adjusted, instead of being allowed to remain over and gather strength, as in the case of Mr. RICHARDSON,—indicating the results to be anticipated from shaping our course in Japan in the light of that experience we have gained in dealing with the Chinese, in critical junctures, during the last twenty years. There is no material difference between the Japanese and Chinese. It is to be hoped that Sir RUTHERFORD ALCOCK did not suffer the fact of his recall to interfere with demands for large redress, and that such demands were not limited to the delivery of the murderers to the British authorities. The author and abettors of the bloody deed, and the motives by which they were actuated, is no impenetrable mystery. As to the two-sworded assassins, we know whence they came and whither they went. Emissaries of the MIKADO, they but did their master's bidding, choosing their own time and selecting their own opportunity. The implicit obedience of the Yaconins to superior authority excludes the idea that they sought to gratify their own personal resentments. These murders constitute a State crime, for which the State must make atonement; and this, to be effective, must be such as the Government and the whole empire will feel keenly and acutely, otherwise we have but to anticipate a repetition of like deeds, deadly attacks on foreign residents similar to those made on merchants of Osaca to restrain any dealings with us through their Yokohama agents. The refusal of the MIKADO to ratify the arrangements made with the TYCOON's Government after the forcing of the Simonoseki Straits, even to the extent of paying the indemnity, proves that late events have but quickened the hostility of the Court of Kioto, and that no means will be spared that malice and cunning can suggest to extract from new concessions all their value. In the abstract, it is of little concern to us what this Spiritual EMPEROR approves or disapproves; possibly we should have gone to him at the first instead of the TYCOON; but having recognised the latter as Sovereign of the empire, we abide by this recognition, and refuse, so far as our own action is concerned, to await the endorsement of the MIKADO. As surely as a crisis in affairs arises, as surely the MIKADO seeks to stretch his prerogatives at the expense of the TYCOON, aided in this by a powerful combination among the leading maritime Daimios. To touch this throned assassin to the quick, no means would be more effectual than that of giving the TYCOON assurance that we would espouse his cause, at all hazards, to the damage of his too encroaching rival, and against any hostile Daimios, and avert from him all dangerous consequences from his concessions. This, however, will be the work of time, and instant retribution is demanded. Our business is to take material guarantees should other satisfaction fail. We long since urged the military occupation of the island at the entrance of the Simonoseki Straits. There are other commanding positions within the Samuda Sea which might be seized with equal advantage, and held with still greater ease; whilst the blockade of the embouchures of the great rivers which empty themselves into this inner sea, would place two-thirds of the archipelago at our mercy. All this should have been done and done quickly, not in the blind and uncalculating spirit of vengeance, but in the interests of civilisation, the protection of that which we hold most sacred—the lives of British subjects. All the great Powers are of one accord in checking, by whatever means may be requisite, the Japanese policy of intimidation. Is it that they are to be foiled by superior cunning? Blood must be made to pay the price of blood even in Japan, and its barbarous rulers be compelled to eat, at the dictate of the hated foreigner, the fruit of their own doings. We understand that our Government sends out specific instructions to its representative in Japan in reference to the terms of reparation, and the means by which the satisfaction demanded is to be secured. These instructions include the demand for a heavy indemnity to the families of Major BALDWIN and Lieutenant BIRD. In the *Patrie* we find these demands detailed as follows, but we cannot endorse them:—

"We are assured that the English Government has sent imperative orders to its Minister in Japan to obtain immediate reparation for the murder of Major Baldwin and Lieutenant R. Bird, assassinated near Kamakura. This reparation will consist in a sum of not less than a million francs (upwards of £40,000) for the families of the two victims, and in the exemplary punishment of the guilty parties. To obtain this reparation as promptly as possible, the English Admiral will hermetically close the ports of Osacca, Yedo, and seize all the Japanese ships which may be found there."

THE JAPANESE QUESTION IN PARLIAMENT.

THE Parliamentary papers on Japan which have just been published, contains the correspondence of Sir R. ALCOCK detailing the reasons for attacking Simonoseki, and the convention made with the Prince of NAGATO and the TYCOON. These despatches will be noticed in our next issue. The last despatch of Sir RUTHERFORD ALCOCK relative to the murder of Major BALDWIN and Lieutenant BIRD constitute a summary of all the information we have of this tragedy. It is remarkable that Sir RUTHERFORD, with his knowledge of Japan, should regard the event as the mere result of a sudden and uncontrollable outbreak of temper on the part of the Yakonins. The contents of this letter, together with the circumstances attending the Simonoseki expedition, the subsequent arrangement with the Tycoon's Government, the motives which led to there call of Sir RUTHERFORD ALCOCK, the retribution and compensation demanded for the murder of the two British officers, and the character of the governmental policy to be applied to Japan, will constitute one of the inquiries to be addressed to Ministers. Rumour points to Mr. DISRAELI as the interrogator, and, doubtless, correctly, unless the honourable member should be anticipated by some too forward Liberal below the gangway. An active, and, possibly, acrimonious debate on our relations with Japan is imminent. The following is a summary of Sir R ALCOCK's despatch alluded to:—

The despatch from the British Minister adds some very important details to those previously known in England of the unhappy event it refers to, and much aggravates the horrible nature of the murders. As regards the actual commission of the offence, Sir Rutherford points to the evidence of a little boy, about eleven years old, as by far the most explicit and trustworthy. "He says he saw the two officers riding leisurely one after the other, the younger (Lieutenant Bird) first; and then two samurais, who had already roughly warned him to go away as there was danger, draw their swords and rush upon the unsuspecting travellers. The first was instantly dismounted, when the boy in terror took fright, and saw no more." What immediately followed remains in some degree veiled in mystery. The dead, it would appear, were removed, after an uncertain interval of an hour or two, to the vicinity of a tea-house, and there laid together on mats stretched on the ground, and a bamboo shed raised over them. Intelligence was sent to the head man of the nearest village, and from about 5 P.M. (the murders having been committed about 2 P.M.) they must be held to have been in his custody. A Japanese doctor was sent for, and he and others "depose to have been with the survivor, to have heard him speak, move his head, drink, or seem to drink, the medicine—until about 10 o'clock, when they say he died." "The horrible circumstance connected with these facts (continues Sir R. Alcock) is the evidence of the surgeons, after careful *post-mortem* examination of the wounds, that one which Lieutenant Bird received across the back of the neck had divided the spine across the bones of the second and third cervical vertebræ, completely severing the spinal cord at that point; and they declare that after receiving such a wound he could not have survived, but must have died almost instantaneously. The only inference upon such evidence is, that this unhappy victim of Japanese treachery received his death wound while in the custody of his keepers, and many hours after the first onslaught. . . . . The assassin must have turned over the helpless body of his victim and struck a savage blow down through the spine, so exactly in the line of the original wound as not to be distinguishable from the first, or thrust a sharp-bladed knife into the first wound, dividing the cord, and that only, almost with surgical precision. But this implies a degree of forethought and calculation, if not of scientific knowledge as to the functions of the spine of which I do not believe Japanese samurais capable." What could have been the motive for such consummate ferocity? The impulse that dictated it is no doubt

Digitized by Google

the one suggested by Mr. Consul Winchester, who says:—"The inference from these premises (if they can be depended on) is very sad, viz., that the ruffians, finding the prolongation of Mr. Bird's life rendered it possible that he might live to tell his story to some passing foreigner (for besides Mr. Wirgman's party at Fusisawa there were three or four Dutch naval officers who arrived at Kamakura or Fusisawa before dark, and remained at a tea-house about a mile distant from the spot), finished the hours of the unhappy youth by the *coup de grace* on the neck."

The difficulties that lay in the way of obtaining a correct and circumstantial account of what occurred are insurmountably augmented by the Japanese practice in such cases. The Governor of Kanagawa received intelligence of what had occurred between nine and ten o'clock the same evening, but he does not communicate with Mr. Consul Winchester till one o'clock the next morning, assigning very plausible reasons for the delay—such as having to find the Vice-Governor, having to walk two miles to the Consul's house, &c. The despatch observes:—"This was not very satisfactory, but unfortunately it was not without many precedents. It appears to be the invariable rule, in all cases where foreigners have been murdered, in the first place to send, for instructions no doubt, to the Government at Yedo, and despatch their own emissaries to the scene. The last step is taken, I believe, with the object principally of securing what evidence is to be had on the spot, and providing against any being given to the foreign Consuls, other than such as they, the authorities, shall deem fitting or expedient." Such a system on the part of the Government of course has its effect on the behaviour of the people. "The keeper of the tea-house and his wife obstinately refused to give any information." Mr. Consul Winchester pointed out to the examining officer that "the wounded men must have been discovered by some one person or party in the first instance, and that no one had been produced as first giving the alarm. He admitted this, and said that they had been actively trying to discover who the person or persons were. Also that the priests or officers of the great temple ought to be in a condition to give some account of the two samurai [supposed to be the actual murderers] stated by the sweetmeat seller to have gone up to the shrine to pray. The answer to this was an admission that such inquiries had not been made, and that they would at once be set on foot."

Sir Rutherford considers that the Tycoon and his council alike deplore the perpetration of such a crime, at this time more especially, and he thinks it very probable to be the act of those who are equally hostile to the Tycoon and to foreigners.

THE TAIPING REBELS AT AMOY.

EVIDENTLY the remnant of the Taiping hordes, dispersed after the capture of Nanking, are concentrating near the treaty port of Amoy, and committing the same murderous devastation in the surrounding country as they perpetrated within the environs of Shanghai. Fortunately for the British and other foreign residents at this port, they occupy an isolated position on the island of Amoy, which renders them comparatively secure from attack, should the rebels make a descent from the mainland. And if they are forced to leave their residences there they can retreat to the rocky islet of Koolangsoo, where, under the protection of four gun-boats and a corvette, their limited number may be safely lodged Meanwhile the merchants' hongs and property at the city of Amoy would be exposed to destruction by fire and *loot* if the rebels succeed in defeating the Imperial force in garrison at that place. Then will come again the question of defending this treaty port, and driving the enemy beyond a thirty-mile circuit with British and French bayonets, as at Shanghai and Ningpo. To do so would be an interference without doing much benefit to our relations in China; and it is quite consistent with the policy hitherto adopted by the PALMERSTON administration to exercise in this second outbreak the strict rules of non-intervention. Leave the business of driving them from Amoy and the province of Fohkien to the Imperial authorities, letting them understand that our forces will act only in defence of British life and property, and they will make greater exertions to send soldiers, disciplined and undisciplined, to the seat of war. If the mandarins calculate upon foreign assistance to quell this new insurrection, then with true Asiatic cunning they will step back from the work to save men and money. It is important therefore for them to know that, as far as England is concerned, they cannot reckon upon the aid of one British soldier or sailor to fight in their cause; and we understand that instructions to that effect have been sent to the Consul at Amoy, and the military and naval authorities at Hong Kong. The only awkward feature in this case is that the merchants' hongs are built up among the houses of the native city, not located in a separate settlement as at Shanghai and Ningpo. Consequently, if the Taipings attack Amoy, and the English forces are to defend the property of British subjects, they must to all intents and purposes guard the property of the Chinese, and repel any attack on the city, thereby virtually taking part in the civil war as before. Under these circumstances our representatives in China should peremptorily demand from the Imperial authorities a strong garrison for the city, to defend it at all hazards; otherwise, in the event of capture and destruction of British property by the enemy, they should be held responsible for the damage. This unsettled state of affairs at Amoy comes unfortunately upon the residents connected with the commerce of that port, at a time when it was just beginning to improve in the extent of its import and export trade, after struggling for twenty years—since 1844, when the port was first opened—to maintain a profitable traffic.

THE PRESENT AND FUTURE OF CEYLON.

THE last China mail brought the acceptance by Sir HERCULES ROBINSON of his Excellency's appointment as Governor of Ceylon. Sir HERCULES may be expected to leave Hong Kong in March or April. His Excellency's departure from Hong Kong will be regretted by many of the residents, for he has zealously worked at promoting the interests of the colony. It is evidently the intention of our SECRETARY of STATE to allow Mr. MERCER, the Colonial Secretary, to take charge—if only temporarily—from Sir HERCULES ROBINSON. Ceylon offers a fine field for his services. The effective admininstration of her Government, the extension of works of internal improvement, and other means of permanently benefiting the colony, demand an increase of revenue, not to speak of the claim lodged by the Home Government in the shape of a large annual charge for her defence. Notwithstanding the reputed wealth of the colony, the value of her products at prices not determined by cost of production but as appraised in distant markets, the large amount of specie she has received of late years from all parts, representing many millions of pounds sterling over and above what her residents require for the purchase of our manufactured products. It is to be remembered that a very considerable portion of her capital is owned in England, and remittances on this account make up a large proportion of her bank drafts. Ceylon has been admirably compared to a sieve which retains none of the golden grains that pass through it; she is for ever in the act of heaping up riches, which strangers gather. European residents, after speedily acquiring fortunes, take to flight; even the Malabar coolies make a point of regularly returning to India with their gains. With all the numerous plantations cultivated to such profit, a large region remains, like unavailable assets, untouched. With all the capital invested, capital is what is most required, and with upwards of two and a-half millions of natives, labour must yet be imported. Is it any wonder that in reference to ability to increase the revenue to meet the charge made by this Government upon her, and for other urgent purposes, misgivings should be entertained? What is the remedy for all this? Manifestly to turn the labour of the natives to account, to rouse them from their lethargy by adequate motives, making the Kandyans and Cingalese pay for the protection they enjoy, at least from the attacks of one another. The following are the antecedents of Sir HERCULES ROBINSON:—For some time he served in the 87th Fusiliers, after which he was actively engaged during the Irish famine, 1846-9, under the Commissioners of Public Works and Poor Law Board in Ireland. He was made Chief Commissioner in 1852 to inquire into the Irish fairs and markets. His next appointment was that of President of Mont Serrat, which he held until 1854, when he was made Lieut.-Governor of St. Christopher, with a dormant commission of Governor-in-Chief of the Leeward Isles. Since 1859 he has been Governor, Commander-in-Chief, and Vice-Admiral at Hong Kong, until he was translated to the Governorship of Ceylon last year. He was also a member of the commission appointed in 1863 to inquire into the financial position of the Straits Settlement. Sir HERCULES ROBINSON is not the man to be swayed by that weak sentimentality which would sanctify laziness rather than give a shade of compulsion to labour. We are very confident that the policy he will inaugurate will be that of taxing the natives up to a point that will compel them to forego their day dreams under cocoanut trees, and otherwise stimulate them to contribute their aid to the cultivation of the leading island staples. This Pandora of islands will, under a vigorous rule directed to the organisation of native labour, enter on a new career. Abundance of labour will do much to invite additional capital, to be followed by a greater influx of Europeans and the introduction into society of more permanent elements. The position of Ceylon, her varied resources, her climatic advantages, are a guarantee for her future; but her rate of progress altogether depends upon the mode in which the Government shall deal with that gigantic evil which crouches behind her acknowledged resources. The following comments are from a contemporary:—

Digitized by Google

"The limited liability companies established last year in London, for purchasing various coffee estates, bringing them under one management, and extending the area of cultivation, cannot fail, if judiciously conducted, to secure high dividends for their shareholders, judging by the large returns to individual proprietors. We have reason to know that arrangements are being made for additional combinations, bringing together adjacent plantations. There are millions of acres of fine forest land awaiting the enterprise of additional companies—land suitable for the cultivation not only of coffee, but spices, indigo, and other valuable products. A Ceylon dye-wood or plumbago company, with practical managers, would give high returns, and an additional opening for good profits will be found in the extraction of cocoa-nut oil. Had the resources of this island been better known, more capital would have been turned upon it. Individual fortunes are there proverbially acquired with rapidity, yet such is the want of monied accommodation in operations connected with its trade, that from 10 to 12 per cent. discount is charged by the local banks on good mercantile bills, whilst in the Colombo bazaar it is no less than 25 per cent.; and this in a colony which can obtain returns from Madras and Bombay in two weeks' time, and which, within the last fourteen years, has received £12,000,000 in specie from the mints of India and the gold-fields of Australia. The amount of foreign bills negotiated at Colombo reaches £4,000,000 per annum. The local circulation of the Oriental Bank Corporation and Chartered Mercantile Bank of Ceylon, which are authorised to issue notes against a reserve of cash equal to one-half of their weekly average circulation, exceeds £300.000 and the floating and permanent balances of customers of these institutions £1,250,000.

DEATH OF COLONEL GORDON'S OFFICERS.

We notice with great regret in the latest advices from China that two of the gallant fellows who held prominent positions in Colonel Gordon's force have succumbed to disease, which has laid them low after passing unscathed through all the extraordinary perils from which neither Gordon nor the best of his officers seem ever to have shrunk. Captain Charles Davidson, who commanded the steamer *Hyson* from first to last, and Colonel Tumblety, who latterly succeeded to the command of the 1st Regiment, are the two officers whose loss we have to record. Both, we are informed on good authority, were highly respected and trusted by Colonel Gordon, who was not too well provided with men whom he could either trust or respect. Captain Davidson was Irish by birth, and possessed, under a rough exterior, the most distinguished attributes of a truly gallant sailor. We cannot do better, in seeking to commemorate his services, than by extracting from an article in the *Cornhill Magazine* for November last, the following paragraph on this subject:—

"The undaunted captain of the *Hyson*—a man more capable of fighting a battle against enormous odds than of subsequently penning a report of his victory, but utterly inaccessible to the bribes which were frequently offered him as the price of desertion with his vessel—handled this curious little war vessel with such daring and discretion, that the mere sight of the smoke from her funnel was sufficient to put to flight a rebel army."

The *Hyson*, indeed, throughout the whole of Colonel Gordon's campaign, was constantly spoken of as rendering most invaluable assistance. We have seen a private letter of the gallant Colonel's, in which he says:—

"Captain Davidson contributed most materially to nearly every action, more especially in the capture of Quin-san, Soo-chow, Ye-shing, and Le-yang. The evacuation of Hoo-chow-fu may also be attributed to his skill and courage, since, pushing his steamer over the barriers in the creek, and passing the forts at full speed, he took them in rear and compelled their surrender, which subsequently entailed the abandonment of the city. He was a gallant, hardworking, zealous, and trustworthy man, and I deeply regret his loss."

Colonel Tumblety was one of those brave and self-taught characters who rise literally from the ranks, having been at the outset a private in H.M.'s 99th Regiment. Taking his discharge from the Queen's service, he obtained a position in Colonel Gordon's force, and rose eventually to the command of the 1st Regiment. Previously to this he had on more than one occasion been entrusted with the command of detached expeditions, in which his conduct gave uniform satisfaction, and at the time of the dissolution of the force he was one of the officers of longest standing. It is with the most genuine regret that we discharge the mournful duty of recording the untimely end of both these gallant fellows; but their friends we trust, will feel it a comfort to know that the memory of their brave and honest work has not passed out of sight. We have little doubt that the intelligence of their death will be most regretted by Colonel Gordon, who was the best able to judge of their services.

OPENING OF THE LINE BETWEEN BAGDAD AND BOMBAY.

The completion of telegraphic communication between Bagdad and Bombay is likely to give an impetus to the scheme, long advocated in these columns, of an overland line from India to Western China, thence branching to the foreign Chinese settlements. The route has been, we understand, pronounced practicable by competent engineers, whilst an overland line is peculiarly free from the dangers that attend oceanic telegraphy. Absolute confidence cannot, after past experience, be felt in the new transatlantic cable, but, even if successful, and with a line stretching to the extreme north, along the Pacific shores, we shall yet be dependent—to our own disadvantage—on the Russian system of communication about being extended over the Manchurian Plain. The arrangements between Bagdad and Constantinople are not yet completed, and hence messages from London to Bombay cannot yet be sent.

A LEGAL VICE-CONSUL FOR SHANGHAI.

We understand that it has been quite decided on to appoint a gentleman versed in legal lore to preside over the numerous cases that now present themselves at the Consular Court in Shanghai. This step has been long advocated by us, but we doubt if the present incumbents of the Consulate, or the community, will when it comes to work be so well satisfied as with the present state of things. We trust, however, that the appointment may fall on a gentleman who will discharge the duties with urbanity, and a due regard to the experience of the older functionaries in the Consulate. This is the danger.

THE NEW CONSUL FOR THE PHILIPPINES.

George Brackenbury, Esq., recently appointed Consul at the Philippines, served in the Consulate at Cadiz from January, 1848, to May, 1852; was Acting-Consul from May 26 to October 4, 1851; was secretary at Kadikoi to the honorary agents of the Crimean Army Fund from December, 1854, to June, 1855; was appointed clerk to the mission and Consul at Madrid, May 12th, 1858; and appointed Consul at Charente, January 1, 1864.

Appointments.—The Queen has been pleased to approve of Mr. Gustavus Overbeck as Consul at Hong Kong, for His Majesty the Emperor of Austria. Mr. Henry Calice as Consul at Liverpool for His Majesty the Emperor of Austria, and M. Hussein Lebbé Marcair as Consul at Colombo for His Imperial Majesty the Sultan. The Queen has been pleased to appoint Martin Crofton Morrison, Esq., now Her Majesty's Consul at Tangchow, to be Her Majesty's Consul at Kiu-Kiang; and Mr. Robert Swinhoe, now British Vice-Consul at Taiwan, to be Her Majesty's Consul at Taiwan.—The Queen has been pleased to approve Mr. Giovanni Edoardo Leveson as Consul at Singapore for His Majesty the King of Italy; and Mr. Julius Menke as Consul at Hong Kong for His Majesty the King of Hanover.

SAM MENDEL'S TABLES.

The value of comparative statistics, as affording data for future calcuation, has never been more fully recognised than at the present time. The labour they involve may be overlooked, but the results are amply appreciated where applying to commercial and financial affairs. Sam Mendel's tabular statistics of exports to the East from our chief ports of plain cottons and yarns, and of their average monthly prices, together with the corresponding average of Bank rates, price of Consols, and the bullion held throughout the last ten years, are for this and other purposes of especial value. Our available stock and export of specie necessarily affect the value of our productions, touching the pockets of manufacturers, and controlling the profits of our merchants. As to the probable demands of distant markets, from time to time, these can now generally be estimated with marvellous accuracy, an operation materially aided by extended telegraphic and steam communication, and improved acquaintance with the demands of our foreign customers. The export of plain cottons to Hong Kong in 1864 was 21,035,013 yards, being nearly 8½ million yards in excess of the quantity sent out in 1863, but falling short by one-third of the shipments of 1861 and 1860, and also below that of several previous years; indeed, in 1864 we hardly sent out more than in 1855. To Shanghai 36,674,459 yards were exported, an excess of 13,000,000 yards over 1863, but under the quantities despatched in any of the previous eight years, in which our shipments of plain cottons to this port have ranged from upwards of 44,000,000 to 158,000,000 yards. The quantity sent to Manila last year was 6,454,608, an improvement over 1863, but a heavy decline in the shipments of the previous eight years. The quantity of plain cottons shipped to Ceylon last year was 7,261,798 lbs.; less than half the export of the previous year, and still more disproportioned to each of the years from 1858 to 1861, inclusive. Batavia shows a large falling off in demand throughout the series of years, the exported quantity in 1864 being but 7,541,574 yards. Of yarns, the export to Hong Kong last year was 1,601,810 lbs.; two-thirds of the amount shipped in 1863, and a still smaller fraction of the quantities sent in the previous years up to 1858; in 1859 we despatched upwards of 9½ million lbs., and in 1860 upwards of 7½ million lbs. of yarns to that part. Our export of yarns to Shanghai in 1864 was 157,249 lbs.; exceeding that of any previous year, except 1858, when 274,400 lbs. were shipped. The export of yarns to Singapore in 1864 reached 1,249,492 lbs.; half a million pounds less than in 1863, and a heavy decline on many previous annual shipments. To Manila, 122,980 lbs. were exported last year, being four times the quantity of 1863, though falling short of that sent out in several previous years. To Batavia, the annual shipment has fallen off one-half, the quantity for 1864 being 294,925 lbs.

Digitized by Google

To Ceylon, the yarns exported in 1864 reached the merely nominal figure of 183,639 lbs., whereas the export for 1863 amounted to 678,649 lbs., the nearest approaches to which latter figure were in the years 1860, 1858 and 1856. The large shipment for 1863 fully accounts for the falling off.

EXPORT OF BULLION.

The circular of F. M. Page, just issued, exhibits last year's shipments of specie to the East, the points of distribution of what, for the most part, must be considered as an adverse balance of trade, which we have been unable to discharge by the export of manufactures. The total sum thus sent out in 1864 reached in value £24,318,189 against £21,455,844, or a sum equal to the annual produce of the mines of Australia, California, and British Columbia! Nor does this aggregate really include the whole discharge of that indebtedness which our purchases and investments in the Far East have entailed; consignments of gold, upon British account, being now sent thither direct from the Pacific gold fields. The shipments to China and Japan in 1864 reached in value £2,199,156, of which sum £49,368 was in gold, £1,539,961 in Mexican dollars, and £609,827 in bar silver and coin; as compared with shipments of the previous year, there is a decrease in those of 1864, amounting to £877,208. The sum sent to Ceylon in 1864 was £79,632, against £116,921, and was chiefly for transmission to Australia, from which country together with India, Ceylon obtains directly those large sums of specie received for her chief staples. To Singapore, for payments at Penang, Batavia and Saigon, we shipped in 1864 the sum of £965,780, against £796,501 in 1863. Not a single Mexican dollar was sent to India; the amount of these coins shipped for Penang, Batavia and Saigon was £900,063, being more than half the amount taken up by China and Japan.

MURDERS IN JAPAN.

(THE TIMES.)

Japan has not failed to contribute by this mail its periodical tale of murder. About every three months we seem regularly to receive from that part of the world intelligence of some unprovoked and sanguinary outrage, to which one or more of our countrymen have fallen victims. Sometimes these Japanese swordsmen attack our Embassy House; at others they cut down a riding party of European ladies and gentlemen; upon this occasion they have cut to pieces two English officers who were engaged in sketching the caves and temples in one of the most picturesque spots among the Japanese islands. It was not an act of robbery, for the watches and other property of the victims were untouched. It was not a quarrel and a fight, for the arms of the murdered men were found loaded. It was a sudden surprise and a murder of malice. It had, in fact, all the characteristics of an ordinary Japanese murder, such as we are always vainly endeavouring to punish. All the circumstances are brought out clearly in the investigation held by the British Consul, acting as coroner, and no mystery can be fairly said to exist as to the manner in which this murder was committed. One fact is remarkable, and that is that, although the country people cannot be made to tell who the Japanese officers were who committed this atrocity, they seem to have felt sympathy for the sufferers, and came in immediately to communicate the fact. When the swordsmen had surprised and murdered their victims and mangled their bodies, and had left them on the road, the peasantry came about them with kindly intentions, and the property upon the persons of these murdered men seems to have been safer than it would have been in some more civilised countries. Let us not, then, involve all the Japanese people in our cry for vengeance. It is plain enough that this is only another explosion of that fanatical hatred of foreigners which exists among the old feudal chieftains of Japan. When a Japanese chief and his swordsman come upon a foreigner his first instinct is to set his swordsman upon him and put him to death. If the European happens to have taken up part of a tea-house or priest-house in which it was the chief's pleasure to lodge, the incentive to homicide is greatly increased; and if he has been obliged to pass on quietly, under awe of the revolvers of a party with whom he could not cope, he will probably give way to the first safe opportunity of indulging his hatred and his love of blood. It is not difficult to relate how this murder took place and to account for the feelings by which it was brought about; but to explain an act is not to justify it, and to account for it is not to punish it. The question is how in such cases we can exact punishment for the past and security for the future. We cannot go to war with a whole people every time a barbarous chief commits a murder. Yet we cannot allow our countrymen to be cut to pieces by any Japanese savage who may choose to resent their being on the same road with him. Sir Rutherford Alcock is said to have taken up the matter with resolution, and we hope we may bring it to the only conclusion which can be satisfactory; that is to say, the apprehension and condign punishment of the persons who perpetrated this murder, and also of those who instigated the crime.

COLONEL SYKES ON CHINA.

The following letter appeared in the *Star*, signed M.:—"In your issue of the 31st ult. I observe the redoubtable Colonel Sykes has again taken the field—of Chinesse politics, and gravely informs your readers that 'in case San-ko-lin-sin, the Chinese Commander-in-Chief impeaches Tseng-kuo-fan, a statesman of high rank, there will probably be bloodshed and a *coup d'etat*, and as both are hostile to foreigners the position of Europeans in Peking during the struggle will be critical.' I will not, in reply to the gallant colonel, remark that 'in case' the sky should fall it would 'probably' be all over with the larks, but I would ask him simply whether anything is more likely to secure the safe position of foreigners in Peking than that those hostile to them should quarrel among themselves? We have already had one *coup d'etat* in Peking since the war, and Shun-paou, a statesman of the highest rank, was beheaded; but, so far from the foreigners there being endangered thereby, one of the most inqusitive of their number actually went to see the execution. The state of China is, indeed, but too lamentable. Disorder prevails in many parts, and it is hard to say whether the old Government can ever again recover its former power. But if we wish the people of China ever again to enjoy the blessings of peace and security, it will be well for us, who will have one day to answer for all the evil we have done to that country, to refrain from giving any sympathy to the lawless and turbulent among them, who, emboldened by the weakness of the authorities, raise their hands against all order and society. Corrupt, indeed, the Chinese officials are, but these leaders of the rebel bands are almost, without exception, incarnate demons, who shed the blood of their own countrymen without any feeling whatever, and for no other end than that they themselves may riot for a while as chiefs—may have a 'merry life' if a short one. Our interest, then, clearly lies in supporting the policy pursued by Sir Frederick Bruce during the last four years; namely, not only to abstain from encouraging revolt, but to lend all the aid in our power towards strengthening the Chinese Executive, so far and in such a way as may be consistent with our honour and the sovereign rights of the Chinese nation."

Naval and Military.

The following, we find, are the particulars of the Princess Royal, the flag-ship of Admiral King, at present serving on the East India and Cape Station, who has been appointed successor to Admiral Kuper, on the China Station. The Princess Royal is a steam-ship of 3,129 tons, 73 guns, and 400-horse power. The following is a list of her officers:—Rear-Admiral Geo. St. Vincent King, C.B.; Flag-Lieut., Richard H. D. King; Secretary, Frederic Penfold; Clerks to Sec., C. T. Dawson, A.P., C. Mackern, A.P.; Captain, William S. Jones; Commander, Alexander Buller; Lieutenants, G. W. Carter, Geo. Rivington, T. H. Royse, T. F. P. Maclear, Lord W. T. Kerr, F. W. Lowther; Master William F. Hains; Captain Marines, John F. Sanders, 1st. Lieut. Marines, G. A. G. Martin; 2nd Lieut. Mar. Art., Augustus J. Hill; 2nd Lieut. Mar., Archibald M. T. Gibson; Chaplain, Rev. Henry E. Yeoman, M.A.; Surgeon, Francis E. Toms; Paymaster, James F. Phillips; Nav. Inst., J. W. Lawless; Chief Engineer, Edwin Boulton; Sub. Lieuts., W. C. J. Blount, H. W. Dowding; Additional, Nesbit G. Willoughby, Dudley C. Stuart; 2nd Master, Thomas L. Morinlyan; Asst.-Surgeons, Robert Hague, Alex. Goodall (act.); Asst.-Paymasters, Francis P. Lyne, John S. Scriven.

It appears that, as we are not prepared with a line-of-battle ship to replace the Bombay, destroyed by fire, we have been compelled to fall back upon a frigate, and in consequence the Narcissus, which was we believe originally intended to relieve the Euryalus, on the China station, has been selected to proceed to the Brazils, to receive the flag of Rear-Admiral the Hon. Charles G. J. B. Elliott, C.B. The Narcissus was only admitted into the first-class steam-reserve last October, so she will not be ready for sea for some weeks.

We understand that Captain Jasper H. Selwyn (1858) has applied to the Admiralty for the command of one of the vessels which may be ordered to accompany the Great Eastern on her approaching trip across the Atlantic.

The following notification relative to the increase of pay of regimental sergeant-majors has just been issued:—"Victoria R.—Whereas, it has been represented to us that it is expedient to us to improve the position of regimental sergeant-majors of regiments and battalions of our infantry of the line, our will and pleasure is, that the pay of such sergeant-majors shall, from the first day of January, 1865, be raised from three shillings and twopence to three shillings and fourpence a day. Given at our Court at St. James's, this 7th day of January, 1865, in the 28th year of our reign. By Her Majesty's command, De Grey and Ripon."

The 8th company of Royal Engineers, which recently arrived at Chatham garrison from China, has been raised to its proper complement from the depot and other companies at Brompton barracks, and will shortly leave the Royal Engineer establishment for Woolwich, there to relieve the 9th company. The 8th company, from its lengthened service in China, returned to this country more than one-half below its proper strength.

Col. Elmhirst, who has lately been in command of the Depôt Battalion at Colchester, has been appointed Deputy-Quartermaster-General at the Cape of Good Hope. The depôts of the 63rd and 84th are expected to arrive at Colchester this week. On the breaking up of the 9th Depôt Battalion a rearrangement of the camp accomodation is to be carried into effect; the 10th Depôt Battalion will occupy A, B, and C ranges, and the 4th Depôt Battalion D, E, and F ranges.

The following promotions are gazetted in the 20th Regiment, owing to the death of Major Baldwin and Lieutenant Bird:—Captain G. E. Francis to be major, vice G. W. Baldwin, murdered in Japan; Lieutenant H. F. G. Webster to be captain, vice Francis; Ensign C. T. Doorly to be lieutenant, vice Webster; Ensign H. H. Leeming to be lieutenant, vice R. N. Bird, murdered in Japan; Ensign W. R. L. Brackenbury, from 100th Foot, to be ensign, vice Doorly; Ensign W. F. Rudman, from the Military train, to be ensign, vice Leeming.

Literature.

The great event in the literary world is *The Life of Cæsar*, by LOUIS NAPOLEON, which is expected to appear about the end of this month, although crowned heads and other celebrities will have received copies previously to that time.—Messrs. Moxon publish *Evenings in Arcadia*, by Mr. JOHN DENNIS, being a series of criticisms on history, and Messrs. Tweedie a volume on *The Study of the Human Face*, by Mr. WOOLNOTH, purporting to show how you may judge of a man by his appearance.—There is a new edition of Mr. SALA'S *My Diary in America in the Midst of War* (Tinsley), containing some additional notes

Digitized by Google

by the author, who is very severe on the Northerners.—Mr. Byron, who has hitherto been chiefly known as a very successful and amusing burlesque writer, has appeared in a new light. His novel, *Paid in Full* (Maxwell), is very clever, and shows great knowledge of the world.—We have received a copy of *The Book of Perfumes* (Chapman and Hall), by EUGENE RIMMEL, which is one of the prettiest books of the season, being well bound and illustrated by good artists. It is, moreover, beautifully scented, thereby carrying with it a proof not only of Mr. Rimmel's powers as an author, but also in the art of which he is so thorough a master.—There are several aspirants to poetical honours, among whom Miss EDWARDS, authoress of *Barbara's History*, prominently figures, although we think she has mistaken her vocation in relinquishing prose writing for verse.—*Chambers's Journal* of January 28, among other articles, contains an interesting notice, entitled *Four Weeks with the Mongols*, describing the habits and mode of living of that wild people.—We have received a copy of a work entitled *The Joint-Stock Companies Directory*, published by Messrs. Barker, Birchin-lane, which contains a list, alphabetically arranged, of all the companies, with their directors, amount of capital, place of business, &c. These companies include railways, banks, finance, insurance, mining, hotels, &c. It is a most laborious compilation, and one which must prove useful. Messrs. Longman and Co. have a number of classical works in the press which will now very shortly be forthcoming.—*Fraser's Magazine* for February contains an article on rebellion, diplomacy, and progress in China, which is evidently written by an old resident in China, and one who thoroughly understands his subject.

Sequel to Life in the Far East, by J. T. THOMSON, and *Our Tropical Possessions in Malayan India*, by JOHN CAMERON, a resident at Singapore, have just been published, and will be reviewed in our next.

The Chinese and Japanese Repository for February far exceeds its usual standard as regards interest for the general reader. The number opens with "a Sketch of the Corean Language and Grammar," from the French of M. Leon de Rosny, from which we learn that the Coreans, unlike the Chinese and Japanese, possess a real written alphabet, that is to say, a series of distinct vowels and consonants—thirteen of the first and fourteen of the latter. The language, as might be expected, contains a considerable admixture of Chinese and Japanese words. The paper by Mr. T. Braddell, on "the Ancient Trade of the East and the Indian Archipelago," gives promise of being, when completed, a most excellent summary of what is known on the subject. The Port of Iloilo, in the Philippines, has become such an important place of trade that Mr. Vice-Consul Loney's instructions for safe navigation in those waters are exceedingly opportune. Another valuable paper is a translation of nearly the whole of a Chinese work "on Cultivating the Mulberry and Rearing the Silkworm;" and we have, lastly, two or three pages of amusing extracts from Chinese Histories and Fables.

Continental Intelligence.

HOLLAND.

(FROM OUR OWN CORRESPONDENT.)

ROTTERDAM, FEBRUARY 8.

Mr. J. P. Hofstede, our Postmaster-General, is about to leave for Brussels to negotiate a new postal treaty with the Belgian Government.

Some days ago Multatuli's drama, "De Bruid Daarbaven" (the Bride in Heaven), was performed at our theatre, and also at Utrecht. The houses were crowded, and the success was complete. I have seldom seen a dramatic piece better performed in all its parts, or more finished and satisfactory in its *ensemble*. The only fault that could be found in the first night's performance was that the piece was too long, but this objection has been removed by the process of excision. At Utrecht Mr. Douwes Dekker received a serenade from the students.

The scandal caused by the article inserted in our periodical, *De Gids*, has not yet ceased, notwithstanding the author, Mr. Busken Huet, is not to contribute in future to that periodical. Several severe pamphlets have been published during the past week.

Per last mail three Japanese officers arrived at the Hague. They will return direct to their country, after having ordered a quantity of machinery for account of their Government, which will be manufactured in our principal establishments.

His Majesty has superseded at his own request Mr. G. Kohler, Consul-General at Sydney, New South Wales.

Mr. H. Rochussen is appointed Consul for Portugal at Batavia.

LAUNCHES.—At the yard of Mr. J. Smit Cs, at Alblasterdam, the clipper frigate Koffyboom (675 lasts), built for account of Mr. F. Fokkens, of Delfshaven. And at the yard of Jan Smit the frigate Cornelis Wernard Edouard, for account of Messrs. W. Ruys and Zonen of Rotterdam. Both vessels are destined for the East India trade.

COMMERCIAL.

COFFEE.—The communication of the Trading Company, that on the first public auction, which will be held on the 15th of Feb., 87,200 bags will be offered, and that in the four following months the same quantities are to be sold, made a very favourable impression in the market. Several transactions took place, almost at unaltered quotations. 760 b. Java, ex Ida Elizabeth, changed hands at prices that did not transpire; 1,450 b. ditto, ex Sverige, were sold at 47½c., and 350 b. ex ditto, at 48½c.; 1,000 b. Padang, ex Vooruit, at 45½c., 800 b. ex ditto at 45¼c., and 370 b. at 50c.; 1,000 b. Brazil, ex Virginie, were willingly taken at 35c. to 38c., likewise 1,000 b., ex Sverige, at 45c. On the 1st inst., 13,800 b. were offered here at private auction, which were sold at 44c. to 49c. General stock in Holland, 626,800 bags.

TEA.—The market is not so firm; 204 ¼-ch. finest Kaiston Congou, mark AD, were sold at 110c., and 108 ¼-ch. and 109 ½-ch., fine Congou, [B], at 80c. For the lower sorts there is more inquiry. Actual stock, 11,700 ¼ch., against 13,600 ¼ch. in 1864.

SUGAR (Raw).—The market remains in a very unsatisfactory condition. There are but a few transactions, because the sellers decline to operate without an advance in price. The quotation now is 2f. lower than at the end of December, as an improvement cannot be waited for, as the stock, both in Europe and America, is not favourable for an improved condition of the market. Our stock in entrepot consists in 21,000,000lbs., at the Trading Company's, 36,148 Kranjangs, and in the first hand, 34,072 Kranjangs; total, 70,220 kr. Refined sugar was in more request at the somewhat lower quotations.

RICE.—Very calm; only 879b. Java, ex Henriette, were sold at a very high, but secret, price. Importers have shown, in consequence of the high quotations at London and Java, and seeing the quantity afloat reduced to 41,200 bags, great firmness.

SPICES.—Dull; only 825 bags pepper, ex Balder, were sold at 20 c. *entr.* The unsold quantities of the Trading Company consist in 2,247 c. nutmegs, 571 c. mace, 1,422 c. cloves, 1,155 fard. cinnamon, and 843 b. pepper.

TOBACCO (JAVA).—The market is rather more active; on the 10th inst several parcels will be offered at public auction, besides a large quantity of Manila cigars.

COTTON.—Influenced by the unsatisfactory state of affairs in America, there has been no speculative inquiry since our last report, and scarcely any demand for export.

BANCA TIN.—The market which was very dull in the first days after last report, with scarcely any demand at 55½f., is now very agitated, by the disposition of the Minister of the Colonies that only one public auction will be held this year in the month of June, instead of four quarterly auctions, as it was stipulated before, and on which determination speculation was founded. The prices suddenly mounted to 60f., and notwithstanding advances are willingly offered, holders decline to operate. Stock in second hand on warrants 62,677 bl. Stock at the Trading Company's for the following auction 108,598 bl.; delivered since the last auction 117,594 bl. In other metals there is nothing doing.

INDIGO.—There are no transactions to report the market, however, remains in a firm condition.

COCHINEAL.—Prices are very firm, with more demand.

COCOA OIL (COCHIN).—Is paid with 25½f.

ARAK.—The quantities offered here by inscription, consisting of 181 casks ex Frederick Warren, 40 do. Batavia, ex Dixon, and 100 do. Sourabaya, ex Ajax, are not sold.

RATTANS.—Only a limited business is transacted, consisting of 2,445 bundles ex Tweelingen, and 2,325 bundles ex Affiance.

SAGO MEAL.—Sold 1,999 c. ex Voor uit from Padang, at prices kept secret.

GUMMI D'AMAR.—Sold 200 ch. at higher prices, and 33 ch. Gum Elasticum.

MONEY.—Discount: Bank rate for acceptances, 5 per cent., for bills; 4½ per cent.; open market, 4¼ per cent. Money was easy. N.W.S, 2½ per cent., 62½ per cent.; 3 per cent., 73¾; 4 per cent., 96¾ per cent. Handelmaatschappy, 142; Central Railway Co., 112; Dutch-Rhenish Railway (shares), 309½ to 311; Netherl. Bank, 230; Neth. Ind. Bank, 93; European Bank, 101. Thus far the fall in the value of money has not given the usual stimulus to the prices of public securities. This must apparently be sought in the condition of trade throughout the country, and in the recent movements of speculations.

CHANGE on London, 3 m., f.11.58; 2 m., f.11.63; short, f.11.73; on Paris, 3 m., f.46.01; 2 m., f.46.15; short, f.46.65; on Hambro', 3 m., f.34.87; 2 m., f.35.00; short, f.35.18.

SHIPPING.

ARRIVALS.—Jan. 30: At Brouwershaven, from Batavia, Orange Nassau; at Texel, from Samarang, Anna. Jan. 31: At Brouwershaven, from Batavia, Henriette Gerardina. Feb. 1: From Padang, Prinses Amalia. Feb. 2: From Batavia, Kosmopoliet, Almonde, Batavia, Minister Thorbecke, Bastiaan Pot. Feb. 3: At Texel, from Batavia, Eliza Henriette. Feb. 5: At Brouwershaven, from Batavia, Alblasserdam, Ary Scheffer, Johannes Lodewyk. Feb. 6: Maria Elizabeth, Kanagawa. At Texel, from Batavia, Cornelia Adolphine, Amsterdam, Loevestein. Feb. 7: Mathilde, from Tjilatjap, Batavia.

DEPARTURES.—Jan. 21: From Hellevoet to Batavia, via Capetown, Maria Johanna. From Texel to Sourabaya, Willem Daniel. To Batavia, Willem Hendrik. Jan. 26: From Brouwershaven to Batavia, Whampoa.

Feb. 1: From Brouwershaven to Batavia, Triton. Feb. 4: From Hellevoet to Decima, Japan Packet. Feb. 6: From Hellevoet to Samarang, Maria Magdalena. Feb. 4: From Texel to Sourabaya, Capella. Feb. 5: From Zierikzee to Melbourne, Burgemeester Hoffmann. Feb. 7: From Hellevoet to Samarang, Maria Magdalena.

LOADING AT AMSTERDAM.—For Kanagawa and Decima, D. T. Visser, Jacqueline and Elise, Julie. For Padang, Pauline Constance, Eleonore. For Batavia, Ferdinand and Louis, Almelo, India Packet, Staatsraad van Ewyck, Krunpenerwaard. For Batavia and Samarang, Galilei, Madura, Koning Willem II., Verhouwen. For Batavia and Sourabaya, Anna and Sophia, Maria Regina. For Samarang, Estafette, Sliedrecht, Stad Leyden. For Sourabaya, Baltimore, Petronella, Quintet.

READY TO SAIL.—Wilhelmina, for Batavia; Quatre Bras, for Macassar; Concurrent, for Batavia, via St. George d' El Mina.

Monetary and Commercial.

At the meeting of the London and County Bank the available total, including a previous balance of £21,726, was stated at £141,158, and a dividend of 6 per cent., with a bonus of 12 per cent. (making 18 per cent. for the half-year), were declared, leaving £18,629 to be carried forward. The paid-up capital is £740,675, and the reserve fund £240,675, and the liabilities are £12,211,353, of which £9,779,754 is for deposits and £2,431,599 on acceptances.

The proprietors of the National Bank have held their 30th annual meeting; Mr. J. N. M'Kenna in the chair. The report, which showed £104,009 net profits carried forward on the year, after paying the usual dividends, was unanimously adopted; and the directors announced that out of their present rest, which amounts to £773,000 they will recommend an allocation to capital of £300,000 in 10,000 shares, £30 paid up, to be presented to the shareholders at Midsummer free of charge. We noticed lately that this bank had entered into arrangements for the Bank of Hindustan to draw upon them. The standing of the National is such that the £30 share is now worth £90.

The Asiatic Banking Corporation have notified their intention to increase their paid-up capital from £500,000 to £1,000,000 by an issue of 25,000 new shares, of £20 each, of which 5,000 has been taken up in London, at a premium of £15.

The dividend of the Comptoir d'Escompte for the half-year ending the 31st December, is 27f. 50c. per share. It is larger than from the troubled state of commerce in the last six months was to have been expected. For the whole of the year 1863-4 (the year ends the 30th June) the Comptoir distributed 59f.; in 1862-3, 42f.; in 1861-2, 39f.; and in 1860-1, 44f.

The Labuan Coal Company and the China and Japan Steam Navigation Company have agreed to amalgamate under the title of the China Steam Ship and Labuan Coal Company. A prospectus has been issued, which appears in our advertising columns, inviting the subscription of shares. This amalgamation is in every way discreet and beneficial to the shareholders.

The report of the directors of the Telegraph to India Company (Limited), submitted on the 6th Feb., stated as follows:—"The directors have to inform the proprietors that they have received the half-yearly payment of £1,250 from the Telegraph Construction and Maintenance Company, for the rental of the company's line in Egypt to 31st December, 1864, and recommend that a dividend at the rate of 5 per cent. per annum, free of income-tax, be paid to the shareholders for the half-year ending the 31st December, 1864, payable on and after the 15th instant."

The telegraphic business which Mr. Julius Reuter, with remarkable energy and sagacity, has been organising for fifteen years past, is now transferred to a joint-stock limited company. The services of Mr. Reuter as managing director have been secured for a term of years. The directors include John Dent, Esq., of Messrs. Dent and Co., China. The capital is £250,000, in 10,000 shares of £25 each, with a first issue of 4,000 shares, of which more than one-half have been already subscribed. The amount of the purchase money is not stated.

The last biddings for 30,00,000 rupees (£300,000) in bills on India took place on the 1st inst. The proportions allotted were—to Calcutta, 16,27,000 rupees; to Bombay, 12,00,000 rupees; and to Madras, 2,22,000 rupees. The minimum price was as before, viz.:—1s. 11½d. on Calcutta and Madras, and 1s. 11¾d. on Bombay. Tenders on Calcutta and Madras at 1s. 11¾d. receive about 27 per cent.; and on Bombay at 1s. 11½d., about 41 per cent. All above these prices i full.

The report of the Mediterranean Extension Telegraph Company, presented on the 3d. inst., shows an available total, including a previous balance of £498, of £7,047, and recommends a dividend on the ordinary shares at the rate of 5 per cent. per annum. The revenue for the past half-year has considerably increased.

A heavy loss of £300,000 on the underwriters and marine insurance offices was posted at Lloyd's. The fine teak-built ship *Assaye*, 1,599 tons register, Captain Thomas which sailed from Bombay for Liverpool with a cargo of 6,254 bales of cotton (valued at from £45 to £50 per bale), 555 bales of wool, 200 bales of jute, and 99 tons of linseed, went ashore on the rocks off Ross Bay, near Gallyhead.

Mr. W. H. F. Elliot, late of the firm of Elliot and Co., whose affairs are now being wound up, has issued a circular announcing himself as a buyer for houses in the China and Japan trade. A circular of prices current is prepared for constituents.

The amount of bullion by the P. and O. Company's steamer *Pera*, from Southampton on the 4th inst., was—In gold, to Galle, £215; to Madras, £1,220; to Calcutta, £49. In silver, to Madras, £15,637; to Singapore, £24,620; to Hong Kong, £44,620; to Shanghai, £4,420. Total in gold, £1,484; in silver, £89,297.

ARTICLES OF IMPORT.

TEA.—Notwithstanding the heavy tone that has pervaded the market during the past month, an average business has been done, a full proportion being out of the public sales, at which 60,000 packages were printed without reserve, the series commencing Wednesday consisting of 29,000 packages. The arrivals during the past ten days have been numerous, amounting to twenty vessels, with fifteen millions lbs. weight. The export trade to all parts continues most limited, especially to Russia, the transactions for that market being confined to a few common flavoury Hokow and Ningchow kinds. These advices will reach China at a time when preparations are being made for the new season, and it will save operators from another year of loss if some regard is paid to the requirements of the home trade instead of giving the Chinese any anticipated advantages arising from the export trade; that to Russia has this season proved a fallacy, and recent advices intimate that there is no chance of revival for some time yet, at any rate none to warrant its being the basis of operations for 1865-6. The present scale of prices ruling here is, with the large stock and increased export from China and India, quite high enough, and may therefore serve as a safe basis for operations for next season, with the exception of fine and finest grades, which should show 1d. to 3d. per lb. margin. The deliveries for the month are in excess even of last year, speaking well for the steady and increasing home consumption, and stand thus:—

		1865.	1864.
Home Consumption	for London from 1st to 31st Jan.	5,420,000	5,119,000
Export	from do. ... ... do.	1,500,000	1,300,000
Sent Coastwise	from do. ... ... do.	2,200,000	2,500,000
		9,120,000	8,919,000

BLACK.—Dusty, broken and good leafy kinds have not been in excessive supply, and most offered of this season's import have been taken at 7¼d. to 9d. per lb., but the cargoes now unloading have brought rather large supplies; Common Congou is neglected, with but little on sale. The inferior to good flavory, and also Kaisow kinds, the trade have been surfeited with samples, and have steadily refused to enter into fresh risks until previous purchases have been worked off; in some instances no concession in price will induce business, therefore importers are compelled to hold. Medium to fine Kaisow is beginning to be more inquired after, the small quantity in first hands is firmly held for fully opening rates of the season, and the proportion ex late arrivals is very small. In finest Kaisow there is nothing doing. In Amoy kinds there has been a better inquiry than for some time past, but prices rule in favour of buyers; nearly the whole cargo of the Willie has been worked off at 1s. to 1s. 3d. per lb., and old imports of fair to good Souchong flavour have sold from 10½d. to 11½d. per lb. The transactions in imitation Kaisow made from Tayshan leaf have not been large, the last imports being deficient in quality. Black-leaf of common to fair description continues particularly heavy of sale; good useful kinds in sale fetching only 10½d. to 1s. 0½d. per lb.: in medium the sales show 1d. per lb. decline, whilst fine and finest maintain previous rates, but the demand the last ten days has been limited. The transactions in Souchong have been mostly in the finer grades over 2s. per lb. In Oolong but little has transpired. Scented Tea: Canton make of Orange Pekoe continues in request, and prices keep well supported. Caper has also been in good demand, medium qualities commanding most attention; the arrivals the last few days are heavier than for months past, but not more than our actual requirements; and the quantity now on the way is very small. Foochow Orange Pekoe of good to medium qualities are scarce, and the late arrivals have been speedily disposed of; fine and finest are rather more difficult of sale, and prices a shade easier. The supply of Caper is much less than former years. Green: Considerable supplies of Ping Suey kinds have come to hand, and prices have somewhat given way, say, for Young Hyson 1s. 2d. to 1s. 4d. for No. 4 or fair to good, 1s. 5d. to 1s. 8d. for No. 3 or medium, 1s. 9d. to 2s. for No. 2 or fine, and 2s. 1d. to 2s. 4d. for No. 1 or finest. There have been no arrivals of New Fychow or Moyune kinds, of this season's growth. A few fine Hysons were taken the early part of the month, for South America. Japan growth either coloured or natural is not inquired for.

At New York the report is:—The market for Black is depressed and

Digitized by Google

rices favour buyers, but Green remains steady at about previous rates. The sales are, 628 half-chests Green, in English order, 800 uncoloured Japan, and 200 Oolong. Prices current :—Hyson, common to fair, 1.30 to 1.50; Sound do., 1.15 to 1 35; Gunpwder and Imperial, common, to fair, 1.30 to 1.50; Uncoloured Japan, do., 1.20 to 1.25; Oolong do., 1.05 to 1.12; Souchong and Congou do 95 to 1.10.

SILK.—Messrs. Durant and Co.'s report states :—During the first three weeks of the year we had active business and large purchases, at improving prices, but all this ceased about the 19th January, and since then we have merely had moderate business. Consumers, both here and on the Continent, are apparently determined to resist the avdance in prices—looking upon it as very much the result of speculative moments. We fear, too, they are especially influenced by the inability to establish any approximate advance upon their manufactured goods. The deliveries during January were fairly up to previous months, bnt now show a diminution. China Silk maintains the full advance of 1s. upon the prices of the 1st of January, but Japan Silk, which at one moment was sold at an advance of 1s. 6d. to 2s. upon the prices of December, has receded about 1s. under the infiuence of the large arrivals present and immediately prospective. See "Latest."

COTTON.—The Liverpool market was greatly affected immediately after our last report by rumours from New York of peace negotiations. East India descriptions also fluctuated considerably. China and Japan were in good request, but closed on the 3rd ⅛d. to 1d. per lb. lower than on the preceding Friday. The quotations might be taken as follows :—China : Middling, 11½d. ; fair, 12½d. ; good fair, 13d. ; good, 14d. ; fine, 16d. This week the market has been steady, without change in prices ; sales on the 8th, of China, 14d. to 15d. ; Japan, 15⅞d. to 16d. The report of the London Cotton Brokers' Association for the first week in February states a dull market and prices irregular, with China ¼d. and Japan 1d. lower ; quotations of China varying from 11½d. to 14d., and of Japan from 12½d. to 16d.

SUGAR.—The arrivals in London since the close of the year have been comparatively liberal, but as the clearances have much improved, the stock has somewhat diminished, and the relative surplus over 1864 is also rather less, viz., 30,000 tons instead of 33,800 tons on the 31st December last. Messrs. Carey and Browne state in their circular, reviewing the proceedings of the market since the 9th January :—The stock of Penang being still mostly held from the market, the business in this description has been very limited. Manila has met some inquiry, but few holders being disposed to accept the reduced prices obtainable, transactions in Clayed have been on a narrow scale at a decline of 1s. 6d. per cwt., and in Unclayed no sales are reported. A small parcel white Siam, recently offered in auction, was realised at the current value. The total business of the month includes 30 tons Penang, fine brown to low middling yellow 28s. 6d. to 31s. ; 1,400 tons Clayed Manila at 27s. 6d., to 28s. ; and 25 tons Siam, good middling and good white, at 36s. 6d. to 37s.

RUM.—We have to report a sale of 350 puncheons Penang, at 1s. 5d. 1s. 5½d. per gallon, proof.

COFFEE.—Prices were still in favour of the buyer to the end of last week. On the 8th, 1,900 bags and 130 casks of native Ceylon sold freely in public sale at firmer prices ; good ordinary to superior greenish, 69s. 6d. to 73s. ; inferior, 66s. to 66s. 6d. Privately, plantation Ceylons commanded full rates. The sales of the month since the 9th January comprise 2,800 casks, 3,000 barrels and bags plantation Ceylon ; fine ordinary to low middling 78s. to 82s., middling to good middling colory 83s. to 86s. ; 600 casks, 10,000 bags Native, good ordinary 69s. to 70s. ; fine ordinary to superior 70s. 6d. to 73s. ; small 64s. to 66s. 6d. : 600 packages Mocha, fair to fine clean garbled 93s. to 102s. ; common mixed 83s. ; common to good long berry 94s. to 99s. ; 1,000 bags Singapore, common Bally 57s., fair 62s. 6d. to 63s., bold yellow Bonthyne 76s. The landings in the port of London since our last, have been 1,000 tons lighter than in the corresponding period of 1864, and notwithstanding that both the home and export deliveries have also been on a more contracted scale, our stock has been partially reduced, being now 500 tons less than at the same time last year. The Netherland's Trading Company have declared only 87,200 bags for their next monthly sale on the 15th inst., and also announce that not more than about the same quantity will be brought forward each month until June ; no sale to take place in July, and only about 80,000 bags each month following ; the valuation for good ordinary is fixed at about 45 cents.

RICE.—The advance noticed in our last checked business, and in some instances lower prices have been accepted. 3,000 bags white Bengal sold on the 8th, at 11s. 9d. to 12s. 6d.

CAMPHOR.—Has recovered its value to the extent of 2s. 6d. per cwt. : moderate business done up to 90s. per cwt. for fine China in lead. Of 660 chests at auction, a few sold at 90s. Nothing reported in Japan.

CASSIA LIGNEA.—Very quiet ; and of 600 boxes at auction only one-third sold at 77s. per cwt. for 3rd pile. Buds : Scarce, wanted, and dearer ; no auctions ; our higher and advanced quotation realised privately.

CINNAMON.—Supply much more adequate, and demand rather languid ; and at the quarterly sales prices declined as follows :—1st sort 3d. to 6d. per lb., 2nd sort 2d. to 4d., 3rd sort 1d. to 3d. ; 4th sort 2d to 4d., Jungle 3d. to 6d. Of the following 2,070 bales brought forward, three-fourths sold, viz. : 419 bales 1st sort at 1s. to 2s. 7d., with superior at 2s. 10d. ; 1,115 bales 2nd, 1s. 5d. to 2s. 3d. ; 376 bales 3rd, 1s. 3d. to 1s. 10d ; 100 bales 4th and Jungle, 1s. 3d. to 1s. 5d. for 4th, and 10d. to 1s. Jungle.

COCOA-NUT OIL.—Large business was doing at the date of our last, which led to increased firmness in terms : latterly the market has become rather more quiet. 483 casks Cochin, 224 Ceylon, and 129 Sydney at auction.

DRUGS.—Cubebs : Some inquiry at present low rates. Dragon's Blood : Only 2 cases at auction, and those retired. Galangal Root : Flat, and nothing doing. Rhubarb : Has remained very quiet, and previous extreme prices have not been thoroughly maintained. Of 144 chests at auction, half sold at 2s. 3d. to 3s. 8d. per lb. for inferior to ordinary flat, and 2s. 6d. to 3s. 5d. round.

GUMS.—Benjamin : Remains steady ; of 45 cases Sumatra at auction, one-fourth sold at £13 per cwt. for good 2nd quality. Damar : Steady, 50 cases sold at auction at 45s. per cwt. for middling picked. Gamboge : Remains scarce, and firm. Nothing of consequence doing.

GUTTA PERCHA.—Remains very flat : 22 tons at auction all retired, private business very restricted. India Rubber : This market is quiet, without the least improvement in rates : 77 baskets Singapore, 225 baskets Penang and 408 packages Assam at auction all retired. Limited sales effected privately in good Singapore at 1s. 3d. to 1s. 3½ per lb., and Assam ball at 10d.

HIDES AND HORNS.—The sales during the month of January comprised 1,200 Batavia Buffalo Hides at late prices ; Best Yellow 6⅛d. per lb. ; Dark 5¾d. per lb., Java 4⅞d. to 4¾d. per lb. During the same period 7,547 Penang and Singapore Cow Hides and 3,208 Buffalo Hides were sold at full prices. Cow Hides Light 5½d. to 8¼d. per lb. ; Heavy 4¾d. to 6½d. per lb. ; Extra Heavy 4½d. to 5½d. per lb. ; Small 6½d. to 8¾d. per lb. ; Thirds 4d. to 5½d. per lb. ; Buffalo Best 5d. to 5⅛d. per lb. ; Light 5⅛d. to 5⅞d. per lb. ; Seconds 4⅛d. to 4¼d. per lb. 13 tons Deer Horns realized 47s. 6d. to 51s. 6d. per cwt. for Ceylon, and 76s. to 104s. per cwt. for Japan.

HEMP (Manila).—This market has again been active, considerable sales effected at £28 to £29 per ton for fair roping, and up to £31. 10s. for Sorsogon. 2,073 bales brought to auction, and all retired.

JAPAN WAX.—Firm, with little offering ; 40 cases at auction retired.

OILS.—Anniseed : Very quiet at the quotations of 6s. 2d. to 6s. 3d., with scarcely a transaction. Cassia : Very dull, with little if any enquiry. Cinnamon : Nothing doing. Mace and Nutmegs : Nothing doing.

SPICES.—Cloves : Firm, and 1,464 bags Zanzibar at auction mostly sold at 3⅛d. to 4d. per lb. for middling to good. Nothing doing in Penang and Amboyna. Ginger (Calicut and Cochin) : 1s. 2d. per cwt. cheaper, and 376 cases at auction all sold subsequently to sale at 58s. per cwt. for ordinary wormy. Mace : Steady, and 27 cases Penang, and 5 cases Batavia at auction, mostly sold at 11d. to 1s. 7d. per lb. for ordinary red to very good reddish. Nutmegs : Flat at previous low prices : and 128 cases Penang sold at auction at 1s. 11d. to 3s. 1d. per lb. for medium and bold mixed to fair bold, and 10d. to 1s. 6d. ordinary small to good medium. Pepper : Black : Market flat, and the recent advance scarcely maintained. Of 2,474 bags Singapore at auction, one-third sold at 3⅛d. per lb. for the sound, with damaged in proportion, and 683 bags Penang retired. White : Firm, and of 549 bags Singapore and 93 bags Penang at auction, three-fourths sold at 5¾d. to 5⅞d. per lb. for fair.

SAGO.—The transactions of the whole month, since 9th January, are as follows :—2,900 boxes have been offered by auction during the month, and nearly all sold at somewhat better prices,—fair to fine small Pearl, 18s. to 19s. 6d., fair medium, 18s. to 18s. 6d., common to good large grain, 19s. to 20s. 6d. Of Flour, sales have been effected at 14s. to 14s. 6d. Tapioca : In public sale, 1,951 bags Penang have been offered, and barely half has been taken off at about steady rates ; middling and good middling, 2¼d. to 2⅜d., very common dingy, 1d. to 1¼d. A small parcel stained Singapore sold at 1¼d. per lb. 370 packages Pearl Tapioca, of middling to good quality, were realised in the early part at 22s. to 23s. per cwt. 219 cases Tapioca Flour were partly disposed of at 2⅞d. to 3d. per lb.

SHELLAC.—Is rather better on the whole, and fine Garnet decidedly dearer ; of 682 cases at auction, one-third sold : Orange at £6. 2s. 6d. ; Liver, £5. 7s. 6d. ; Garnet, £5. 12s. 6d. to £5. 15s., with very fine up to £6. 5s. ; Button, £5 to £6. 7s. 6d ; Native, £4. 17s 6d. to £5. 5s., and Block £4. 15s. Private operations moderate, but at some improvement upon the previous value.

TERRA JAPONICA.—Cutch, Pegue : Is still very flat, with scarcely any business. 200 bags and 80 tons at auction all retired. Gambier : Steady ; 1,210 bales at auction mostly sold at 22s. 6d. to 23s. per cwt. for middling to fair block, and moderate business accomplished privately upon similar terms.

TOBACCO.—Manila Leaf : Neither price nor quality can tempt the trade to use much of this growth. Manila Segars : prices remain firm, Java : Several old but fair parcels have come from the Continent, and help to keep up the stock of this useful substitute ; inferior very unsaleable. Japan : Snpplies are much wanted ; orders to some extent are waiting to be carried through for lack of the article. Quotations : Manila Cheroots and Segars, 8s. to 9s. 3d. ; Manila Leaf, 7d. to 3s. ; Java, 6d. to 1s. ¼d. ; Japan 4d. to 7d.

MISCELLANEOUS.—Galls : Are very scarce, and commanding extreme rates ; as much as £10. 10s. per cwt. paid for a few bales Turkey. Chiua less active, and cheaper : of 436 cases at auction, only one-fourth sold at 60s. to 60s. 6d. per cwt. for good. Rattans : Of 7,000 bundles Singapore and 3,833 bundles Penang at auction, about half sold at firm prices, 3s. 5d. to 6s. 9d. per 100 ; the remainder (Singapore) retired above present worth. Sapan Wood : Flat ; 7 tons Siam, 14 tons Manila at auction all retired : nothing doing privately. Mother o'Pearl Shells : Quiet ; 180 cases Singapore at auction, all retired. Soy : Remains firm, and scarce ; 20 hhds. at auction retired. Star Anniseeds : Rather cheaper, 30 cases at auction having sold at £6 per cwt. for good. Sticklac, (Siam) : Continues dull, and 122 cases at auction were all retired. Turmeric : No China offering, Java also scarce, and 20 bags sold at auction at 16s. per cwt. Vermilion : Firm, and in demand at the quotation.

Digitized by Google

ARTICLES OF EXPORT.

IRON.—The quotations in London are for Welsh bars, £7. 10s.; nail rod, £9; hoops, £10 to £10. 5s.; sheets, single, £10. 15s. to £11; Staffordshire bars, £9 to £9 10s.; rails, £6. 10s. to £7.

STEEL.—Swedish keg, £16.

COPPER.—Sheet and Sheathing, £95 to £96 per ton; yellow metal, 8d. to 8¼d. per lb.

TIN.—95s. for block; 96s. for bar. Tin plates, best charcoal, I.C., 28s. to 29s.

LEAD, &c.—English pig, £20. 5s. to £20. 10s.; W.B., £21. 15s.; shot, patent, £23; sheet, £21; spelter, £19 to £19. 10s.; zinc, English sheet, €24. 10s.; quicksilver, £8.

The following is from the Circular of Messrs. French and Smith:—It is many years since the metal trade has experienced so dull a January as that just passed; notwithstanding prices are very low compared with many years preceding, and money is abundant, there is little disposition amongst dealers to get into stock. Iron: A moderate business has been transacted at rather easier prices both for Welsh and Staffordshire; Scotch Pig has varied but slightly during the month. Copper continues very flat, and the price has given way £2 to £3 per ton; the large quantity advised from the West Coast of America by the last mail has a very unfavourable influence on prices. Tin: Until the last few days both English and foreign were very depressed, but the announcement made on the 1st inst., that the Dutch Company would not hold their sale until June next, caused a sudden spring in the price of both Banca and Straits of from £4 to £5 per ton; English also is rather firmer. Tin Plates continue without activity; the shipments last month were 62,000 boxes, against 78,000 in 1864. Lead has experienced but little fluctuation, and has been in moderate inquiry. Spelter, the past month, was exceedingly quiet; the last day or two we have had more inquiry, and the price is stronger; stock in London is 10,344 tons, against 6,177 in 1864.

EXPORT OF BULLION TO CHINA, &c.

The following return shows the shipments of bullion from Southampton from the 1st January by the P. and O. Company's mail steamers.

FREIGHTS AND CHARTERS.

Notwithstanding the recent numerous arrivals from the Eastward, a slight improvement has taken place in outward freights, vessels of moderate tonnage being scarce and in demand. In coal freight rates continue firm, especially for Galle, and for the leading ports show an upward tendency.

Current Rates of Freight for Vessels on the Berth:—To Yokohama: 50s. weight, 40s. to 50s. meast. To Nagasaki: The same. To Hankow: 60s. meast. To Amoy and Foo-chow-Foo: 50s. weight, 40s. meast. To Shanghai: 40s. weight, 25s. to 30s. meast. To Hong Kong: 40s. weight, 22s. 6d. to 30s. meast. To Manila and Labuan: 50s. weight or measurement. To Singapore: 25s. to 30s. weight or measurement. To Penang: 40s. weight or measurement. To Batavia: 40s. weight, 30s. measurement. To Bankok: 60s. weight or measurement. To Ceylon: 40s. weight, 25s. measurement.

The quotations for coal and iron from the North are as follows:—For Hong Kong: £35 and £1. 11s. For Shanghai: £45 and £2. For Manila: £1. 10s. For Batavia; £23 to £24, and £1. 2s. 6d. For Singapore: £26 and £1. 1s. 0d. For Penang: £27. For Galle: £26 and £1. 1s. These rates are from the Wear or Tyne, and Newport, Cardiff, or Swansea respectively.

The Admiralty have invited tenders for the conveyance of 800 hhds. of porter and 92 tons naval stores, including a few combustibles from the river Thames to Hong Kong, and have ordered the Cathaya to be surveyed for that purpose.

The P. and O. Company have made new contracts for coals for Shanghai, also for a small quantity for Yokohama.

CASUALTIES.

The Lichtshaal (Dutch ship), from Batavia, ran aground 25 Jan., in the river between Newsluice and Rotterdam, but floated off again.

The Johannes, Rademakers, from Batavia for Rotterdam, put into Simon's Bay, Dec. 6, leaky, and with rudder damaged on discharging Jan. 20, part of her cargo was found damaged, and would have to be sold.

The Cornelia and Geertruida, Wielema, from London to Batavia, put into Simon's Bay, Dec. 1st, leaky, and with loss of bulwarks and other damages; on discharging part of her cargo was found to be damaged, and would have to be sold.

The Elizabeth de Boer, from Hamburg for China, has put into Niewe Diep, leaky.

The Jeanie, of Melbourne, Washburn, from Hamburg for Singapore, arrived at Deal Jan. 26, with topsailyard sprung, but proceeded on the 28th, and put into Plymouth, Feb. 5, with master sick.

The St. Fillan, from Manila to Queenstown, was spoken with Dec. 12 in lat. 358, lon. 25 E., with scurvy on board.

The C. S. Lemon, Campbell, from Manila for Liverpool, put into Mauritius, Dec. 21, to repair rudder. Another account states that, 24 hours after leaving Manila, she experienced a typhoon which lasted three days, during which she split her rudder and lost her foreyard.

The Fernand, Giles, from Bordeaux to Singapore, which put into Rio Janeiro, Dec. 12, leaky, was discharged and placed under repair there.

AT ALGOA BAY.—Dec. 2, Fontenaye, Thompson, sailed for Singapore.

AT MAURITIUS.—Dec. 21, from Manila for Liverpool, C. S. Lemon Campbell (with damage); 31, Seringapatam, Wyatt, sailed for Japan.

THE DOUBLE SCREW-STEAMER "FAR EAST."—The twin-screw steamship Far East, Henry Jones, commander, from Hong Kong and Shanghai arrived off the Isle of Wight on the 29th ult. She brings the following passengers:—Lieutenant Grant, 85th Regiment, from Capetown; Lieutenant Taubman, 5th Regiment from Capetown; Mr. Wilson, Mrs. Wilson, two children and servant, from Hankow; Mrs. Eaton, child and servant, from Shanghai; Mrs. Henry Jones, two children and servant and Miss Hardman, left Hong Kong on the 5th Nov. and Anjer 12th. On 22nd, in lat. 20 and long, 75 E. the S.E. trade winds failed. Thence she had light variable winds, rendering it necessary to keep the ship under steam until December 7, when she made the coast of Africa off Algoa Bay. There the wind set in from S.W., and all the coal being expended it was necessary to put the ship under canvas and beat to windward, to Capetown, where she arrived on 13. After leaving the Cape, the trades were found to be unusually light, and they failed in 2 deg. S. In 32 deg. the N.E. trade winds failed. After this she encountered calms and thick weather until Jan. 21, in lat. 45 deg. N., and long. 20 deg. W. Then the wind set in from N.E. to E., blowing hard gales, with a very high confused sea. She spoke, on November 30, the British bark Cœur de Lion, from Foo-chow for London, in lat. 28 15 S., long. 28 40 E., Nov. 30., Marryatt's Code, 2d pennant 8,537, Hamburg ship, lat. 28 15 S., long. 28 40 E.; Nov. 30th, 1st penant 9,857 British bark, rend 6,947, rend 4,036, lat. 28 15 S., long. 28 40 E.; December 11, the British ship Falcon, from Mauritius for London, lat 34 57 S., long. 23 11 E.; 13th, the British bark Peterborough, from Macao for London, lat. 34 57 S., long. 19 53 E.; 17th, 1st pennant 6,519, Hamburg bark, lat. 31 14 S., long. 13 31 E.; 19th, the British bark St. Oswin, from Singapore for London, lat. 27 48 S., long. 8 6 E.; 29th, Her Majesty's ship Wye, from St. Paul's for Ascension, lat. 8 25 S., long. 10 35 E.; January 4, the steam tug Conqueror, from Falmouth for Calcutta, and the British ship Eliza Shaw, from London for Japan, both in lat. 5 N., long 19 31 E.; 9th, British bark second pennant 2,378, 6,209, 2,843, lat. 15 N, long. 26 38 W.; 14th, French schooner, showing two flags, PP and 71, first white and second coloured; 15th, British bark Copiapo, from Coquimbo for Havre, lat. 32 50 N., long. 51 30 W.

NEW SHIP FOR CHINA.—Messrs. Duncan, Wright, and Son launched from their building-yard, at Kincardine-on-Forth a clipper ship of 678 tons N.N.M., 720 tons O M. Dimensions:—Length, 155 feet; breadth, 31 feet 3 inches; depth, 19 feet 8 inches. She was named the *Queen of the Forth* by Miss Euphemia Wright, and is owned by Messrs. Wright and Captain Crombie, who takes command. The *Queen of the Forth*, loads in London for China.

Secretary (pro tem.)—ALFRED LOWE, Esq.

Temporary Offices—17 and 18, Cornhill.

This powerful Company has been formed for the purpose of acquiring, consolidating, and developing the enterprises known as "The China and Japan Steam Navigation Company," and "The Labuan Coal Company."

The object of the former Company was to supply the much-felt need of steam navigation in the China waters, and the latter Company was formed to work the coal mines in Labuan and Borneo, and so supply the whole of the Government and Mercantile Marine in the East with steam fuel. It has been found, however, that from the fact of those Companies having been formed with too small a capital, and on too limited a basis, the requirements both as to supply of vessels and also the further development of the Coal Mines cannot be adequately met. It has, therefore, been considered advisable to merge the two undertakings, and to make one large Company, with sufficient means and influence to develop the valuable business of both the old Companies, and in accordance therewith arrangements have been made for the immediate transfer by them of their respective fleet and collieries, together with the goodwill and valuable plant.

This Company will, therefore, immediately acquire the powerful trading steamers Elgin, Mona, and Sterling, and steam tugs Titan, Vulcan, and Tienchang, already well-known and profitably employed in China; and the sailing ship Andromeda, a frigate of 2,000 tons burden, admirably adapted for a coaling hulk.

In developing the shipping operations of the Company, in addition to the building of trading and collier steamers, special attention will be paid to the construction of tug steamers adapted to the ever-increasing inland traffic of the great China rivers, where the demand for such shipping is constant. It is also proposed to establish a line of steamers between Bombay, Singapore, and Hong Kong.

This Company will also at once enter on all the rights of the Labuan Company, in Labuan and Borneo, and all their pits, plant, buildings, and stock of coal in the former island, and take over their valuable contracts with Her Majesty's Government.

The Labuan Coal has been contracted for extensively by the Admiralty, and will actually be the standard Steam Coal for the navy in the China waters, and elsewhere in the East, as well as extensively used by the leading steam shipping companies, when the arrangements contemplated for storeage, rapid loading at Labuan, and delivery at the different Government stations in the East shall have been completed, the present means of production and delivery being totally inadequate to meet the constantly increasing demand.

The Resident Manager of the Labuan Coal Company, in a late report, states that the works now completed open a field of Coal to the extent of above a million of tons, and that a New Pit—the preparations for the sinking of which have been commenced, and the machinery for which is on the spot—will quadruple the quantity available for working or four millions of tons, the further quantity to be obtained being practically inexhaustible.

Immediate steps, therefore, will be taken to open this pit and others, and to connect the mines with the Harbour of Victoria, by a mineral tram railroad of about seven miles in length. In Port Victoria ships drawing twenty feet of water can lie close alongshore, and every facility is offered for their being economically and rapidly loaded by the erection of coal shoots. Coal hulks will also be established in the leading ports of India and China. By these means the Company will be able to meet the public demand for steam fuel at highly remunerative rates, in addition to supplying their own fleet with the necessary coal.

Present Price of Coal in China.—The present price at Hong Kong for Coal, equal in quality to that of Labuan, is 45s. per ton, and that price is exceptionally low.

Profit.—The probable profit of the undertaking will be seen by reference to the following figures. Experience has proved the cost of raising the Coal and placing it on board ship at Labuan to be 6s. to 7s. per ton. Taking the price at 6s. 9d. per ton, and adding 3s. 3d. for agency, management, &c., the cost of the coal on board ship at Labuan would stand the Company 10s. per ton. Allowing for the Company's steamers a freight of say 15s. per ton, the cost of the Labuan Coal, when delivered, would be 25s. per ton against 45s., the present price of English coal, equal in quality; and it is estimated that when the Company is fairly at work it could easily raise and dispose of 100,000 tons of Coal annually.

Supposing coal and freight to cost 25s. per ton, and sold at 45s. per ton, there will be a profit of 20s. per ton; which, on the produce of 100,000 tons only per annum, is equal to £100,000
Net profit of steamers, say 30,000
£130,000

But calculating that only 50,000 tons are the first year raised, and that there is only 15s. per ton profit realised thereon, there is still, with the profit on the steamers, £67,000 per annum, or 28 per cent., on a paid-up capital of £250,000, or, allowing for interest on debentures above 20 per cent. net for dividend.

The allotment of the shares will be made on the following basis, viz.:—

7,500 Shares partly fully paid up, and partly with £10 paid up, will be reserved for allotment to the applicants who are shareholders in the existing Companies; of these 6,000 have already been applied for, and the deposits paid to the Company's Bankers.

5,000 Shares with £5 paid will be allotted to shareholders in the Credit Foncier and Mobilier of England (Limited).

5,000 Shares with £5 paid will be allotted to the general public, as also such shares (if any) as may not be applied for in the paid-up form, or by the above.

Applications will also be received for 5,000 fully paid-up shares on which dividends for the whole amount paid-up will be declared.

2,500 shares will be reserved for allotment in Bombay, applications for which will be received by Messrs. D. Sassoon and Co., Bombay.

The Concession, Plans, Reports, and Articles of Association can be inspected at the offices of the solicitors.

Applications for shares are to be made in the annexed form, and left with the Bankers of the Company, upon payment of the deposit of £1 per share. If no allotment is made to the applicant the deposit will be immediately returned without deduction, and if a less number of shares be allotted than is applied for, the deposit paid will, so far as necessary, be credited towards the payment due on allotment.

Prospectuses and Forms of Application can be obtained at the offices of the Credit Foncier and Mobilier of England (Limited), 17, and 18, Cornhill; also of the Bankers, Brokers, Solicitors, and of the Secretary of the Company.

13th February, 1865.

FORM OF APPLICATION FOR SHARES WITH £5 PAID UP.

No. —— (To be retained by the Bankers.)

To the Directors of the China Steam Ship and Labuan Coal Company (Limited).

R. Russell Carew, Esq., Carpenders-park, Watford.
J. H. Crawford, Esq. (late Bengal Civil Service).

BANKERS.

Bank of England, London and County Banking Company, and the Mercantile and Exchange Bank (Limited).

MANAGER.

H. A. Parry, Esq.

AGENTS IN INDIA.

Messrs. Gillanders, Arbuthnot, and Co., Calcutta; Messrs. Ewart, Latham, and Co., Bombay.

REPORT of the DIRECTORS to the FIRST ORDINARY GENERAL MEETING of the Members, held at the London Tavern, Bishopsgate-street, on Friday, the 27th January, 1865.

The Directors beg to submit to the shareholders the following report, and the accounts audited to the 31st December, 1864.

The gross profits from the commencement of the business in April last have amounted to £21,762. 13s. 2d., which, after deducting expenses of management, rebate of interest on bills, and all other charges, and carrying 10 per cent. to the credit of preliminary expenses and office furniture, leaves a balance of £16,975. 18s. 11d. Out of this sum the Directors have appropriated £706. 3s. to the payment of ad interim interest to 30th June last, at the rate of 8 per cent. per annum, and £3,298. 12s. 8d. for dividend to 31st December, 1864, at the rate of 8 per cent. per annum, leaving the sum of £12,971. 3s. 3d. to be carried forward to the next account.

The operations in India are upon a satisfactory basis, and are capable of considerable extension, but the commercial uncertainty which has existed during the last few months has induced the Directors to restrict business.

The closed accounts from thence for the past year have not yet been received, and they will therefore appear in the next statement.

The business which has been undertaken, otherwise than in connection with the East, has principally consisted in advances against the deposit of collateral securities, besides which the London Engineering and Iron Shipbuilding Company (Limited) has been successfully introduced for the object of taking over the business of Messrs. Westwood, Baillie, and Co.; the Borakai Tea Company (Limited) has also been brought forward by this Corporation.

As it is necessary that a clause in the Articles of Association should be altered to meet the regulations of the Stock Exchange, which require that companies shall not invest in their own shares, notice of an Extraordinary Meeting will be given for the purpose of effecting that object, and, at the same time, of introducing clauses increasing the qualification of Directors, and giving additional powers to the Corporation for raising money on debentures, and for other purposes.

ORIENTAL FINANCIAL CORPORATION (Limited).
BALANCE SHEET, December 31, 1864.

Dr.

To capital, 10,000 shares of £50 each, £500,000 viz:—

SECRETARY (pro tem).
Mr. Frederick J. Griffiths.

OFFICES.
1, Royal Exchange-buildings, London.

This Company is established to provide capital for the purchase and extension of the well-known telegraphic business of Mr. Julius Reuter.

Mr. Reuter has, by fifteen years' labour, organised a most extensive system of telegraphic correspondence for obtaining and communicating to his subscribers the earliest and most reliable, political, financial, and commercial intelligence.

A large revenue is now derived from this source, which is capable of considerble extension by the use of additional capital.

The services of Mr. Reuter, as Managing Director, have been secured for a term of years, and in the agreement for the transfer of the business is a clause by which Mr. Reuter is bound, in the event of his connection with the Company ceasing, either by the termination of the period of his engagement, or from any other cause, not to assist directly or indirectly in the prosecution of any similar business.

Mr. Reuter will continue to have the exclusive management of the telegraphic department, which will be conducted as heretofore with the utmost secrecy, fidelity, and impartiality.

The whole of the profits from the 1st of January will belong to the Company.

All applications for shares must be made according to the annexed form, at the offices of the Company, of the brokers, or of the bankers.

NOTHING IMPOSSIBLE.—The Greatest and most Useful Invention of the day, AGUA AMARELLA.—Messrs. JOHN GOSNELL and CO., 12, Three King-court, Lombard-street, London, Perfumers to Her Majesty, respectfully offer to the public this truly marvellous fluid, which gradually restores the human hair to its pristine hue—no matter at what age. The Agua Amarella has none of the properties of dyes; it, on the contrary, is beneficial to the system, and when the hair is once restored one application per month will keep it in perfect colour. Price One Guinea per bottle; half bottles, 10s. 6d.

JOHN GOSNELL and Co., Perfumers to Her Majesty, and by Special Appointment to H.R.H. the Princess of Wales, London.

HOLLOWAY'S PILLS.—NERVOUS IRRITABILITY.—The very perfection of the human body renders it, like a complex machine, very liable to be thrown out of order—a state that is at once made manifest by the nerves. Holloway's Pills are always the seasonable and reasonable remedy; they relieve every ailment that is not mortal in the human system. As alteratives stomachics, tonics, and aperients, these Pills occupy a proud pre-eminence, from which no other medicine can dislodge them; they restore health and strength, which nervous and dyspeptic sufferers have failed to recover elsewhere. Holloway's Pills act with such directness upon the organs of digestion, assimilation, and circulation, that they immediately arouse torpid organs, augment diminishing vital power, and support failing energies.

CORRESPONDENCE RESPECTING AFFAIRS IN JAPAN, NO. I. (1865.)

Such is the title of the collection of despatches relative to Japan, which, as our readers have already been informed, has just been presented to Parliament. The series commences with the instructions given by Earl Russell to Sir R. Alcock, dated December 17, 1863, which enjoin him to "require from the Tycoon and the Daimios the execution of the engagements of the Treaty." The Admiral is to be authorized to land marines, destroy batteries, and spike guns, when their hostile purpose has been clearly proved; but no unarmed or peaceable town is to be bombarded.

Next in order comes a despatch from Colonel Neale, stating the intention of the Tycoon's Government to send an embassy to Europe, as they had been informed by Admiral Jaurés and the French Minister, after the murder of Lieutenant de Camus, "That the only means of assuaging the indignation that would be occasioned in France by that event would be by the Tycoon addressing an autograph letter expressive of his deep regret at its occurence to the Emperor; that the letter should be sent by special envoys charged with its delivery; and that in such case the Admiral would place a ship-of-war at their disposal as far as Shanghai, from whence they might proceed by the ordinary French mail." But beyond that, these Envoys would be instructed to press on the Treaty Powers the abandonment of Yokohama, and other points all restrictive of Treaty rights. Colonel Neale gives an account of an interview with the Tycoon's Vice-Ministers and two Governors of Foreign Affairs on the 4th January, 1864, at which they stated that owing to the ill-feeling of the country towards foreigners the Government "was constrained to propose closing the port of Yokohama, leaving only Nagasaki and Hakodadi open to foreign trade." The Colonel denied the existence of any such feeling. The people, he said, were friendly: the two-sworded class and certain Daimios might very probably be hostile, because they were an exclusive and domineering class. He was there to take care that the Treaty was carried out. If the trade were stopped, or any other aggressive acts adopted or tolerated by the Tycoon's Government, Her Majesty's forces were within reach to repel such acts. The Governors urged that when it was said the Japanese were friendly to foreigners, that could only apply to the Tycoon's Government, and to the people of Yokohama: in the interior they were not so—

"Colonel Neale asked what was understood by the term 'Tycoon's Government?' Did it mean literally the Tycoon himself and his Ministers?—The Governors said they understood by the 'Tycoon's Government' the Tycoon and all the Ministers of the country.—Colonel Neale observed that in civilized countries a Government was understood to mean the Sovereign or Chief Ruler, his Ministers, and a sufficiently powerful party who supported that Government and its policy.—The Governors responded that the Japanese Government consisted of the Tycoon and his Ministers, but no Daimios. The Tycoon governed the whole nation.—Colonel Neale replied that the Tycoon must therefore, to some extent, govern the Daimios—certainly those of his own creation, who are very numerous. He wished the Tycoon's Government to understand that when a nation is said to be on friendly terms with another, it is not implied that the Sovereign and his Ministers are personally and solely on friendly terms.—Governors: If the Japanese were united in their feelings of friendship towards other nations, then everything would go on smoothly, but there are thousands who differ in opinion from their Government.—Colonel Neale replied that there is no country in the world that is united unanimously in opinion or feeling upon all subjects; but the Dynasty and Government which prevailed must have a strong party which supports their views."

The Colonel here expressed his desire to have no repetition of the discussion, and complained of the obstacles thrown in the way of trade, no less than eighteen shops having been closed, and the free passage of silk from Yedo partially prohibited. The Governors affected not to know why the shops were closed; they could not help it—

"Colonel Neale then said: If you stop our trade we will stop yours; if you stop our supplies we will stop yours; and I wish you, above all things, to record and convey to the Tycoon's Government this most serious statement on my part, for it will bring under their consideration an inevitable course of action which must be adopted under the contingencies referred to.—The Governors asked whether by stopping their trade was meant the imports which come from abroad.—Colonel Neale said: Certainly not. I mean your own trade between one port and another. In regard to supplies and provisions, if you permit that they cease to be supplied, we must necessarily seek them where we can find them in other parts of your country, which, under other circumstances, we do not desire to frequent.—After some further conversation upon general subjects the Conference was closed."

The French Government applied through Earl Cowley to know the opinion of that of England in regard to the proposal for closing the port of Yokohama; to which Earl Russell gives the decisive reply (March 23) that "Her Majesty's Government have no desire to see the Envoys in London, and, if they came, would certainly not give up Yokohama as a port of trade." A despatch from Colonel Neale, giving an account of an interview with the mission prior to their departure, acquaints Earl Russell "that the Envoys had deposited the sum of £100,000 at one of the British branch banks at Yokohama, and opened a credit for that amount in Europe. A similar amount would shortly be added. These funds, it cannot be doubted, will be employed, for the most part, in the purchase of cannon, rifles, and most probably, also, of one or two ships of war." Communications are made from the Foreign Office to the Treaty Powers acquainting them that England would altogether refuse to negotiate on the subject of closing the ports of Yedo and Yokohama, and also that one object of the mission was to gain time with the Mikado and the anti-foreign faction on that question. M. Drouyn de Lhuys, for the French Government, concurs entirely in these views, and recommends that the intended purchase of vessels and munitions of war should be prevented. The Go-

Digitized by Google

vernments of Holland and Prussia also expressed their concurrence. Mr. Seward, too, tells Lord Lyons that he entirely agreed in thinking "that no proposals tending to the abandonment of any of the rights secured by the Treaties with Japan should be listened to for a moment; indeed that, for his part, he thought that the concession which had been made some time ago with regard to a delay in opening one of the ports had been a mistake"

As is known, the Japanese Envoys did not come over from Paris to England, finding that there was not the slightest chance of obtaining any modifications of the treaty. They, therefore, wrote to Earl Russell a letter which was received on the 17th of June, informing him of their altered intentions. They state:—

"Having now become aware that the negotiation in regard to the closing of the port can lead to no good result, we have resolved to return to Japan, and to communicate this to the Government, so that entirely different measures might be taken for pacifying the disturbed national feeling, and for maintaining for the future a good understanding with foreign Powers. Although it might appear strange that we, after having accomplished only half the journey we had undertaken, should return to Japan without fulfilling the duty with which we were charged, still we entertain no coolness towards your country; but, having for our object the perpetuation of everlasting friendship between the two countries, we go back to Japan regardless of our fault in not having fulfilled our duty as ambassadors. It is thus to be wished that your Excellency will take cognizance of our feeling, which is persistent in maintaining and perpetuating this friendship, and to give a precise account of it to Her Majesty the Queen. We may at some future period, in obedience to orders from our Government, come back to Europe and visit your country; and we hope that by that time the friendship between the two countries shall have greatly increased beyond what it is at present. Should this be so, then we wish that your Excellency will view it as a proof of the good result of our present return to Japan."

Sir Rutherford Alcock arrived at Yokohama on the 2nd March, 1864, and at the end of the month forwards his estimate of the position of matters in Japan, stating his opinion that "it obviously behoves us to be, as far as possible, prepared for hostile action on the part of a powerful body of nobles, quite capable, without any previous warning, of seeking by force to expel all foreigners from the country, and from this place more especially. As regards the Tycoon's Government, if it survive the present crisis I think it is very probable the leading members of it will go on as they have hitherto done, and temporize rather than take decided action; trying to steer a safe course between the two dangers of civil war and foreign hostilities. But if, as seems very probable, the Tycoon should himself be virtually deposed, and the anti-foreign faction among the Daimios gain the ascendant—and who shall say this may not already be the result of the eventful gathering of all the notabilities of the Empire at the capital of the Mikado?—I see no security whatever against immediate attack or other measures, at once aggressive and obstructive. I know that active armaments are going on everywhere. The Tycoon is calling in all the four-cash copper pieces so recently issued, giving eight each for them, and melting all the bells of the temples at Yedo in order to feed the furnaces of his foundries, where cannon on European models, and in large number, are being cast with unremitting activity. The Prince of Choshiu, who has proved himself one of the most forward and determined of the anti-foreign faction, has only recently fired into and destroyed one of the Tycoon's steamers, lent to Prince Satsuma for purposes of trade. Civil war on a small scale has actually commenced therefore. The last piece of intelligence which reaches me is also one of the most significant. Our greatest hold over the Tycoon has been the facility with which we could cut off the supply of rice from Yedo, the main staple of the food on which some two millions are dependent. The chief supply comes from a large district on the north-west coast of Nipon, and it is brought in junks through the Inland Sea and round Cape Idzu. But owing to the currents the junks are compelled to come through a narrow channel, shut in by the island of O-Shima (Vries Island in the Admiralty charts). A couple of gun-boats could effectually blockade this and cut off the supplies. I hear to-day that the Tycoon's Government has renewed with desperate energy an enterprise often before contemplated, partially begun but as often abandoned, namely, to cut a canal through a range of hills which interpose between the rice-growing districts of Yetsigo and Yedo. Everywhere in the territories of the Daimios thare is arming and preparing for war, buying of steamers, and drilling of men with percussion-capped muskets and bayonets. I think we are not justified in coneluding, in the face of such evidences of general uneasiness and preparations for war, whether among themselves or against foreigners, that we may count upon exemption from either aggressive or seriously obstructive acts. If such immunity is to be secured, I believe it will be mainly owing to the state of preparedness in which we may be to resist attack and punish aggression in any shape."

This despatch is followed by one dated "May 1, 1864," communicaing what Sir Rutherford has learnt as to the result of the Great Council of Daimios that had been held in the capital of the Mikado, which was "a final resolution to persevere in preparations for the expulsion of foreigners." On the 6th of the same month the British Minister advises the course that was eventually followed:—

"Seeing, then, that there is such cumulative evidence of a deliberate resolution to baffle all our efforts, by conciliation, concession, or diplomatic agency, to obtain the legitimate ends provided for by the Treaty, and in last resort to drive both the foreigner and his trade from the country, as soon, that is, as they can muster in sufficient strength to do so by force, to what means shall we trust for securing a different and less disastrous issue? The Treaty Powers have long been condemned to a state of dissatisfied inaction, while a manifestly obstructive policy, and more or less aggressive acts, have inflicted serious injury. Without reasonable ground of hope that time or patience will bring improvement, but on the contrary a certainty that worse will befall, it is difficult to avoid the conclusion that it is rapidly becoming a necessity of the position made for us by the signal bad faith of the Tycoon and Daimios to take the first fair opportunity of striking an effective blow at the whole system of perfidy and obstructiveness so perseveringly pursued. If possible, it is of course desirable to do so without entering upon general hostilities against either the Government of the Tycoon or the country. Such an opportunity seems still open to us. In attacking in his stronghold the most violent and rash of his class, it may be possible, I conceive, by one blow to paralyse the whole body of Daimios. If the attack were as successful and effective as I think might be safely anticipated with the means at command, I see every reason to believe that such a conviction of hopelessness and utter incapability of carrying to a successful issue schemes for our forcible expulsion might be borne into the minds of all the ruling Powers, from the Mikado and Tycoon down to the two-sworded Samourai and masterless Ronin, as would suffice to put an end to all further plotting. The command of the inland seas and the whole internal trade of that portion of Japan which must of necessity be in our hands during any operations would do more, probably, to bring the Court of the Mikado and of Yedo to a sense of the danger and folly of entering upon hostilities with the Treaty Powers than any course of diplomacy, however able or longsuffering the spirit animating it."

An extract from the *Japan Herald* is enclosed in this despatch, endorsing the opinion quoted by that journal from the *London and China Express*, that "prompt and vigorous measures must be adopted if we are to stay in Japan as peaceable traders."

Consul Myburgh reports to Sir Rutherford Alcock on the 26th March that "considerable embarrassment and loss is being caused to the native merchants, and, through these not being able to fulfil their contracts, to British merchants, by the blockade of the Straits of Simonoseki by the Daimio Choshiu," "which has a ruinous effect on the trade of Nagasaki especially." He proceeds—

"There can be no doubt that the free and unimpeded navigation of the Straits is of the greatest importance to the trade of this port, and that if the Choshiu be permitted to continue the arbitrary control of it, the result will be most damaging to the commercial interests at stake here. Foreigners and Japanese alike are delighted that there is a prospect of the passage being forcibly opened, if compelled to, by foreign men-of-war; and I may mention that, in view of the probability of such a contingency, the agent of the Daimio Satsuma at Nagasaki is stated to have sent to Kagosima for about fifty more followers, for the better protection of that Daimio's yasky and other property belonging to him here, as it is anticipated that should Choshiu be defeated in any conflict that may ensue, his ronins will certainly visit Nagasaki, and in revenge will attempt the destruction of the lives and property of his enemies, foreign as well as natives, among which latter Satsuma and his belongings are included. Recently one or two suspicious looking ruffians have been encountered in the streets of Nagasaki and in the Settlement, and their conduct remarked to be exceedingly menacing to several foreigners, evinced by their blocking up the road, and placing their hands on the hilts of their swords; and they appear only to have been restrained from displaying open violence by the foreigners making a timely demonstration of their revolvers, without which it is absolutely unsafe to go abroad either by day or night. From this it will be gathered that the tendency of a certain class, instead of becoming more pacific, daily increases in hostility. Taking this in conjunction with the total want of that protection which the Japanese authorities ought to afford, and their complete failure in bringing criminals to punishment, it cannot be said that the prospect before us is brighter or more cheering than it was. How long this is to be permitted to continue comes to be a question for anxious consideration."

Sir Rutherford Alcock orders up the 20th Regiment from Hong Kong, "in view of the present aspect of affairs and future contingencies;" but Earl Russell is disinclined to resort to hostilities. He recommends another course of policy:—"1. Giving every encouragement and support to such of the Tycoon's Ministers and to such of the Daimios as are favourable to foreign trade, and thus to lead to the ultimate weakening of the feudal system, and of the protectionist theory of Japan. 2. To make arrangements with the Japanese Government for the protection of the foreign settlement at Yokohama. 3. To keep for the present a strong squadron in the Japanese seas. 4. To endeavour to establish an understanding with the Governments of France, the Netherlands, and the United States, with a view to our common interests in Japan." And on the 26th July his Lordship writes the following imperative orders to refrain from anything that might induce a conflict:—

"Sir,—I have to state to you, with reference to the despatches which I have lately received from you, that Her Majesty's Government positively enjoin you not to undertake any military operations whatever in the interior of Japan; and they would indeed regret the adoption of any measures of hostility against the Japanese Government or Princes, even though limited to naval operations, unless absolutely required for self-defence. The action of the naval and military forces of Her Majesty in Japan should be limited to the defence and protection of Her Majesty's subjects resident in Japan, and of their property, and to the maintenance of our treaty rights. It may be hoped that the power vested in you by Her Majesty's Order in Council of the 7th of January last, to prohibit, or regulate or restrict, the entrance or passage of British ships into straits or waters of Japan, when such entrance or passage may lead to acts of disturbance or acts of violence, or may otherwise endanger the maintenance of peaceful relations or intercourse between Her Majesty's subjects and the subjects of the Tycoon of Japan, will enable you to prevent the occurrence of the necessity for any such measures of hostility to obtain redress for injuries done to British vessels.—I am, &c., "RUSSELL."

Throughout May, however, the British Minister in Japan has been reiterating the opinion that "no middle term of concession or compromise on our part, and no proposals for the modification of existing treaties, in any sense compatible with the maintenance of our trade and position at Yokohama, could avail, in the least degree, to avert the coming conflict;" and at his instigation a *note identique*, agreed upon on the 25th of May, is sent to the Japanese Ministers for Foreign Affairs from himself and his colleagues, the other Foreign Ministers in Japan, to the following effect:—

"The representatives of Great Britain, France, the United States, and Holland, having, on the 25th day of July, 1863, declared it to be indispen-able to the maintenance of treaty rights that the Inland Sea should be re-opened, they announced such decision to your Excellencies, confidently hoping that his Majesty the Tycoon would effect that object. In

Digitized by Google

his reasonable expectation they have been disappointed. The Japanese Government has made no reply to that communication, nor has it taken any steps to put a stop to hostilities which are still threatened. It has, on the contrary, shown either its sympathy with those hostile to the treaties, or submission to their dictation, by asking that the port of Kanagawa shall be closed, and declared that it is only on such condition that peace can be preserved. The undersigned having been made acquainted with the views of his Government in reference to this most extraordinary proposition, is enabled to declare that no such concession can be made. He therefore invites your Excellencies to withdraw such request, in order that the excitement which will naturally attend its discussion may be removed. In the interest of peace he also feels it to be his duty to declare that the Government of His Majesty the Tycoon cannot safely rely upon the further forbearance of Great Britain, and that it will be expected to show both its willingness and ability to remove the obstructions to commerce which now exist at the outlet of the Inland Sea, and to prevent any repetition of the hostile acts of the Prince of Choshiu. The undersigned conceives it equally his duty to call the serious attention of the Government of the Tycoon at this moment to the grave responsibilities which will inevitably fall upon them, if, as the language of the Ministers themselves would lead it to be inferred, any violence should be offered to foreign residents by Japanese subjects, or any damage by whomsoever inflicted on their interests, trade, or property in this country, which, equally with their lives, are placed under the sateguard of treaties and the law of nations."

Earl Russell appears to have been willing to stop the rapid career of his Minister; and the above information having been received on the 2nd August, replies on the 8th:—

"Your despatches of the 21st and 25th of May are of such importance that it is, in the opinion of Her Majesty's Government, necessary that at no long interval of time you should return home to explain the actual situation of affairs, and confer with Her Majesty's Government as to the measures to be taken. I shall by the next mail inform you as to the provision which will be made for carrying on the business of the Mission during your absence. In the meantime I have communicated at Paris, Washington, and the Hague the views of Her Majesty's Government. I confess I cannot perceive, except in the increased preparations for defence at Yedo, and for attack in the neighbourhood of Yokohama, that your accounts give reason to apprehend any immediate attempt to drive foreigners out of Japan. The Prince of Satsuma at least appears more friendly than he has hitherto been. I do not understand that the passage of the Inland Sea is at all necessary for purposes of foreign commerce, so long as Osaca is not open and the Mikado remains in seclusion at Kioto."

And on the 18th August Earl Russell again enjoins inaction, addressing Sir Rutherford in these terms:—

"Sir,—From your recent despatches, and from other trustworthy information, it appears that the injuries inflicted by the batteries and troops of the Prince of Nagato on ships navigating the inland sea concerned the Governments of France, the United States, and the Netherlands. That the French Government have expressed themselves satisfied with the punishment they have already inflicted on the agents and soldiers of the Prince of Nagato. That the United States' Minister declined to take steps of a warlike nature till fresh forces of his nation should arrive. That the Dutch Envoy and the Dutch Government alone desire that her Majesty's naval forces should proceed to measures of coercion in the Inland Sea. It appears further that the navigation of the Inland Sea is not necessary for purposes of European and American commerce so long as Kioto and Osaka are shut to foreigners. That the Tycoon still professes an intention to chastise the Prince of Nagato for his hostile acts, and that he is promoting, by the most expeditious means in his power, the construction of barracks for the regiment of British troops which you have summoned to Yokohama. In these circumstances Her Majesty's Government are of opinion that you should not require Admiral Kuper to act in a hostile manner against the Prince of Nagato, and that you should turn all your attention, and that of the Commander of Her Majesty's naval and military forces, to the defence of Yokohama. If the Tycoon and the Mikado see that the British position is strong, and that the British naval and military forces are effective, they will, by degrees, if not at once, drop all thoughts of violating the existing treaties, and of expelling foreigners from Japan. You will communicate the substance of this despatch to your French, Dutch, and American colleagues."

The Dutch Minister for Foreign Affairs, Mr. Cremers, had indeed expressed his regret to Sir J. Milbanke, that "so much time should have been lost, for he thought steps ought to have been at once taken to bring the Prince of Nagato to a thorough sense of the error he had committed in closing the Inland Sea." The reports too of the Dutch Political agent in Japan and of the Commander-in-Chief of the Dutch squadron had strengthened the concurrence of Mr. Cremers in the views of Sir Rutherford. Sir J. Milbanke writes:—"His Excellency thinks that no further proof is required that a catastrophe is imminent in Japan, and he is apprehensive that unless preventive measures are speedily adopted, it will burst over the European community, and unavoidably bring on a war on a much larger scale than would be the case were hostilities to be confined to the avengement of wrongs on a single nobleman whose acts and conduct have already been openly disavowed by the constituted authorities. He conceives that a severe blow inflicted upon one of their number would strike terror among the whole body of Daimios; that it would fortify the courage of those who are supposed to be friendly, and convince the hostile portion of them that the European Governments are not to be overreached or deterred from vindicating the honour of their flags by any fear of them or their batteries; and, further, M. Cremers does not doubt in the least that an expedition undertaken jointly by all the foreign Powers would be productive of great advantage by putting an end to the conceited ideas of the Japanese in regard to their military capabilities, and thereby perhaps contribute to avert the deplorable consequences to which an overstretched leniency must, it is to be feared, inevitably lead, as soon as the Government deems itself strong enough to proceed to the expulsion or massacre of all the foreigners, and the appropriation or destruction of their property."

With a Dutch colleague by his side so sure to join heartily in offensive measures, it was clear that if peace was to be preserved Sir Rutherford Alcock must be got home at once, if time there were, out of the possibility of doing mischief. Earl Russell, therefore forwarded a despatch on the 25th August to hasten his return:—

"Sir,—With reference to my despatch of the 8th inst., I have to state to you that I have been informed by Colonel Neale that the state of his health is such as to prevent him from returning immediately to Japan; and as Her Majesty's Government are still desirous of communicating personally with you on the state of affairs in that country with as little delay as possible, I have no alternative but to leave Mr. Consul Winchester in charge of Her Majesty's mission after your departure. As soon, therefore, as you can make arrangements for your return home, you will inform the Japanese Government that you are about to proceed to England on leave of absence, and that Mr. Consul Winchester will thereupon act as Her Majesty's Chargé d'Affaires. On making over to Mr. Winchester the charge of the mission you will caution him in the strongest terms against having recourse to any aggressive proceedings.—I am, &c., "RUSSELL."

Events, however, had proceeded too rapidly in Japan. The combined squadron sailed from Yokohama on the 28th and 29th August to force the Straits of Simonoseki. An attempt had been made to open a communication with Choshiu in person through the means of two youths whom that Daimio had sent to England in the preceding year to be educated. These young men received a passage from Yokohama on board H.M.S. *Barrosa*, and took with them a Memorandum from Sir Rutherford Alcock, addressed to Choshiu, warning him that "the hostile position he had taken could no longer be endured." Mr. Satow reports:—"When they returned they had with them only a single retainer, but they said they had been accompanied as far as the coast by a guard of soldiers, given them by their Prince. They commenced the delivery of the communication with which they were charged by saying that they had found their Prince at Yamaguchi, and had given the four letters to him themselves; that he had consulted on the subject with his chief retainers, and had come to the following conclusions:—That he perfectly acknowledged the truth of what was contained in the documents, and was conscious of his own inability to cope with the forces of Western nations. But he was acting on orders which he had received, once from the Tycoon, and oftener from the Mikado, and not on his own responsibility, in consequence of which he was unable to give the desired reply to the letters without having first received their permission to do so. For this purpose he intended to go up to Kioto and impress his views on the Mikado, which he calculated would take about three months, and he begged that the foreign Powers would delay operations for that period. . . . . I had a little conversation with them afterwards, in which they told me that their Daimio had been originally favourable to foreigners, but had gone too far now to retract, and that they did not believe the matter could be settled without war. They also suggested it as a good measure that the foreign representatives should throw the Tycoon overboard, and going to Osaka demand an interview with the Mikado's Ministers, and conclude a treaty with him. They spoke with great bitterness of the Tycoon's dynasty; that they kept all trade, not only foreign, but native also, to themselves by seizing all places where trade was likely to develope itself, as Nagasaki and Neegata; and they told me that these feelings were shared by most of the people of the country. The way in which they delivered their message made me suspect that the original was couched in far more uncompromising terms than that which they communicated."

The later course of events will best be told in the British Minister's own words, as contained in a despatch to Earl Russell, dated August 25, 1864:—

"Our attitude has for a long time been one of observation, and our wiser course patience. A change, however, has now become obviously expedient, if not altogether unavoidable. And my first care having been to ascertain the opinion of my colleagues, and to secure perfect unanimity, a memorandum was drawn up and signed by all on the 22nd July, to which I would for a moment draw your lordship's attention. Passing in review the progress of events and the actual situation, the Representatives in Conference recognised the necessity of consolidating and strengthening their position by a cordial understanding, based upon identity of interests and entire unity of views, as well as of action. They determined accordingly to place on record in a formal document their perfect accord, and to establish certain principles to serve as the bases of future co-operation. To this end they framed, and embodied in the Protocol signed, five Articles: the 1st recognising as the general basis of the policy to be followed, the neutralization of Japan, so far as the four Powers were concerned, and while awaiting the ratification of their respective Governments they engaged that this principle should prevail in the open ports. In article 4, serving as a corollary to the 1st, the representatives agreed 'neither to ask for nor to accept any concession of territory, nor any exclusive advantage whatsoever, either in the open ports or elsewhere in Japan.' While in article 5 they engaged equally to abstain from all interference with the internal affairs or administration of the country, and any intervention between rival factions.

"A happy chance brought two of Choshiu's subjects and retainers who had been sent for education to England back to Japan. They were introduced to me as anxious to return to their Prince, profoundly impressed with all that they had seen in England of the superior resources, power, and military means of Great Britain, and convinced that their master would change his policy could they only gain access to him. Anxious to avoid the necessity, if possible, of proceeding to extremities with this feudal chief, I induced Admiral Kuper, with the concurrence of my colleagues, to send these youths to the Prince of Choshiu's dominions; all the more willingly that both the Admiral and I felt the necessity, before further committing ourselves or allies, of ascertaining by observation the nature and extent of the fortifications and obstructions raised by the Prince since the Straits had last been visited. I was no less anxious, however, to give the Prince a last chance of retracing his steps, and putting aside his schemes of hostility. In this view each of the four representatives sent with the two youths an informal kind of manifesto, or letter, in Japanese, and English, or Dutch, the American and Netherlands representatives signing their names, and addressing what they had to say

Digitized by Google

direct to the Prince. Twenty days were given to this undertaking, and the result, so far as Choshiu's attitude was concerned, amounted to nothing. He merely sent a verbal message (delivered with doubtful accuracy by his two young envoys) to the effect that he had acted under the joint orders of Mikado and Tycoon, but would see if in three months some alteration in them might not be obtained.

"In the meantime news had been received of a new aggression on the part of Choshiu in firing upon a small American vessel putting into his port of Hangi on the west coast, in distress for fuel and provisions. The act was accompanied by treachery, no warning having been given to quit the anchorage, and there is no doubt they did their best to sink her.

"Nothing further remained to be done in this direction, therefore; and such being the unanimous opinion of the four representatives, a memorandum was drawn up embodying certain resolutions, the object of which was to call upon the senior naval officers to proceed to the Straits of Simonoseki, and remove all obstacles to their free navigation.

"While active preparations were going on, a communication was made by the representatives to the Ministers of Foreign Affairs, to request that some high officer might be sent to receive an important communication from them. The day before that fixed for the departure of the squadron, accordingly, three officers were sent; and my colleagues joining me, they were informed that it was no longer possible to delay action against Choshiu, who continued in his hostile attitude, and had, quite recently, committed an act in violation not only of treaties, but the law of nations. They then urged certain reasons for further delay—as had been perfectly agreed beforehand they should—to which we replied by promising to give them due consideration, and send our reply in writing.

"But even while the conference was taking place the mail of the 27th of June arrived, bringing with it, most unexpectedly, the Japanese Envoys from Europe, and news that they had signed a Convention in Paris on the 20th of June, by which they engaged, on the part of the Tycoon, that the Straits should be opened, with the co-operation of the French if necessary, within three months from the date of their return.

"The result of this Convention was to undo the work of so many months, to break up the combined action of the four Powers, and to isolate France from the other three. It was otherwise calculated to have a very disastrous effect; for if the Tycoon ratified the Convention, it was clear he must accept a position of public antagonism to the Mikado and the powerful partizans of a policy hostile to foreigners, which hitherto it had been his main care to avoid, as calculated to insure his perdition by an order for his deposition from Kioto, if by no other means. The mere return of the Embassy defeated the only real object of sending them, which was to gain time for the Tycoon to find some less hazardous issue out of the difficulties by which he was beset, and was a new cause of alarm and danger. Bringing the peremptory refusal of France, and by implication that of all the other treaty Powers, to enter into any negotiations for the closing of Yokohama the news was calculated to precipitate an outbreak of hostility against the Tycoon and foreigners alike, and bring on a political crisis.

"The only alternative offering any chance of safety to the Tycoon lay in the repudiation of this Convention, and a refusal, on the ground of inability to carry it out, to ratify it. This course was taken, and communicated in an official letter of the Ministers of Foreign Affairs.

"The non ratification of the Convention brought affairs back to the same situation as the day before the mail arrived, as far as the power of combined action was concerned among the representatives, though it could not prevent the damage to the Tycoon's position by the failure of his mission, and its return after only entering into a Convention so disgraceful to the Emperor in Japanese eyes, as conceding indemnities and consenting to accept the co-operation of naval forces to attack a Daimio. Without a moment's hesitation, therefore, my colleagues and myself renewed our requisition on the senior naval officers to proceed to the Straits of Simonoseki, after agreeing to a memorandum recording certain resolutions more clearly defining the ulterior objects to be kept in view. These were, the retaining possession of the Straits, or some position commanding them, until negotiations could be concluded between the representatives of the four Powers in concert and the Tycoon's Government, for the imperialisation of the adjacent coasts, and the repayment of the costs of the expedition, as an indemnity to be exacted at the Prince of Choshiu's expense, should this be approved by their respective Governments."

In the meantime serious events had occurred in the interior of Japan, which go far to nullify the Prince of Nagato's excuse for his conduct in the Straits, that he was but zealously carrying out the orders of the Mikado. Instead of being the subservient officer of that personage, he was then actually in open rebellion against him. Before the transmission of the *note identique*, Sir R. Alcock writes on the 7th September, "Takemoto Kai no Kami was sent from Yedo by the Tycoon to communicate to the foreign representatives startling intelligence, which had just reached him from Kioto, that the Prince of Nagato had sent a large force to the capital of the Mikado on the 20th of August, apparently with the view of seizing on his person. An attack had been made on the palace-gates, during which a large part of the city was set on fire and burned down. After a fight lasting through great part of a night and day, the assailants were finally beaten off; but an urgent demand upon the Government of Yedo had been received from the Mikado for large reinforcements. These the Tycoon was engaged in sending, although he was also pressed for troops to make head against the large bodies of ronins in the districts north of Yedo."

The despatches narrating the attack on the Prince of Nagato's forts, which were made public just after the event, are repeated in the present collection so as to complete the record of events. The success of those operations produced first, an Agreement assented to in Choshiu's name, by his Chief Councillors, to the following effect:—

"1. Henceforward all ships of all countries passing through the Straits of Simonoseki shall be treated in a friendly manner. Ships shall be allowed to purchase coal, provisions, wood, and water, and every other necessary. As the harbour of Simonoseki is subject to violent winds and currents, people suffering from stress of weather shall be allowed to land without opposition.

"2. Not only shall new forts not be built, but no repairs shall be made to the old ones, nor shall guns be mounted therein.

"3. Although the town of Simonoseki might justly have been burnt for having first fired upon foreign ships, it was left undestroyed. A ransom shall be paid for this, and in addition to this, the whole expenses of the expedition shall be defrayed (by the Prince).

"I agree to abide by the decision of the Foreign Ministers at Yedo with regard to these two points.

"This agreement being merely for the cessation of hostilities upon this occasion it has nothing to do with questions affecting Choshiu which have to be settled between the Japanese Government and the Ministers of Foreign Powers.

"(Signed) SHISHIDO BIZEN, MORI IDZUMO, MATSDAIRA DAIZEN NO DAIBU, YOSHICHIKA."

The above was succeeded by a Convention between a Plenipotentiary appointed by the Tycoon for that purpose, and the Representatives of the Foreign Powers:—

"CONVENTION.

"The Representatives of Great Britain, France, the United States, and the Netherlands, in view of the hostile acts of Mori Daizen, Prince of Nagato and Suwo, which were assuming such formidable proportions as to make it difficult for the Tycoon faithfully to observe the treaties, having been obliged to send their combined forces to the Straits o Simonoseki, in order to destroy the batteries erected by that Daimio for the destruction of foreign vessels and the stoppage of trade; and the Government of the Tycoon, on whom devolved the duty of chastising this rebellious prince, being held responsible for any damage resulting to the interests of Treaty Powers, as well as the expenses occasioned by the expedition;

"The Undersigned Representatives of Treaty Powers, and Sakai Hida no Kami, a member of the Second Council, invested with plenipotentiary powers by the Tycoon of Japan, animated with the desire to put an end to all reclamations concerning the acts of aggression and hostility committed by the said Mori Daizen, since the first of these acts, in June, 1863, against the flags of divers Treaty Powers, and at the same time to regulate definitively the question of indemnities of war, of whatever kind, in respect to the allied expedition to Simonoseki, have agreed and determined upon the four Articles following:—

"Article I.—The amount payable to the four Powers is fixed at 3,000,000 dollars. This sum to include all claims, of whatever nature, for past aggressions on the part of the Prince of Nagato, whether indemnities, ransom for Simonoseki, or expenses entailed by the operations of the allied squadrons.

"Article II.—The whole sum to be payable quarterly in instalments of one-sixth, or 500,000 dollars, to begin from the date when the representatives of said Powers shall make known to the Tycoon's Government the ratification of this convention and the instructions of their respective Governments.

"Article III.—Inasmuch as the receipt of money has never been the object of the said Powers, but the establishment of better relations with Japan, and the desire to place these on a more satisfactory and mutually advantageous footing is still the leading object in view, therefore if his Majesty the Tycoon wishes to offer in lieu of payment of the sum claimed, and as a material compensation for loss and injury sustained, the opening of Simonoseki, or some other eligible port in the Inland Sea, it shall be at the option of the said foreign Governments to accept the same, or insist on the payment of the indemnity in money under the conditions above stipulated.

"Article IV.—This Convention to be formally ratified by the Tycoon's Government within fifteen days from the date thereof. In token of which the respective plenipotentiaries have signed and sealed this Convention in quintuplicate, with English and Japanese versions, whereof the English shall be considered the original. Done at Yokohama this 22nd day of October, 1864, corresponding to the twenty-second day of the ninth month of the first year of Gengi.

"(Signed)—SAKAI HIDA NO KAMI; RUTHERFORD ALCOCK, Her Britannic Majesty's Envoy Extraordinary and Minister Plenipotentiary in Japan; LEON ROCHES, Ministre Plenipotentiaire de Sa Majesté l'Empereur des Francais au Japon; ROBT. H. PRUYN, Minister Resident of the United States in Japan; D. DE GRAEFF VAN POLSBROEK, his Netherlands Majesty's Consul-General and Political Agent in Japan."

"MEMORANDUM.

"The undersigned, having on behalf of their respective Governments entered into a convention with the Government of His Majesty the Tycoon, providing for the payment by him of a gross sum of 3,000,000 dollars for indemnities and expenses occasioned by the hostile acts of the Prince of Nagato, declare that they assumed as a basis of such convention that entered into at Paris with the Commissioners of the Tycoon (not ratified by the Tycoon because of other provisions) in and by which the payment of 140,000 dollars was to be made to the Government of His Imperial Majesty the Emperor of the French for the attack on the *Kienchang*. As such sum or a larger one may be justly claimed, and as the Governments of the United States and the Netherlands are justly entitled to like indemnities for more serious attacks on national and merchant ships of those countries by the same Prince, it is reserved for those Governments to decide if any and what indemnities from the said gross amount so to be paid by the Japanese Government shall be paid therefore.

"In view of the possible acceptance by the said Governments of a port in the Inland Sea in lieu thereof, which will render any division unnecessary, the undersigned reserve the same for adjustment by their Governments; and to provide an equitable basis, have hereto annexed memoranda of the naval commanders, showing the number of ships furnished by each for the expedition and assigned for the defence of the several ports, with their armaments and crews; and also of the military commanders, showing the number of troops collected for the same purposes.

"Yokohama, October 22, 1864.

"(Signed)—RUTHERFORD ALCOCK, Her Britannic Majesty's Envoy Extraordinary and Minister Plenipotentiary in Japan; LEON ROCHES, Ministre Plenipotentiaire de Sa Majesté l' Empereur au Japon; ROBT. H. PRUYN, Minister Resident of the United States in Japan; D. DE GRAEFF VON POLSBROEK, His Netherlands Majesty's Consul-General and Political Agent in Japan."

With reference to Article III in the Convention, Earl Russell writes to Sir R. Alcock:—

"Foreign Office, December 3, 1864.

"Sir,—In your despatch of the 28th of September you requested to be instructed as to whether, in lieu of any pecuniary ransom for the town of Simonoseki, and of any indemnity to cover the expenses of the late expedition against the Prince of Nagato, Her Majesty's Government would be willing to accept the opening to foreign trade of the port of Simonoseki or of some more eligible port in the vicinity of the Straits; and I have to acquaint you in reply that Her Majesty's Government are willing to renounce any money payment if greater or equal advantages can be secured by stipulations to be obtained from the Tycoon or the Mikado.—I am, &c., (Signed) "RUSSELL."

This waiver, in favour of opening the port of Simonoseki, may be of considerable importance to British commerce, as would appear from the following extract from a letter to Sir R. Alcock, written by Mr. Rickerby, the Agent of the Central Bank of India at Yokohama.

"Central Bank of Western India, Yokohama, Nov. 14, 1864.

"I take the liberty of addressing your Excellency to express my regret that my unavoidable absence at Nagasaki should have prevented my adding my signature to a letter addressed to you by the English mercantile community here on the subject of your approaching departure from Japan. It may be interesting to your Excellency to hear from an eye-witness that there is every evidence of an active resumption of trade in the Inland Sea, and more especially at the port of Simonoseki, and that at that place the best possible feeling apparently exists towards foreigners. The harbour, when I saw it, was crowded with large junks, bulwark to bulwark, like ships in the Pool of the Thames, to the number, as far as my memory serves me, of 300 or 400, the most part loading, as we were told, for Nagasaki. The utmost desire seems to exist to have the port opened for foreign trade. We were asked to make contracts for supplying shirtings, camlets, broad-cloths, and other English manufactures, and urgently requested to stay for three or four days until communication could be had with the Prince of Nagato, then in the interior. So far from any bad feeling existing between the authorities there and foreigners, we found ourselves, although no foreign vessel of war was in the port, treated with the utmost kindness and hospitality; officials boarded us immediately on our anchoring, offering us freely coals, water, and provisions, and finding us well supplied, invited us to land, when they entertained us in excellent style, after which we were shown the town, the batteries, and every object of interest. No attempts are being made to repair the forts, which are still strewn with the *débris* of the late fight. The people of the town, as well as the officials, and what few soldiers we saw, were excessively civil and polite, refraining even from that oppressive curiosity which is so annoying in Japanese towns whose inhabitants are not accustomed to the presence of Europeans. Were other proofs wanting of the correctness of your Excellency's estimate of the Japanese character, and of the success of the policy which you have pursued lately in your relations with their Governments, the facts above detailed would, I think, have weight; but when, in addition, we see the trade of Yokohama, after a stagnation of nearly a year, suddenly reviving, and the restrictions which have hitherto cramped it as suddenly removed, so immediately after the affair of Simonoseki, and your subsequent visit to Yedo—and when, in proof of this, we see two successive steamers taking each a larger cargo of the most valuable export (silk) than has ever been recorded since the opening of the port—no thinking man can fail to see that the policy pursued by your Excellency has had the most beneficial results, nor can any one view your departure without apprehension and regret, lest the execution of your plans should be interrupted, or a different policy initiated."

Almost the last despatch in the collection is one from Sir R. Alcock to Earl Russell, dated the 19th November (received Jan. 26, 1865), in which he defends the policy he had pursued since his return to Japan; and this he does because, as he states, "it was impossible not to see in Earl Russell's former despatches something of censure and condemnation." We need not present our readers with this defence of a policy which was so brilliantly justified by results as finally to call forth a generous and most handsome retractation from Earl Russell of the judgment he had erroneously passed. The conclusion, however, of Sir R. Alcock's despatch demands preservation, as the summation of his experience of the characte of the Japanese Government:—

"All Treaties made with Japan have been forced upon it; and until great changes have taken place in the character, institutions, and government of the people it is in vain to expect that Treaties so entered into can be maintained by a religious abstinence from the use of force as a means. There need not necessarily be any brutal display of physical force; the determination to maintain the Treaties and to exact respect for their chief stipulations may be veiled under diplomatic forms. But whatever forbearance or conciliation may be exercised—however carefully sustained the *suaviter in modo*—my whole experience of twenty years in the East tells me there must be *fortiter in re* to fall back upon. Force there must be in reserve; and precisely in the degree that there is a conviction in the minds of the Japanese that, if driven to extremities by a persistent refusal to listen to argument or remonstrance, it will indubitably and effectively be brought into action, will the necessity be avoided, or of rare occurrence. It is weakness, or the suspicion of it, which invariably provokes wrong and aggression in the East, and is a far more fertile cause of bad faith and danger among Asiatics than either force or the abuse of strength. Hence it is that all diplomacy in these regions which does not rest on a solid substratum of force, or an element of strength, to be laid bare when all gentler processes fail, rests on false premises, and must of necessity fail in its object—more especially, perhaps, when that end is peace. The very emphasis with which it is insisted upon, and the earnestness of the desire manifested to maintain it at any sacrifice, so far from promoting a good result, directly tends to provoke such intolerable wrong as must bring war. If I am mistaken in this, I have the lesson of all my Eastern life and career to unlearn."

By a despatch dated "November 2nd," Earl Russell had already acknowledged that Sir R. Alcock's despatch of the 28th September was "a successful vindication of his conduct." This expression of the satisfaction of the British Government was more emphatically reiterated in the following:—

"Foreign Office, Jan. 31, 1865.

"SIR,—I have received your very full and able despatch of the 19th of November. Your former despatch contained a satisfactory justification of the course which, in co-operation with the representatives in Japan of the other Treaty Powers, you have so successfully pursued. Your despatch of the 19th of November makes this justification complete. The despatches from this office of which you speak were written in the belief at that time that trade was uninterrupted, and that no serious attack on Yokohama was in contemplation. Circumstances on the spot were of a totally different complexion. The energetic course you pursued in concert with the representatives of the other Treaty Powers in these altered circumstances has been entirely approved by Her Majesty's Government, as you will have found by my despatch of the 2nd of November. You were ordered home that you might in person give to Her Majesty's Government fuller information as to the state of things in Japan than mere despatches could convey, and that thus Her Majesty's Government might be able to come to a satisfactory decision as to the course of policy which it might be best to pursue with respect to Japan; but the order given to you to return home for that purpose was by no means to be understood as implying your removal from your post. On the contrary, after hearing from you your explanation of the present state of affairs in Japan, I shall wish you to return at once to Yokohama, to perform in Japan such additional meritorious services as may be expected from your tried ability and long experience.—I am, &c.,

"(Signed) RUSSELL."

Though he had often been placed in hostile contact with the Tycoon's Government, yet it appears Sir R. Alcock had nevertheless obtained their esteem and consideration, for we have a letter addressed to Earl Russell from the Minister of Foreign Affairs at Yedo, in which the latter intimates his extreme regret at Sir Rutherford's intended departure, stating—"Moreover, as the representatives of other Powers have been changed, he is the only one who has a correct knowledge of the state of affairs since the opening of the ports, and, as such, his residence in this country has strengthened a good deal the relations between the two countries, as I have in many respects been able to obtain his advice regarding the settling of the present civil war. His Majesty the Tycoon has therefore directed me to represent to you the desirability of his being sent back to his post in this country after he shall have terminated his affairs in England."

CHINA.

KIUKIANG.

The Kiukiang Races came off on the 23rd and 24th Nov. The racing was very good, and the course on the first day in capital condition, as after a long continuance of dry weather there had been some heavy showers during the preceding night. Hankow was well represented, and carried off the Autumn Vase and the Visitors' Cup.

First Race.—Hack Cup; value $50. Half-a-mile.
Red Deer 1
Tomtit 2

Second Race.—Autumn Vase; value $150. One mile.
Meteor (late Agony) 1

Third Race.—Chaa-Sze Cup; value $200. One mile. Presented by John Forster, Esq.
Prizefighter 1

Fourth Race.—Challenge Cup; value $100. Half-a-mile.
Pat 1

Fifth Race.—New Comers' Cup; value $100.
Sluggard 1

Sixth Race.—Visitors' Cup; value $100. Three-quarters of a mile.
Liddington 1

This closed the first day's racing.

SECOND DAY.

The Selling Stakes. Three-quarters of a mile.
Hard Cash 1

A Match between Mr. Graham's Red Deer and Mr. Toremop's Tomtit. Red Deer won easily.

A Match between Mr. Fraser's Wild Dayrell and Mr. Manship's Ackbar. Wild Dayrell came of conqueror.

Consolation Stakes.—For beaten ponies at this meeting. Value $50. Half-a-mile. Widdie came in first by half a length. Four others ran.

Steeple Chase.—Meteor, Pat, Liddington, Sluggard, and Norwood started. Meteor was the first over the first jump, but fell, all the other three ponies following his example. He was also the first over the second water, followed by Norwood. Meteor refused the bank, and the lead was then taken by Norwood, followed by Pat until the last fence, which he refused. Pat then went over followed by Sluggard and Meteor, who had a fine race home. Liddington threw his rider at the fourth jump, who was much shaken.

THE JAPAN SILK TRADE.

With reference to the Silk trade we extract the following interesting "communicated" article:—

Digitized by Google

Our attention has been drawn to an article printed in another paper, the purport of which is that the Japanese authorities have issued orders in the silk districts that for the future no more fine silk be reeled, which measure would have the effect of preventing the exportation of this article by foreigners, as they only require fine Silk, whereas the demand on the part of the natives is limited to coarse sizes. We may preface our remarks by stating that we have not heard from any Japanese merchants that such orders have either been in contemplation or really issued; nor are we disposed to believe (except upon the most undoubted evidence) that the Japanese Government would deliberately commit themselves to a measure so thoroughly opposed both to the spirit and the letter of the arrangements made in October last at Yedo between the Foreign Ministers and the Gorogio.

But assuming, for argument's sake only, that such orders have been actually given, we do not see that we need be very much alarmed. Your contemporary and his informant must be very little conversant with the silk-trade if they imagine that foreigners require fine silk only. So far from such being the case, there has been throughout this year a very active demand for coarse or full silk for exportation, not only to Europe, but also to India and China; and the extreme scarcity of that class on our market has only been satisfactorily explained by the supposition that the native manufacturers can, and do actually, out-bid us for it. The produce of the districts of Hatshogee, Matti, Nangahama, Mashta, Sodai, Inchiu, Tamba, Tazima, Echizen, Nambu, Amatzki, &c., of which in former years we used to receive an abundance, is now either exceedingly scarce, or fails altogether to come down to Yokohama. Almost everbody connected with the "noble article" in Japan, knows for the last two years the proportion of fine silk sold on this market has been considerably larger than that of coarse silk, whereas originally the reverse was the case; but the impression on our mind is that the gradual substitution of the fine for the coarse sizes is not so much owing to our requirements of the former as to a fact which was very soon discovered by the Japanese dealers, viz.: that foreigners were offering prices comparatively higher for fine raws than for the coarser kinds.

On the other hand, certain branches of industry in Europe are sorely put out by the universally increasing scarcity of coarse silk. The exports of Taysaams from China have fallen off to one tythe of what they used to be. Persia and Georgia barely supply one-half of their former produce. In Bengal the coarse native kinds have in a great measure given way to fine silk, reeled off after the Italian method. In Turkey the districts of Antioch, Beyruth, Castravan, Brutia, and Adrianople, which used to produce large quantities of good, useful coarse silk, have almost entirely abandoned their primitive ways; and the cocoons from those places are either reeled off fine, or shipped to Marseilles to supply the French and Italian filatures.

The trimmings, fringes, sewing-silk, the ribbon and various other trades in Europe, have great difficulties to find suitable supplies. Any measure therefore that would tend to restore here the original proportion of coarse silk, might be looked upon, at least by some people, as decidedly advantageous; and consequently instead of finding fault with the Japanese authorities for restraining the growing excess of fine over coarse silks, one is rather disposed to think that such a proceeding would be quite as much in our interest as that of the native manufactures.

LIAO-TANG SILK.

MEMORANDUM RESPECTING THE SILK REGION IN THE NEWCHWANG CONSULAR DISTRICTS.

British Consulate, Port of Newchwang, 24th Oct., 1864.

The silk region of the Newchwang Consular district may be described as the valleys of the Yang and other small rivers which empty themselves into the head or northern extremity of the Yellow Sea. But the region extends as far north as the parallel of Moukden, the hilly country lying due east from that city, and which is drained by the affluent of the Leaou river which passes it, also producing silk. No other port of the Leaou valley produces silk, nor is any, so far as I can learn, produced in the hills which lie between it and the Great Wall.

The silk region, as I have defined its limits, is about 100 miles broad from east to west, and about 140 miles long from north to south. Its southerly portion, that nearest the Yellow Sea, is probably most suited for the cultivation, and it is from that that the accompanying cocoons, with the twigs and leaves of the bush which the grub feeds on, have been procured. The pieces of stuff that accompany them were woven in the same region, whether with or without admixture of cotton, which is also produced in that quarter, I cannot tell.

I have traversed the silk region twice. A watershed composed of the mountains that come down from the north east of Moukden and stretch away to the Maoutaou straits forming the Leaou peninsula, this watershed intervenes between the silk region and this port-town. But there are certainly two, if there be not more practicable for the heavy goods carts used in this province. Heavy articles of small value, as pulse, bean cakes and oil, could not with profit be brought over these mountains to this port. On the other hand, a considerable portion of the foreign cotton-manufactured goods which supply the fairs held near the Corean frontier are taken in carts over these mountains from this port, showing that, in articles of no greater value in proportion to their weight than cottons, this foreign shipping port can compete favourably with the Junk-ports at the head of the China Sea, the longer land carriage being counterbalanced by the cheaper freights and quicker passages of foreign ships with the power of insuring goods conveyed by them. Heretofore the cocoons have been sent southwards through the junk-ports at the head of the China Sea; none, so far as I can learn, have ever been brought to this port. But as the light cocoons could be brought from that region with less cost in proportion to their value than can cotton goods be taken thither, it is plain that, in so far as the land transit is concerned, there is no reason why this port should not become a port of export for the silk region. And if it has paid Chinese dealers for generations back to take it away southward, there would seem to be, in so far, no reason why, in the present dearth of textiles, foreigners might not also take it away with profit.

The southern dealers arrive at the junk ports as the navigation opens about the end of March, and proceed into the silk valleys, where they give advances to the farmers. The first crop is usually taken to the ports, most of it to one called Fa-koo-shan,—about July. A second crop is shipped just before the navigation closes, *i.e.*, about the beginning of November. The cocoons are taken away in large baskets. The price in some seasons goes down to four or five mace of silver for fifteen hundred cocoons, in others it rises to six or seven mace for fifteen hundred,—advances being in every case made to the cultivator. As to the quantity annually exported, I have not been able to get any information. My principal informant tells me that from one valley, which is however one of the most productive, about 80 cart loads are taken away annually. Each cart carries ten baskets which from his description must each contain about fifteen cubic feet. That would give about 12,000 cubit feet of loosely piled cocoons from that one valley. What I myself know is that the production in the whole region could be quadrupled in a few years if the entering of foreigners into the trade should give sufficient inducement to the cultivators; for, at present, not one fourth part of the hill sides suitable for the cultivation of the shrub for the feeding of the grubs is planted with those shrubs.

The cocoons now sent have had boiling water poured over them to kill the worms.

Some silk is also produced from grubs that feed on the mulberry tree leaves; but the cultivation is a precarious one, and is only carried on by the females of well to-do families.

THOS. TAYLOR MEADOWS, Consul.

REPORT BY MR. MAJOR ON THE SPECIMENS OF COCOONS, &c., RECEIVED FROM NEWCHWANG.

Shanghai, 2nd Dec., 1864.

Sir,—I beg to acknowledge receipt of your favour of the 29th ultimo, accompanied by 24 cocoons with some branches and leaves of an oak shrub on which the animal that had made them fed, and also a piece of cloth woven out of the thread drawn from this kind of cocoon. I have also received, and read with much interest, the memorandum on the cultivation of silk in the region of the Newchwang Consular district, from H. B. M. Consul, T. T. Meadows, Esq.

It affords me much pleasure to acquiese in the request of the Chamber of Commerce expressed in your letter, by giving the following report on this article as my opinion and all I know about it. I have first seen this kind of cocoon (some 15 years ago) in the Museum of the Chamber of Commerce and Arts at Lyons. It had been sent there (likely 100 years ago) by the Roman Catholic Missionaries, as the produce of a worm in the north of China feeding on the leaf of the oak tree. No experiments had been made therewith in France, because the quantity sent had been too small. Since I have been in China I have received a letter from Lyons, asking me to look after this cocoon, but it was only once, two years ago, that I succeeded in getting a few of them from Japan, which I then reeled off, and now beg leave to hand you herewith a small skein of silk made of them.

The first impression on seeing these cocoons and the cloth woven from their produce is that this can never come in for silk. The manufacture is the rudest that can be in all respects; the thread is as coarse and unequal as well can be, the whole has no gloss whatever, although no cotton is mixed; both the warp and woof are made of the raw material as taken from the reel, without any attempt at Tram or Organzine, therefore, necessarily left in the gum. I have attempted to boil off the half of the cloth sent, to ascertain the quantity of gum the animal may use in spinning, which with the silkworm is 20 per cent., but I have not been able to reduce it in weight at all; this can only be accounted for, if the cocoons have undergone a degree of firmention, by the process of killing the grub which has been adopted. You will also see from the piece of cloth I return you, together with the other piece unboiled, that the colour has remained nearly the same (it would, therefore, in dyeing, take no other colour than black), whereas, if this had been made of usual yellow silk, it would have turned out white from boiling.

I have, however, also boiled off half the skein of silk of my reeling from such cocoons, which I add to the other skein of raw, which you will perceive has become nearly white and will take any colour. I therefore am persuaded now, after seeing this silk boiled off, that it really is silk, and could well be used for Tram in European manufacture, if reeled equal to this sample.

The yield of the cocoons I reeled was 20 to 1, *i. e.* 20lb. of cocoons only give 1lb. of silk, whereas usual China dry cocoons of inferior quality yield 5 or 6 to 1, and good European dry cocoons 4 to 1, always for best silk of 11/12 ds.

This difference arises partly from the great bulk of the worm, not nearly dry, and partly from the greater quantity of waste which must be made before a clean thread can be drawn, but then the thread is quite as clean and may be even cleaner than good silk, although it has nothing like the elasticity of good silk, less gloss when boiled off and little or none before.

Of the value of these cocoons I can say nothing before I can get a sufficient quantity of them to make two or three lbs. of silk, at least some four times 1,500 cocoons and know exactly what they cost in dollars or taels in Shanghai. But I think it will be worth while making such a trial, and sending the produce to Lyons or London (there is more skill in Lyons) to be dyed and manufactued into goods. First crop cocoons in preference to second crop, and if possible not killed in that abominable China fashion. I shall be very happy if I can be of any service to forward such a trial.

Besides this it is requisite to ascertain—

1st. How often does this worm sleep while feeding.

2nd. Is the worm fed on the mulberry leaf, of which Mr. Meadows speaks of this same species (that feeds on oak leaves) or bred of the usual China silkworm eggs. I should much like to see a few cocoons of worms fed on the mulberry leaf there.

Digitized by Google

3rd. An experiment ought to be made of this breed (eating oak leaves) to ascertain what they come to when fed in a more congenial climate on mulberry leaves. If I could get an ounce of eggs of the first (July) crop, I would willingly attend to their feeding myself. The eggs ought to be sent here during the winter, protected from frost but not kept near any fire or in a too warm cabin; 66 degrees Fahrenheit would be too hot, or the utmost they would bear.

It strikes me that this species of silkworm may turn out of the greatest consequence in restoring the silkworm breed in Europe, now quite lost, and even in restoring the silkworm of China, which I find also greatly deteriorated, to a more healthful state (this, however, is almost hopeless, considering the Chinese character). In all nature, too much and long continued culture degenerates a breed; then new strength and vigour is acquired by cross breeding with a healthy kind of the same species.

Now this worm gives me the impression of being very strong and healthy. It would be a great boon to the silk trade and industry to introduce any such a means.

New seed has for years been tried from all parts of the world in Europe, but to no effect, the whole family of one and the same race seems to have outlived itself by constant regenerating in the same family at an enormous rate, to supply our augmented and constantly growing luxury.

In Naples I tried during three years cross-breeding the old European breed with the usual China worm, and that with very good success; when I left for China I gave all the seed I had thus collected to an English gentleman, who I fear has not persevered, or I should have heard something of it; people look too much to immediate benefits.

If this new family is to be introduced for cross breeding, I should recommend feeding them in their first and second stages on oak leaves, and after that only on mulberry leaves.

I beg leave to conclude with my opinion that great thanks are due to Mr. Meadows for making so great an exception among the Consuls in China, by turning his eye and mind towards what may be advantageous to the commerce and industry of the country he represents, and thereby also to the country he occupies.—I am, sir, your obedient servant,

JOHN MAJOR.

Walter Pearson, Esq., Secretary of the General Chamber of Commerce in Shanghai.

THE PROGRESS OF ENGINEERING AT SHANGHAI.

(FRIEND OF CHINA.)

It was in April last that we noticed the arrival here of Messrs. Heard and Co.'s fine river steamer *Kiangloong* (river dragon). This vessel was brought out in pieces from New York, and put together by Messrs. Hunt and Co., at Whampoa; the magnitude of the job being estimated by her dimensions in the report, viz.—length, 285 feet, breadth over guards 71 feet, engines, made by Boardman and Co. of from 1,000 to 1,200-horse power, with a cylinder 27 inches in diameter. Her boilers, we stated, like the *Fusiyama's*, were on the guards, and it was estimated that, though loaded to 5½ feet with coals on board, and to 7 feet with cargo, with 30 lbs. of steam on she would make "from 19 to 25 revolutions of a wheel 32 feet in diameter, or, on the average, say, 20 miles an hour."

This estimate of her speed, however, was found to be too high. Even without going down to seven feet, her wheels were so much immersed that, placed alongside any other steamer on the Yangtse she was sure to drop astern; either of them could pass her easily; while the boilers on the guards were found, as we believe those connected with the *Fusiyama* have found them, to be misplaced and a mistake.

The result of this experience of their "River Dragon" has been a determination on the part of her spirited owners to pull the vessel to pieces from the main deck up, turn the boilers end for end, and transfer them from the guards to the hold, twenty-five feet further forward, while the wheel axletree and whole fabric above it are to be raised bodily some two or three feet.

The undertaking by Messrs. Collyer and Lambert as shipwrights, and Messrs. Hunt and Co. as machinists, to effect this work, may be termed stupendous;—such a job, in fact, was never attempted in China before, and it affords us much satisfaction to be able to congratulate these practical workmen on the early prospect of a complete success. Yesterday saw the port boiler, weighing over forty tons, safely landed in the hold, and before Christmas day, it is computed, the other will be alongside of it.

One great fear,—from the many assertions that it could not be effected, indeed,—the greatest fear was that Messrs. Falls and Lawrence, superintending Messrs. Hunt and Co.'s machine factory, would not be able to reduce the length of the connecting rod, and adapt it effectually to the altered height of the machinery in the *Kiangloong's* hull. Brought ashore here at Hongque it was, however; and a blacksmith's forge to effect a weld nine inches in diameter was built on purpose in the yard, with blowers, worked by steam running at the rate of 3,500 revolutions in a minute. This completed, then came the work of lifting the rod, a piece of iron weighing over five tons, into a position for a cut to reduce it twenty inches in length—calculations for this cut requiring to be made with the greatest care; a portion of the excess to be removed consisting of the groove into which the other end of the spindle had to tongue for welding. The last requirement was a hammer, or pile-driver-like monkey, of sufficient weight to operate efficiently on the joined end. In all these preliminaries Messrs. Hunt and Co.'s workmen were entirely successful, the huge beam being managed like a plaything, and altered to the size required with, it is believed, as much compactness as if the piece were a rod which a couple of men could handle on a common anvil. The weld completed, it was taken to the turning shop adjacent, and placed in one of the largest lathes to be found this side of the Cape, and there, at the moment of our present writing, it is being polished off as neatly as it could be done in any workshop in the world. Verily Shanghai is a great place, and in no way more so than in the enterprise and ability of its shipwrights and machinists. In drawing our attention to this subject, a friend says:—"Shanghai can, from this day, take its place among the first cities of the world in arts and sciences. Every day new works and manufactures are being carried on by the different artizans among us that compete, and in many cases excel the same kind of work when brought from abroad. But in no branches beyond those of ship and steam boat building and engineering have such progress been made. Now we can have any sized ship or steamer built equally as good as in any part of the world, as has been shown by late surveys; and in the engineering departments, to those who will take a walk in the different machine shops around, all will be surprised to see the work that is being done, principally by Chinese artizans, headed by some European who directs and controls the whole."

MANCHESTER CHAMBER OF COMMERCE.

At the annual meeting of the Chamber Mr. Henry Ashworth, the president, in moving the adoption of the report read by the Secretary, remarked upon the forbearance and discretion with which the working people of the cotton districts had endured the privations caused by the American war. Since 1860 the cultivation of cotton had been distributed over a very large portion of the globe. In that year, which was the year of our largest consumption, the quantity of cotton we consumed was valued at £34,000,000. Last year, for a quantity, probably, not exceeding one-half what we received in 1860, we had to pay, in round numbers, £80,000,000. In 1860 our consumption was 1,083,000,000 pounds weight; last year we consumed only 561,000,000; or, in round numbers, 51 per cent. of the quantity in the previous period. But while we had in this respect tided over one-half the difficulty, the employment had increased in a greater ratio by reason of the inferiority of the staple, which was principally from India, and had required a much larger number of hands to manipulate a smaller quantity of cotton. Hence the 50 per cent. of cotton consumed had employed between 60 and 70 per cent. of the hands; and if we were to receive another 50 per cent. of cotton it must be obvious that there were only 30 to 40 per cent. of hands to work it. From these circumstances the consumer might judge in what period of time he might receive a more durable character of cloth at something like half the money. In 1860 the cotton we received from America furnished us with five days' labour out of six. That which we received last year from America had not been equal to half a day per week. The supplies which had kept the mills going beyond this were derived from various sources. From China and Japan in 1860 we received no cotton whatever, but last year we received 96,000,000 of pounds weight. From Turkey in 1860 we received as much cotton as came to £625 in value. Last year we received 22,000,000 of pounds. The import from the Brazils had also increased largely, but the receipt from Egypt had increased, perhaps, more largely still. In 1860 the cotton from Egypt was of the value of £1,500,000; now it was nearly £15,000,000; showing that the Egyptians had made considerable progress. The 80 millions of money in a year which had been distributed over the world for this production of cotton had been largely gathered by the countries just named; and the Viceroy of Egypt and the Sultan of Turkey had given a description of encouragement to cultivation similar to that afforded in this country by agricultural societies—not protection exactly, but such information and encouragement for the growth of cotton as it was becoming on their part to offer, and those countries had reaped a large advantage thereby—(applause). While the people of India had been making ducks and drakes of the large sums sent over to them for cotton, while we heard of their making silver tires for their cartwheels, and knew not what else they were doing with the bullion they received, it would appear that the poor Arabs of Egypt had understood how to make a better use of their money. They had applied it to the purchase of machinery for the carrying out of cultivation, for steam-ploughs, steam-engines, for irrigation, cotton gins, and a great variety of implements of agriculture, so that the money they received for these supplies of cotton was being brought back, to a large extent, and expended on those articles which were best calculated to increase cultivation. Egypt was now deriving the advantage of European intelligence and European capital and banking. Its people had found out that a bank under the auspices of European intelligence was quite as safe a place to hoard money as a hole dug in the ground; and they had also found that a Liverpool "price-current" was to them a subject of as much interest as the Nilometer they have been accustomed to adore for centuries. The prosperity of Egypt now might be said to exceed that of any previous period, if we expected only that time when the "seven fat kine" were heard of, and when Joseph conducted that large speculative operation in grain. (A laugh.) But what had been the effect produced in India by the increase of price? In 1860 we paid for Indian cotton £3,500,000, and last year more than £40,000,000; while the quantity we received had increased two-and-half times—*i.e.*, from 214,000,000 to 513,000,000 pounds weight. While the receipt of so great a sum must have stimulated cultivation, it must also be remembered that a large portion of the cotton lately derived from India had been withdrawn from the domestic manufacture of India, and from that proportion of cotton which India had been accustomed to ship away to China.

COMMERCIAL POSTSCRIPT.

ARRIVALS NOT INCLUDED IN THE TABLES.—Feb. 16, at Falmouth, from Batavia, St. Bede, from Hong Kong, Amoy; at Queenstown, from Hong Kong, Alida; off Falmouth, from Foo chow-Foo, Picciola.

SPOKEN.—Julia Augusta, London to Colombo, Dec. 5, 37 S., 21 W.; Frenchman, Liverpool to Galle, Dec. 9, 34 S., 17 W.; Azelis (?), London to Ceylon, Jan. 8. 5 S., 24 W.; Navigator, Liverpool to Hong Kong, Nov. 7, 42 S., 58 E.; Yawmee Williams (?), Dutch barque, Newcastle to Batavia, Nov. 25, 34 S., 93 E.

DEPARTURES.—Feb. 14, from Shields, for Singapore, Sampson.

LAID ON.—At London: For Colombo, Sea Sprite; for Yokohama, Castleton. At Liverpool: For Singapore, Gyrn Castle.

LONDON, MONDAY, FEB. 20, 1865.

FRENCH ENCROACHMENTS ON SIAM.

IN our issue of the *London and China Express* of the 26th Jan., under the heading of France, a paragraph appeared which, although it consisted of only three lines, is of no little importance. We refer to the rumour of the King of LAOS' wish to place his so-called kingdom under the protectorate of France. We say "so-called" because in reality the King of SIAM is the sovereign also of Laos, and his delegate there has not the least vestige of authority for assuming the regal title. It appears to us that the French are about to play the same trick at Laos as they did with so much success at Cambodia. The VICEROY of the last-mentioned place, who being appointed by the King of SIAM, was cunningly induced by a French missionary to make a treaty with his countrymen, solely on his own responsibility; and as a reward for this piece of treason, his independence was recognised by the French. He called himself King, and a large portion was docked from the possessions of Siam, which of course accrued to France. The danger of such a precedent is at once apparent; any discontented Governor has but to appeal to these kind-hearted Frenchmen, and out of the most disinterested motives they will offer him protection, give him the empty title of King, and themselves take the substantial part of the oyster, the while they magnanimously present him with the shells. This has succeeded at Cambodia, and will, unless we take care, succeed at Laos. The French see the great advantages that will fall to their share, by the addition of these provinces to their Eastern territories, and they are as bold and unscrupulous in carrying out a plan as they are cunning in its construction. If we are, as we pretend, the faithful allies of the King of SIAM, we ought surely in some way to testify our disapprobation of the continuance of this mode of proceeding. Deprived of his tributaries, the unfortunate King, will in due time have to follow their suit, and leave us to chafe at the superior spirit of enterprise that exists in our neighbours, whom we shall one day find with possessions close up to our Tennasserim provinces. The matter may not be viewed by all in the same light, and some may imagine that we are making a mountain of a mole-hill; but still we cannot help wondering as to whether H.M. Consul at Bangkok has reported these acts to his Government, or taken any steps to prevent the repetition of them.

CHINA SHIPPING TRADE.

HAVING clearly demonstrated in previous articles the cause of the losses which have accrued to importers in tea and silk, from the injudicious transactions of traders in China, we now direct our attention to another source of loss, to shipowners especially connected with the trade of Shanghai. We allude to the high shipping charges, and the losses from collision, and detention at that port, in consequence of the crowded state of the harbour; the insufficient accommodation for landing and loading cargoes, and the shoaling of the anchorage from natural causes, which the local authorities have not the means of preventing. These drawbacks, and other annoyances from exorbitant charges for indifferent pilotage, have become very damaging to the profits of shipping employed in that trade, so that shipowners, like merchants, have reason to calculate their losses from local causes that might be remedied, or new plans laid out to meet the evils. These have been recently brought before the public in a report from the engineer to the Municipal Council of Shanghai, "on the shore-line of the settlement," in which he makes the following remarks on the general condition of the upper anchorage:—"The increasing requirements of "this port; the insufficient landing accommodation; the "threatened blockade by mud-deposit in and at the Soochow "Creek, of an important channel of communication with the "interior; the danger to boats and *sanpans* by the eddies and "currents of the *chow-chow* water, and the disadvantage of "no action being taken to define the banks, and restrain "encroachments on the shore, sufficiently point out the neces-"sity of measures for the removal of existing evils, and the "prevention of future and more uncontrollable sources of "alarm." Coming from the official engineer of Shanghai, these views upon the present and future prospects for shipping are certainly calculated to create unpleasant feelings in the minds of shipowners and captains risking their ships at such a port. As to the landing accommodation, it is even worse than the anchorage, according to Mr. CLARK'S report:—"The existing "bunding will soon require reconstruction; the present insuffi-"cient jetties are much out of repair, and must shortly involve "considerable expenditure; and it becomes a question whether "it be not more advisable to expend at once a sum of money "to secure larger advantages to the port, than to expend a less "sum for purposes inadequate, and entailing eventually a far "greater expense." Here is actually a declaration on professional authority that the upper anchorage in front of the English settlement, where the great bulk of the trade is carried on, will soon be closed against foreign shipping, and the wharves unfit for landing cargo. The worst of it is that the remedy proposed by Mr. CLARK will cost more money than the Municipal Council can command; and the members of that body are not inclined to become personally responsible for any sums beyond the revenue, as the Council is not incorporated and they are individually liable for the expenditure. Neither is it possible to raise a loan for the purpose of making costly and unlimited improvements, as the Council has no legal power to issue scrip. In this dilemma merchants and others interested in the port are improving the dock and wharf accommodation by associated enterprise at the lower anchorage, where the difficulties to contend with are not so formidable, and the river banks afford greater facilities for the construction of jetties, where there is sufficient depth of water to load and discharge vessels of large tonnage at all times of the tide.

On the left bank of the Wongpoo at the lower anchorage several jetties have been erected by the American residents, but these are chiefly for the accommodation of their steamers that ply up the Yangtsze river; and the same may be said of the Shanghai Steam Navigation Company's wharf at the French Bund, where the large American steamers load and discharge. It is on the right bank of the river, commonly called the Pootung side, that English enterprise has made any progress to meet the pressing requirements of the port. Here the Shanghai Wharf Company have erected three jetties, with spacious godowns for storing merchandise and coal, and all the wharfage appliances to load and discharge with dispatch, as in English harbours. To the shipowner this is the great *desideratum* for the profitable employment of his ships; as the detention in harbour often runs away with the best marginal profits on high freights. Hitherto at Shanghai vessels have not been discharged in a month or six weeks, and frequently they have been as long in loading with tea, by the slow and unsatisfactory lighterage system. At the premises of this Company a vessel of one thousand tons may now discharge cargo in as many days as it takes weeks by the system of lighters; while the cost, if detention be taken into consideration, is less than one-fourth the charge by cargo boats, and the dangers of a river subject to strong currents, ripple and eddies. So far it is satisfactory to shipowners that a step has been made in the right direction to provide their ships with safe and speedy accommodation to land and embark freight. We understand that the agent of this Company is now in London with a view to extend their premises so as to meet the growing demands upon them, by increasing the capital to build new piers and send out the necessary "plant" for that purpose; which we have no doubt will meet with the necessary support.

However, without detracting from the advantages presented by these established wharves for accommodating the shipping that prefer them to the open anchorage, it is the opinion of those well acquainted with the trade of Shanghai, that even if they

Digitized by Google

were increased ten-fold they would be inadequate for the requirements of the port. This is evident when we take into consideration the enormous aggregate of tonnage that enters and departs from that emporium of commerce. In 1863 the shipping inwards amounted to 964,309 tons, and outwards to 996,890 tons; and it is expected the returns for 1864 will show upwards of a million tons each way—equal to 2,000 vessels averaging 500 tons burthen. We must also take into consideration the native shipping which throngs the "fairway" of the anchorage, not less probably in the aggregate than the foreign shipping, and our readers who are not conversant with the port will form some idea of the crowded state of the harbour. To those who know its navigation and the "lay of the land"—to use an expressive nautical phrase—there is only one speedy, commodious, and *permanent* means of relieving the shipping in the river, and that is to construct a railway from Shanghai to Woosung, with jetties and warehouses at the latter place, which is the natural port of the former. By this means all the dangers of intricate navigation for fourteen miles would be avoided by a direct line of railway not more than nine miles long; while the Municipal Council need not expend one tael on the improvement of that part of the river over which they have control, as in time no large vessel would load or discharge cargo from the bund jetties by lighters; while they would derive a better revenue through any company that would undertake to bring a railway into Shanghai, by crossing the Soochow creek on a spacious iron bridge. This is not a new project, for it has been long entertained by enterprising residents; but we learn that it has been again revived in consequence of the continued unfavourable reports from shipmasters to their owners trading at Shanghai. Steps are about to be taken, we understand, to secure the sanction of this undertaking of the local native and foreign authorities; and if these are secured, with the co-operation of the merchants and shipowners interested in this important matter, there is no doubt that ere long the project will be a *fait accompli*.

THE CEYLON COFFEE ESTATES.

THE limited liability companies recently established for the cultivation of coffee in Ceylon, appear to afford evidence of success. The directors of the Ceylon Coffee Company anticipate being enabled to announce, at their next half-yearly meeting, a dividend of at least 15 per cent. In the first eighteen months of its operation this company made no less than 33 per cent. on its paid up capital; it has fully relieved itself from the burden of preliminary expenses, and has declared dividends amounting to 17½ per cent., in addition to a handsome bonus, leaving a surplus in hand. The management of this company is certainly very creditable to the directors.

The Ceylon Coffee Estates Company, which like the former was brought forward for acquiring from individual proprietors, estates already growing coffee, promises well, and shareholders very confidently anticipate the announcement of a large dividend at the next meeting. This company was established with a nominal capital of £120,000, of which £60,000 was offered; the deposit of £2. 10s. on each of the £10 shares issued gives a total working capital of £15,000.

The last one formed is the Ouvah Coffee Company, incorporated in autumn of last year, with a capital of £100,000 in £10 shares, for cultivating coffee on five purchased estates, which, together comprise 1,685 acres, a considerable portion already brought into cultivation. The shareholders in this company have the guarantee of the vendor of receiving a minimum dividend of 10 per cent. per annum; and the company proposes to sell its coffee in the English market without the intervention of a broker.

BARON GROS'S YELLOW BOOK.*

In a small quarto of 248 pages, Baron Gros has given a complete resumé of his correspondence, with extracts from his journal, during his second mission in China. The papers published on the subject in 1860 by the French Government were confessedly incomplete, and Baron Gros now sends forth this larger Yellow-book to let the world, as he says, know the part that he, as the representative of France, played in that extraordinary campaign. It would neither be fair to Baron Gros, nor conducive to the right comprehension of the pages in question, to pass over the fact that certain persons in France have slighted his services and declared that the advantages obtained by the Allies were all in favour of England. Baron Gros answers this in his introductory remarks by stating the much larger force and expenditure of England as compared with that of France, together with the facts that the Chinese Government was compelled to pay to each of the Allies the same indemnity for the war, and that the sum received by the Baron by way of some compensation for the treatment of the victims of the infamous treachery at Tung-tchaou amounted to 136,000f. for each person, while Lord Elgin only received an equivalent of 86,000f. for each of the unfortunate victims, although the total paid to the British Ambassador was 300,000 and to the French 200,000 taels. As regards these two cases we believe one to be thoroughly sound and inexplicable, and the other transparently unsubstantial. To take the latter first—there were twenty six subjects of the British Crown, and only eleven Frenchmen seized; but the latter consisted almost if not entirely of valuable lives, while the former included many belonging to the ranks. It is evident that the compensation would be larger, per man, on the average, in the latter than in the former case. It is fair to the memory of Lord Elgin and to those associated with him to place this in a proper light. As to the other fact, we confess we cannot explain it, and we can only place one extract against another. Baron Gros claims credit for the larger proportionate war indemnity at page 3, and at page 60 gives the reply of the Chinese High Commissioners to his claim, in which we find the following passage:—"The "English only ask double the amount of indemnity claimed by "them in 1858, while the French quadruple their claim." The fact remains, Lord Elgin thought fit to be more moderate in his demand than Baron Gros, who has full right to claim credit for having obtained, *pro rata*, a higher indemnity than his colleague; though, to our notions, his Government would have occupied a higher position in the eyes of the Chinese had it not preferred a claim so obviously disproportionate to the forces it had employed and the actual outlay incurred. The fact, too, that an identical sum (2,000,000 taels) with that claimed by Lord Elgin as indemnity for the losses of British merchants at Canton was insisted on by Baron Gros, although not a single French merchant had been established at that place, makes it evident that the old feeling of national rivalry had more to do with the fixing of the amounts than severe principles of justice. This has become the more evident in the sequel, since we have seen the few German and Swiss merchants who were promised compensation out of this fund for their trifling losses vainly pressing the French authorities for a fulfilment of this undertaking. It is pleasant to run over the pages of this diplomatic note-book and to find evidences throughout of the general harmony which existed between the two Ambassadors, and the high respect which Baron Gros entertained for our lamented representative. Unanimity appears to have been the rule; and as to the exceptions we shall touch upon them as we take a flying glance at the contents of this Yellow-book. Baron Gros, in his diary of the 29th July, records a fact that should make some people blush. He says, in reference to the march on Ta-kou:—"We are moving "in the dark, for we could never obtain a Chinese spy!" There is, however, one instance mentioned of a Mandarin having warned Mr. Parkes of a terrible trap laid for the Allies. One point of difference between the Ambassadors referred to the proposed evacuation of Canton. "Lord Elgin had several times urged it (says the Baron, in a letter to General Montauban, of the 6th September), but I did not feel that I could consent to it because I was convinced that as soon as the Europeans quitted the place, it would be occupied by the rebels." Concerning the evacuation of Chusan by the Allies, Baron Gros says:—"This has given rise to some criticism; but it was inevitable; the principal island of the archipelago of that name, which England regretted not to have kept at the mouth of the Yang-tze-Kiang, as she had that of Hong Kong before the Canton river, had been occupied by the British troops for several years after 1842, but was loyally given back to China when the indemnity for which it was the pledge had been paid;" and his conclusion is, that neither of the Powers alone could have appropriated it, and that joint occupation might have led to serious difficulties in future. The island in question seems to have resembled the traditional goose—too much for one and two little for two," so China retained it for herself. The circumstances of the infamous treatment of the victims of the treachery of San-ko-li-tsing are dwelt upon at length, but it is useless to open up again that horrible wound,

* Négotiations entre la France et la Chine en 1860. Livre Jaune du Baron Gros, Ambassadeur Extraordinaire, &c., en Chine. Paris: J. Dumane. 1864.

Digitized by Google

and therefore we refer those who desire to compare Baron Gros's account with others, to the Yellow-book itself.

One of the points on which there was the most decided difference of opinion between the Ambassadors was the burning of the Summer Palace, and this act has called forth similar divergencies in England. Lord Elgin had made up his mind to inflict a severe punishment on the Chinese Government for the infamous treachery of San-ko-li-tsing. He determined to burn the Summer Palace—already set on fire in several places, according to the Baron's information, by bands of pillaging Chinese—and he moreover proposed to compel the native authorities to erect at Tien-tsin a monument which should commemorate their own infamy and the punishment which was inflicted. Against this Baron Gros protested with all his might, he succeeded in getting Lord Elgin to renounce the idea of the Tien-tsin monument, but nothing could induce the latter to give up the burning of the Summer Palace, which he doubtless believed was one of those public acts which alone would impress the Chinese people with the fact of the humiliation of the Chinese Government, and the power of the Allies. In the burning General Montauban, like Baron Gros, refused to take part, and, whether politic or the contrary, the English alone are answerable for it. Baron Gros's argument was that such an act would drive Prince Kung into Tartary, and that then the Allies would have no one to negotiate with, and would be drawn into an endless labyrinth of difficulties. In the intimacy of his diary he pours forth his thoughts without reserve. He says—"At five in the afternoon (October 18th) we perceived clouds of smoke rising in the north and coming over Peking, It was from the Summer Palace, the remains of which were being burned *officially* by the English army. My heart ached at the sight, and I feared that this act of useless and savage vengeance would terrify the Prince Kung and make him fly into Tartary." According to Russian reports, as quoted by Baron Gros, such had very nearly been the effect, the Prince had everything prepared for flight, and was only prevented from leaving with the greatest possible difficulty.

It would not be quite just to pass over another matter connected with this same Summer Palace, namely, the scandal concerning the conduct of the French in the matter of the first loot. Of course this did not necessarily come within the scope of Baron Gros's book, but a few words in reply to what has been published on this subject might not have been wasted. The bearing of the two Ambassadors in their separate interviews with Prince Kung when the peace was signed contrasts in the most curious manner. According to the diary of the Baron, Lord Elgin, who signed the day before his colleague, treated the Prince with supreme contempt. He kept him waiting two hours and three quarters! and, to quote Baron Gros's own words, "exhibited so much hauteur that he frightened the young Prince, for whom the interview was more than painful." Baron Gros, on the contrary, was punctual to his time, met the Prince half-way as the latter rose to approach the Ambassador's palanquin, and hands were shaken in the most cordial manner. Prince Kung did not forget to draw attention to the fact that he had come, full of confidence and without a single soldier, into the midst of a considerable number of French troops, to which, naturally, Baron Gros replied that such confidence could not be better bestowed. The Ambassador took an opportunity to make Louis Napoleon's head upon the seal of the treaty the occasion of presenting the Prince with a collection of French money, from the gold piece of 100 f. to the copper centime, which he hopes may some day induce the Chinese to adopt the decimal system "in place of their own absurd and inconvenient one." The Baron then presented the Prince with fine photographic likenesses of the Emperor and Empress, begging him to preserve them. In short, in the words of the Baron himself:—"I tried during the whole ceremony to be as civil and respectful to his Imperial Highness as I was informed they had been cold and severe with him on the day before, in the same place and under the same circumstances." Prince Kung was naturally enough delighted to be so courted; the clouds cleared from his brow, and all went merry as a marriage bell, the Prince actually condescending to say, in a loud voice, that if Baron Gros stayed a few days in Peking, he, the Prince, would pay him a visit, not as Imperial commissioner but as a friend. Mutual excuses were interchanged relative to costume. Baron Gros regretted that his uniforms were left at the bottom of the sea at Ceylon, to which the Prince replied with a slight blush:—"I also do not wear my finest robe, for if yours have perished in the water, it is the fire which destroyed mine." He knew already that I had refused to take part in the destruction of his brother's palace. When the Baron retired the Prince accompanied him to the palanquin, and soon afterwards sent him a complete and *recherché* Chinese dinner, which was conveyed in fifteen baskets, and "I need not say," adds the Baron, "that all the officers of the guard at my yamun partook of it with great interest."

Another subject on which the Ambassadors differed in opinion was the immediate establishment of legations at Peking. Mr. Bruce having arrived at the capital was for remaining there, but this the Baron considered to be inopportune and imprudent, and in the end Lord Elgin gave in. The Baron went so far in arguing the point as to say to Lord Elgin in writing, "Do not forget, my lord, and this is said without any *arrière pensée*, that in the eyes of the Chinese Government the policy of Mr. Bruce is looked upon as one of the chief causes of all the catastrophes which have lately fallen on the country . . ." It would not, however, be fair to Mr. Bruce even to quote this complaint of his previous conduct without stating that his colleague, M. Bourboulon was spoken of in like terms. In one of the Chinese despatches which fell into the hands of the Allies at Sin-Ho, we find the following passage:—"It must be remembered that Bruce and Bourboulon, *inseparables* in trickery, are crafty and bloodthirsty;" and in another—"As Bruce and Bourboulon are inseparable, and by nature equally sanguinary and perfidious." He would be thin-skinned indeed who smarted under such phrases from the pens of the Chinese authorities of Sine-Ho. Perhaps the Baron had forgotton this coupling of the names of the two representatives when he referred to the bad odour of Mr. Bruce only, and not to that of his colleague M. Bourboulon, for the Chinese papers were seized in August, and the Baron's reference to Mr. Bruce occurs in a letter to Lord Elgin bearing date the 7th November. At page 97 Baron Gros says, in his journal of the occurrences about the time of Parkes' capture:—"Lord Elgin is deeply affected; the fate of Mr. Parkes disturbs him greatly. Parkes alone is worth a whole army, he has repeatedly said to me."

Undoubtedly, the opinions of Baron Gros and Lord Elgin differed on several points, and their respective treatment of Prince Kung, presented as great a contrast as possible, but the entire intercourse of the two plenipotentiaries seems to have been marked by the greatest loyalty and sincerity, and it is peculiarly gratifying now that one is, alas! no more to find his colleague addressing him at the moment when some of the matters on which they disagreed were still unsettled, in such terms as the following:—"It is not necessary for me to tell you, my Lord, how happy your cordial and enlightened concourse has made me during this second as well as in my first mission with you in China, and your Excellency will have remarked, I hope, that I have always tried to act in accordance with you, and to afford you the same moral support that you have accorded to me; and I have been happy in thus fulfilling a duty to make the same known to the Government of the Emperor." Such expressions as these do equal honour to the living and the dead."*

THE STRAITS OF SUNDA.

WE regret to hear that Anjer so long the oasis in the sea voyage from England to the Far East, has become the resort of troublesome and broken-down foreigners, from Batavia and other adjacent places. The captains and passengers who now visit this place find themselves beset by a set of sharks, in place of the unsophisticated natives, who in former times held the supplies of the place. Now we hear of disputes, and arrests, and trials before magistrates, detention of ships, &c., as in regular ports, instead of a mere passing place of call. These encumbrances can have but one end—vessels will cease to anchor there. This will be much regretted by passengers for who that has been some twelve weeks on the sea from London, does not hail with delight the prospect of landing, if only for an hour, on the sunny shores of that lovely spot? We recommend the authorities in Java to see to this, and take the proper steps to bring matters to the *statu quo ante*. In the good old times, the Harbour Master was the only functionary necessary to conduct the affairs of passing vessels.

TREATY BETWEEN SIAM AND PRUSSIA.

THE ratification of the treaty of friendship, commerce, and navigation, between Siam, Prussia, and the Zolverein, has been duly exchanged.

* *The French mode of spelling the names of places has been followed in this review.*

Literature.

Extract from *The Siberia Overland Route from Peking to Petersburg*, by Alexander Michie, p. 381 :—"The import trade (from China to England) has increased from 41,000,000 taels (about £13,000,000) in 1860 (the last year before the opening of the Yangtsze and the northern ports) to 81,000,000 taels (about £27,000,000) in 1863. The increase is due in a great measure to the large and increasing trade from the ports on the Yangtsze in Chinese produce of all descriptions. The vastly increasing trade in imports into this country from China, compared with which the exports are a bagatelle, Mr. Cobden passes over as having no bearing on the question. The opium revenue to the Indian Government is also overlooked. The large shipping interest engaged in the China trade goes for nothing in Mr. Cobden's estimate, but it is nevertheless of great importance to the country, even though the vessels are not all owned in Lancashire and do not all carry cotton. The amount of capital that British shipowners find employment for in connection with China is not limited to the large fleet of vessels engaged in the direct trade with this country, but it is spread all over the coast and rivers of China. In the despatch above quoted Sir R. Bruce states that the entries of foreign shipping in China have increased from 293,568 tons, in 1860, to 996 890 tons, in 1863.

"The interests which British merchants, and through them the nation at large, possess in the prosperity of China is largely ramified. They are largely involved in the local and coasting trade; large amounts of British capital are sunk in fixed property of various kinds at all the open ports, and such investments are increasing at a rapid rate. These things lie under the surface, and are not generally considered in estimates that are formed in this country of the actual stake Great Britain has in China. But they are none the less real on that account. Theorists may say what they will, but our establishment in the territory of China is a great and important fact, and whether the process which led to it was theoretically correct or not, it will be impossible to undo it. Not only are we fixed in China ourselves, but large native populations at the treaty ports have thrown in their fortunes with ours, to abandon whom would bring calamities on the Chinese for which it would baffle Mr. Cobden to find a remedy.

"To reverse our progress is, however, the policy or hobby of Mr. Cobden. He would not only undo what has been done, but he would urge the Government on to a new career of conquest in China, without even a pretext for war. He would seize two more islands on the coast in order to make free ports, which would draw trade away from those now established—"Get two other small islands—merely establish them as free ports; I don't ask you to do more." Mr. Cobden does not commit himself to say how the islands are to be acquired, but he knows very well there is but one way of acquiring them. And supposing we took possession of two islands, how many would France take? And if England were to lead the way in such schemes of aggrandisement, would the ambition of France stop short at islands? Many high-handed proceedings have been laid to the charge of this country, but this scheme of spoliation would pass everything else of its kind. Mr. Cobden would probably suggest purchasing the islands, which would be at least a civil way of putting it. But the whole scheme is so purely Utopian that one marvels that a practical thinker should have shown such contempt for his audience as to propound it. Hong Kong is the model on which Mr. Cobden would base his colonies; very flattering to Hong Kong perhaps, but betraying an incredible forgetfulness of the history of that colony. The *London and China Telegraph* of 13th of June last, in commenting upon Mr. Cobden's speech, shows clearly that the advancement of Hong Kong as a port of trade was due to purely adventitious circumstances, and that for many years, when it rested on its own merits for success, it was an absolute failure, and a constant expense to the country. If Mr. Cobden aspires to be a second Stamford Raffles he is beginning at the wrong end. Our policies in China will be more safely left to the chapter of accidents than to visionaries. We have hard facts to deal with, and not phantoms of a lively imagination."

FRENCH INSTRUCTION ON JAPAN.

The following article we translate from *Les Debats*, of Feb. 9:—

The most inexact notions prevail of the political world of Japan. According to *La France* the Tycoon is already metamorphosed into an English constitutional sovereign. The truth is, there is not in Japan even the shadow of constitutional rule; foreign Powers there confront a feudal Government of the most extreme type. Although we may speak of two Sovereigns of Japan, the one Temporal, the other Spiritual, there is but one, the Mikado, dwelling in the interior of the isle of Niphon, in a city marked on the maps as Miako, but the true name of which is Kioto, and represented on the shore by a delegate, the Tycoon, resident at the maritime city of Yedo. It is only by an error he is termed by us Temporal Sovereign; he can do nothing to change the constitution of the empire without the consent of the Mikado. The establishment of strangers in Japan being expressly interdicted by the national constitution, it follows that the treaties concluded by the Tycoon with European or American diplomats, but not ratified by the Mikado, violate, if carried into effect, the fundamental pact existing between the great feudatories. The rich and powerful vassals, of whom the Tycoon is but the first, see in the regard paid by foreign nations to these treaties, as completed instruments, favourable occasions for relieving themselves from the yoke of one who in reality is to them a mere appointed superior (*Maire du Palais*). These unratified treaties place the Tycoon between two necessities; he must either withdraw them or crush his adversaries. In default of power sufficient to do one or the other, he has had recourse to indirect means. He has aimed to render sojourn in the empire impossible to foreigners. The more concessions are extorted from him by the representatives of France and England, the greater the power he gives his enemies, and the more do embarrassments of all sorts multiply.

In the last great difficulty with Japan, studious endeavours were made to avoid a war in the neighbourhood of Japan; Yokohama continued to be maintained by the sole force of inertia; but although the settlement was not attacked, commerce was withdrawn. A remote diversion was determined on; so necessary is it found to conserve in the Tycoon a *point d'appui*; our enemies being his own, the strengthening of his power constitutes our only guarantee. These enemies have for their chief a Daimio who had put to death the envoys of the Tycoon, and had interdicted to foreign vessels all entrance into the Inland Sea. In directing a naval enterprise against this Daimio, we attacked our adversaries in the person of their chief, and for the Tycoon we played the *role* of protectors and liberators. More than a year ago the representatives of France, England, the United States, and Holland, agreed upon this policy as the best means of obviating difficulties. Results have corresponded to expectations, in giving entrance to the hitherto unapproachable sea. The Tycoon, witnessing in our success the abasement of his rival, himself engages to pay the cost of the expedition. It is no more a question of the abandonment of Yokohama; the local authorities of that town have even accorded to foreigners lots of land and prescribed embellishments; and silks have been freely forwarded to the local market; in fact, the supreme council of Yedo, not unobservant of the rising fortunes of the Tycoon, appears to have sincerely endeavoured to obtain the ratification of the late treaty. It is of great importance that the eight Daimios should be united on this important matter.

SELECTIONS FROM "PUNCH."

A DREAM OF THE FUTURE.

GAS HAS BEEN TURNED ON IN CHINA.

(Translation of Correspondence).

(1.)

His Celestial and Imperial Highness, Brother to the Sun and Moon, Twin to the Twinkling Stars, Cousin of the Comet, presents his celestial compliments to the Secretary of the Hi Ski Hi Gas Company of Pekin, and requests to be informed of the reason why the Imperial and Celestial Palace was suddenly left in darkness on the evening of yesterday.

Imperial Palace, Pekin.

(2.)

To his Celestial and Imperial Highness, &c., &c., from T. JONES, *Secretary of the Pekin Hi Ski Hi Gas Company (Limited).*

His Celestial and Imperial Highness, Brother to the Sun and Moon, &c., &c., is hereby informed that as certain moneys (account rendered, enclosed herein) are still due to the Hi Ski Hi Company, the regular supply of Gas to the Palace has been, and in future will be discontinued until the above-mentioned debt is discharged. (*See Rules and Regulations of the H. S. H. Company*).

(3.)

From His Celestial &c., to T. JONES, *Secretary, &c.*

His Celestial Imperial Highness, Brother, &c., &c., requests the pleasure of MR. T. JONES'S head, for the purpose of spiking it on the Celestial Palace gateway before sunset. [*Bearer waits.*

(4.)

To His Celestial, &c., from T. JONES, *&c.*

T. JONES beseeches His Celestial Imperial, &c. to have patience. He has implored the Company to turn on the gas. If the Brother of the Sun will only condescend to pay so much in the pound, all may yet be well.

(5.)

From His Celestial, &c., to T. JONES, *Secretary, &c.*

His Celestial Imperial, &c., swearing by the shade of Confucius, and by his immortal ancestors CRI KEE, HO KEE, PO KEE, WANG KEE, and the transcendant FUM, herewith demands the immediate surrender of all the heads belonging to the pernicious and abominable Directors, Secretaries, and other miserable vermin calling themselves the Hi Ski Hi Gas Company. [*Bearer waits.*

(6.)

Report of Bearer of Missive to His Celestial Imperial, &c. To His Celestial, &c.

Your poor slave, crouching and trembling, has to announce the escape of Gas Company.

(7.)

Order of the Day issued by His Celestial, &c.

Bamboo and behead the bearer.

[*Bearer bambooed and beheaded accordingly.*

End of Correspondence.

Foreign Intelligence.

HAMBURG.

(FROM OUR OWN CORRESPONDENT.)

FEB. 13.

The Leipzig *Illustrirte Zeitung* gives a drawing of the new Chinese Order of Merit, mentioned in my last letter, and accompanies it by the following letter-press description which contains further particulars :—"By the capture of Nanking, the Chinese Government find themselves at length delivered from the widely extended rebellion of the Taipings that had lasted for ten years and for some time caused great uneasiness in political circles at the seat of government. In celebration of the victory the Emperor of China decreed thanksgivings to the gods, all the members of the Imperial family received presents, the highest honours were conferred on Prince Kung all the chief officers of the State and the army were gratified by gifts of money, and even the public executions, that according to custom are performed in

Digitized by Google

the autumn, were postponed till the following year. Amongst this lavish display of the Emperor's gratitude, a peculiar mark of distinction was reserved for the "barbarians" who had contributed in a great measure to suppress the rebellion, and an Order, something in the European fashion, was instituted by the Emperor, consisting of a gold and silver medal to be worn suspended by a yellow ribbon with two clasps. On the averse is engraved the name of the present Emperor in the Chinese and Tartaric languages, whilst the obverse contains a double representation of the Dragon worshipped by the Chinese as a superior being that, however, no one ever set eyes on. The medal has a square hole in the centre, like all the coins of the country, and as a specimen of art is not to be compared with anything similar made in Europe, the metal being too soft, from the absence of any alloy. About one hundred and forty of these decorations have been conferred on British and French naval and military officers, and it is proportionably valuable from the limited number distributed."

The Prussian Consulates in China are about to be increased by two consular districts at Canton and Tientsin. On the other hand, the Grand Duke of Oldenburg gives up his consulates at China, and by a new convention with the Cabinet of Berlin transfers the international representation and security of his subjects and flag to the Prussian Consulates in China. The new flag of the Duchies of Schleswig and Holstein, whose vessels and cargoes are placed under the protection of Prussia in China and Japan, is now decided to be horizontal stripes of blue, white, and red—in fact, the Dutch flag with the colours reversed, with two yellow balls in the white stripe.

A clerical mission has just left St. Petersburg overland viâ Siberia for Peking. At the head of the mission is an Archimandrite who has been in China before, and since then was chaplain of the Russian Embassy at Rome.

At Nijni-Novgorod a project has been set on foot for the formation of a joint-stock company with a view to purchase the block of warehouses lately built by the Russian Government, and to extend them in conformity with the requirements of the traffic of that place, the fair having of late years increased so much in importance. The building in question now produces an annual rental to the Government of 116,000 roubles. The provisional committee of the promoters of the project have already sounded the feelings of the Government on the subject, and found them favourably disposed to listen to proposals. It is stated that the English company that has already built the block of fire-proof warehouses called the Apraxine Door, has expressed itself willing to undertake the erection of these new stores on the same fire-proof principle.

At Kiachta the corporation of merchants have made a present of a house and grounds, of the value of 15,000 roubles, belonging to them at Troitzkozavsk, to the school for young ladies lately founded at that place by the Count Muravieff, Amoorsky.

The Emperor of Russia has directed the Minister for Public Works and Communications to give the telegraph department in Siberia instructions to admit young women of unimpeachable character to the functions of telegraph operators. They are bound to take the usual oath of fidelity and secrecy, and their salary is not to exceed 300 roubles per annum.

On the 12th of December last the telegraph was opened between Nicolayefsk and Charabofka, a distance of 1,000 wersts

COMMERCIAL.

SUGAR.—Raw market very dull, and 12 sch. bco. lower than as last reported. Refined shows no sign of animation, though holders are prepared to take lower prices. The sales were below the usual average quantity.

RICE.—This article continues in favour, and prices have a tendency to rise. In rough grain there have been no transactions.

SPICES.—Nothing of importance to notice. Ginger is dull of sale and a shade easier. Cloves and Pepper well supported. In Cassia Lignea no alteration in value.

SPELTER.—After a long period of dulness during which prices have considerably fallen, better accounts are received from Silesia and other producing districts, which have had a favorable effect on this market, and some sales have been effected to the amount of about 5,000 centners at 12¼ marks banco, for Spring delivery, and a better feeling exists.

TEA.—Owing to the season of the year the business of the past month was on a very limited scale, and prices underwent no fluctuations. Ord. to good ord. Congou, sells readily at 10½ to 14 sch. bco., Hyson skin is worth 15 to 21, gunpowder, country, 43 to 46 do., Canton, 15 to 28, and Japan 18 to 26.

SHIPPING.—Elizabeth, De Boer, from Hamburg to the Amoor, has put into the Texel for repairs, with loss of bulwarks, stays, and other damage.

HOLLAND.

ROTTERDAM, Feb. 14.—Last week a very interesting case was brought before our Correctional Court:—

A captain of the East India Army, returning on leave of absence to Holland, took passage at Padang on board of the Dutch vessel *Vooruit*, Capt. Kool, bound for Rotterdam. Some days after sailing, the officer, who was very ill, handed the master of the ship a bag containing 1,000 fl. in ryksdaalers (two-and-a-half florin pieces). After being a fortnight on board the officer recovered from his illness. On a certain day Capt. Kool asked him to make up his account with his shipowners (Messrs. H. Muller and Co.). This done, the account showed a deficit of 900 fl. against Kool. Some days later the passenger saw Kool take the bag from his bureau; this excited his suspicions, and he therefore claimed his property. The master of the ship denied that he had received anything, declared the officer mad in presence of the other passengers and the crew, and ordered the chief officer to put the passenger in confinement, which was done. The following day the ship arrived at St. Helena, and the passenger was released, perhaps in the hope that when he had once gone on shore he would not return on board. The Dutch Consul, however, advised the passenger to embark again, as he could do nothing for him. When he returned on board Captain Kool bullied him and threatened him nearly every day, putting him in confinement again. When the *Vooruit* arrived at Portsmouth the passenger made his escape ashore, leaving his property behind. On the 1st of January he arrived here, where he brought an accusation against the master of the ship, in consequence of which Captain Kool was imprisoned. During the investigation, and at the sitting of the Court, several witnesses, who saw the passenger hand the bag of money to the captain, were examined, and they all confirmed the charge. To-day the Court condemned Captain Kool to one year's imprisonment (cellular), and to a fine of f.12.50. The verdict caused much sensation.

In a former letter I told you that Mr. A. Prins would again be appointed Vice-Presses of the High Council in the Netherlands India. The *Staats Courant* now confirms my communication, and Mr. Prins will start by one of the first mails.

The news from Amsterdam causes much anxiety in regard to the proceedings of the managers of the Kanaal-maatschappy. It is generally thought the company must wind up should there be no other directs or elected on the general meeting, which will be held to-day.

His Majesty has at their own request superseded Lieut.-General C. P. Schimpf, Commander of the East Indian Army, and Major F. K. G. Fritzen.

COMMERCIAL.

COFFEE.—The market was rather more inactive, the trade being occupied inspecting the parcels to be offered in the public sale of the Trading Company on the 15th inst. 1,200 b. Java, ex Sverig, were sold at 45 c.; 219 b. ex ditto at different prices; 1,800 b. Java, ex Albert the Good, at secret prices, and 366 b. Padang, ex Vooruit, at 50 c.

TEA.—Firm but inactive, transactions are limited to those for consumption.

SUGAR (Raw).—There is now some more inquiry; prices being 3½f. to 4f. under those of November; the quantities sold last week amount to 5,000 to 6,000 kr.; besides the following quantities (sailing) was disposed of: 1,677 kr. Java, No. 15, per Leaping Water, fine quality at 34½f.; and 592 kr., No. 12½, per ditto, 32½f.; and 763 kr. No. 10, good to fine quality, per Ocean, at 30f.; Refined: In tone with raw sugar; some lots crushed, B and H, changed hands.

SPICES. Very flat. Cinnamon, No. 3, 97c. to 98c.; No. 4, 90c., with much demand, but without stock. Pepper, 170 b., ex Vooruit, were sold.

RICE.—The sales have been extremely light.

TOBACCO (Java).—The great quantities offered at the private sales were sold at very high prices for 1st quality: ordinary sorts were in comparison lower. The 1,086 p. Java C.H. and D. offered by inscription, were not sold.

COTTON.—The confidence in this article was somewhat improved in the first days after our former report, and some parcels E.I. were sold for export. The market closes dull, according to the advices from Liverpool.

BANCA TIN.—The market has become inactive, because there is no more speculative inquiry in consequence of the London market. The quotation now is 58f.

MANILA SEGARS.—The lot of 84 mille., 2A. Cortados, 1863, offered at public sale, were sold before the auction at unknown but firm prices.

CAMPHOR.—Very firm, and business to a fair extent done privately.

GUMMI D'AMAR.—200 ch., ex Peeress, were sold at prices that did not transpire.

GUMMI ELASTICUM.—The 50 pic., ex Peeress, and the 102 pic. ex Koophandel were sold at former prices.

RATTANS.—8,743 bundles, ex Sirius, changed hands at firm prices.

HIDES.—The parcels Buffalo, imported from Java per Nation's Hope, were sold at firm but secret prices.

INDIGO.—The market was rather more animated, about 100 ch. were sold at former prices.

HEMP.—Dull.

MONEY.—Easy; Bank discount for Bills 4½ per cent., and for acceptances 5 per cent.; Open Market 4½ per cent., N.W.S. 2½ per cent., 62 7-18; 3 per cent., 73 9-16; 4 per cent., 96 15-16; Handelmaatschappy, 143; Java Bank, 150; Netherlands Bank, 330. Change: London, 3 mo., f.11.58; 2 mo., f.11.63; short, f.11.73½; Paris, 3 mo., f.46.10; 2 mo., f.46.25; short, f.46.65; Hambro', 3 mo., f.34.87; 2 mo., f.35; short, f.35.20.

PASSENGERS OUTWARD.—For Java: per Wilhelmina, Capt. Brauer, Mr. N. A. Wannee.

ARRIVALS.—Feb. 8, at Brouwershaven, from Batavia, Julia; at Hellevoet, from Macassar, Elizabeth and Jacoba; at Flushing, from Batavia, Stad Middelburg. 12, at Texel, from Batavia, Mentor.

DEPARTURES.—Feb. 10, from Brouwershaven to Sourabaya, Wilhelmina; from Zierikzee to Java (*via* the Coast of Guinea), Concurrent; from Texel to Macassar, Quartre-Bras; 13, from Texel to Batavia, Ferdinand and Louis. Shipping is again stopped by the ice. Temperature, 18 deg. Fahrenheit.

LOADING AND FREIGHTS.—Unchanged.

Digitized by Google

MISSIONARIES IN CHINA.—Mr. Blodgett, a missionary of the American Board, who recently visited a cemetery of Roman Catholic priests at Peking, writes:—"Of twenty-six priests whose remains were interred there, the average term of life in China was 24 years, and the average total of life was 60 years. The average age for entering the field was 35 years. No settled minister who feels inwardly called to the missionary work need be detained by his age from coming to China, if he be not above 30 or 35." Peking is in the province of Chieli, which is situated between the 38 and 43 degrees of N. latitude. Nanking is about 33 deg. N.; and in the province in which Nanking is situated, the average term of labour of the Jesuit priests was but 11 years, as Mr. Blodgett ascertained in a similar way. But all the Protestant missionaries have, until recently, been compelled to labour in cities which are south from Nanking, and the average term of Protestant missionary life has been but five years.

PARLIAMENT—BRITISH SUBJECTS IN CHINA.—Colonel Sykes wished to ask whether the order in Council of the 1st March, 1864, had been enforced, and all British subjects withdrawn from the service of the Emperor of China and that of provincial mandarins. Mr. Layard said that the Government had no power to withdraw from the service of the Emperor of China any person who might be in that service. Those who were in the service of Her Majesty had been withdrawn, and other British subjects would remain in the service of the Emperor of China at their own peril.

FREIGHTS AND CHARTERS.

Owing to the inclemency of the weather but little change has taken place in outward freights. Homeward charters are very scarce, and appear almost at a standstill. Coal freights continue to improve, the amount of available tonnage now offering for Galle being quite insufficient for present requirements.

Current Rates of Freight for Vessels on the Berth:—To Yokohama: 50s. weight, 40s. to 50s. meast. To Nagasaki: The same. To Hankow: 60s. meast. To Amoy and Foo-chow-Foo: 50s. weight, 40s. meast. To Shanghai: 40s. weight, 25s. to 30s. meast. To Hong Kong: 40s. weight, 22s. 6d. to 30s. meast. To Manila and Labuan: 50s. weight or measurement. To Singapore: 25s. to 30s. weight or measurement. To Penang: 40s. weight or measurement. To Batavia: 40s. weight, 30s. measurement. To Bankok: 60s. weight or measurement. To Ceylon: 40s. weight, 25s. measurement.

The quotations for coal and iron from the North are as follows:—For Hong Kong: £35 and £1. 11s. For Shanghai: £42 and £2. For Manila: £1. 10s. For Batavia; £23 to £24, and £1. 2s. 6d. For Singapore: £26 and £1. 1s. 0d. For Penang: £27. For Galle: £25 and £1. 1s. These rates are from the Wear or Tyne, and Newport, Cardiff, or Swansea respectively.

The Admiralty have engaged freight in the Yaratilda for the conveyance of Government stores from the River Thames to Hong Kong, and have invited tenders for the conveyance of 12 tons further stores from the River Thames to Hong Kong.

CASUALTIES.

The Qua Lee, Collins, from Liverpool for Singapore, was towed into Lisbon, Feb. 11, with loss of fore and main topmast.

The Admiral de Winter, Bunnemeyer, from London for Batavia, has returned damaged, having been in collision with the Surrey.

The Luisita (Spanish ship), Gordia, from Manila to Cadiz, with general cargo and Spanish troops on board, put into St Thomas's, Jan. 20, leaking badly, and escorted by the Memphis (barq.), of Liverpool, which had kept in company with her since Jan. 3. The Luisita was discharging.

The Jane Isabella, Cole, from Yokohama for Liverpool, put into Youghal, Feb. —, short of provisions.

The Iberica (Spanish ship), Onato, from Liverpool, to Manila, put into Cadiz, Feb. 14, with loss of foremast, sails, and spars, and making water. She will partly discharge for repairs.

MISCELLANEOUS.

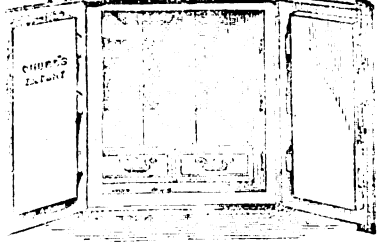
CHUBB and SON.—" For perfection of workmanship and construction of Locks also for the manufacture of Iron Safes."
Prize Medal awarded, International Exhibition, 1862.

CHUBBS PATENT DETECTOR LOCKS.—The most secure from picklocks and false keys, are strong, simple, and durable, and made of all sizes and for every purpose to which a lock can be applied.

Cash, Deed, and Paper Boxes of all sizes, Travelling Bags, Letter Bags, Writing Boxes, and Desks, all with the DETECTOR LOCKS.

It will be observed that no locks of inferior quality are made by Chubb and Son. The whole of their locks sold to the public at large are exactly the same in security and excellence of workmanship as those supplied to Her Majesty, the Government offices, the Bank of England, Stock Exchange, and other public establishments.



CHUBBS PATENT SAFES afford the greatest security from fire or burglars. They are constructed in the best manner of strong wrought iron, and lined with the best known fire-resisting and non-conducting composition.

The doors are all secured by CHUBB'S PATENT DRILL-PREVENTIVE, and their Patent Gunpowder-proof Locks.

Complete Illustrated Priced Lists of CHUBB'S Locks, Boxes, Safes, and other Manufactures, will be sent gratis and post-free to any part of the world.

CHUBB AND SON,
Makers to the Queen, H.R.H. the Prince of Wales, and the Bank of England.

Sold in boxes containing one pound each.
PARIS, 22, BOULEVARD MONTMARTRE.
MARSEILLES, 9, RUE PARADIS.
London, 27, Margaret-street, Regent-street.

CAUTION.

THE GROSS FRAUDS which continue to be practised by obscure manufacturers, more particularly in Germany, by imitating the Labels attached to JOHN GOSNELL and Co.'s PERFUMERY, render it imperative upon the Proprietors to Caution the public against such nefarious proceedings, and to request their friends and patrons to purchase only of respectable dealers, who import direct from JOHN GOSNELL and Co., and invite special attention to the address, 12, THREE KING-COURT, LOMBARD-STREET, LONDON, E.C.

JOHN GOSNELL and Co.'s SELECT PERFUMES.—Ess Bouquet, Royal Yacht Club Bouquet, Jockey Club Perfume, Essence of Wood Violet, Victoria Bouquet, Garibaldi Bouquet, Frangipanni, Military Bouquet, The Bride's Bouquet, Tea Rose, Russian Leather Perfume.

JOHN GOSNELL and Co.'s Toilet Vinegar, Inexhaustible Salts, Aromatic Vinegar, Aromatic Eau de Cologne.

JOHN GOSNELL and Co.'s Prince of Wales Perfume.

JOHN GOSNELL and Co.'s Princess Alexandra Perfume.

JOHN GOSNELL and Co.'s La Noblesse Perfume.

JOHN GOSNELL and Co.'s La Noblesse Pomade.

JOHN GOSNELL and Co.'s La Noblesse Soap.

JOHN GOSNELL and Co.'s Real Old Brown Windsor Soap.

JOHN GOSNELL and Co.'s Golden Oil—Moelline—Macassar Oil, Bear's Grease, &c., for the Hair.

JOHN GOSNELL and Co.'s Extra Highly Scented Toilet and Nursery Powder.

JOHN GOSNELL and Co.'s Stereodesmic or Dentists' Tooth Brushes and Trichosaron Hair Brushes, warranted to purchasers.

JOHN GOSNELL and Co.'s Instantaneous Hair Dye.

JOHN GOSNELL and Co's Cherry Tooth Paste is greatly superior to any tooth powder, gives the teeth a pearl-like whiteness, protects the enamel from decay, and imparts a pleasing fragrance to the breath.

NOTHING IMPOSSIBLE.—The Greatest and most Useful Invention of the day, AGUA AMARELLA.—Messrs. JOHN GOSNELL and CO., 12, Three King-court, Lombard-street, London, Perfumers to Her Majesty, respectfully offer to the public this truly marvellous fluid, which gradually restores the human hair to its pristine hue—no matter at what age. The Agua Amarella has none of the properties of dyes; it, on the contrary, is beneficial to the system, and when the hair is once restored one application per month will keep it in perfect colour. Price One Guinea per bottle; half bottles, 10s 6d.

JOHN GOSNELL and Co., Perfumers to Her Majesty, and by Special Appointment to H.R.H. the Princess of Wales, London.

HOLLOWAY'S OINTMENT AND PILLS.—SOUND LUNGS.—Unless the blood be purified from the foul matters which enter it in its passage through the chest, the strongest lungs will often be inconvenienced, and the delicate chest will assume positive disease. Holloway's remedies exert the most wholesome power in cleansing the air tubes, dislodging accumulated mucus and clearing the blood. When there is any congestion of the chest, stitch, or heavy pectoral pain, some of this Ointment well rubbed over the seat of suffering will speedily remove the evil and certainly prevent worse consequences. In common colds, shortness of breath, wheezing, and chronic or spasmodic coughs, Holloway's Ointment and Pills will give present comfort and avert future danger,

List of Passengers.

PASSENGERS INWARD.

By this mail to Marseilles, per P. and O. Co.'s steamer Pera, arrived Feb. 26.—From Yokohama: Mr. Paine. From Hong Kong: Messrs. Henderson and Scholefield, and one second-class passenger. From Singapore: Mr. Hunger and two second-class passengers. From Penang: Major Stevenson, Mr. and Mrs. Macdonald.

PASSENGERS OUTWARD.

Per P. and O. steamer Delta, from Southampton, Feb. 20.—To Hong Kong: Sub.-Lieut. D. M. Smith, R.N., Mr. W. L. Hunter, Dr. C. C. Wimberley, R.N., Dr. W. Patullo, Miss Brae and ayah, Miss Firth, and one 2nd-class passenger. To Ceylon: Mr. H. W. G. Layard, Mr. R. Cunninghame, Mr. H. Marsden, Mr. D. Saumarez, Mr. A. Lackenbacker, nine second-class passengers, and six children. To Calcutta: Mrs. Comley, Mrs. Farquhar, infant, and European servant, Mrs. Col. Taylor and European servant, Lieut. H. A. Rooke, Miss Mayne, Mrs. Cooke, Assistant-Surgeon Shipton, Messrs. John Ogilvie, F. Keighley, J. D. Watters, G. H. Peel, F. Peel, Runner, Vanderkiste, W. F. Jones, and W. Webber, and seven 2nd-class passengers. To Madras: Messrs. B. Mockett, and H. J. Penny, Mrs. Lewis and European servant, Col. E. A. Foord, Lieuts. Easton and Lousada, Mrs. Gordon, two children and two Misses Gordon, Col. Denison. To Suez: One 2nd-class passenger. To Alexandria: Mr. and Mrs. Johnson, Rev. and Mrs. J. Lawrence, Miss Barker, Mr. Barker, Mr. E. S. Heywood, and courier. To Alexandria and back: Rev. F. Soden.

From Marseilles, March 1.—To Hong Kong: Mr. and Mrs. Trautman, Mr. A. Milsom, Mr. Wilks, Col. Knox, C.B., Mr. and Mrs. Evans, Mr. and Mrs. T. S. Stephenson, and one 2nd-class passenger. To Shanghai: Messrs. Detring, Allin, and Vernimb, Dr. and Mrs. J. Watson, Mr. and Mrs. P. M. Evans, Mr. F. Diers. To Singapore: Mrs. Rigg. To Ceylon: Mr. and Mrs. Armitage and two infants, and nurse, Mr. Ratcliffe. To Calcutta: Mr. and Mrs. Terry, Right Hon. W. N. Massey, Mr. G. W. Forbes, Capt. Sitwell, Mr. G. Badham. To Madras: Major-General Haines, Major Holland. To Alexandria: Mr. Hamilton.

Per P. and O. steamer, from Southampton, Feb. 27.—To Ceylon via Bombay: Mr. J. W. Venn. From Marseilles, March 5.—To Hong Kong via Bombay: Mr. and Mrs. H. Dickinson. From Malta.—To Hong Kong via Bombay: Mr. G. Overbeck.

Per P. and O. steamer, from Southampton, March 4.—To Shanghai: Mr. F. Evans, Mr. C. Dunn, Mr. E. M'Loughlin. To Hong Kong: Mr. J. Dinwoodie, Mr. J. W. Coxford, Mr. W. J. Mayne, R.N., Mr. G. B. Westcott, R.N., Mrs. Hogg and infant. To Singapore: Mrs. Robinson. To Ceylon: Mr. O. E. Lee, Mr. W. M. Lyte, Mr. R. Temple, Gentleman and two Ladies, Mr. J. Mackenzie, Mr. and Mrs. Anderson and infant. From Marseilles, March 12.—To Hong Kong: Mr. B. Seare.

Per French mail, March 19.—For Hong Kong: Mr. and Mrs. Mayers.

Per Solent, sailed Feb. 15.—To Shanghai: Mrs. E. J. Board, Miss D. Elliot, Mrs. Edwards.

Summary of News from the Far East.

JAPAN.

YOKOHAMA.

Our dates come down to the 1st January. The London mail of the 26th October arrived out on the 24th December.

On the morning of the 24th December Sir Rutherford Alcock, the British Minister Plenipotentiary, and Lady Alcock, embarked on board H.M.S. *Barossa* on their homeward voyage. At nine o'clock the bund, from the Legation building to the New Hatoba, was lined with the men of the 20th Regiment and Royal Marines. At the Hatoba, detachments of these regiments formed a guard of honour, and a small body of His Netherlands Majesty's Marines attended as a complimentary guard. At half-past nine Sir Rutherford and his lady, accompanied by all the Foreign Ministers and Consuls and Diplomatic and Consular Corps, left the Legation, escorted by Captain Applin at the head of the Military Train Escort, and passed down to the place of embarkation, saluted along the whole route by the cheers of the men. At the Hatoba a very considerable number, if not all, of the British residents (and many of other nationalities) had assembled to pay a parting mark of respect to his Excellency. The band, having received him with the National Anthem, struck up "Should auld acquaintance be forgot"—the Royal Artillery, which had been drawn up in front of the new Custom-house, fired a salute; the Japanese forts at Kanagawa also saluted; and amidst such marks of honour, his Excellency, after paying the last complimentary visits to the *Euryalus* and other ships in harbour, embarked on board the *Barossa*, which immediately got under weigh and took her departure. His Excellency (says the *Japan Herald*) appeared not a little gratified with the warm adieux of the great concourse of residents which had assembled; and well, indeed, he might be, for every cheer, every hat lifted, must have convinced him that, let former words said or written remain uneffaced where they may, yet that the mendacious insinuation that he has done little or nothing for the community since his return, has met with almost universal indignant repulsion.

The following were the arrangements for public business consequent on Sir Rutherford's departure:—

"C. A. Winchester, Esq., H.B.M.'s Consul at Kanagawa, will take charge of the British Legation on the departure of the Minister, and thereupon act as Her Majesty's Chargé d'Affaires during his absence, or till further notice.

"Marcus Flowers, Esq., H.B.M.'s Vice-Consul at Kanagawa, will in like manner take charge of the Consulate from the same date, as H.M.'s Acting-Consul.—By order, "JOHN MACDONALD.

"H.M.'s Legation, Yokohama, December 24, 1864."

On the 23rd December the 67th Regiment and the Beloochees embarked on board Her Majesty's troop-ship *Adventure* for Hong Kong. "We cannot let the departure of these brave fellows from our settlement pass by (says the journal before quoted) without a word of acknowledgment of their exemplary conduct during the whole time of their being quartered in this place."

One of the actual murderers of Major Baldwin and Lieut. Bird, has been captured at Yedo, and brought down to Yokohama and executed. The first information, brought by one of the Vice-Governors from Yedo, to the British Minister, was to the effect that on the 17th December, one Seiji, reported to be the head of a band of Lonins, had been captured by means of information derived from one of the men executed on the 16th,

Digitized by Google

that he had since made full confession, and it was confidently expected his evidence would lead to the discovery of his immediate associate.

On Tuesday morning, December 27, it having become generally known that Seiji, having made full confession of his crime, would be brought into Yokohoma for exhibition through the foreign and native settlement, a large number of residents congregated along the streets to witness the procession. Many had waited long, and it was getting near to dusk when a white banner, and a long board, both inscribed at some length, were seen approaching in the distance. Curiosity was soon satisfied, for with the delay only of a few minutes at the entrance of the native town the procession arrived. It consisted simply of a few of the Government foot soldiers armed with foreign muskets; then followed common soldiers bearing the banner and accusation board; then the prisoner, a man of apparently about 28 years of age, of large frame, and with a most sinister and resolute physiognomy, tightly bound, and seated upon a pack-horse; then some six or eight mounted Yakonins, and a few more foot soldiers. The procession moved past the Custom-house, through the street leading to the British Legation, on through the wide street between the Old and Swamp Settlements, then through the back streets of the Native Settlement, stopping more than once to give refreshment to the prisoner, and so back to the execution-ground. Through the whole route the procession was accompanied by many foreigners on foot or on horseback. All concur in the observation that during the whole of this time the prisoner showed no one evidence of shame for his position, or dread of his approaching doom. After arriving at the execution-ground a long delay ensued, and finally, the order of the Governor for the delay (at the request of the British authorities, we believe) of the execution to the following day arrived.

The following is the official account of the execution, from the British officials appointed to witness it:—

We, the undersigned, having in accordance with instructions received from Her Majesty's Chargé d'Affaires, proceeded this day to the Japanese gaol in company with Mr. Acting Consul Flowers, representing the extra territorial jurisdiction of the district, assisted by Mr. Student Interpreter Satow, and with a party of the mounted escort in charge of Lieut. Smith, commanding the Legation Guard of Royal Marines, to witness the public execution of Shimedzoo Seiji, one of the assassins of Major Baldwin and Lieut. Bird H.B.M.'s 20th regiment, hereby declare that the sentence was carried out in the following manner:

On our arrival at the scene of execution we found two battalions of the 20th Regiment and Royal Marines and half a battery of the Royal Artillery, under the command of Lieutenant Colonel Penrose of the Royal Marines, drawn up in a square around a slight elevation of a few hundred yards distant from the prison, on which the usual preparations had been made for the punishment which was going to take place. Although the time for the execution had been fixed at 10 A.M. precisely, the prisoner did not arrive till 11. He was brought from the prison in a norimon under due escort, headed by the bearers of a white flag and a wooden board, on which the annexed sentence was written. When taken out of the norimon, saké and sweetmeats were given him, which last repast, although standing over the pit which was a few minutes afterwards to receive his head, he seemed to enjoy very much. The short time usually allowed to the condemned for making their last earthly arrangements, was chiefly employed by this man in singing a song, understood to be to the effect that "he did not regret dying thus, as to kill foreigners was the desire of a real Japanese," followed by a savage growl, unmistakably an execration against all foreigners; after which he tendered his neck to the executioner with the greatest imaginable indifference. The decapitation presented a shocking sight, the executioner having to strike three blows before the head was severed from the body. As soon as the first fatal blow was struck, a gun fired by the Royal Artillery announced to the spectators that Justice had received her due. Besides a large crowd of natives, nearly the whole foreign community witnessed the awful sight. When the troops marched back they saw his head exposed near the guard-house at Yosidabashi, the bridge connecting the settlement with the road to Kanagawa. Shimedzoo Seiji was a strong, tall man, apparently of sound bodily health, and with a countenance fully answering the description of a Japanese desperado. He met his doom in a manner worthy of a better cause, and for which he would no doubt have left this world with full forgiveness from the regiment he so outrageously insulted in murdering two of its beloved officers, had he but shown the slightest sign of regret at the sorrow of which he was the cause.

MARTIN DOHMEN, Acting Japanese Secretary.
JOHN MACDONALD,
H.M.'s Legation, Yokohama, 28th Dec., 1864.

PROCES VERBAL of the recognition of Shimedzoo Seiji, one of the murderers of Major Baldwin and Lieutenant Bird, by the Japanese witnesses, Sei Kanakitchi and Itchibee, at the Japanese Prison, Tobey, the 27th Dec., 1864.

Under instructions from H.M. Chargé d'Affaires we proceeded to the Tobey at one P.M., for the purpose of being present at the recognition of the criminal by the above-named witnesses, and on our arrival found the witnesses assembled. It was arranged that the witnesses should view and observe the features and person of the prisoner from behind a screen; an arrangement which the sliding partitions of Japanese rooms rendered perfectly easy.

The prisoner arrived from Yedo about four P.M., and was immediately placed so as to be fully exposed to the observation of the witnesses. When a sufficient time had elapsed to enable the witnesses to speak to the identity, they were separately interrogated and respectively made the following statements:—

Sei (a widow who keeps the sweetmeat stall at the gate of the Hajiman) declared that she recognised the prisoner to be the man who laid his hat on her bench before going to the temple.

Kanakitchi (a boy aged 11 years, residing at Muira) declared that he recognised the prisoner as the man who with drawn sword attacked the first foreigner (Lieut. Bird) as he passed.

Itchibe, the keeper of the Kadoya tea-house at Totska, declared that he recognised the prisoner as one of the two Samourai who, on the night of the 22nd of the 10th Japanese month, came into his premises, and imperiously demanded food.

Whereupon we proceeded into the room where the prisoner was, and the following questions were put and replies received through the undersigned, E. Satow, as Interpreter:—

"Are you indeed Shimedzoo Seiji?

"Yes, my name is Shimedzoo Seiji.

"Are you one of the men who killed the foreign officers at Kamakura, on the 22nd of the Japanese month?"

"Yes, I killed one of the foreign officers at Kamakura."

The last question was repeated in a somewhat varied form, and the prisoner rejoined—"Without doubt I am one of the men who killed the foreigners at Kamakura; but I have something to say about the manner in which I have been examined."

At this point the Japanese officers rushed in, and, ordering the prisoner to be silent, requested the interrogatories might cease; and the undersigned Acting-consul, considering the satisfactory character of the recognition, and subsequent acknowledgment of guilt, rendered it unnecessary to proceed further, we retired to the next apartment.

The prisoner looked pale from confinement, but did not exhibit on his person or countenance any marks of exhaustion or ill-usage.

MARCUS FLOWERS, H.M. Acting-Consul.
ERNEST SATOW, Student Interpreter.

It was observed that on the previous day, as he was conducted through the town, he was in the roughest garb. At his execution, however, it was not so; he wore one of the superior outer coats, with a crest or bearing upon it, and had evidently caused his hair to be arranged with more than usual precision. It was noticed, also, that his hand was slim and well-formed, and smooth as a woman's. The head was brought to the guardhouse by the bridge at the entrance to Yokohama from Kanagawa, and was there impaled upon a bar erected for the purpose, where it remained.

The crime and sentence of the two men before executed, on the 16th December, were as follows:—

"The Ronin, Kabaike Genpachi, a vagrant aged 26 years; the Ronin, Ianaba Usijiro, a vagrant aged 23 years:

"The above-named individuals, by profession vagrants, wearing two swords, went with Shimedzoo Seiji to the village of Hatorimura in Soshiu, to the houses of the country people, saying that Seiji was going to exterminate and expel the foreigners resident at Yokohoma, and demanded funds for that purpose, threatening the peasants with death if they refused. The above-named individuals having received such money, and divided it with Seiji, they cannot deny being accomplices of Seiji, and therefore they are condemned to be put to death by decapitation.

"11th Month of the Rat (December 16, 1864)."

NAGASAKI.

We hear from Nagasaki that Mr. Broussel, who was chief officer of the *Cosmopolite* when she was sold to the Japanese some time ago, having brought an action against Mr. Rainbow, representing Messrs. Dent and Co., for $200, the value of some sails found in the sail loft of Messrs. Lake and Co., sailmakers, and alleged to be Mr. Broussel's property,—Mr. Rainbow has brought, through the Dutch Consul at Desima, a counter action, in the shape of a charge that Mr. Broussel had stolen the said sails. The facts related are these. When Messrs. Glover and Co. acting for the Japanese purchasers, went over the ship's inventory, they were assured by the captain of the *Cosmopolite*, that between decks was a certain set of good sails, and on that assurance the sale was completed. On her first voyage outwards the *Cosmopolite* damaged her canvas in a gale, and required to change what remained aloft for the sails which it was thought were left below. But they were not to be found. Not long afterwards Mr. Broussel, who with the rest of the crew had been sent to China, returned to Japan, and was spoken of as a sail-seller. This circumstance reaching Mr. Rainbow's ears, he made secret inquiries, and was enabled, by the evidence of a Mr. Parker, formerly second mate of the *Cosmopolite*, to ascertain that some of the sails for sale were those lost from the sold vessel, and for which a refund out of the purchase money had been demanded by the Japanese, and duly paid. Should it turn out that Mr. Broussel is really guilty of purloining these sails, it will be a lesson to acting chief officers of vessels sold to

Digitized by Google

Japanese not to allow their cupidity to outrun correct principles.

The steamer *Australian* had arrived at Shanghai, having been compelled to return to repair injury sustained by running ashore on a reef in the Inland Sea. She fortunately got off at high water, and immediately steamed for Simonoseki, knowing that the *Argus* was lying there. But the pumps failed to prevent the water gaining considerably. Assistance was given her by the *Argus*, which enabled the hole to be patched up, and that vessel accompanied her to Nagasaki to render further aid by the way, in case the repairs should prove insufficient.

The screw steamer *Bahama* has been sold by Messrs. Glover and Co. at Nagasaki to the Prince of Kiu-siu for the sum of $138,000.

HAKODADI.

A correspondent, writing under date of the 8th December informs us that the schooner *Petrel*, which had left on the previous afternoon, put back in a crippled state from loss of some spars in a heavy squall during the night. The barque *Ashmore*, Captain Jenkins, on her passage from Yokohama to Hakodadi, had run ashore on Oma Island at the extremity of Cape Turawisaki, on the opposite side of the Straits to Hakodadi. The crew were on the island about a week without being able to reach the mainland. Every one was saved, as well as the treasure on board, amounting to $30,000. An official inquiry at the British Consulate was to take place. The ship had gone to pieces. Strong westerly winds and very cold weather had been prevailing.

CHINA.

SHANGHAI.

The following review of 1864 is from the *Recorder* :—

There are various improvements to be noticed in Shanghai. The large space of ground, which for long lay waste and drear, at the back of the Consulate lot, has been filled up. A handsome block of dwelling-houses, built in a most substantial way, now ornaments the neighbourhood of the Soochow Creek. They are capital tenements, and are admirably adapted for those who require comfortable accommodation. A good town-hall, however, is required. There are numerous occasions when public meetings are necessary, and the Library is the only place where an assembly can meet. The meeting of land-renters is now one of the annual events happening in the settlement; and there is no doubt that a building of some kind, suitable for public meetings, should be erected. There are one or two sites very well suited for such a hall. No better place could be obtained than the plot of land on which the premises lately occupied by Messrs. Hunt and Co. stand. The importance attached to Shanghai in a mercantile point of view, has given rise to the formation of several local offices. The China Fire Insurance Company, and the North-China Insurance Company are both doing well, and have taken a position as such in China. Banks are also on the increase. The Bank of Hindustan, China, and Japan has amalgamated with the Imperial Bank of China. The Asiatic Bank will shortly open. The others are the Bank of India, the Bank of China, and the Hong Kong and Shanghai Bank. This last bank is sure to obtain the support of the community, and will materially add to the prosperity of both ports, as well as facilitate mercantile transactions in native currency.

The municipal affairs of the settlement have occasioned some discussion. The great difficulty is obtaining a charter, which would place the Council on a proper basis. Nominally, they possess a certain amount of jurisdiction, but virtually their orders may be disputed. In many cases their authority is ignored, and at the present moment nothing definite has been settled. The Land Regulations, by which the Council act, are under revision, and we hear that a charter holding on the provisions of the said rules, will be obtained, so that some direct system of municipal government can be arrived at. The police force under the municipal control is much improved. The present staff of officers are highly efficient, and the present Superintendent has contributed largely to this desirable end. One or two alterations have been made, which have given the force a better opportunity to acts, for the benefit of the community. We must not omit the fact that a fire-engine is now attached to the police force. It came out from America, and is a very fine one of its kind. There are several in Shanghai, and on many occasions they have been called into requisition.

The most interesting news belongs to the province in which Shanghai is situated. The rebels have been completely routed out. With the fall of Nanking, the last hopes of the Wangs and their followers, in the district of Keangsoo, disappeared. Colonel Gordon, after conducting a campaign of no ordinary difficulty,—hampered in many ways, and commented on by the press in certain quarters with a peculiar freedom of language and elegance of composition that would do justice to any modern Chesterfield, has returned home. He deserves the support of his countrymen, and every one who knows him will bear testimony to his conduct while guiding the movements of the Chinese troops under his control. The signal success, which upon nearly every occasion followed his plans, was attributable to the care and interest he showed when he actually commenced operations. His campaign was one full of interest, and there are many details connected with the event which may some day be brought to light.

On the 2nd Jan. a series of athletic sports took place between the soldiers of H.M.'s 2nd Belooch Regiment and the sailors of H.M.S. *Scylla*.

The following mercantile notices have appeared :—

The interest of Mr. John T. F. Bowker, in the business of the *Shanghai Recorder*, ceases from this date. "*Shanghai Recorder*" office, December 23rd, 1864.

The interest and responsibility of Mr. James Cock in our firm ceased from this date. Watson and Co., Shanghai, December 22nd, 1864.

The Trustees of the estate of Maitland, Maclean and Co. have declared a first dividend of 14 per cent., which will be paid on and after the 1st December next, at the office of Messrs. Cope, Cheshire and Co., Accountants, Foochow-road, Shanghai.

The following items are from the *North China Herald* :—

Within the settlement but little of interest has occurred since the date of our last Overland issue. Our French neighbours have announced that the arrangements some time since entered into for the formation of a gas company to illuminate their settlement have been completed. A notice which appeared informing the public that such a company was in contemplation, was new to many, although reports to that effect had been current for some weeks before. But a further warning since conveyed to intending speculators, that all the shares had been allotted, culminated the surprise. It will be interesting to compare the progress of the rival companies, both in point of expenditure and of time required to set each on a working footing. For two years, residents in the English settlement have been anxiously awaiting the boon which, like the grapes of Tantalus, appears always to recede from their grasp when they hope to attain it. The Compagnie du Gaz de la Concession Francaise contemplates an expenditure of Tls. 30,000, and promises to keep carefully within that margin, by strict attention to economy, and avoidance of unnecessary expenditure on "buildings and other extraneous matters (*objets de luxe*) which in its opinion have no real value, and only serve to absorb profits." No hint is given as to the time within which the new company is likely to have completed its arrangements for lighting the settlement.

The Shanghai Gas Company's preparations are now so far in advance, that we presume we are justified in hoping that the English settlement will first enjoy the blessing of light.

On the 31st a capacious and well-modelled iron steam barge, on the screw principle, was launched from the engineering works of Messrs. Nicholson and Boyd. She is one of two sister ships now being built by the same firm, for the purpose of shipping and landing cargoes with despatch. The keel was only laid down about ten weeks ago, and credit is due to Messrs. Nicolson and Boyd for the quickness with which they have completed her. We understand this is the seventeenth iron vessel launched by the same firm in 1864, the whole aggregating a gross tonnage of over 4,000 tons. The difficulties attending a business of this description in the East are great, both as to the supply of material and labour; and it is gratifying to those interested in the prosperity of the "model settlement" to see work turned out effectively.

Some few mornings ago a terrible commotion took place at the guard-room of the old north gate, in consequence of the abstraction of two heads which for three months had adorned the wall at that place. The heads had formerly belonged to two renowned Cantonese robbers by name Wang A-chang and Yang A-lai, whose friends have, since Wang's and Yang's departure for a better world, made several efforts to possess themselves of the interesting relics above mentioned. They at length succeeded, and have left the guard in a predicament

Digitized by Google

something similar to that of the soldier of Ephesus, celebrated in song. Whether the guard will be compelled to furnish two other heads in the place of those lost we are not in a position to decide, but a bambooing all round is the least penalty they may expect.

The annual Masonic Ball was given on Dec. 29, in the Shanghai Club, which was kindly lent for the occasion by the shareholders. The excellence of the arrangements, for which the masonic body is indebted to the indefatigable Secretary of the Club, was the theme of universal praise. Dancing was kept up until a late hour, both ladies and gentlemen appearing to enjoy what so seldom falls to their lot in Shanghai—a ball costume. The dresses worn by the members of the Encampment, Chapter and various lodges, lent an air of gaiety to the scene, while many of the ladies emulated the craft distinctions gained by their husbands, and appeared in dresses ornamented with Knight Templar, Royal Arch, and blue masonic insignia.

The Fychow giant, who has been astonishing the Shanghai world by his extraordinary length, breadth, and thickness, is about to be sent to Europe, and will, we understand, leave this port by the first mail in February. He will be accompanied by an exhibitor, who will carry him through the principal cities and towns of Europe.

The weather has been fine, and the temperature has fallen, the maximum in the open air having been 48 deg. and the minimum 23 deg. A new theatrical company, consisting of seven gentlemen and two ladies, has arrived from Hong Kong, and purposes shortly to appear in public. Their talents are extolled by the Hong Kong press, and we have no doubt that they will afford equal satisfaction in Shanghai. The departure of the 67th Regiment for Hong Kong has been postponed in consequence of small-pox having broken out on board the *Adventure*.

Mr. James Cock has returned to Shanghai from Hong Kong, and he has been advertised out of the firm of Watson and Co. No result of the state of his affairs or of the firm has yet been arrived at.

On the announcement of the change of name of the Mercantile Bank of India, a foolish rumour got abroad that the bank had stopped! We are happy to say that no bank is sounder.

The trial of the tug steamer *Island Queen* versus the P. and O. Co. for services to the *Nepaul* will be tried about the 20th January.

A large seizure of arms was made at the Custom House under the following circumstances. A number of barrels purporting to contain flour had come from Hong Kong per *Oriflamme*, consigned through Messrs. Russell and Co. to some one at Hankow. Application for permission to transship was demanded, and granted after one of the barrels had been examined. While hoisting the barrels into the boat for conveyance to the Hankow steamer, one unfortunately burst open, and brought to view a quantity of revolvers, Prussian rifles, &c., neatly packed. The remainder of the "flour" was at once seized, when firelocks sufficient in number to equip a couple of regiments of Nienfei or Mahometan rebels were discovered. They now lie in the Custom House godown to await a legal investigation.

FOO-CHOW-FOO.

The following provisional regulations affecting passengers in British vessels will, subject to the approval of H.B.M.'s Charge d'Affaires at Peking, take effect from the 1st of January, 1865.

1. Passengers in British vessels unprovided with proper passports will not, until further notice, be allowed to land at this port without the express permission of H.M.'s Consul.

2. Persons arriving at this port in British vessels, unprovided with such passports, must be detained on board by the captain until the case has been reported to the Consul, who will give or withhold his permission as he may see fit. Masters and consignees of British vessels will be held responsible for any passenger or passengers landing in violation of this regulation.

3. In the same way all persons, whether foreigners or Chinese, leaving this port in British vessels must have their passage tickets vised at this Consulate before they can be allowed to proceed on board.

4. In any case a return of passengers should, in accordance with Article No. VIII. of the General Regulations of Trade, be handed in by the captain on entering and clearing at this Consulate.

A. R. HEWLETT,
H.M.'s Consulate, H.M.'s Acting Consul.
Foochow, 15th December, 1864.

NANKING.

The French mission in Shanghai has despatched two of its members to this city to claim the pieces of ground formerly occupied by Catholic chapels and schools. The Taotai has appointed a Wei-yuan to accompany them, and assist in the necessary inquiries.

NINGPO.

The following notifications have been published:—The undersigned has to notify for general information that he has been provisionally appointed to be Acting Danish Consul at this port of Ningpo and in the Province of Chekiang, and that with the concurrence of H. B. M.'s Government he is authorised under a commission from H. E. Vice-Admiral Steen-Bille, Envoy Extraordinary of H. M. the King of Denmark to the Imperial Court of China, to exercise all the duties and rights of a Royal Danish Consul in carrying out the provisions of the recent treaty between Denmark and China. W. H. FITTOCK, H.B.M.'s Consul.

IN THE BRITISH CONSULATE.

Ningpo, Dec. 31, 1864.

In the cause in which Sun-hsin-keng, of Ningpo, *v.* McCarthey; Mahony and Co. to recover $5,220, due and owing; also,

In the cause the proprietors of the Queen Hotel, and others, *v.* McCarthey and Mahony for sundry amounts, due and owing.

To Eugene Mahony and Henry McCarthey, builders and contractors, at Ningpo, absconded debtors.

You are hereby informed that unless you appear before H.B M.'s Consul at Ningpo within ten days from this date to answer in the above suits, judgment will be given against you for the several sums claimed, interest and costs. W. H. FITTOCK, H. B. M.'S Consul for Ningpo.

HONG KONG.

We understand that the reformatory at West Point promises to flourish so well that H. E. the Governor has granted a site for a new building to replace the temporary premises. There could not possibly be a better proof of the success of this reformatory than the fact of Sir Hercules Robinson having consented to provide its managers with a site for their proposed new building, when we think how very rarely such grants are made by the local governmemt, and in no case without solid reasons.

The circus at this place continues to attract good houses, and the entertainment bids fair to prove a good speculation for the managers. The performances of a little boy, Tommy M'Collum, with an educated pony, was perhaps *the* feature of the evening.

The following mercantile announcements have appeared:—Mr. Edward Pettit has this day been admitted a partner in our firm. Mr. Ernest Deacon is authorised to sign our firm per procuration.—DEACON and Co., Canton, Jan. 1, 1865.

Mr. Bapoojee Pallonjee Banjee has been admitted a partner in our firm from Oct. 31, 1864.—P. F. CAMA and Co., Hong Kong, Jan. 2, 1865.

Mr. Robert Lyall is authorised to sign our firm per procuration.—LYALL, STILL, and Co., Hong Kong, Jan. 2, 1865.

The *China Mail* has the following:—

Major Brine, R.E., who proceeds home this mail, through ill-health, and his three years' service in China having expired, has been within the past week inspecting the volunteer corps in the south of China. On the 6th inst. he inspected the Canton volunteers, of which corps he is commandant; and yesterday evening he issued his farewell order, on a full parade, to the steadily-increasing corps of Hong Kong volunteers, of which he is lieut.-col. commandant.

The parade was formed it front of the head-quarters, Government buildings, with the band on the right, then the battery of artillery, and then the rifle company. All the officers were present, and likewise a large number of spectators, who have always taken a great interest in the volunteer movement in this colony. After opening and going down the ranks, Colonel Brine addressed the corps in something approaching the following terms:—

Captain Coxon and Gentlemen,—It is with very great regret that I am suddenly to be separated from a corps I formed three years ago, and, thanks to you, have commanded ever since. However, it will be gratifying to you, I feel confident, to know I am going home and in improved health. The progress of the corps has been very great last year. From January, 1862, to April, 1864, there was only a battery of artillery; since the latter date a band, nearly 30 strong, has been organised, a rifle company formed, and only last month the Canton Rifle Volunteers, a sub-division of your corps, increased your ranks. On the 31st December, 1862, the effectives numbered 123, and hon. members 42; on same date 1853, 82 and 43; but on 31st December, 1864, the "official" strength of the corps was—band, 25; artillery, 84; rifles, including Canton, 91; hon. members, 67;—total, 267. These figures, notwithstanding the climate and unavoidable expenses connected with a Volunteer Corps far from home, are very encouraging. Your efficiency in drill also shows great improvement, especially in the manœuvres of the Field Battery. The rifle-shooting in 1864 was far better than in 1863; and as for the band, its performances are so good that as amateurs I have been applied to for their services four nights in succession, three of which were granted, viz., for the Governor's

Digitized by Google

patronage, General Guy's, and to-night at Government House. Continue, please, to back up your officers and thereby yourselves; recruit; don't give any offence. Go quietly about your own way, and become good shots, good drills, and aid good fellowship.

When I came to China there was only one volunteer corps, viz., Shanghai. I leave it, including Japan, with five. Of these I have formed three, armed four, and command two. Understand Singapore is not counted. The four China corps—viz., Canton, Hong Kong, Shanghai, and Hankow, to-morrow send to London, for competition at Wimbledon, by "Home" Volunteers, a 500 guinea cup. This corps, in addition, subscribes £20 annually to the National Rifle Association; and several old Scotch Volunteers have lately sent Lord Elcho, for the "London Scottish," a 100 guinea cup. All this is very encouraging, and we must all feel very thankful. I do to you,' to the hon. members, and the authorities. In Sir Hercules Robinson the corps has a strong backer and warm friend. I am afraid I am tiring you; so I will just notify to you the changes that will take place in the corps. Major Scott, 22nd, will succeed me. Mr. Tripp, A.D.C., will be Adjutant; and Mr. Kerr, extra A.D.C., vice Tripp. Farewell!

Colonel Brine then fell out the officers, and the adjutant broke the corps off, on which several lusty cheers were given by all for their gallant commandant. The latter, after bowing uncovered to the Volun. teers, then rode off the ground with his actingadjutant.

The return cricket match between the Hong Kong Club and the Garrison took place on the 2nd and 3rd January, when the Garrison gave the Club a defeat such as they themselves received on the former occasion.

Two fires have taken place, both, it is supposed, originating from the matsheds of the natives. One of these was of a very serious nature, and destroyed an extensive range of mat coal-sheds belonging to Messrs. Robt. S. Walker and Co., with about five thousand tons of coals and two hundred barrels of tar. Fortunately, by dint of much daring and perseverance, the destruction was confined to the one range, although it burned splendidly for four or five hours, and smouldered twice as long.

The Volunteers have been indulging in shot and shell practice, and the battery report shows a great improvement.

SIAM.

Messrs. A. Markwald and Co.'s Report of the 6th of January announces that the exportation of Rice has been prohibited:—

"We already reported in our last the failure of the rice crop, which we herewith beg to confirm. The outturn, we regret to say, will not be anything near the requirements for local consumption, and importations of the grain are likely to be made to a considerable extent, in order to save the population from starvation. The Siamese Government have, under these circumstances, considered it necessary to prohibit the exportation of the grain for a period of seven months, beginning the 25th January, and ending the 20th August next; the prohibition to be continued, however, from that date for a further period of twelve months, should there not be a fair prospect of a good in-coming crop at the expiration of the first term. There are several foreign vessels in harbour under charter, which will have to leave in ballast either for China or Singapore, as shippers were unable to procure during the last few weeks any rice or paddy, supplies having been scarcely sufficient for the local consumption. Inferior white rice is sold at ticals 1½ to 1⅝ per bucket, equal to ticals 150 to 162½ per coyan."

THE PHILIPPINES.

MANILA.

When every place in the world seems to be going ahead, when advancement both at home and abroad seems the rule, the colonists of the Philippines (observes the *Straits Times*), like their fellow subjects in Spain, are not only far behind the age, but are positively retrograding. A few weeks ago, the Councillors, by a majority, passed a recommendation to the Home Government to close the ports of Cebu, Yloilo, and Sual, opened some years ago to direct trade. The policy is completely suicidal. The opening of the ports has created a wonderful increase in trade. Not only a direct trade with various countries has sprung up, but the old trade, both in imports and exports, to and from Manila, formerly the only open port in the colony, has increased. From Yloilo alone 1,600 tons of sugar were shipped in 1863, against 750 tons in 1855, when the port was opened. Sixty foreign vessels were loaded last year from Sual—without counting Spanish. Indeed, the highest anticipations have been more than fulfilled; and it is very discouraging to those who have settled there, and lamentable to lovers of progress, to see such downright ignorance displayed. During 1863 and this year, one or two foreign houses, British and American, have been opened at Cebu and Yloilo; thus introducing capital, and promising more than a continuance of prosperity. We believe a strong and well-penned protest has been addressed to the British Government by the houses there, through the Consul.

The English Steamer *Luzon*, bound to Manila from Amoy, was lost on a shoal off the coast of Zambales, on the night of the 22nd December; the crew and passengers being saved. This steamer had but recently arrived from Glasgow, having been built expressly for trading between Manila, Cebu, and Yloilo.

MALACCA STRAITS.

SINGAPORE.

The dates hence are to the 21st January. The London mail of the 10th December arrived out on the 14th January.

The *Straits Times*, in stating that the Transfer Question would be brought before Parliament this session, remarks that "if the real position of the settlement, financial and otherwise, was only sufficiently made known, no opposition to the transfer was likely to hold for a moment." Our contemporary continues:—

The "public debt" which is talked about at home, now for the first time, is a purely arbitrary creation of the pens of our Indian financiers; no debt whatever exists against the settlement. The amount of money which is so unceremoniously sought to be thus charged is purely a suitors' fund, under control of the local Court of Judicature, which accumulated in the Treasury to the extent of over £100,000; and the Indian Government, with a view to utilize this money, which would otherwise have been profitless, arranged to take over the money and pay 4 per cent interest on it, subject to withdrawal at any moment by the Court of Judicature. In this way the money departed from the Treasury in ordinary annual disbusements, and to meet Imperial drafts. The amount, however, has always been, and is still, available at any moment, to the call of the Court. Latterly, the sum is being redeemed by the Bengal Government in Five per Cent. India Bonds. The debt, if such it is to be called, is clearly one of India to the local Treasury, not one of the local Government to the Indian Treasury.

On the 12th Jan. one of the most painful catastrophes that has occurred in the neighbourhood, was brought to Singapore knowledge. On that day a Chinaman, much bruised about the body, presented himself at the Shipping-office, and said that he had left Swatow a fortnight before in a large three-masted schooner with 550 other passengers. On the night of the 6th, at the entrance to the Straits, barely thirty miles from this, the vessel going at full speed dashed against the Lighthouse rocks; a moment afterwards she fell back, filled rapidly, and sank in deep water with all hands on board. The man, who believed himself the only survivor, got hold of a small piece of wood, on which he floated a whole day and night, when he was picked up by some Rhio fishermen and brought to Singapore. This story, so fearful in its details, was scarcely believed in at first; but fatal confirmation of it arrived a day afterwards from the Dutch Resident at Rhio. One of the crew of the ill-fated ship, a Swede named Christensen, was picked up and brought ashore at Rhio—and his story was the same as the Chinaman's. The vessel was the Hamburg three-masted schooner *Canton*, bound from Swatow to Singapore with 550 Chinese passengers. The Chinamen that reached this, and the European sailor now in hospital at Rhio, are the sole survivors.

The statement of Sin Hee Hee, the Chinaman, made on oath before the Marine Magistrate, is as follows:—

"I was a cook on board a vessel wrecked near the lighthouse (supposed to be Pedra Branca); the flag that was flying on board was a red flag with a white centre. There were altogether 548 men on board, including the captain, crew, and myself. I know the number of men, because I was a cook on board, and used to cook for them all in separate dishes. We left Swatow about fifteen days ago; eight days after leaving Swatow this occurrence took place; it was about one o'clock in the morning. I was sleeping in a boat at the time. There was a strong squall, the vessel went on the rock, and when she came off again she sank. When the ship wrecked, I got a ladder belonging to her and was driven to the coast of Rhio with the ladder. I there met some men working in a gambier shed who gave me clothes. I came here in a China boat belonging to Rhio. On the night of the wreck I saw several men swimming. The next morning I saw about forty afloat. I cannot say whether they were alive or dead. There were no women on board. I did not see the vessel next morning. I was in the water about twenty-four hours. I do not know anything more about it. There were two sails set at the time."

The master of the barque *Gazelle* reported also that "on coming up to Singapore, near the Pan Shoal, on the 14th January, nine dead bodies were seen floating, one of them without a head, supposed to be a Chinaman." Assistance had been sent to the place by the Resident of Rhio, in the hope of saving some lives.

The Sarawak steamer *Rainbow*, which arrived on the 20th January, brought up Captain Orr and part of the crew of the English barque *Canada*.

PENANG.

We (*Penang Argus*) are glad to welcome back G. W. Earl Esq., to our island; we congratulate him on his complete restoration to health, consequent on his stay in Australia, and wish him many long years of usefulnesss in this settlement. Mr. Earl has already assumed charge of his duties as Assistant Resident Councillor, Police Magistrate, and Commissioner of the Court of Requests.

Digitized by Google

The paddy crop in the north of Province Wellesley still suffers from the intensity of the drought. Nothing but a considerable fall will now bring on the crops. The Resident Councillor, on being informed of a police prosecution against some respectable Malays of Lahar Kapa, for damming back the water in the canal, to irrigate their parched fields, stopped it, and directed that the ryots should be permitted to use all the water in the canals and ditches under the direction of the Pangulu Mukims. Gang robberies are of frequent occurrence along the Keddah side of the Muda, and if the paddy crop fails to the extent threatened, these depredations will extend to our side also. It is fortunate, with this unpleasant prospect, that Mr. Bennett is proceeding steadily with the new lines of road in the N.E. In a few weeks it will be possible to ride, without dismounting, from the Permatang Birtam road to the banks of the Muda at Dusun Gaja. A buggy can now drive to Alor Kladi, and before May we anticipate that the continuation of this line will be open for ponies to the frontier pillar. Canal operations recommenced on the 2nd January, and we have every reason to expect that before the end of this year both roads and canals will be finished. The experience of two successive seasons of severe drought shows the necessity of having a command of water for irrigation not only in the belt of swamps now in process of being drained, but in all the higher parts of the country. The waters of the Muda will probably be made available for the former tract next season, and if the experiment succeeds it may be hoped that Government will take the work in hand for the benefit of the latter tracts also.

Births, Marriages, and Deaths.

(Announcements for Subscribers are made free of charge.)

BIRTHS.

BRUCE—On the 21st Feb., at 13, Hertford-street, the wife of the Hon. Thomas Bruce, of a son.

GALTON—On the 3rd Jan., at Fuhchau, the wife of W. P. Galton, of a daughter.

GRISWOLD—On the 19th Feb., at Paris, the wife of Charles Griswold, Esq., of New York, late of Manila, of a daughter.

MCLACHLAN—On the 26th Feb., at Blackheath, the wife of W. McLachlan, Esq., of a daughter.

RICKETT—On the 24th Feb., at 8, Darnley-road, Hackney, the wife of William R. Rickett, Esq., of a daughter.

SPEIDEN—On the 4th Feb., at New York, United States of America, the wife of Wm. Speiden, Esq., late of Hong Kong, China, of a daughter.

MARRIAGES.

FRASER—SAUNDERS.—On the 14th Feb., at St. Anne's Church, Aigburth, near Liverpool, by the Rev. H. Teush Hecker, James Campbell Fraser, Esq., of Yokohama, Japan, second son of the late William Fraser, Esq., of Skipness Castle, Argyleshire, to Emily, eldest daughter of Fredk. Saunders, Esq., of St. Anns, Aigburth, near Liverpool.

GILFILLAN—BLACK.—On the 21st Feb., at Glasgow, by the Rev. Dr. M'Ewen, James Gilfillan, Esq., of Shanghai, to Agnes Thomson, daughter of Alexander Black, Esq. No cards.

KING—SANGER.—On the 7th Dec., at St. John's Cathedral, Hong Kong, by the Rev Thomas Stringer, George King, to Esther Eliza Sanger.

VAN DER KWAST—YZELMAN.—On the 5th Jan., at Singapore, by the Rev. J. Mathison Mr. A. P. Van der Kwast, to Miss P. C. Yzelman.

DEATHS.

BATEMAN—On the 12th Jan., at the General Hospital, Hong Kong, John Bateman, gunner, R.A., aged 26 years.

BROWN—On the 19th Dec., at sea, on a voyage from England to Shanghai, Thomas Brown, master of the British ship Lalla Rookh.

BIRDSEYE—On the 1st Jan., at Shanghai, T. J. Birdseye.

BENNETT—On the 8th Jan., at his residence, Hongque, Shanghai, Capt. John C. Bennett, of the firm of Todd and Co., aged 41 years, a native of Beverly, Massachusetts, U.S. of America.

KERR—On the 11th Jan., at Canton, Fanny Jane, only daughter of Dr. J. G. Kerr, aged 2 years and 2 months.

MAGRATH—On the 16th Dec., at Hong Kong, Miles Monk Magrath, Esq., Assistant-Surgeon R.N., second son of the late Nicholas Magrath, M.D., of Guernsey, in the 30th year of his age.

WELLS—On the 15th Oct., on board the Antipodes at sea, whilst on the voyage from London to Shanghai, William Wells, M.D., a medical officer of the London Missionary Society.

SHIPPING INTELLIGENCE.

ARRIVALS.

At YOKOHAMA.—From London: Dec. 23, Julia. From Marseilles, Blanche.

At SHANGHAI.—From London: Dec. 28, Antipodes. From Shields: 28, Lalla Rookh.

At FOOCHOW.—From London: Dec. 31, Oithona. From Liverpool: Jan. 4, Prince Arthur. From Sunderland: 7, Manfred. From Newcastle: 10, The Cedars.

At MANILA.—None.

At SINGAPORE.—From Liverpool: Jan. 8, Bella Donna. From Shields: Wm. Mitchell. From Newcastle: 15, Johore (str.). From Cardiff: 17, Amazone.

At PENANG.—None.

At BATAVIA.—From London: Stad Assen. From Liverpool: Pieter. From Glasgow: Helen Finlayson.

DEPARTURES.

From YOKOHAMA.—For London. Dec. 31, Pembrokeshire.

From SHANGHAI.—For London: Dec. 27, Anglo-Saxon; 28, Courier and Bosworth; 29, James Russell and Bedfordshire; Jan. 3, Canadian; and 6, Spirit of the Deep. For Liverpool: 4, Anna Helena; and 6, Yorrick. For New York: 3, Catherina. For Montreal: 7, Eastern Chief.

From FOOCHOW.—For London: Sydney Eggers and Star of the North. For Continent: Kite.

From HONG KONG.—For Liverpool: Dec. 31, Jas. Vinnicombe.

From MANILA.—For London: Dec. 20, Hampton Court; 29, O'Thyen; Jan. 5, Corneille David. For Falmouth: Dec. 20, Ladye Love; 24, Vectis; Jan. 5, Carl. For New York: Dec. 29, Game Cock.

From SINGAPORE.—For London: Jan. 12, Maury. For Falmouth: Charlotte Jane.

From PENANG.—For Montreal: Jan. 13, Zizine.

LOADING.

At YOKOHAMA.—For London: Alfred Hawley. For Liverpool: Gabalva. For New York: Velocidade.

At SHANGHAI.—For London: Belle, Countess Russell, Naomi, Spray of the Ocean, and Jubilee. For Liverpool: Spec, Spirit of Trade, Sailor's Home, Constance, and Her Majesty. For New York: Finella. For Montreal: Princess of Wales, and John Nicholson.

At FOOCHOW.—Laurel, Dilkhoosh, and Maiden Queen. For New York: Queen of the Seas.

At HONG KONG AND CANTON.—For Liverpool: Lockett, Prince Arthur and British Crown. For Portsmouth: Hindustan. For London: Lochnagar and Carl Ritter.

At MANILA.—For Falmouth: Monarchy.

At SINGAPORE.—For London: Alexandra, Hawthorn, and Norval. For Liverpoool: Sharpshooter, Indiaman, Lady Bowen, and Springwood. For Cowes: Boreas. For Channel: Blohm.

At PENANG.—For London: Avalanche.

At BATAVIA.—For Channel: Scharnhorst. For Amsterdam: L. A. Bang, Gebreoders, Schelde, Oceaan, Zaanstroom, and Reflect. For Rotterdam: Hollandia, Catharine Maria, Luconia Nagasaki, Cornelia Hendrika, County of Renfrew, Hendrina, Ida Wilhelmina, and Argo.

PASSED STRAITS OF SUNDA.

From ENGLAND and CONTINENT to CHINA, &c.—Jan. 7, Ned Neptuna, from Rotterdam to Batavia.

From CHINA, &c., to ENGLAND and CONTINENT.—Dec. 28, Delhi, Shanghai to London; White Eagle, Shanghai to London. 31, Coringa, Shanghai to Liverpool. Jan. 1, Kirkland, Macao to London; 3, Birchgrove, Foo-chow to London; 4, Hampton Court, Manila to London, Violet; Foo-chow to London; Roodee, Shanghai to Liverpool; 5, Vectis, Manila to Falmouth.

From CHINA, &c., to UNITED STATES.—Dec. 24, Theodor and Julie, Amoy to New York; 29, N. B. Palmer; 27, Diligentia, Foo-chow to New York.

FREIGHTS AND CHARTERS.

YOKOHAMA.—To London, cotton and tea, £3. 10s. to £4 per ton; silk, £5 per ton of 50 cubic feet. To Shanghai, per steamer, for silk, $3.50 per bale; measurement, $5 per ton; per sailing vessel, $3 to $5; measurement, 40 cubic feet. To Hong Kong, per sailing vessel, $4 to $6 per ton of 40 cubic feet; per steamer, $7.

SHANGHAI.—To London and Liverpool, cotton, £2; tea, £2. 10s.

FOO-CHOW.—To London, £2 per ton.

HONG KONG.—The following settlements are from the circular of George Holmes:—The Lockett (615), Prince Arthur (544), and British Crown (1,118), to Liverpool at £3 per ton. The Oliver Cromwell and Kestrel have been taken up to load at Manila for Falmouth, London, or Bristol at £4. 5s. for hemp and £3. 5s. for sugar. Several charters have taken place to Saul and back at 25 cents per picul and 25 to 30 cents extra if ordered north.

MANILA.—There have been no transactions to report, but next settlements for the United Kingdom are likely to be at a decline on last rates, and may probably not be over £2. 10s. for clayed, £3 for unclayed sugar, and £4 per ton for hemp.

SINGAPORE.—There has been more activity in the freight market, and several charters have taken place from rice ports to United Kingdom, at £3. 2s. 6d. to £3s. 5s. per ton.

CASUALTIES.

LOSS OF THE LUZON.

H.M.S. Rifleman arrived Jan. 10, from Singapore, Labuan, and Manila, and reports the loss of the above steamer near Manila.

EXCHANGES ON LONDON.

[For dates, see first page.]

			Bank.	Private.
At Shanghai (per Tael.)	6 months sight.		6s. 6d. to 6s. 6¼d.	6s. 6d. to 6s. 7d.
At Canton, At Hong Kong, At Macao	6	ditto	4s. 8¼d. to 4s. 9d.	4s. 9d. to 4s. 10d.

At Shanghai, Bills on India, Rs. 309 to 310 per 100 taels. At Hong Kong, Rs. 223 to 224 per $100. Bar Silver at Shanghai, 111 taels; at Hong Kong, 8 to 9 premium. Mexican dollars at Shanghai, taels 72 per 100, and Exchange on Hong Kong, 27 to 28 discount.

COMMERCIAL REPORT.

CHINA EXPORTS.

TEA.—The remarks made last mail may be repeated. The supplies of Black are nearly exhausted, the export is very full, and rates are maintained in a singular manner. The new country Greens are tightly held by the teamen at rates above what foreign exporters can possibly pay, the fact being that the expenses of transit are so heavy, owing to mandarin exactions, that holders will not see their money back.

CANTON.—Transactions for the fortnight have been on a very limited scale in this market. Country Congous: Although the teamen within the last few days have appeared more anxious to do business, yet thei

Digitized by Google

ideas are still too high for intending purchasers, and so there are no settlements to report. Country Greens: 241 half-chests Hyson have been taken for India, besides which nothing has as yet transpired in these kinds. Canton-made Teas have throughout the fortnight been neglected, and may now be bought on easy terms.

AMOY.—Supplies of Oolongs have of late come forward more freely from the country, but buyers have held altogether aloof from the market, and no settlements are reported excepting one small chop of 208 10 catty boxes Oolong at $24½.

FOOCHOW.—The transactions of the fortnight have been small. Of the settlements reported, fully a moiety have been made by one house, at previous rates for common, and a slight advance for flavory kinds. The settlements reported are as follows:—Congous: 3,445 chests and 3,828 half-chests at 6 to 13½ tls. for dust and broken leaf, 12 to 16¾ tls. for common to good common, and 16½ to 20½ tls. for flavoury to good flavoury. Souchong: 100 chests common at 20¾ tls. Oolong: 3,080 half-chests and 400 boxes at 8 to 12½ tls. for inferior, and 14½ to 17 tls. for common to fair cargo. Scented Teas: 790 boxes common to fair at 19 to 23¼ tls.

SHANGHAI.—Black: A fair amount of business has been transacted during the past fortnight, and prices have again ruled somewhat irregular, many of the settlements showing an advance of one tael on previous quotations. During the past two days holders, in consequence of the advance in exchange, have been more anxious to realise, but at present no decline can be quoted. Settlements have been:—7 chops Oopack, at 23½ to 24½ tls.; 5 chops Ningchow, at 22 to 23 tls.; 8 chops Oonahms, at 18 to 20 tls.; and 4 chops Hohow, at 16 to 17 tls.; together, 24 chops or 9,358 chests. Reshipped on owners' account, 14 chops 6,451 chests; making in all, 37 chops or 15,989 chests, and showing a total for the season to date of 346,323 chests. Stock, waiting shipment and for re-sale, 50 chops or 21,026 chests. Quotations:—Third crop Oopacks, 23½ to 26½ tls.; Ningchow, 20 to 23 tls.; Oonahms, 18 to 22 tls.; Hohow, 16 to 20 tls. Green: One large chop of Moyune country tea, belonging to a foreign firm, containing over 1,700 packages, have been settled at 35 tls.; but natives will not accept similar rates, so the market cannot be reported as fairly opened. Stocks both here and at Kiukiang are steadily increasing. A few small parcels of Shanghai packed have been taken at previous rates.

KIUKIANG.—Green Teas: Teamen had proved firmer than foreigners, and about 8,500 half-chests had been settled at prices fully 2d. per lb. over highest home rates of last season. The stock on hand had increased to 125,000 packages and the absence of any general anxiety to buy coupled with the growing necessities of the teamen would probably lead to a considerable decline in prices after China New Year. Total settlements and shipments: 32,116 half-chests or 1,889,400 lbs. against 143,110 half-chests or 8,418,900 lbs. last year. Black Teas: One small chop only had been settled at former rates, and 3 chops remained in stock.

HANKOW.—Between the 17th and 31st ultimo, four chops had been settled somewhat above last home rates. Seven chops were in stock, and about twelve more were likely to arrive before the definite close of the season. Total settlements and shipments: 365,000 chests, or 36,423,200 lbs., against 360,000 chests or 35,038,000 lbs. last year.

YOKOHAMA.—There is no change whatever to report in this staple since last issue. The high rates demanded by the teamen have checked operations to a very great extent. Stocks chiefly consist of Medium to Fine.

RAW SILK.—The shipments from Shanghai for this mail were as follows:—For Southampton 246 bales, for Marseilles 146 do., from Yokohama 703 do. Total, 1,095 taels. Shanghai: The market has been rather quiet throughout the fortnight, the transactions being estimated at 500 bales. After the departure of last mail the silk men appeared more anxious to sell, wishing to close their accounts at the end of the China year, and submitted to a reduction of from 5 to 10 tls. per picul. The unsold silk is chiefly composed of undesirable qualities, and as the arrivals from up country have amounted to 500 bales, the stock remains unaltered. Taysaams, No. 1, 430 to 440 tls.

YOKOHAMA.—After the departure of the *Corea*, business continued for a few days moderately active and at steady prices, but since the arrival of the 26th of October mail, the demand has become much slacker, the foreign buyers requiring concessions which the native dealers are but little disposed to make; hence a struggle which cannot otherwise than end to the advantage of foreigners if they but hold off for some little time, as the Japanese are well aware that the present prices are at a critical height and cannot be much longer supported. Meanwhile our late quotations remain almost without change. The settlements to date are about 8,600 bales, against 12,300 bales same time last year. The unsold stock in the market about 400 bales, mostly composed of second rate and inferior description. Ida best, $710 to 720. Mybash and Sinchu: Best parcels offering, $700 to 710; medium, $675 to 690; inferior, $650 to 665.

DRUGS &c.—CANTON.—The ample supply of 1,900 pls. has met with an adequate demand, and 1,600 pls. have been taken at $15.80 to 15.90 per picul, showing an advance of 10 cents on previous quotations. Cassia Buds: There have been no sales; the stock of 40 pls. is held at $57. China Galls: Have further advanced, and must now be quoted $16 per picul, at which rate 100 pls. of the new crop are offered. Vermilion: Is to be had on easier terms, say at $39½ to 40 per box. Rhubarb: Neither supplies nor transactions. Musk: Nothing doing. Galangal: Continues neglected with a large stock, and is quoted nominally at $2 to 3. Essential Oils: None brought to market.

CHINA IMPORTS.

COTTON YARN.—The sales of the past fortnight amount to only 45 bales, which have found buyers at an advance of about $2 per picul upon the quotations previously current. Grey Shirtings: These manufactures have met with a moderate amount of inquiry since the departure of the last mail steamer, and have been purchased both on native and foreign account at prices which show some advance upon the quotations previously current. The settlements of the fortnight are estimated at 5,200 pieces purchased by the dealers, and 12,000 pieces taken by foreigners. White Shirtings remain at about previous values, and have been taken on this market to the extent of 3,500 pieces. In Canton 2,100 pieces of these goods have found buyers. T-Cloths: Show a material rise in value when compared with the quotations ruling on the departure of the last mail steamer. There has been a moderate amount of business transacted in these goods during the fortnight, and they continue to be inquired for. The settlements reported are 4,200 pieces taken by the dealers, and 7,800 pieces purchased on foreign account. American Drills: There are not any of these goods on the market. White Spotted Shirtings, Dyed do., Brocades, White and Coloured: The sole transaction reported in these fabrics since the date of last circular consists of the settlement of 500 pieces. Coloured Brocades: Quotations remain nominally the same. Damasks: No sales reported. Handkerchiefs: Have not been in any request, but sales of 1,700 pieces of Chintzes are reported as having been effected during the fortnight.

WOOLLENS.—Spanish Stripes, Medium Cloths, Ladies' and Habit Cloths: Not a single transaction has been reported in Spanish Stripes during the fortnight, and the only sale to notice is that of 68 pieces of Medium Cloths. Long Ells: These goods have again met with a moderate amount of inquiry, but the range of prices continues extremely low; the sales reported amount to 700 pieces. Camlets: Show some improvement in value, and have found buyers to a larger extent than for some time past, the settlements of the fortnight are put at 1,820 pieces. Lastings: This description of goods has also been in fair request, and the sales of the past fortnight are put at 1,000 pieces. Blankets: There are not any transactions to notice.

METALS.—Iron Flat, &c.: The value of Nail Rod Iron continues extremely firm, and an advance has been established in the price of this description in the Canton Market. The sales of all classes amount in this Colony to 1,000 piculs, and in Canton 200 piculs of Nail Rod have changed hands. Lead: There has not been the slightest inquiry manifested for this article during the fortnight, and we only hear of a sale of about 70 piculs at the low quotations previously current. In Canton 2,000 piculs have found purchasers. Tin: 100 piculs sold in Canton. Tin-Plates: 100 boxes have changed hands.

COMMERCIAL POSTSCRIPT.

There are no further houses named as in difficulties beyond those reported by last mail.

TEA.—The following is from the circular of J. C. Sillar:—Increased heaviness has prevailed in the Tea-market for the last fortnight, and prices of all kinds have again given way. As will be seen below, nearly 28,000,000 lbs. have arrived from China since the 30th ult., which will have to be added to the stock. The United Kingdom stock stands at about 128,000,000 lbs., and consists almost entirely of Teas worth 1s. 4d. per lb. downwards, while more than a half is low red and black leaf, from 1s. to 10d., and even as low as 7d. in value. Private telegrams report the shipment of 5,000,000 lbs. for the fortnight, which will increase the quantity afloat to 26,000,000 lbs.

It has been stated in the *Times* newspaper, and is generally accepted, that the present duty on tea is 33½ per cent. *ad valorem*, whereas in reality it is one hundred per cent. upon the great bulk of tea imported. The finest descriptions of tea only pay a duty of 30 to 50 per cent., but these constitute a very small percentage of the season's import, and are consumed exclusively by the upper classes. The poorer classes, on the other hand, as a rule, drink eightpenny Congou, and upon this they have to pay a duty of one hundred and fifty per cent., a tax they can ill afford. A shilling a pound is considered the usual average profit charged by the shopkeeper, a shilling is charged by Government, and eightpence a pound is allowed to the importer, who has to pay the Chinese Government a duty of taels 2½ per picul, or say 2½d per lb., 2½ the expense of chests and leads, 1d. for freight and insurance, and 2d. to the Chinese merchant, who has to divide this between the grower and the local mandarins as best he can. The consumption, for the reasons shown above, barely increased last year 4 per cent., being for the year 1864, 88½ millions duty paid, against 85 millions the year before, while the results of the above fair division of profit are beginning to show themselves in the commencement of the destruction of the China trade, several heavy failures having already taken place; whereas, had the principles of free trade been fully carried out, the consumption would have been double or treble its present size.

ARRIVALS NOT INCLUDED IN THE TABLES.—Feb. 24, at Deal, from Batavia, Iris; at Plymouth, from Maulmain, Kate; 24, at Falmouth, from Rangoon, Columbia; 25, at London, from China, Glenclune; 24, at Liverpool, from Shanghai, Providence; 25, at Deal, from Maulmain, Lorenzo; 26, at Deal, from China, Agincourt; 24, at Texel, from Padang, Tinnevelly; from Batavia, Souburg, Victoria; from Banjoewangie, Huydecoper; at New York, from Foo-chow-Foo, Corea; 25, at Falmouth, from Batavia, Wilhelmina; 27, from Maulmain, Selina.

DEPARTURES.—Feb. 2, from New York, for Shanghai, Uncowah; 3, for Hong Kong, Powhatan; 25, from London, for Newport and Shanghai Helen Douglas; 25, from Clyde, for Singapore and Penang, Priam; for Batavia and Singapore, Maythorn.

LAID ON FOR CALCUTTA.—Steamer Far East; at Liverpool, for Shanghai, Bankside.

SPOKEN.—Julie Claire, Batavia to Amsterdam, Jan. 30, 25 N., 28 W.; Isadore (?), (Dutch ship), Batavia to Amsterdam, 120 days out, Feb. 21, 48 N., 7 W.; Macassar, Macassar to Rotterdam, Jan. 17, 3 S. 22 W.; Brouwershaven (Dutch ship), Batavia to Rotterdam, Jan. 28, 17 N., 36 W.; Leaping Water, Sourabaya to Amsterdam, Jan. 9, 14 S., 8 W. (master unwell); Huydecoper, Sourabaya to Amsterdam, Jan. 11, 11 S., 12 W.; Isis (ship), Batavia to Amsterdam, Dec. 16, 35 S., 21 E.; Tigranes, Cadiz to Manila, Jan. 4, 27 S., 30 W.; Satellite (barq.), for Singapore, Jan. 16, 3 N., 23 W.; Andrews (?) (barq.), Japan to London, Japan 24, 15 N., 32 W.; Isaac da Costa, Rotterdam to Padang, Sept. 26, 9 S., 27 W.; Koning Willem III., Rotterdam to Macassar, Jan. 9, 5 N., 23 W.; Sourabaya Packet, Amsterdam to Sourabaya, Jan. 15, 12 S., 33 W.; Devana, London to Hong Kong, Jan. 21, 12 S., 33 W.

CASUALTIES.—Nothing has been heard of the Claremont, M'Intosh, from China for London, since her departure from Ascension, on the 8th of December.

Digitized by Google

THE COMPRADOR SYSTEM IN LONDON.—Our readers in the Far East will be surprised to hear that the comprador squeeze is not confined to China alone, inasmuch as a nobleman of high standing and repute, viz., the Duke of Sutherland, has, in a letter to *The Times*, opened the eyes of the public to the fact of its existence in London. It appears from his statements that the tradesmen in the metropolis have been accustomed to pay servants a per centage upon all goods sold to their masters, thus evidently encouraging them to all kinds of dishonesty. As the Duke observes, "it is equally unjust to masters and servants, as the expenses of the one and the temptation to the other are both considerably increased. Therefore (he continues), all servants or tradesmen in my employment detected in pursuing this system, will be immediately dismissed from my service and patronage." It is to be hoped all other large and influential householders in London will follow the example set before them, which indeed becomes a duty to society at large when the corruption, engendered by a habit so pernicious is taken into consideration.

APPOINTMENTS.—The Queen has been graciously pleased to appoint Christian Koch, Esq., to be Her Majesty's Consul at Frankfort; Mr. Julius Meyers as Consul at Demerara for His Majesty the King of the Netherlands; and Mr. Charles H. Powers as Consul at Coaticook, Canada, for the United States of America; Mr. John Raspen Ringrose as Consul at Hull and for all the ports on the Humber for His Majesty the King of the Netherlands; and Mr. Gustav Heyn as Consul at Belfast for His Majesty the King of Hanover. The following officers of the Marine of his Imperial Majesty the Emperor of the French, and of his Majesty the King of the Netherlands, to be Honorary Members of the Military Divisions of the Second and Third Classes of the Most Honourable Order of the Bath, respectively; viz. :—To be Knight Commander: M. Jean Louis Charles Jaures, Vice-Admiral. To be Companions: M. Antoine Louis Marie le Couriault du Quilio, Capitaine de Vaisseau; M. Henry Maurice Pas-quier de Francheu, Capitaine de Vaisseau; and Captain Jacobus Eliza de Man. Hugh Mallet, Esq., to be Secretary or Registrar to the Mixed Commission Courts established at the Cape of Good Hope under the treaties concluded by Great Britain on the 3rd of July, 1842, and 7th of April, 1862, with Portugal and the United States respectively, for the suppression of the African slave trade,

PLURALIST DIRECTORS OF JOINT-STOCK COMPANIES. — In running over the *Joint-Stock Companies' Directory for* 1865, we were astonished to see the same names over and over again as directors of different companies. Mr. W. W. Cargill, M.P., is director to no less than 16, and even he is outdone by Alderman Dakin, whose name is repeated 17 times. We leave our readers to imagine for themselves how these gentlemen manage to attend to their own interests or those of the shareholders, and content ourselves with annexing the names of those companies which are or ought to be happy under the directorship of Mr Alderman and Sheriff Dakin :—1, London Necropolis and Mausoleum Company; 2, City Offices; 3, Bank of London; 4, Metropolitan Railway; 5, Smith, Knight and Co.; 6, South African Mortgage and Investment; 7, Contract Corporation; 8, Imperial Mercantile Credit Association; 9, Great Central Gas Consumers; 10, Mutual Life Assurance Society; 11, Mutual Tontine Association; 12, Chairman of Great Western Canada Railway; 13, Chairman of English and Scottish Marine Assurance; 14, Rhymney Railway; 15, Cape Railway; 16, Metropolitan Extension Railway; 17, Deputy Chairman London and Lancashire Insurance.

CHINESE PIRATES.—The following is an extract of a letter from a young gentleman on board H.M.'s gun-boat *Grasshopper*, dated Swatow, December 13, 1864 :—"When we left Swatow in search of pirates, and were going to Amoy on a little business, we were steaming at full speed when we sighted six small junks. As soon as they saw us they set all sail and made off, but we lay to, and gave them some grape shot, and all the men in the junks leapt overboard, and we picked up 76 of them naked. It was a horrible sight to see, when we brought them on board, some with their arms and some with their legs off. We then stowed them away like so many pigs, and brought them to the Supreme Court of mandarins, to whom we gave them up. After we were at Amoy, we returned in the course of three days to the same place we had left the pirates, and there was a sight. There were 20 of them crucified, with nails in their hands and their feet; 20 drowned, with stones to them; 20 hanged; 16 tortured and burned to death. The Chinese Government had been looking after these desperate parties for a long time, but never could catch them. They did not spare them when they got them. The first thing they did before we left was to give them four dozen each with the lash, but this was only to teach them that they had been taken by a British man-of-war.

EXPLOSION ON BOARD THE PENINSULAR AND ORIENTAL COMPANY'S MAIL STEAMER "RANGOON."—By the arrival of the Peninsular and Oriental Steam Navigation Company's mail steamer *Rangoon* at Suez, telegraphed to the company, intelligence has been received of a very shocking accident having occurred on board that vessel by explosion, shortly after her departure from Bombay to Suez. According to the brief particulars contained in the telegram, it appears that the catastrophe took place on the 18th of last month, when a quantity of gunpowder, stated to be about 7 lbs., exploded somewhere in the vicinity of the after saloon carriage, causing the death of two passengers, a female and a child, and doing damage to the furniture and fittings of the state cabin.

A NEW SILKWORM.—M. Guérin-Méneville has communicated a paper to the Academy of Sciences, Paris, on a new silkworm sent over from Senegal. The caterpillar on being hatched is black; it then becomes grey, then of a brilliant silver white, and in the last stage green, its body being covered with small bunches of bristles, those near the head being red and blue, and those on the rest of the body red and white. The butterfly, on issuing from the cocoon, exhales a slight smell of musk. The food of this breed consists of the leaves of the jujube-tree.

SALE OF CHINESE CURIOSITIES.—There has been a large sale of Chinese and Japanese curiosities at Mr. Phillips' auction rooms in New Bond-street. They were the property of an old resident, who had formed one of the finest collections seen in this country for some time. On entering the sale-room, the article that first drew attention was a large state bed, most exquisitely carved and wrought in gold. With this fine piece of work were a group of figures representing a princess at her toilet, attended by her women, all of whom were moulded in close imitation of nature. These, together with the bed, only brought in about £80, which, as Mr. Phillips pathetically observed, was "giving them away." Then followed a very fine and varied assortment of jars and vases, most of which were bargains, several fine gongs, and some exquisite straw work in cabinets. Some tables and chairs of wonderful workmanship completed the list, and altogether made up a show that was well worth an hour's inspection.

ADMIRAL COCHRANE AND THE CABMAN.—It will be seen by our readers that the gallant Admiral fully sustains at home the character he bore when commanding on the China station. A cabman has had the audacity to impose upon him by an overcharge of 8d., for sundry parcels which he ought to have carried for nothing. Unfortunately he had mistaken his fare. "Drive to the Westminster Police-court," thundered the Admiral, and to the Westminster Police-court he was driven. The charge was stated—but *only on public grounds*, and the unfortunate cabby paid the penalty of his rashness with a fine of 3s. Then, quoth the prosecutor, "Is not the defendant bound by law to drive me back for nothing?" The magistrate thought not, so the Admiral went home, but whether on foot or by cab is not stated.

GREAT DESTRUCTION OF TEA BY FIRE.—A destructive fire occurred on the 25th December at Maimatschene, a Chinese frontier town near Kiakhta. Three warehouses containing 2,000 chests of tea were entirely destroyed. The loss is estimated at 120,000 roubles. The Chinese were thrown into great consternation by the disaster, for which they were altogether unprepared, as no fire had happened there for about twenty-four years. They also have a superstitious notion that to extinguish a fire is a sin, and they consequently had no firemen or engines; but they worked hard in carrying water to the Russians, who did their utmost in mastering the conflagration, and succeeded in saving about 4,000 chests of tea.

HOUSE OF COMMONS.

CHINA.

(Feb. 24th.) Colonel SYKES gave notice that on the 3rd of March he would call attention to the alleged inability of the present Government to enforce orders in council, and ask the Under-Secretary for Foreign Affairs whether such inability was consistent with the proceedings of the consular courts in China.

THE CONFEDERATE CRUIZER "SHENANDOAH."

The United States steamer Iroquois, eight guns, Commander Rodgers, arrived in Table Bay on Monday (Jan. 9) with a portion of the crews of the schooner Lizzie M. Stacy, and of the bark Edward, both of which vessels were burnt at sea by the Confederate cruizer Shenandoah, the men on board being afterwards landed at Tristan d'Acunha, from whence they were taken by the Iroquois. The following particulars of these captures have been placed at the disposal of the press :—

THE "LIZZIE M. STACY."—The following is the report of Capt. W. H. Archer, of the fore-and-aft schooner Lizzie M. Stacy, from Boston with a general cargo :—"On the 13th November, in lat. 1.40 N., long. 28 W., discovered a ship to the westward coming up very fast; shortly afterwards made her out to be a steamer. In about two hours and a-half she steamed close alongside us, flying the English ensign. I then showed my colours, on which she fired a gun; at the same time down came the ensign and up went the pirate flag. The ship hove to, I following her example. She then lowered and sent one of her boats on board in charge of Lieut. Grimball, Master's Mate Hunt, and Midshipman Brown. Upon their coming on deck, I was asked where I was from, and where bound to, and if I had any foreign cargo on board. To which I replied, 'No.' 'Then, sir, you are a prize to the Confederate steamer Shenandoah; take your papers and go on board with your mate.' I went on board, and on arriving there was shown into the wardrobe. The captain then asked me where I was from and bound. I told him. He then asked me if I had any foreign cargo on board. I said no. 'Well, sir, I shall burn your ship. Go on board and get your luggage together, and take great care not to destroy provisions. If you do, it will be the worse for yourselves.' I then left the cabin and went on board my ship for the purpose of bringing my clothes and crew on board the steamer; after which they commenced to ransack the vessel. After taking the provisions and many other things, they destroyed my boats and cast them adrift, after which they scuttled and set fire to the vessel at both ends. We then stood away to the northward and eastward. The Lizzie M. Stacy was a fine fore-and-aft schooner, of about 140 tons, 3 years old, and belonged to Messrs. C. Brewer and Co., of Boston, U.S.A. After the capture of my vessel, and that of the whaling barque Edward, we and our crews, consisting in all of 27 men, were landed on the Island of Tristan d'Acunha, and were kindly received and lodged by the people on shore. We remained there 21 days, and were taken off by the U.S. steam corvette Iroquois, Captain C. J. R. Rodgers; and after a passage of 12 days from the island were landed in Table Bay on Monday." The following is Captain Archer's description of the Shenandoah: A fine long ship of about 1,000 tons, ship rigged, three patent reefing topsails, appeared to be a very fast vessel, carried 8 guns, 4 on either side. She had no pivot guns. The following is a list of her officers: Captain Waddell; 1st Lieut., C. W. Whittle; 2nd Lieut., J. Grimball; 3rd Lieut., S. S. Lee; 4th, F. S. Chew; 5th, D. M. Scales; Master's Mates, Colton, Hunt, and Miner; Surgeon, C. Lining; Assistant Surgeon, J. F. McNulty; Passed Midshipmen, O. A. Brown and J. F. Mason; Gunner, John Guy; Boatswain, J. Harwood; Sailmaker, H. Halcott; Carpenter, J. O'Shey; in all 74 persons. While on board the steamer, four of the Lizzie M. Stacy's crew joined her. The crews of the vessels taken before the Lizzie M. Stacy were put on board the ship Kate Prince, which vessel was bonded and released on account of her having a cargo of coals for Bahia.

THE WHALING BARK "EDWARD."—The following is Captain Worth's report of the taking of the American whaling bark Edward, of New

Digitized by Google

Bedford :—"On the 4th December, in lat. 37.50 S., long. 11.45 W., at 5 p.m, observed a strange-looking steam-ship under sail standing towards us; when within about half a mile of us he showed the English ensign. I then backed my main topsail and hove to, thinking he wanted to speak me. Previous to this I had run up my colours to the peak, after which he hove his vessel to about quarter of a mile from us, and lowered one of his boats, which he sent to board my vessel, in charge of Mr. Bullock and Mr. Miner. They came alongside, and the officers coming on deck, I was told to go on board the strange steamer with my papers, leaving my ship in charge of the officers. Upon my going on board, I was taken into the cabin, where I was met by Captain Waddell, who said, 'Captain, I wish to examine your papers.' After looking over them, he said, "I shall burn your vessel.' He them made me take oath to answer the truth to the questions he would put to me. He then said: 'What money have you on board?' Answer, '150 dollars in gold. He then said, 'Take care of it, and deliver it to my purser, when you come on board.' I then left the cabin and proceeded on board my ship to fetch my clothes and send the crew on board next morning (it being late in the evening, they did not touch anything until next morning), when they commenced to take what provisions and other articles they wanted, and at six in the evening they set fire to the vessel. The whale boats, which were new, were taken on board the privateer; at that time her cargo was about 100 barrels of oil on board. She was a fine barque of about 350 tons, and was owned by Messrs. T. Knowles and Co., of New Bedford. She had been out four months; part of the men's clothes were saved; one of the seamen joined her while on board; he was an Englishman."

In addition to the above the following is a list of the ships burned by the Shenandoah :—Alena, bark, from Cardiff, bound to South America, with coals; brig Susan, from England, to South America, with a cargo of coals; bark D. Godfrey, from Boston to Valparaiso; schooner Charter Oak, from Boston to San Francisco; bark Adelaide, with the Argentine flag at her peak, was boarded. It appears that the captain of the privateer demanded her bill of sale and transfer to the Argentine Government, which the captain could not produce. She was then ordered to be destroyed. After they had broke up the cabin and poured tar and turpentine over the floor, the captain of the Adelaide spoke a few words to the privateer captain, upon which he immediately ordered them to repair what damage they had done, and release the vessel. It appears she belonged to a friend of the Confederates.

GAS IN CHINA.

(DAILY TELEGRAPH.)

"What next, and next?" asked Mr. Richard Cobden. "Next and next" came, in a form of which Mr. Cobden had never dreamt. "Next" was the Indian mutiny; "Next" was the liberation of Italy; "Next" was the civil war in America. The truth is, we cannot rest. We cannot stand still. For ever is there thundering in our ears the cry of "Onwards!" For ever are we reminded of the penalty which those incur who, not only look back, but strive to trace their steps in a retrograde direction; and happy are we if our career is not merely onwards but upwards, and if we succeed in avoiding the road which is all down hill. "What next, and next?" Everything is "next." The things we hope for must come—reform, sobriety, peace, innocence, happiness. The things we dread must come equally—grey hairs, diminished strength, bereavement, and the grave. It is simply a question of time. In an infinite succession the actors are waiting at the "wing" to enter on the stage of life. They are dressed and painted, and perfect in their parts; they are only waiting for their proper "cue," and we have not the least idea of when the "cue" will be given. Tremendous "set scenes" are behind the forest or the chamber which engage our transitory attention, and they do but await the promptor's whistle to be disclosed. If the curtain falls, let us not seek for our hats and prepare to depart, in vain assumption that the play has come to an end. It is but the act drop; the green curtain is a long way off: the great drama has yet to develope the most marvellous episode. There may be myriads of anti-climaxes before the great catastrophe. It is a good thing when you are old and feeble to "rest and be thankful," but in the aggregate, when nations are thankful for rest, it is that they may gather new strength and devote themselves, so soon as need be, to fresh efforts. The history of civilisation is but an incessant repetition of the question, "What next and next?" suddenly answered by a discovery or a revolution. The arts of the scribe and the illuminator are perfected to the highest degree; and lo! printing is invented. Nothing more can be done to render chain and plate armour invulnerable; and a German monk crumples up armour like Mr. Cobden's sheet of paper with a pellet of lead and an ounce of gunpowder. Mail-coaches are pronounced faultless, and a screeching railway train sweeps them off the road. The Lords of the Admiralty rub their hands over swift-sailing frigates; and Fulton puts a furnace, a chimney, and some water on board a barge, and steam navigation laughs the swift-sailing frigates to scorn. A three decker, as big as a parish church, "eats her head off" in the harbour of Malta, or towers majestic in Hampton Roads; and a little tin-pot floating battery, a kind of Eelpie-house punt, covered with railway irons, comes and knocks the tremendous three-decker to pieces, as easily as though it were a Dutch cheese. The things of which we brag loudest are in a moment superseded, and rendered as worthless as an old wig. Where is miniature-painting since photography came in? How is the sealing-wax trade since the introduction of gummed envelopes? How grateful the geese must be for the popularity of Gillott's steel pens! What has become of the old semaphore on the top of the Admiralty, all arms and legs, like the ghost of an insane cockchafer? Next was the electric, and next after that the magnetic telegraph. Just three-and-thirty years have elapsed since the learned and eccentric Mr. Babbage, in his "Economy of Manufactures," hit upon a notable device for forwarding letters and parcels along wires, and utilising the church steeples for the conveyance of the royal mails; but, in all his philosophy, the Organic sage never dreamt of Queen's-heads, the penny post, and the Pneumatic Despatch Company (Limited). The date of Mr. Babbage's whimsical suggestion reminds us that in the same year, 1832, a reverend Doctor of Divinity, the incumbent of a London church, put his churchwardens into the Ecclesiastical Court for daring to erect fishtail burners on either side of his pulpit. We will not mention his name, for the stanch old Tory may be yet alive. Had the late Sir George Cornewall Lewis only remembered Conservatism, he might have moderated his scepticism as to human longevity. Gas in a church! The Doctor of Divinity could not be expected to stand that, so he moved Sir Herbert Jenner Fust to put the wicked churchwardens down. We don't know exactly the offence with which they were charged—whether it was made out to be simony, or heresy, or "brawling;" but it is on record that the Arches Court was occupied with the great gas question. What would the reverend prosecutor have thought had he been told that in the year 1865 not only the whole of Europe, not only the whole of North America, but the town of Hong Kong, would be lighted by gas? Yes, carburetted hydrogen has found its way to the Middle Kingdom. The borders of the Flowery Land are liable to be cut off at the main; the Celestial Empire is threatened with an irruption of meters and pipes, gasometers and fishtail burners. It is true that Hong Kong is a British colony; that there are policemen there who, a very short time since, were wearing pig-tails; that the town has its club and its reading-rooms, its whist parties and its chemists' shops, its military messes and its fancy balls. Still, gas at Hong Kong for the moment staggers us. It is about the last place in the world where we should expect to find such a commodity. The innovation seems to menace the existence of Chinese lanterns and Chinese fireworks. Gas in Japan would not surprise us half as much; for the Japanese have shown a surprising aptitude in availing themselves of the appliances of Western civilisation. They are making mathematical instruments, stereoscopes, and camera obscuras. They are using hydraulic screws and Nasmyth steam-hammers. They are rifling cannon, drilling soldiers according to Hardee, and building iron-clads. Gas at Yokohama or Hakodadi would be quite a natural and comprehensible thing. Of course, the gasometers, the pipes, the meters, and the burners would all be made of paper; of course the collector who called for the rate would wear two swords; and of course the consumer who was three quarters in arrear would be driven to commit the *hari-kari*, or "happy despatch," to avoid the deep indignity of having his gas cut off.

"What next, and next?" Why, gas will cross from Hong Kong to the mainland, and in process of time light up the whole Celestial Empire until it reaches that deadest of dead walls, the Great Wall of China, along whose ramparts a regular row of gas lamps would be at once elegant and useful. The Chinese have been enterprising enough to emigrate in large numbers to California and Australia. San Francisco and the Bendigo diggings are full of their broad-brimmed hats, their dried countenances, their temples, their opium-smoking houses, and their tea-gardens; and English amateurs of Havana cigars would be surprised to learn how many choice Cabanas and Aaitagas are made by sallow Chinamen who, clad in European dress, and letting their hair grow, labour in the tobacco factories of Cuba. In the city of Havana is published an illustrated periodical, the blocks for which are engraved, and the copies of which are struck off by "Asiaticos" or Chinese workmen. If they can so adapt themselves to the requirements of civilisation abroad, why should we not reciprocate the compliment they show us by endeavouring so far as we are able to civilise them? A Canton Gas Company (Limited) might not turn out the most unprofitable of investments. The members of the Foreign Legations at Peking got up last year some very successful horse-races; why should not gas follow in the wake of the Chinese Derby? There is gas, to some extent at least, at Calcutta, at Bombay, and at Madras; there is now gas in Hong Kong, and we hope very soon to hear of the introduction of the brilliant element, not only in the capital of the empire, but at Shanghai and Canton. We collect the Chinese customs; we have drilled and commanded their "braves;" why should we not light their streets? A lantern at the end of a pole may be picturesque, so is a pigtail; but both are barbarisms. The celestials might plead, perhaps, that all civilisation began with them, and that they possessed gas, together with printing, balloons, gunpowder, telegraphy, the Jacquard loom, the Armstrong gun, photo-sculpture, animal magnetism, spirit-rapping, postage-stamps, Epsom champagne, and decalcomanie at least six thousand years ago, but it is nevertheless certain that their civilisation, albeit highly elaborate, is desperately rusty, and is in great danger of becoming rotten—if, indeed, it have not already attained an advanced stage of decomposition. China may shine, though it is with the phosphorescent glimmering of an ancient mackerel in the dark; but give China gas, and we may hear of her, "next and next," shining with thrice her former brilliance.

Continental Intelligence.

HOLLAND.

(FROM OUR OWN CORRESPONDENT.)

ROTTERDAM, FEB. 24.

If we are to believe the *Dagblad*, we are on the eve of a Ministerial crisis. Not only, according to that authority, does there exist a warm difference between our Premier and the Minister of Marine about the settlement of the quarantine law, but the Opposition paper says that there is also discord between Messrs. Thorbecke and Franssen van de Putte. At the last Cabinet Council the Premier brought colonial politics into debate, and our contemporary tells us that "Mr. Thorbecke was not at all at his ease about the future of our colonies." I need not say that this assertion has provoked general laughter. I believe it to be a *canard* of the largest size.

It is widely rumoured here that the Governor-General of the East Indies, Baron Sloet, will return home. It is believed that Mr. P. P. van Bosse would not decline to become his successor. Many other candidates are named of all shades—modern, liberal, and ultra-orthodox. In my next I hope to be able to tell you more about this rumour.

Parliament will not meet before the 28th. It seems that a further delay was directed by the Premier, because he feared an

Digitized by Google

interpellation about the Canal-Maatschappy. I; doubt, however, that this question will be settled on that day. The agitated state of public opinion in Amsterdam is not at all quieted, and it becomes daily more probable that it will be impossible for the managers of the company to make a beginning with the work before the 14th of March. Should this supposition be right, the company loses a municipal contribution from Amsterdam of 3,000,000 f. The appointment of Mr. J. H. Van der Linden, as Government Director, has not tended to propitiate public favour.

The report of the commission of the States-General on the Indian tariff was issued some days ago. Not less than forty-seven members were present at the discussions in the sections. Several Conservatives opposed the Free-trade principles that are embodied in this Bill by the Minister of the Colonies. On the other hand, the Radicals warmly protested against the export duty, and the high import duty, as well as the differential tariff maintained. The Liberals alone are entirely contented with the tenor of the Bill, which is sure to undergo a searching discussion.

The *Haagsche Courant* (which is in a dying state) asserts that the King is seriously ill. Nothing is known here as to the truth of that rumour.

On the 4th of September an international exposition of pictures will be opened at Amsterdam; and a monster flower-show will be held during the month of June in the Palace of Industry.

Captain Cool, of the *Vooruit*, has appealed against his conviction.

Our well-known poet, C. G. Withuys, died suddenly at the Hague, on the 14th inst.

His Majesty has conferred on Rear-Admiral J. May, late Commander of H. M.'s Marine in the East Indies, a commandership of the order of the Netherlands Lion; has promoted General Major J. H. Blanken, Minister of War, to be Lieutenant-General; and General-Major A. J. Andresen, Commander of the Second Military Division in Java, to be Lieutenant-General and Commander-in-Chief of the East India Army.

The chartered troop ship *Gerard Pieter Servatius*, which has been taken up by the War Department for the conveyance of reinforcements to Java, will embark 150 soldiers from the Colonial depot at Harderwyke.

His Majesty was pleased to present on his birthday a silk flag to the *Medusa*, and an ordinary flag to the *Metalen Kruis*, *Djambi*, and *Amsterdam*. "*Simonoseki*" and the date of the battle will be inscribed on these colours.

COMMERCIAL.

The Government trade returns over the year 1864 were issued some days ago; they show that our exports to the Far East consisted in :—

Earthenware, to Java, 36,000 f.; to Japan, 11,000 f.; do. fine, to Java, 382,000 f.; to Japan, 5,000 f. Vinegar, to Java, 158,000 f. Beer, to Java, 1,583,000 litres; to Brit. India, 43,000 litres. Butter, to Java, 711,000 lbs. Chemicals, to Java, 74,000 f.; to Japan, 26,000 f. Drugs, to Java, 33,000 f. Opium, to Java, 257,000 f. Steam Engines, to Java, 348,000 f. Yarns (cotton untwined), to Java, 27,000 f.; do. (twined), to Java, 437,000 f. Spirits, to Java, 2,915,000 litres; to Brit. India, 1,396,000 litres. Liquors, to Java, 29,900 litres. Perfumery, to Java, 85,000 litres. Window-glass, to Java, 47,000 f.; to Brit. India, 10,000 f.; to Japan, 56,000 f. Glass Bottles, to Java, 47,000 f. Glasswork, to Java, 213,000 f.; to Japan, 26,000 f. Gold and Silverwork, to Java, 87,000 f. Flour and Meal, to Java, 471,000 lbs. Leather, to Java, 55,000 f. Iron, to Java, 499,000 f. Railway Bars, to Java, 288,000 f. Gaspipes, to Java, 113,000 f. Iron (manufactured), to Java, 1,245,000 f. Iron Nails, to Java, 457,000 f.; to Brit. India, 139,000 f. Coals, to Java, 25,040 tons. Copper (manufactured), to Java, 304,000 lbs. Mercery, to Java, 545,000 f. Lead, to Java, 428,000 lbs.; to Brit. India, 79,000 lbs. White Lead, to Java, 190,000 lbs. Silk (manufactured), to Java, 426,000 f. Cotton (manufactured), to Java, 5,960,000 f.; to Brit. India, 261,000 f.; to Japan, 132,000 f. Cotton (manufactured), printed or coloured, to Java, 6,978,000; to Brit. India, 1,375,000 f.; to Japan, 1,444,000 f. Linen, to Java, 446,000 f. Wool (manufactured), to Java, 708,000 f.; to Japan, 152 000 f. Woollen Bed-clothes, to Java, 22,000 f.; to Japan, 10,000 f. Flannel, to Java, 46,000 f.; to Japan, 3,000 f. Lace, to Java, 85,000 f. Silk Ribbon, to Java, 30,000 f. Oil, to Java, 561,000 lbs. Petroleum, 166,000 lbs. Paper, 401,000 f. Spiauter, to Java, 247,000 lbs. Steel (in bars), to Java, 196,000 lbs. Sugar (refined), to Japan, 35,000 lbs.; do., (West India) to Java, 3,000 lbs. Cigars, to Java, 42,000 lbs. Carpets, to Java, 17,000 f. Tar, to Java, 1,612,000 lbs.; to China, 143,000 lbs.; to Brit. India, 215,000 lbs. Watches, to Java, 5,000 f. Stock-fish, to China, 1,000 f. Meat, (all sorts) to Java, 1,180,000 f. Wine, to Java, 93,273,000 litres; to Japan, 9,000 litres. Salt, refined, 613,000 lbs. During 1864 our principal imports from the Far East consisted of drugs, from Java, 239 000 f. Arak, from Java, 257,800 litres. Sapanwood, from Java, 43,000 lbs. Hides, from Java, 771,000 f. Indigo, from Java, 366,000 lbs. Coffee, 68,975,000 lbs. Pepper, from Java, 750,000 lbs. Rice, from Java, 14,259,000, Rattan from Java, 2,735,000 lbs. Spices, from Java: Cassia Lignea, 106,000 f.; Mace, 169,000 f.; Cinnamon 43,000 f.; Nutmegs, 642,000 f.; Cloves, 24,000 f. Sugar, from Java, 106,140,000 lbs. Tobacco, from Java, 5,859,000 lbs. Tea, from Java, 1,448,000 lbs. (From China there were no direct imports, nothwithstanding the imports in 1862 consisted of 949,000 lbs.; and in 1863 of 773,000 lbs). Tin, from Java, 5,746,000 lb.

COFFEE.—The auction of the Trading Company on the 15th inst. went off with spirit, the good qualities ½ to 1 c. above valuations, and ordinary, unclean kind at about valuation; good 45½ c. Since the public sale there was a good demand for all kinds; a good business was done, and prices were in favour of the seller. 1,500 bags Padang and 1,200 bags Java were sold at auction prices; 2,490 bags Padang, ex Affiance, at 45¼ c.; 6,300 bags Java, ex Kosmopolitt, at 45½; and 2,681 bags, ex ditto, at 43 to 48 c.

TEA.—In waiting for the public auction, there were no transactions. At the public sale, which was held yesterday, 1,294 ½-chests China Congou were offered, and partly sold at the following prices:—Mark "Emma" 65 ½-chests Superfine Congou 100c., 9½ extra fine, Kaisow Congou 138 to 140c.; BCL 63 ½-ch. fine Congou, 100c.; Margaretha, 10¾-ch. fine Congou 95c. RFA, 128 half-chests finest Pecco Souchow, 160 c.; TSJ 84 quarter-chests fine Kaisow Congou, 105 c.; GVY, 55 quarter-chests finest Kaisow Congou, 105 c.; GS, 99 half-chests Kaisow Congou, 98 to 100 c.; L and C, 136 quarter-chests finest flowery Pecco, 140 c.; Margaretha, 75 quarter-chests superfine Congou, 95 c.; AHS and C, 50 quarter-chests superfine Souchow, 95 c.; Margaretha, 98 quarter-chests finest Congou, 110 c.; J, 203 half-chests fine Congou, 144 c.; RSF, 101 quarter-chests Kaisow Congou, 100 c.; F and Co. F, 23 quarter-chests, finest Lapsang Souchow, 125 c.; H, 99 half-chests finest Souchow, 39 half-chests choicest do., 36 half-chests finest Souchow, all at 95 c.; 100 quarter-chests extra fine Oopack Congou, 140 c.; D and Co. H, 89 quarter-chests finest Moning Congou, 108 c.; DBT, 100 quarter-chests finest Lapsang Souchow, 180 c.; H Bros., 176 quarter-chests extra fine flowery Pecco, 112 c.; AC, 113 half-chests finest black-leaf Pecco, 110 c.; 12 quarter-chests Java Pecco, 280 c.

SUGAR.—(Raw): The market remains very dull. Some lots Java, about 1,800 kr., were sold at former rates. Prices unaltered: No. 17, 35½f., No. 14, 34f. Stock in entrepot, 35,065,213 lbs.

RICE.—A fair business was done, and the market is firm, because there are no arrivals to be waited for, and the prices on the markets abroad are too high for the importers. 2,209b. Necranzie sold at 7¼f., 1,300b., do., ex Mowe, at 6½f.

SPICES.—Nutmegs, No. 1, with some more demand. The other articles dull. Ginger; on the 1st March 525 chests and 40 chests Mandaryn, imported direct from China, per Cathaya, will be offered in public sale.

COTTON.—Offered at lower prices, but without transactions.

BANCA TIN.—The market is dull; the quotation is 57f. to 58f., but at Amsterdam some 1,000 bl. were sold at 56½f. to 57f.

INDIGO.—Notwithstanding the quarterly sales in London of East India have gone off with good competition at firm rates, our market remained inanimate. Only 30 ch. were sold, at firm prices; holders decline to sell without an advance.

COCHINEAL.—Firm, without transactions.

WOOL.—At the auction of the Trading Company, 1,241 b. Cape were sold at 78 to 262 c., and 919 b. Buenos Ayres at 62 to 110 c.

PETROLEUM.—Market quiet. Quotation, 32½f. to 33½f.

MONEY.—The Netherlands Bank reduced the rate of discount to 4 per cent., and for other securities to 4½ per cent. Open market, discount, 4 to 4½ per cent. The tendency on the stock markets on the whole was favourable in the last few days. The news from America indicated that the rupture of the peace negotiations is complete, but, notwithstanding, the confidence in the markets returned. N.W.S., 2½ per cent., 62 5-16th; 3 per cent., 73¼; 4 per cent., 96; Handelmaatschappy, 143¾; Expl. State Railways, 89 per cent.; Dutch Rhenish Railway, f.310; Central Railway, f.112½; Change on London, 3 mo., f.11.63½; 2 mo., f.11.68; short, f.11.78, on Paris, 3 mo., f.46.10; 2 mo., f.46.25; short, f.46.72; Hambro, 3 mo., f.34.87; 2 mo., f.35; short, f.35.20.

SHIPPING.

ARRIVALS.—Feb. 16, at Hellevoet, from Batavia, Mary Goddard; at Texel, from Batavia, Kinderdyk and Java; 18, at Brouwershaven, from Batavia, Zee Gezusters; at Zierikzee, from Batavia, Cornelis Anthonie; 19, at Texel, from Banjoewangie, Zephir; 23, at Texel, from Java, Ocean.

DEPARTURES.—None. Shipping will be re-opened within a few days. Temperature 39 deg. Fahrenheit.

In 1864 our mercantile E.I. fleet numbered 448 vessels, measuring 141,834 lasts, against 609 vessels in 1857, measuring 185,100 lasts. The Trading Company chartered in 1864, 147 vessels to convey 51,341 lasts produce from Java and Sumatra to Holland.

FREIGHTS.—Quotations of Messrs. Fauchey and de Vletter, shipbrokers, Rotterdam: For Batavia, Prinses Amalia, 842 tons, Kortenaer, 973 tons, Copernicus, 742 tons, Grootmeester Nationaal, 755 tons, Maria and Elisabeth, 313 tons, 18f. to 20f.; for Batavia and Samarang, Maria Adriana, 718 tons, Marie, 746 tons, Catharina Wilhelmina, 1,083 tons, Minister Fransen van de Putten, 1,500 tons, 18f. to 20f. for B., 25f. to 30f. for S.; for Batavia and Surabaya, Delft, 735 tons, 18f. to 20f. for B., 25f. for S.; for Sourabaya, Salatiga, 448 tons, 25f. to 30f.; for Samarang, Vyfvrienden, 337 tons, Hendrika, 667 tons, 25f. to 30f.; for Padang, Frederik Hendrik, 611 tons, 40f.; all per last of 2,000 ks., or 120 cubic feet Amsterdam, and 15 per cent.; for Melbourne, Nereus, 655 tons, Hendrik Ido Ambacht, 756 tons, 40f. to 45f., and 5 per cent. per 1,000 ks. of 40 cubic feet English; for Singapore and Hong Kong, Gouverneur van Swieten, 352 tons, 30f. to 35f. for S., 40f. to 45f. for H., both per ton of 1,000 ks., or 40 cubic feet English, and 15 per cent.

LOADING AT AMSTERDAM.—For Kanagawa and Decima; D. T. Visser, Jacqueline and Elize, Julie. For Padang: Pauline. For Batavia: Almelo, India Packet, Staatsraad van Ewyk, Krimpenerward, Kandanghauer, Gerard Pieter Servatius. For Batavia and Samarang: Galilei, Madura, Vertrouwen. For Batavia and Sourabaya: Anna and Sophie, Maria Regina, Willem II. For Samarang: Stad Leyden, Estafette, Sliedrecht. For Sourabaya: Baltimore, Petronella, Quintet.

The Netherlands Trading Company chartered the following 17 ships to convey produce from Java: To Amsterdam, IJmuiden, Capt. G. J. Melenberg; Constance, J. S. Mulder; Capella, A. R. de Lang; Wilhelmina and Elise, A. K. Wiersma; Maria Catharina, H. C. de Bos; Anna Maria Wilhelmina, F. Turenout; Ferdinand and Louis, D. E. Nolting: Sophia Koningin der Nederlanden, L. Klein; Maria Adriana, C. J. Itz; Hendrika, A. J. Bus: To Rotterdam, Nieuwe Waterweg, Capt. E. Von Lindern; Dorothea Henriette, D. Smit; Maria Louisa Antoinetta, A. Muysson: To Dordrecht, J. C. Schotel, Capt. J. de Groot; Jacobe, M. F. Schaap: To Middleburg, Haamstede, Capt. J. Ter Marsch: To Schiedam, Whilhelmina, Capt. M. C. Von de Kerkhoff.

PASSENGERS INWARD.

From JAVA: Per Zephir, Captain Wemmerus: Mr. J. B. Van Overvest, Captain of the E. I. Army: per Cornelus Anthonie, Capt. Bouten, Mr. P. A. Van Goor, 1st Lieut.

The Cesar, Capt. A. D. de Jong, sailed from Sourabaya on the 31st July, for Amsterdam, and has not since been heard of.

HAMBURG.

(FROM OUR OWN CORRESPONDENT.)

FEB. 24.

Colonel von Siebold, who has spent many years in Japan, and is considered an authority on the affairs of that country, lately addressed a letter to the editor of the *Augsburg Allgemeine Zeitung*, published in that journal, asserting that all the treaties with European Governments are *de jure* invalid because they were concluded with the Tycoon, who is nothing more than military commander-in-chief; whereas they ought to have been negociated with the Mikado as the real Sovereign. He therefore proposes a general revision of those treaties on general principles, for which purpose he has drawn up a draft of his proposals, which, however, are too voluminous to give them in your columns—at all events at the present moment, when the late outrageous murder of two British officers requires summary satisfaction and a guarantee for the future before any fresh arrangement can be thought of. This ignorance of the relative positions of the Mikado and the Tycoon, says Colonel von Siebold, is one of the many difficulties that were thrown in the way of foreign Powers when negotiating with the Japanese. The Tycoon has never laid claim to the title of "Majesty," which has been so generally conceded to him in the translations of treaties into foreign languages, and which he has tacitly accepted through his own personal ignorance of those languages. In the Japanese text of the treaties of 1858, the sovereign title of "Majesty" is nowhere to be found, but on the contrary the subordinate position of the Tycoon to the Mikado is plainly expressed, for he is called *Tei kok' Tai-Nippon Taikun*, which means literally "the Great Lord of the *Tei*, or Mikado of the Empire of Great Nippon." This was translated in the treaty with the United States, "His Majesty the Tycoon of Japan," and the same expression is used in the other treaties subsequently concluded with European Powers. The Prussian Ambassador and Plenipotentiary entertained considerable doubts as to the sovereign power attributed to the Tycoon, but he was led to waive the point on its being represented to him that all the other States—England, Russia, France, America, and Holland—had concluded their treaties with the Tycoon, and that a revolution would infallibly ensue if all these treaties with foreign countries were suddenly declared invalid by the phantom of the Mikado.

From St. Petersburg we learn that on the 27th ult. the annual general meeting of the Imperial Geographical Society was held there, H. I. H. the Grand Duke Constantine Nicolayovitch (brother of the Emperor), President of the Society, in the chair. Among the numerously-attended meeting were the Governors-General of East Siberia and of West Siberia, 114 Ordinary Fellows, and a large number of Corresponding and Honorary Members and their friends, with a fair sprinkling of ladies. After the usual report of the financial state of the society had been read—from which it appears the receipts of the year amounted to 19,000 silver roubles—the distribution of the Society's gold and silver medals took place. Among the recipients were Mr. F. B. Schmidt in recognition of his laborious services for four years as the head of the physical department of the Siberian expedition; Lieutenant Schabounine, for his discoveries and maps of Siberia; Captain Printz, of the staff, for his valuable *memoire* of his visit to Kho'bdo, in China (of which I sent you some account in a recent letter); Count Steenbock, for his discoveries in the Ussuri district; and Mr. Lopatin, for his surveys of the Southern part of the East coast of Siberia. Admiral von Lutke was re-elected Vice-President, and then the meeting broke up.

The Prussian corvette *Gazelle*, after having undergone thorough repairs in one of the Imperial docks at Cherbourg, is ordered to remain at that port for the present, it being considered advisable not to remove the crew, after having been so long accustomed to the warmer climate of the Eastern Seas, to the cold atmosphere of the Baltic till the spring, as the sudden change might be injurious to their health. On the return of the *Gazelle* to Kiel the Prussian steam corvette *Vineta*—a sister ship of the *Gazelle*—under the command, probably, of Captain Kuhn, will sail for the Far East, to remain for some years on that station for the protection of Prussian interests in China and Japan.

Negotiations have been opened between the Governments of Prussia and Japan for an alteration of Paragraph 15 of the Commercial Treaty between the two countries, which stipulates that Prussian money shall be taken in payment everywhere in Japan, the value of the money to be based on its weight and computed at the same rate as Japanese coins of similar intrinsic or metallic value. The Japanese Government having created a course of Exchange for their own coinage founded on the value of American dollars, it has been found desirable to alter the above stipulation and introduce a separate tariff price in Japan for Prussian coinage circulating in that country.

The *Irkutzk Gazette* reports that several severe shocks of earthquake were felt at the end of the year in the neighbourhood of Lake Baikal, but without doing much damage except at Nishni-Ilunsk, which appears to have been the centre point of the subterranean movement. The winter has been very severe everywhere in Siberia. At Jakutzk the thermometer ranged between 45 and 50 degrees of Reaumur, equal to from 69 to 80 degrees below zero of the Fahrenheit scale, whilst ever since the beginning of November it had never been higher than 40 deg. R. (58 deg. under O of F). The above-mentioned 50 deg. of Reaumur is probably the greatest maximum of cold possible on the face of our globe, as that is the estimated temperature of the unlimited space through which we career in our orbit round the sun.

COMMERCIAL.

COFFEE.—The frost has set in again with such severity as to put an end to all navigation for the present, the ice in the Elbe being more than two feet thick. It is curious to see the outward bound shipping in the harbour taking in their cargoes, not from barges alongside as usual, but from loaded sledges and four-horsed waggons on the ice. This stoppage of supplies from oversea countries has had a favourable effect on the coffee market, and in conjunction with the high prices obtained at the late sales in Holland, produced a trifling rise for most sorts, whilst all descriptions were firm and looking up. Sales since last English mail 35,000 bags.

SUGAR.—Raw in a very depressed condition, and fully one mark banco lower than a fortnight ago, whilst there is no desire to buy, even at the present low rates. On the other hand, Refined sells readily at previous values, and 25,000 loaves have been taken for consumption.

RICE.—The dealings in cleaned grain continue with great activity every day at full prices, with a tendency to further improvement, though the only description in which there is an actual rise is Patna, which is 8 Sch Bco higher; Rough in the husk neglected, and might be bought a shade easier.

SPICES.—Cassia Lignea is rather lower, 1,800 chests having changed hands at 9 Sch Bco. Cloves command an easy sale, and prices rule firm. Mace and Nutmegs calm. Pepper has a moderate sale, but without any fluctuations in the value. Singapore, 3⅝ to 3⅞ Sch Bco; Sumatra, 3½ to 3⅝; do. cleaned, 3¾ to 3⅞.

SPELTER.—After the departure of the last English mail a few thousand centners were sold for Spring delivery at 13 marks bco and even a trifle higher; but since then a reaction took place, and purchases might have been made at 12¼, though buyers were shy, and would not come forward. During the last few days, however, there is an evident improvement in the tone of the market, and 2,000 centners have changed hands at 12¾, which has inspired both buyers and sellers with more confidence, and as the spring advances better prices will most likely be obtained. The present stock is 50,000 centners, against 34,000 at the corresponding period of last year, and 112,000 in 1863.

Discount 3¼ to 3¾ per cent.

SHIPPING.

ARRIVALS AT CUXHAVEN:—Voladora, from Manila; Gustav and Ernst and Minerva, from Macao; Madagascar and Marie Heydorn, from Zanzibar.

FRANCE.

An Imperial Factory is about to be created in China, where the principal seats will be at Shanghai and Nanking. Great expectations are entertained from this measure, and it is hoped that French commerce in the Far East will gain a more rapid development from it.

Five young Anamites have just arrived at Paris, where they are to receive a religious education and be prepared for Holy Orders at the Catholic Seminary of St. Sulpice. As soon as they are ordained, they will return to Saigon, in order to act as missionaries among their fellow-countrymen in Cochin China. In addition to the above-mentioned Anamites there are at Paris two inhabitants of Cambogia, who are also preparing for the Church, with a view to become missionaries in their own country.

A plan is being concocted at Paris for transferring the rights of sovereignty over Cochin China to an industrial and trading company, on condition of their paying all the expenses of the Civil and Military Government. This would be something like the revival of our own former East India Company, and place the relations of France towards Cochin China on the same footing as were once those of the mother country and the French East India Colonies under Dupleix, in the time of Louis Quatorze.

LONDON, TUESDAY, FEB. 28, 1865.

THE NEW COURT FOR CHINA.

WE learn that Sir EDMUND HORNBY, Kt., is the functionary appointed by H.M.'s Government to the post of Supreme Judge of the Court to be established at Shanghai, and that he is to proceed to China some time in April, accompanied by an assistant-judge and other officials, so that by the beginning of the hot weather our litigious friends at the mouth of the Yang-tze will be able to show themselves in the precincts of a law court before a real judge. Sir E. HORNBY has occupied, for a length of time, a similar post at Constantinople to that which he is now to occupy at Shanghai, and has, no doubt, been selected with reference to his familiarity with Oriental affairs. We understand that the Court over which he is to preside will relieve H.M.'s Minister of his appellate jurisdiction, thus obviating those protracted delays in important cases which have been a frequent source of complaint. We think it probable also that the Court will be intended to make the Circuit of the ports, though we should imagine that, in practice, there will be considerable difficulties in the way of such an undertaking. The public may expect to be shortly in possession of H.M.'s Order in Council, establishing the new Court, and it will doubtless then be found that measures have been taken to amend that state of affairs through which criminals within Consular districts in China have been so frequently enabled to get off with insufficient penalties. The main business of Sir E. HORNBY and his assistants will, however, consist in the trial of those numerous civil suits which now engross the time of H.M.'s Consul at Shanghai, and we shall be greatly mistaken if the importation of so much legal talent does not give a strong impetus to litigation, much of which the present system of Consular law tends strongly to keep down. We have long consistently urged an amendment in the existing provisions for the despatch of legal business in the Consular Courts in China, but we confess to a suspicion that the highly organised system denoted by the appointment of a man of such standing as Sir EDMUND HORNBY may not be quite an unmitigated benefit to the mercantile community. The rough-and-ready administration of justice by H.M.'s Consuls had doubtless its imperfections, but these arose rather from the restricted nature of their powers than from a defect in the system itself. A Consul sitting with mercantile assessors, to administer (as the Consular instructions have it) the law of England with respect to its *spirit* rather than its *letter*, formed a Court of Equity in which substantial justice was usually to be obtained, without inordinate expense, and without those quibbling discussions and interminable references to precedent which seem inseparable from the thorough-bred lawyer. It was in fact a Court of Common Sense, rather than of mere Common Law; and if certain sharp attorneys complained now and then of its disregard of forms and ignorance of the statutes of EDWARD II. or HENRY VIII., we think the public at large was probably no loser.

We shall be mistaken now, however, if a reign of Coke upon Lyttelton and the statutes at large is not imported into the decision of mercantile plaints in China, and a lively flight of legal practitioners from the Australian Colonies to Shanghai may be expected to take place before many months are over. If, however, the business of Sir E. HORNBY'S Court is to be confined by the Order in Council to litigation between Europeans, the litigants will at least be no worse off than they would be at home; but we should be strongly inclined to deprecate the exercise of jurisdiction in those "mixed cases"—*i.e.*, between Chinese and British subjects, which necessarily form a large portion of the legal business in China. As we understand the system at present pursued, these mixed cases are tried by the Consul rather as Arbitrator than as Judge, a bond being entered into by the alien litigant, who binds himself to abide by the decision of the Court; and, in practice, we believe, a large proportion of the cases in which Chinese merchants are the defendants are arranged amicably with the advice and assistance of the Consul without ever entering Court at all. It is plain, however, that to render such a course possible the adjudicating functionary must be a person intimately acquainted with the Chinese language and modes of business, and must futhermore be free from all technical prejudice—in fact, such an official as Sir HARRY PARKES, at Shanghai, or Mr. D. B. ROBERTSON, at Canton. It is only natural, on the contrary, that lawyers should see no salvation out of the pale of the law, and that of the most rigid description; and it is not by any means likely that a "Supreme Judge" like Sir E. HORNBY will interest himself in promoting arrangements *a l' aimable*, or "out of Court." We may therefore look for difficulties in the matter of mixed litigation; for if the horror with which Chinese defendants regard the Supreme Court of Hong Kong is likely to become felt with respect to its new rival at Shanghai, they will naturally fall back upon the right they will enjoy at the latter place, as Chinese subjects, of declining to submit to a foreign tribunal; and British suitors will have the pleasure of seeing their cases against native defendants conducted in the "Taou-tae's Court," whatever that mythical tribunal may be. Many other considerations suggest themselves to us in this connection, but we shall reserve them for discussion in a future article.

OPENING OF NANKING.

IF our information be correct, mercantile enterprise has again outstripped in China official routine. Agents of leading English houses have visited Nanking to secure building sites in advance of the establishment of a foreign settlement, the "most favoured nation clause" giving us the full advantage of the 6th article of the French treaty. The success of these speculations will of course depend greatly on the amount of judgment and foresight that may have been exercised; but it is understood that there was a very general agreement as to the most desirable site for foreign residents among those concerned in the purchase. It is to be hoped that no further time will be lost by the Foreign-office in setting up in this provincial capital a Consular establishment, although it is far from likely that Nanking will be repeopled and rebuilt with any of that magical rapidity which has marked the recovery of several other destroyed Chinese cities, seeing that the whole surrounding district has been completely devastated. Many connected with the China trade will incline to regard the port of Chinkeang as more advantageous for conducting their dealings, as the natural converging point of the produce brought down the Grand Canal from the neighbouring districts; but the concession of the grant of a foreign settlement at Nanking is, in a political view, of great importance, whilst its commercial value must increase with time. Here at least is a basis from which British trading posts may ultimately be extended into the interior,—a cherished scheme with the more enterprising of foreign residents, and which could hardly fail to result in an increased consumption of our manufactures. This is, or ought to be, the great desideratum with us. The produce of China is sure to be brought to the places in which we are located, but the pushing of our own goods requires the personal attention and vigour of our countrymen. The balance of trade against us, amounting to so many millions, should be reduced, or our late treaty is not worth the value we put upon it, and we might as well be confined to Canton, Foochow, and Shanghai. Our merchants lead up to sellers instead of to buyers, which is not playing our own game nor the secret of success.

OPENING UP OF BRITISH TRADE WITH THE KOREA.

IT is time that the attention of merchants trading with the Far East should be directed to the peninsula of the Korea. The inquiries that have recently sprung up as to the possibility of our establishing commercial intercourse with the Korea will

Digitized by Google

prove, we may hope, forerunners of an active foreign trade with that peninsula. Reduction of profits by competition, or the hope of higher gains, perpetually impels commerce to seek out new channels. Here then, to the north-west of Japan, to which the Korean islands serve as so many stepping-stones, a country larger than Great Britain, and peopled by an industrious agricultural population, offers itself to our enterprise, a country having mines of iron, lead, coal, and sulphur, sedulously worked, and with manufactures in metals, silk, cotton, and paper. Yet with all the materials of a productive commerce, the Korean trade with Japan has never risen above barter, the Japanese being subjected in this peninsula to much the same restrictions as those they placed on the Dutch at Decima, whilst it is only within a comparatively few years that Korea has been visited by Chinese junks, trade with China having been confined to a fair held on the borders of Mantchuria, and a table of wares set out in a Peking bazaar by the Korean bearer of the annual tribute. All European connection with Korea has been confined to the wreck of a Dutch vessel on the coast, and the occasional stoppage of vessels on their way to the Sea of Tartary, at the most southern of the Korean islands. The mines and manufactures of Korea manifestly provide the elements of a lucrative business in exchange; and should that country possess, as appears probable, copper in abundance, we have, to begin with, a valuable article on which to base the export trade. The manufactures that would suit the Koreans are thick and heavy woollens, similar to those produced in Russia and Poland, invaluable in northern Asiatic trade, but which our manufacturers refuse to imitate, stout white cotton goods, and, generally, the articles exported to Japan. The Koreans barter with the latter country, sword-blades, javelins, harpoons, bar-iron, lead, ginseng root, canvas, and a peculiar kind of paper, for copper, silk, and cotton twist, foreign piece goods, sugar, timber, various condiments and lacquered ware. To China, Korea sends ginseng root and most of her manufactures, receiving in return, tea, silk, foreign goods, porcelain, and various other articles. The late stimulus to the trade of the Korea with her two rich neighbours may be traced to the Korean demand for foreign goods which English and Russian importations have excited. The China trade has even allowed of Europeans making ventures on their own account. The Koreans have plainly enough refinement to experience keenly all the wants common to civilisation, after having had a foretaste of the mode in which luxuries and necessities may be supplied, and have already ceased to act the part of a recluse. The Japanese, who have had a factory in the Korea for 250 years, are not the people to push trade with it; Korean traditions go against them, and they have never surrendered their claims to the ownership of a peninsular they have twice conquered.

The question as to how our commercial relations may best be opened with the Korea, involves slightly the question of sovereignty. As between the claims of China and Japan to the fealty of the Korean Sovereign, those of China clearly predominate, for whilst the Emperor of CHINA exacts a yearly tribute and sends envoys to crown each new Sovereign, all that the TYCOON has to show is a present on these rare occasions—a token falling short of the accustomed Asiatic symbols of submission. Besides having been the field where China and Japan have fought out their quarrels, the Korea has afforded fine scope for Chinese and Japanese diplomacy, Japan especially having constantly interfered in the affairs of the several States. China has merged the claims of conquest in those of adoption, leaving the Korean Sovereign practically independent, the functions of this monarch for all purposes of foreign negotiation are intact. The Japanese, indeed, renewed their own trading relations with the Korea through the mediation of a Chinese Emperor, but it will be time for us to go to Peking for commercial privileges when we have failed in a direct embassy to Kinkiato. In any event, the Chinese EMPEROR, already disposed to grant us inland trading posts in China, could not fail to regard a foreign settlement on the Korean coast as an additional bulwark against the aggressions of Russia.

A favourable position for a foreign settlement might be found in "Deer Island," commanding one of the two entrances to a noble harbour at the southern extremity of the peninsula, known as Tsau-liang-hai, and backed by a thickly-peopled district. The island is from five to six miles in circumference, with good building ground, a plentiful supply of water, and a healthy climate, and but twenty miles distant from Tsusima. A thorough exploration of channels would render the navigation less intricate. In addition to securing "Deer Island" for a settlement, negotiations should be directed to the establishment of trading stations and the opening of ports on the western coast, where a good harbour may be found within easy distance of the capital, and above all to the cession of the magnificent group of islands discovered by Her MAJESTY'S steamer *Actæon* in 1859, commanding the entrance to the sea of Tartary and Japan. Their magnificent sound, in which the navies of the world might ride, and their almost equal distance from the Gulf of Pecheli, Yedo, and Russian Mantchuria, invite to the creation at this point of a British naval station. So highly did Russia appreciate their position, that two years from the discovery the Russians were found erecting a block-house, and would have succeeded in effecting a lodgment but for the protests of the European representatives in Japan. Let us delay the acquisition, and Russia will certainly renew the attempt, and next time more successfully. A British settlement on the south of the peninsula and our occupation of these islands would check, more than anything else, Russian encroachments in the Eastern Seas. Russian designs on the Korea are no secret. A power that has acquired an outlying province of China without war, has the means of becoming mistress of the Korea. For fifteen years she has held the southern portion of the island of Saghalien, with its rich coal-fields; why not the anthracite deposits of the Korea? Only a narrow strait separates Saghalien from Yesso, and at Broughton Bay, on the Mantchurean coast, Russia reaches the northern limits of the Korean peninsular. Japan lies between this as in a vice. It is a necessity of her position, too, to advance quickly, for to delay is to see new barriers raised up against her. It is not the counter trade of Russia we have to fear, but her sterile Asiatic polity, which aims to circumvent our commercial supremacy. In addition to mines, which have their special attractions in Muscovite eyes, Russia would obtain in Korea what she obtained from Finland, hardy seamen to man the Imperial fleet.

There are, then, political as well as commercial reasons for prompt action on the part of our Government to open relations with this extremity of the Asiatic continent. Our diplomacy to this end must not be of too refined an order. We shall gain nothing by such homage as that which marked our earlier approaches to the Chinese and Japanese Courts. We must dictate our terms rather than receive them, after the manner in which Lord ELGIN finally concluded our Treaty with Japan. The Koreans, with all their imperturbability of countenance and air of independence, exhibit more real barbarism under the show of refinement than any other Asiatics—in fact, show all the signs of a people fitted to wear the badges of despotism, exhibiting before superior power cringing fear and servile submission. The arts and sciences they possess result from the transmission of their from China to Japan, represented in allegory by the departure of the three thousand from "the land of the rising sun"* to seek for a Mongol Emperor in the Japanese isles, the plant of immortality.

Sir JOHN BOWRING, the British Plenipotentiary in China ten years ago, was actually accredited to the Korea, and with a view to ascertaining the desirableness of visiting the country and of endeavouring to open the trade, entered into correspondence with some Catholic missionaries and a Korean convert. When the Koreans treat Chinese Ambassadors more like prisoners than guests, it is improbable that they would give to utter strangers opportunities for learning the extent of their resources. The prospect was not judged by his Excellency, at the time, as sufficiently encouraging; the changed position, however, of matters in Japan now fully justifies some action to this end on the part of Her MAJESTY'S Government.

CAPTAIN SHERARD OSBORN.

We regret that Captain Sherard Osborn is permanently removed from the China field in which he shone so eminently, as we find he has been appointed Manager-in-Chief at Bombay of the Great Indian Railway.

THE STRAITS TRANSFER.

In our last notice of this subject it was stated that a difficulty existed in regard to the revenue, and a reply was expected from Singapore and from Sir Hercules Robinson on the subject. These obstacles have now been satisfactorily cleared up, and a

* The Korea.

Digitized by Google

Bill will be introduced in the present Session of Parliament to effect the transfer from the Indian Government to the Colonial Office. The revenue of Singapore is found sufficient not only to cover every reasonable civil and military charge, but even to leave a considerable surplus. Such being the case, the Straits Colony will be the only one out of six-and-forty colonies which, while it adds fifteen millions sterling a year to the trade of the nation, will cost it absolutely nothing.

THE HON. SIR FREDERICK BRUCE, K.C.B.

As we intimated in January, Sir Frederick Bruce will not return to Peking, and the post now held by Mr. T. F. Wade remains to be filled. We believe that no settlement will be made until Sir Rutherford Alcock, who has arrived by the present mail, has been consulted. Sir Frederick has been appointed to succeed Lord Lyons, who resigns on account of ill-health, as Minister at Washington.

THE STEAM SERVICE FOR JAVA.

In our issue of the 10th November last we noticed the progress of the Netherlands India Steam Navigation Company (Limited). We have now to announce the launch of the first steamer built for their service from the yard of Messrs. Randolph, Elder, and Co., on Clyde. The name of this vessel is the *Kæning William III.*, after the King of Holland; she is 225 feet long, 51 feet beam, and 22 feet depth, and her draught of water when loaded will be 12 feet. She is built, as we before intimated, on the "composite" principle. We understand that the number of vessels required to start with is nine, varying from 1,000 tons and 200-horse power to 500 tons and 100-horse power, with large proportionate freight and passenger-carrying capabilities, and embracing every adaptation to the traffic in a tropical climate that experience could suggest, including a spar or upper deck, with open top sides, and extra arrangements for shade and ventilation. The construction of the four largest of these steam ships has been entrusted to the above-named firm, who are fitting them with horizontal geared engines, combining their peculiar arrangements for the economy of fuel—a desideratum obviously of the greatest importance in a part of the world where coals are very costly.

CHINESE PAPER CURRENCY.

(To the EDITOR.)

DEAR SIR,—I have just come across the enclosed writing from an old work which you may think interesting.—Your obedient servant,

ANTIQUARIAN.

"Schlötzer, of Gottingen, in his 'Kritisch-historische Nebenstunden,' has published a dissertation to show that the invention of paper money was anterior to the establishment of the earliest bank of circulation in Europe, that of St. George at Genoa, founded in 1407, and was to be attributed to the Mongol conquerors of China in the thirteenth century. Klaproth, however, having entered somewhat more deeply into the inquiry, has shown that as early as B.C. 119 the Chinese Government, in the reign of the Emperor Ou-ti, of the great dynasty of Han, had adopted the experiment of forcing the circulation of an artificial money termed phi pi, or values in hide, made from the skins of white deer, bred exclusively in the park of the emperor. The method of forcing them into circulation was very simple: they were made indispensable as passports into the presence of 'the son of heaven,' for so the emperor was termed, and the great nobles and even the members of the imperial family were obliged to purchase these 'cards of admission' from the master of the imperial household for a sum amounting to about 300 francs, or 12 pounds sterling apiece. These tickets appear to have passed current at this value amongst the chief nobility, but do not seem to have ever come into general circulation. But from the commencement of the seventh century down to the termination of the dynasty of Soui, the Chinese finances were so disordered that, as the historian writes, all kinds of substances, even bits of cloth and of cardboard, were circulated as money. At the commencement of the ninth century, in the reign of the Emperor Hian-tsoung, of the dynasty of Thang, metal money had become so scarce, that copper was forbidden to be employed for domestic utensils, and the Government issued an edict that all metal should be brought in to the imperial treasury, whilst it issued in exchange an artificial money termed fey-thsian, or flying-money. Thai-tsu, the founder of the dynasty of Sung, about 960 B.C. issued a similar money termed pian-tsian, or convenient-money. We have five subsequent issues of variously modified fictitious money circulated by state authority between this period and the establishment of the earliest Mongol dynasty consequent on the invasion of Jengiz Khan, that of Youan, in 1279, and there can be no doubt that at the end of the tenth century or the begining of the eleventh, paper money in the strict sense of the word, made from the bark of trees, was current in China in lieu of the ancient metal money, which had been found to be inconvenient. There is a curious fact connected with the history of these issues of spurious money. Copper or bronze constitutes in the present day the money of the Chinese; in fact, the word cash, which seems to have been borrowed from this quarter of the globe, signifies the small brass currency which alone passes by tale counting, for silver when used as an article of exchange amongst the Chinese is always tested by the scales and the touch-stone: but the plenty or scarcity of the copper coinage has been affected in China at different intervals by a cause which is perhaps as singular in producing this effect, as any of the peculiarities of this eccentric people, viz., religious toleration or persecution. Thus, according as the religion of Fo, that is, Buddhism, has been favoured or persecuted, a paper currency has superseded a metallic one, or the reverse. The occasional exhibition of state favour to Buddhism entailed, as an indirect consequence, the fabrication of a great number of little images in bronze of Fo and other objects of worship, for which purpose the coin was melted down; the persecution of his votaries, on the other hand, caused the images to disappear and the metal to be restored to the purposes of circulation; and it seems not improbable that some of the occasions when a large issue of paper money took place, coincide with the ascendancy of princes favourable to the Buddhist innovations on the older and established system of Confucius. The Emperors of the native dynasty of Ming, who succeeded to the throne on the expulsion of the Mongols in 1368, did not fail to avail themselves of precedents which naturally recommended themselves to an embarrassed government. They consequently issued in 1375 notes (assignats) of six different denominations, varying from 1,000 to 100 pence in value. Those of a thousand pence were declared worth on ounce of silver, and a government prohibition was put forth at the same time against the use of gold or silver for purposes of traffic. These notes however suffered an immediate depreciation in the ratio of thirteen to twenty-seven when compared with copper, and they continued to fall in current value most probably in consequence of an immoderate issue, since in 1448 a note of the nominal value of 1,000 pence would exchange for not more than threepence in specie. The government now attempted to restore the credit of heir paper by prohibiting the use of copper or any other circulating medium but the government notes, and ultimately issued an ordinance that the dues at the markets of the two great capitals of the empire should be paid in government paper. But these measures appear to have been unsuc essful, as may be readily imagined, and this last species of artificial money seems to have at last disappeared from circulation, as history makes no further mention of it after the year 1455 of our era. It was termed *tchhao* or *want of metal;* the same Chinese character when pronounced with a slight variation as tchhaó, signifies to take by force, or to rob another of his goods. The present masters of China, the Manchu Tartars, who subdued the Ming in 1652, are represented by Klaproth to have been too barbarous to understand the financial system of their predecessors, at least they have never attempted to issue any description of paper money.

FRENCH VIEWS RESPECTING JAPAN.

(FROM OUR PARIS CORRESPONDENT.)

The publication of the *Livre Jaune*, or collection of State papers relative to Foreign Affairs, by the French Government, has naturally called forth some discussion on the position of the Western Powers with respect to Japan. Of course, people are not unanimous on this, any more than upon any other subject, but the following will give a fair idea of the view taken by the Imperial party in France. The conduct of the Japanese authorities in executing the two *Samourai*, who were believed to have had a hand in the assassination of the two English officers, is accepted as a proof of the good intentions of the Tycoon, and private letters are said to prove the energetic loyalty exhibited by the Japanese Government in the measures taken to discover and punish the assassins and as evidence of the good will which the vigorous measures taken by the Western Powers have inspired in the mind of the temporal sovereign of Japan. It is remarked that although during the last ten years, although eleven Europeans have been assassinated, this is the first time that the head of a *Samourai*, the class to which most of these brigands are believed to belong, has fallen by public execution before the eyes of the people, who might have been deceived heretofore as to the disposition of the Government by the impunity which seemed to surround the assassins of Europeans. The impression of this rigorous measure upon the Japanese, we are assured, has been most salutary, and cannot fail to have the best results as regards the Europeans; nor will the Tycoon relax his endeavours to have the principal culprits brought to justice for the confession of the two *Samourai* is said to have revealed the existence of a kind of secret political association, which would not have stopped short of any crime to carry its ends. Another inference drawn from the avowals of the two men who were executed, is said to be that they were accomplices in, if not the actual perpetrators of, the murder of Lieutenant Camus. Other letters speak of an edict expected to be published shortly, by which the local authorities and even the people themselves will be held responsible for the presence of suspected individuals within the limits of the territory accorded to Europeans around Yokohama; and in other places where they are established. Mention is also made of the formation of new roads, of the creation of a race-course, which will also serve for military exercise and manœuvres, of the draining of a marsh in the rear of Yokohama, and the concession of sites for the erection of a small-pox hospital and consular buildings. The Japanese authorities are said to have exhibited much promptitude and good will in the granting and carrying out of these concessions; and, it is added, the happy unity of idea and efforts which has never ceased to exist between the representatives of France and England has contributed in no small degree to this satisfactory result. The community of interests which unites the two nations in the extreme East is declared to be most happily represented by the cordiality and personal intercourse established between M. Léon Roches amd Sir Rutherford Alcock, and the moral and material support which the agents of the two Powers supply reciprocally are considered to have greatly aided in improving their common situation with respect to the Japanese Government. Special reference is made to the murder of a French sailor in the worst quarter of Yokohama. It seems that some men belonging to the French ships being drunk got into a quarrel with some of the lowest of the Japanese, and that one of the former was killed; the Gorodjo immediately acceded to the demands for satisfaction made by the French minister, the chief of the police was discharged from his post for not having interfered in time to prevent the unfortunate result of the melee, and fifty of his subordinates were arrested and afterwards suspended from employment; and lastly, two Japanese who were armed with boat-hooks during the row were tried and condemned to the galleys for life. From these various circumstances it is inferred that the rapidity and vigour with which the Japanese authorities have acted have inspired the population with respect for the life of Europeans, and that our intercourse will in future be far more easy and agreeable—to which we have only to say, in the words of the Queen of England when she gives her royal consent to an Act of Parliament—*Ainsi soit il!*

Digitized by Google

THE FRENCH IN COCHIN CHINA.

(FROM OUR PARIS CORRESPONDENT.)

It is announced that the *Messageries Imperiales* is engaged in the formation of a great maritime establishment on the left bank of the Donai. M. Domerque, a retired Lieutenant-Colonel of Engineers, and principal agent of the company, is entrusted with the direction of the work. Buildings have already been raised to the extent of more than three hundred yards; these include a house for the principal agent, warehouses and offices, forges, machine shops, and coal and wood stores. The directors of the works are European, the artizans Chinese, and the labourers Annamites. Some of the ornamental work in carving and painting has been confided to the Chinese entirely, and the French admit that the former exhibit not only great aptitude but excellent taste in such matters. The whole undertaking will be completed in a few months, and, in the words of a French journalist:—"The establishment will be one of the finest, the most complete, and the most advantageously situated that could by any possibility be imagined."

The *Constitutionel* has just commenced a series of articles on Cochin-China, in which the history of that country, or rather of the lower provinces, is traced from the year 1663, through the negotiations which took place with France during the reign of Louis XVI., and which were broken off by the revolution to the present time. The writer concludes with a reference to the sufferings of the Romish missionaries, recounts the origin of the expedition of 1859, and arrives at the conclusion that the formation of a colony there was not in any way a voluntary act of the French Government, but arose simply out of the force of circumstances—just as the confiscation of the three provinces did not take place because France willed it, but was simply forced upon her by the bad faith and insulting conduct of the Annamite Government. If there be any force in the well-known French adage, "*Qui s'excuse s'accuse*," the account of the origin of the colony in question would have far better been left untold. The matter is too recent for history, and too stale for news; yet nearly one quarter of the paper in question is devoted to the narrative, and the subject is to be continued.

Correspondence.

THE PORT OF SHANGHAI.

(To the Editor of the *London and China Telegraph*.)

SIR,—Your remarks in the *Telegraph* of the 20th inst. having reference to the above great emporium of trade, are most just and wise. The port of Shanghai has so enormously increased of late years that it has now become positively imperative to devise some scheme by which the shipping interests may have better facilities for the discharging and loading of cargo, together with more security at their anchorage. Shipping to nearly a million of tons enter inwards, and nearly the same amount outwards annually, and this not taking into account the native craft, which is also exceedingly large, probably amounting to two-thirds of the above, in the same period. It is no matter of surprise to those acquainted with the port and river of Shanghai, that this enormous amount of tonnage must fearfully overburden the river facilities, and as a consequence be the immediate cause of the great number of serious accidents which continually occur to the shipping, both foreign and native. The anchorage ground, too, is constantly becoming more contracted and unsafe, by reason of encroachments and diversion of the river currents, &c. Now, I say advisedly, that there is no method of meeting the difficulty under which Shanghai labours with regard to its shipping, other than that of extending the limits of the port to Woosung, and that this is not an *already* accomplished fact is a matter of extreme surprise, and the more particularly since the opening of Japan and the Yang-tsze river to foreign trade. Woosung is the natural outlying port of Shanghai, and is splendidly adapted as an *entrepot* for all warehousing and trans-shipping purposes. With the extension of the port of Woosung, must follow (or indeed might advantageously precede) the connecting link with Shanghai—*the rail and telegraph*. And, *en passant*, I will just here remark that I know of no undertaking that could be carried out with less expense than a railway between Shanghai and Woosung; the country is a dead level, and there are no engineering difficulties whatever in the way, and the distance by land is short, being only nine miles. That a railway would pay handsomely between the above places cannot for a moment be doubted, and, indeed, a great *future* is in store for undertakings of this nature in this quarter; Shanghai, with all its wonderful advancement, being yet only comparatively in its infancy. In addition to the goods traffic, which would shortly be enormous, passengers *in transitu* would materially add to the profits of the company. And it might be expected that, with the facilities of communication which a railway would give, many of the Shanghaity would make Woosung a place of residence, at least during the hot months, there being no doubt of its superior healthfulness over the former place; in fact it is a wonder that a sanitarium has never been established at the entrance of the river, beyond Woosung; the sea breezes there being almost always fresh and invigorating, consequently health-restoring.

In conclusion, Mr. Editor, I will only further say that it is utterly impossible the extension of the limits of the port of Shanghai can be longer delayed with safety, consequently the sooner this measure of relief be carried out the better it will be for all interested in trade with that port.

London, Feb. 24, 1865. OLD SHANGHAI.

THE NATIVE SOVEREIGN OF SINGAPORE.

(To the Editor of the *London and China Telegraph*.)

SIR,—In looking over Mr. Cameron's just published volume, I find there are various differences of opinion in which I might indulge, but I wish particularly to dwell upon the disputed sovereignty, as he is pleased to call it, and its consequences on the trade and prosperity of Singapore. In page 23, latter end, he says, speaking of a treaty between the Sultan and Tumongong, "that the former ceded the sovereignty, which transferred a dynasty." The territory was ceded, it is true, and under compulsion, and was the result of a most unfair exercise of the power of Government. Both Colonel Butterworth and Mr. Church, the Resident Councillor, regretted afterwards what they had done, and the latter has left his opinion upon record. Mr. Cameron is an adherent of the Tumongong, and insists that the Sultan sold his birthright of the sovereignty (page 137), "but strange to say retained, as he still does, the title of Sultan;" a proof, at any rate, that he had not resigned it. He then continues, "It has been a badly managed piece of business, and has given rise to great dissatisfaction among the Rajahs of the Peninsula, who refuse to acknowledge the Tumongong, because, in point of hereditary rank, *he is beneath many of them*."

It is worthy of attention that within the last six months these chiefs asked the Sultan to come among them, and they have recognised in him those rights of which the British seek to deprive him, and why? Is it because, as Mr. Cameron says, "the Tumongongs have been far in advance of the Sultans in ability and education?" Not in the least; what brought the Tumongong into notice was his piratical proficiency, and as the best means of controlling that thriving community, the father of the present chief was taken by the hand by Mr. Bonham, and from that time made much of by the British Government. Had the Sultan been equally turbulent, he would not have been neglected. But what has been the consequence of this "immoral policy?" The whole of the chiefs of states composing the whole empire of Johore are against us, or against the man we patronise; and instead of a valuable trade existing from Tringanu to Malacca, nothing is to be found beyond the monopoly of timber for the benefit of the Johore Saw Mill Company, of which the Tumongong is a large shareholder, and the gambier and pepper trade in the immediate vicinity of Singapore, the monopoly of which by the ruler of the country was only lately defeated by the vigilance of the Chamber of Commerce. The Government authorities privately condemn the policy which publicly they are obliged to uphold. The chiefs, united under the Sultan, would be more easily influenced by the British, than they can be divided as they now are; and whereas in the one case they would have a general interest to promote trade and open up the resources of their countries, they are now distrustful of each other, and afraid to stimulate the industry of their subjects for fear their wealth should cause the others to attack them. Besides, who would think of endeavouring to develop the riches of such at present disorganised countries? Can life or property be safe under such a system? Are the English respected and looked up to as they should be? The result of the Pahang war and the bombardment of Tringanu show the contrary. If, therefore, the riches of the south end of the Peninsula are to be developed we must inaugurate a more sound and moral policy; we must recognise the legitimate power acknowledged by the Malays—even by the Tumongong himself; we must bind the chiefs together by self-interest, and teach them the principles of good government, assisting them, if necessary, by advice, and affording them the benefit of the administrative talent of an able Resident, as at Mysore; then we may expect to see a rich and fertile country pour its varied products into our lap, and a flourishing commerce succeed the forty-five years of neglect which have unfortunately marked our presence in those parts.—Yours, truly,

February 20, 1865. AN OLD RESIDENT.

JAPANESE ORDERS FOR MACHINERY.

(To the Editor of the *London and China Telegraph*.)

SIR.—Will your Rotterdam correspondent kindly afford information as to the description of machinery ordered on Government account by the Japanese officers recently arrived at the Hague? Is the order for mills, drainage pumps, or marine engines? Cannon cannot well be called machinery. It so happens that the first steam-engine constructed in Japan was made out of copper from the drawings of a Dutch work that had found its way thither.—I am, &c., SCRUTATOR.

London, Feb. 24, 1865.

NUMBER OF BRITISH RESIDENTS IN JAPAN AND CHINA.

(To the Editor of the *London and China Telegraph*.)

Sir,—Consuls, like some other men, seem occasionally to wander most unaccountably out of their way. Who would have looked to our Consul at Calais for a statement in his Report to the Foreign Office of the number of Englishmen settled in Japan, China, Cochin-China, and Persia? Yet so it is, these countries are lumped together, and the number given is 1,207 for the official year 1863-64. An approximate estimate of the present number of British residents in China and Japan, as well as in these two countries separately, would interest many of your readers, including, STATICIAN.

Oxford, Feb. 18, 1865.

Naval and Military.

The inquiry into the circumstances of the loss of the Bombay by fire has terminated after five days' duration. Captain Colin A. Campbell in defence referred to the destruction of H.M.S. Queen Charlotte and Ajax in a somewhat similar manner, and concluded by observing that he felt sure that the Court would perceive from the evidence that both his officers and himself were to be exonerated from all blame. The Court (after one hour's consultation) decided that in every way Captain Campbell had fulfilled his duty, and passed the highest eulogiums on the discipline preserved in such trying circumstances. The President then returned Capt. Campbell and Commander Wilson their swords, and the proceedings terminated.

The following promotions, dated from the 10 inst., will take place in consequence of the death on the 9th inst. of Admiral Sir Henry Byam Martin, K.C.B.:—Vice Admiral Sir James Scott, K.C.B., to be Admiral on the active list; Vice Admiral the Right Hon. Henry John Chetwynd, Earl of Shrewsbury and Talbot, C.B., to be Admiral on the reserved list; Rear Admiral Sir Baldwin Wake Walker, Bart., K.C.B., to be Vice Admiral on the active list; Rear Admiral Edward Stanley, to be Vice Admiral on the reserved list; Captain Douglas Curry, 1846, Captain Superintendent of the Plymouth (Royal William) Victualling Yard, and of the Royal Hospital at Plymouth, to be Rear Admiral on the active list.

Digitized by Google

The 17-gun sloop Mutine has returned to Woolwich, after a trial at the measured mile, and it is ordered to be prepared for immediate commission. Her destination is stated to be to relieve the Harrier on the Australian station. The Mutine has been repaired in every compartment, and has been fitted with a topgallant forecastle as a shelter for the crew. The same principle, it is stated, is intended to be carried out by Mr. Reed, the Chief Constructor, in all ships of that class belonging to Her Majesty's navy.

The Navy Estimates for the year 1865-66 have been issued. The net decrease, as compared with last year, is £316,427, the total amount required being £10,392.224, against £10,708,651. It should be stated, however, that the sum thus voted last year includes the votes in the supplementary estimate for increasing the full pay and for the extension of naval retirement of officers of the navy, amounting to £61,041, and the supplementary estimate for purchase and completion by contract of the El Tousson and El Monassir, iron-clad ships, amounting to £220,000. The items of decrease are as follows:—Coastguard service, &c., £16.323; scientific branch, £1,234; Her Majesty's establishments at home, £159; ditto abroad, 334; wages to artificers in home establishments, £116,509; section one in naval stores, Storekeepers-General of the Navy, £29,528; section two, Comptroller of the Navy, £317 512; and half-pay, &c., to officers of the Navy and Royal Marines, £5,370. On the other hand, the wages to seamen and marines are increased by £15,093; victuals and clothing for ditto, £21,575; Admiralty-office, £7,352; artificers abroad, £3,380; new works, &c., £83,687; medicines and medical stores, £450; miscellaneous services, £1,605; military pensions and allowances, £17,010; civil pensions and allowances, £14,050. The estimated amount for the coming year of extra receipts and repayments to be paid to the Exchequer is £239,319, which reduces the net amount of the navy estimates to £10,152,905, against the net amount last year of £10,507,792. With regard to numbers, the number of officers, petty officers, and seamen to be voted for the coming year is 38,000, against 38,500 last year. There are also 7,000 boys, and 7,000 men in the coastguard service, against 7,500 last year, making the total 52,000 against 53,000. The marines are in all 17,000, namely, 8,000 for service afloat, and 9,000 for service on shore, being 1,000 less than in 1864-5. The civilians for the coastguard service are 750 against 950, leaving the total force in the fleet and coastguard service 69,750, against 71,950 last year.

According to a letter received at Southampton from on officer on board H.M.S. Liffey, dated Gibraltar, Feb. 15, that vessel must be in a very bad state, and wholly unfit for the West Indies whither she is ordered. He says—"I have not slept in a dry bed the whole of this month, as there is a constant drip through the main deck and sides on my bed and all over the cabin. Half our tanks have broken through the working of the ship. They cannot be replaced here, so we take them with us, and shall have to distil the whole way across. Another heavy gale and we expect them all to go, as they have been upwards of six years in the ship, and are as thin as wafers. In fact, we ought to go to England. A survey of the ship there would condemn her. Several beams have started, bolts in knees drawn, as well as the copper bolts in the side. The decks are too thin for the guns; and, to sum up, by the carpenter's report it would take three months to patch the ship up in one of our dockyards at home. She requires a new stock, lock, and barrel, as the soldiers would say. We might weather out six months longer on this station, but are unfit for the West Indies."

We understand that the Admiralty are about to remove all distinctions between the officers for general service and those on whom hitherto has especially devolved the navigation Her Majesty's ships. With this view they will abolish the ranks of staff commander, master, second master, master's assistant, and naval cadet of the second class; and for the future Her Majesty's ships will be navigated by lieutenants and commanders. An increase of pay will most likely be granted to the officers who perform this duty. In addition to this, all staff commanders of above 20 years' service will become captains, while all other staff commanders and masters will become commanders and lieutenants, and second mastets second lieutenants; but all these officers will have to learn gunnery. Masters' assistants above 16 years of age are to become midshipmen.

Rear-Admiral Yelverton, C.B., at present second in command in the Mediterranean, is to be the new Junior Lord of the Admiralty.

Literature.

Our Tropical Possessions in Malayan India; Being a Descriptive Account of Singapore, Penang, Province Wellesley, and Malacca; their Peoples, Products, Commerce, and Government. By JOHN CAMERON, Esq., F.R.G.S. With Illustrations. London: Smith, Elder, and Co.—We have given the title-page of Mr. Cameron's book in full, because the volume does most satisfactorily discharge the promise held out therein. It were heartily to be wished that every one of our colonies and dependencies had so excellent a handbook to its past history, both political and commercial, with such a full account of its products, its various population, their different manner of life, the revenue and how obtained, with almost every other particular that could be looked for even had the writer proposed to embrace an encyclopedic view of the subject. Mr. Cameron appropriates a chapter, first, to the history of the Straits Settlement; then he proceeds to treat of the town of Singapore, with its suburbs and scenery; this is followed by a description of the native population, divided into the three great sections of Aborigines, Malays, and Chinese; next the cultivation, climate, and products are treated of; then the commerce of the three districts,—Singapore, Penang, and Malacca; Government and Revenue succeed in due order; a couple of chapters occupied with matters relating to the social life of the settlement are followed by four that comprise what Mr. Cameron has to tell in special reference to Penang, Province Wellesley, and Malacca. The Preface claims the reader's indulgence, that "parting with the manuscript at a great distance from the place of publication, the author would not be allowed the advantage of revising or reconsidering what he had written." Some errors traceable to this cause are discernible on a close examination of the pages, but none of very serious consequence. That of most importance is perhaps the statement at page 15, that the allotments of land at Singapore were granted by the East India Company on a 99 years' lease. We have always been told that the term was 999 years—a wide difference, but possibly only a typographical error. Singapore, it appears, was not associated with Penang till 1826, the final arrangements for its cession to the British not having been made with the Sultan and Tumongong of Johore till August, 1824. Colonel Farquhar was appointed by Sir Stamford Raffles as Resident in 1819, when the British flag was first hoisted. Mr. Crawford succeeded him in 1823, when Singapore ceased to be a dependency of Bencoolen. In 1825, Malacca was again handed over to us by the Dutch, and in the year following, Penang, Singapore, and the first-named were incorporated as one settlement, Mr. Fullerton being sent out as Governor, who made Penang the seat of authority. Mr. Ibbetson succeeded in 1827, being appointed by Lord William Bentinck, who complained on landing at Penang that "he could not see what the island was like for the number of cocked hats that were in his way." This official retired in 1833, and had for his successor Mr. Kenneth Murchison, who had been Resident Councillor both at Singapore and Penang. In 1837 on Mr. Murchison's departure, the acting-Governorship was handed over to Mr., afterwards Sir, S. G. Bonham, who was finally confirmed as Governor, after some manœuvring for the office on the part of Mr. Church, who had eventually to be content with the post of Resident Councillor. Governor Bonham made Singapore the permanent residence of the ruling authority of the incorporated settlement. Colonel Butterworth followed in 1843, Sir S. G. Bonham going to Hong Kong. The Colonel presided over the destinies of the now flourishing emporium for the long period of twelve years, not being removed till 1855, when Mr. E. A. Blundell became his successor. Mr. Cameron tells us:—

During Mr. Blundell's administration the great rebellion in India broke out, and with him it was that Lord Elgin was staying when he issued the famous order that deflected the troops of the China expedition at Anjer, and sent them back to India. The news of the Indian revolt reached Singapore in the afternoon; all that night Lord Elgin remained pacing up and down his room in the Government bungalow that stood where Fort Canning stands now, holding various interviews with the naval and military officers of the expedition, and next morning at daylight a steamer was despatched to the Straits of Sunda, with the order which, it is believed by many, saved the British empire in India.

In 1859 Colonel Cavanagh received from Lord Canning the appointment of Governor of the Straits. "The agitation for the transfer of the settlement to the Crown had already commenced, and as Lord Canning was one of those most favourable to it, he was particular when making the appointment to explain its probably short-lived nature. Colonel Cavanagh's term of office, however, has, contrary to expectation, extended quite as long as that of most Governors of the settlement, being only exceeded by that of Mr. Bonham and that of Colonel Butterworth."

As regards those articles of produce more especially cultivated in the neighbourhood of Singapore, it seems that gutta percha is likely to die out—

Unlike the means adopted by the Burmese to obtain the caoutchouc, the gutta percha or tuban tree is not tapped merely, but cut down and absolutely destroyed, to obtain its juice. It is stated that the quantity of juice obtained by tapping the live tree is so small that it would never remunerate the search for it. This is much to be regretted. The tree is of very slow growth, and under the present system, which requires the destruction of ten trees to produce one cwt., the supply must sooner or later fall short from the forests of the peninsula, as it has already done from those in the island of Singapore.

Another extract from this portion of the book will serve to show the value of the information it abounds in, as well as the clear, intelligible style in which Mr. Cameron conveys it:—

Another commodity which still continues to be produced in considerable quantities in the jungle districts of Singapore, and of the growth of which probably less is known at home than of any other Eastern import, is gambier, or terra japonica. As it is brought to the market there, edible gambier resembles in appearance and consistency little square rich blocks of yellow mud in a half dry condition, and is as little suggestive of its origin as can possibly be conceived. I have already alluded to the gambier plantations in the interior of the island. They are selected far from town, in the midst of the jungle, and very picturesque little clearings they are. The plants, which are small and bushy, seldom over seven or eight feet high, are planted six feet asunder. The leaves are small, smooth, and of a dark green colour, having an astringent bitter taste. In about fourteen months

Digitized by Google

from the time they are planted, the first crop of leaves may be cut; but in about two years' time the plant has attained full strength, and may be cropped once in two months. The croppings, which consist of leaves and young branches, are gathered together and thrown into a huge cauldron of hot water, and boiled till all the strength has been extracted. After this, what remains of the twigs and the leaves is withdrawn, and the liquid, which contains a strong decoction, is kept boiling for six or seven hours, till a great part of the water is evaporated and nothing but a thick pasty fluid is left behind. This is now poured into shallow troughs a little more than an inch deep, and allowed to cool and then dry, when it is cut up into little inch blocks, and is then ready for market. The reason of its being cut up in this manner is twofold—first, to enable it to dry and harden more quickly, and secondly, because in this shape it is better suited to the markets in Siam, Cochin China, and the Archipelago, where it was originally and still is largely consumed as a masticatory, wrapped with betel-nut in leaves of siri.

Pepper is grown in the same jungle districts as gambier, the cultivation of the two plants going on together, for the refuse of the latter forms an excellent manure for the former; and the gambier plant not requiring much attendance between the croppings, the labourers of the plantation can then devote their time to the pepper. Black and white pepper come from the same berry, the former being produced from treatment of the berry in its green state, and the latter from the fully ripened berry. The owners and labourers of both the gambier and pepper plantations in the island of Singapore are invariably Chinese; the Malays appearing to have a rooted aversion to the culture of any product that requires the least manufacture or manipulation to prepare it for market. The Chinese, in fact, are the bees of the Asiatic hive. Mr. Cameron states:—

They are by far the most industrious and consequently the most valuable people we have in these possessions—the development of the internal resources of which is almost entirely due to them. In Singapore all the gambier and pepper produced is of their growth; in Penang and Province Wellesley also, the chief plantations are in their hands, or worked by them; and in Malacca, all the tin, all the sago, and all the tapioca is of their production. Unlike the Malays, they are ambitious, and become rich; and though this ambition has generally its origin in the desire to return to China in affluent circumstances, yet our possessions not the less benefit by their labour, and while many never attain the full realization of their aspirations, others, as they grow rich, become attached to the country and its laws, seek wives from among the comely daughters of the soil, and abandon all idea of returning to their native land.

We have been particular in giving above a notion of the contents of Mr. Cameron's book, that the reader may fully understand the vast amount of interesting and serviceable information to be found in it. The extracts in our columns will suffice to show the completeness with which each topic is handled, and to recommend this account of "Our Tropical Possessions in Malayan India" to the notice of every class, whether it be the merchant, the politician, or the seeker for mere amusement. The seven coloured illustrations to the book are well chosen as to subjects, and convey to the eye a lively impression of the scenery and buildings of Singapore and the neighbourhood.

A correspondent (an officer in the 31st Regt.) has written to the *Army and Navy Gazette* a letter in which he impugns the veracity and correctness of sundry statements made in Dr. Rennie's work, *The British Army in China and Japan*. Dr. Rennie, the author, being at this present moment in India, was of course unable to reply to these assertions, but his cause has been undertaken by his father, who has boldly written to the journal in which the offensive letter appeared, and challenged the writer either to prove his allegations or make an apology. We need not add our opinion on the subject, as our readers have only to refer to our review of the work in question. Dr. Rennie has no doubt stated something which is unpalatable to the 31st, but nevertheless a fact.

Monetary and Commercial.

The Times, on the 22nd inst., had the following in the City article:—

"Private telegrams from China received in the City mention numerous failures at Shanghai, caused by the severe and continuous losses of the past year in tea and silk."

This naturally caused a spirit of inquiry. It was found, however, that the information referred only to the houses named by last mail. There are rumours of a more important house, one of old standing, but, as in the case of most of the old houses, the senior partner had retired, leaving the good name of the firm, acquired during a quarter of a century, to the care of juniors, to whom the dull routine of a prudent and studious merchant's life was considered too slow; the excitement of the turf being found more suitable. With the publicity that will in course of time be made in winding up insolvent houses, the allusions which we made in our article on *Over-trading in Tea and Silk*, will be fully borne out. That an improper connection between the purchase of teas and "horse-racing" has existed, there appears now no doubt; and in some cases when this did not suffice to tide over the difficulties, acts have followed which in this country would be investigated in the criminal court. When clerks purchase a chop of tea, procure an advance from the Bank, and leave their employers to find out from the tea broker that the cost of the same has been "placed to the account of the house"—not having been stated as purchased on private account—it is high time that the seniors in the China trade set about a purification. It was an act of injustice for the partners in such a case, not to prosecute the delinquent. Notwithstanding the facility with which "Letters of Credit" are to be procured now-a-days, nothing can stand the losses which are now being experienced in the Tea trade, equal in many chops to thirty and forty per cent. This year must see an end of such trading. We are very much mistaken if we do not see even lower prices in Mincing-lane, as the holders of hypothecated bills of lading will now appear as sellers to a very great extent. No doubt the result will be sufficiently onerous to stop shipments by clerks and the mushroom houses that have crept into the trade.

Since the above was in type the following announcement was made in the Postscript of the *London and China Express* of yesterday.—

Meetings of the creditors (chiefly Manchester) of Messrs. Fletcher and Co., China, have been held at the suggestion of Duncan Fletcher, Esq., who had retired from the firm. It has been decided to liquidate the firm, and powers of attorney go out by this mail for that purpose.

The directors of the Agra and Masterman's Bank (Limited) have this day declared a dividend at the rate of 10 per cent. per annum for the half-year ending 31st December last, with a bonus of £3 per share—equal to 22 per cent. per annum, and making, with the previous distribution, 20 per cent. for the year 1864, at which rate a dividend and bonus on the new shares will be paid. The dividend warrants will be payable on the 8th March.

Mr. S. David Sassoon, of 15, Leadenhall-street, has joined the direction of the Bank of Hindustan, China, and Japan (Limited).

It was announced last week that a basis of amalgamation had been agreed to between the Alliance and Consolidated Banks, subject to arrangement of details. It was yesterday decided that the details could not be arranged.

At an extraordinary general meeting of the China and Japan (Coast and River) Steam Navigation Company, held on the 23rd inst., the agreement entered into with the China Steamship and Labuan Coal Company, as founded upon the resolutions embodied in the circular noticed in our last, was carried unanimously. Mr. G. L. Browne was appointed liquidator.

The Malta and Alexandria cable has sustained further injury owing to the bad weather, and the vessel sent from Malta could not proceed with the repairs.

The Mauritius Government 6 per cent. loan of £300,000, for which the Crown Agents for the Colonies invited tenders, was not all taken up. The total applied for was £230,100, but the *minimum* was fixed at 103, at and above which debentures to the extent of only £118,800, and registered stock to the extent of only £31,600, were disposed of, at an average of £104. 15s. 4d. It is understood that the Crown Agents will be prepared to receive tenders for the unallotted portion, amounting to £179,700.

The accounts of the Southampton Dock Company were received by the meeting of proprietors, and showed a net revenue, after payment of interest on the debenture capital, of the dividends, and the preference stocks and all expenses, amounting to £7,276. 12s. 5d., which, added to the surplus from last year, made £8.053. 8s. 7d., out of which a dividend of £2 per cent for the half-year was declared, absorbing £7,207, and leaving a balance of £846. 8s. 7d.

The Board of Trade returns for the month and twelve months ending the 31st of December, have been issued; they do not contrast favourably with previous returns as regards the month, though on the year the balance in favour of 1864 is very considerable. This pre-eminence in the year is to be attributed to the general satisfactory state of trade in nearly all branches. The falling off in the month must again be put chiefly to the transactions in cotton yarn and cotton manufactures, and so long as the war in America continues these items may be expected to present unfavourable aspects. The total declared value of exportations for the month of December last was £12,095,437, against £14,354,400 in December 1863, and £10,807,033 in 1862, which is a decrease on the former period

Digitized by Google

of £2,258,963, but an increase on the latter of £1,288,404. For the year last past the total was £160,436,302, against £146,602,342 in 1863, and £123,992,264 in 1862; which is an increase, as compared with the former period, of £13,833,960, and as contrasted with the latter of £36,444,038. Commerce with the Far East is represented in these returns by the figures following:—

EXPORTS TO CHINA AND HONG KONG.

For the Month ended the 31st December.

	1862.	1863	1864.
Cotton yarn	—	56.678	126.120 lbs.
Cotton manufactures	2.145,813	3,470.068	7,556.069 yds.
Worsted stuffs	1,041,168	1,052.567	1,836.339 ,,
Woollen and worsted cloths	165.240	94.813	211.072 ,,
Lead	1,479	1,099	395 tons

For the year ended 31st December.

Cotton Yarn	3,214.059	2,251,154	1,961.813 lbs.
Cotton Manufactures	80.636,465	46,454.793	73,462,152 yds.
Worsted stuffs	8,398,271	9,440.811	14,981,435 ,,
Woollen & worsted cloths	2,037,448	1,598.505	1,827,613 ,,
Lead	9,977	14,580	7,714 tons

Value for the year ended 31st December.

Cotton yarn	£183,963	£239,251	£241,980
Cotton manufactures	1,269.998	1,162.505	2,010,025
Worsted stuffs	415,756	651,121	979.405
Woollen and worsted cloths	254,681	295.883	312,661
Lead	213,756	310,541	168,200

Of Cotton Manufactures the quantities and values exported to the other great centres of trade in the Far East appear as follows:—

Quantities for the Month ended 31st December.

	1862.	1863.	1864.
Ceylon	2,813,650	4,636.541	709.285 yds.
Singapore	1,350.014	4,091.218	377.690 ,,
Java	247,515	2,176,510	2,627,618 ,,
Philippine Islands	1,723,136	1,005,956	—

Quantities for the year ended 31st December.

Ceylon	18,432,697	22,222.525	12,645.684 yds.
Singapore	32,726,886	29,060.076	24,980,447 ,,
Java	26,322,463	16.165.927	29,710,223 ,,
Philippine Islands	14,338,218	14,231,397	19,900,645 ,,

Value for the year ended 31st December.

Ceylon	£310,538	£569,642	£413.536
Singapore	567,488	701,618	653.357
Java	294,180	411.389	556,634
Philippine Islands	294,510	351,091	546,257

IMPORTS.

Of Raw Cotton the imports for the month and year from British India and China are stated thus:—

Quantity for the month ended 31st December.

	1862.	1863.	1864.
British India	687,726	914,479	738 004 cwts.
China	3,411	40,259	77,665 ,,

Quantity for the Year ended 31st December.

British India	3,505.844	3,878,757	4,522,566 cwts.
China	15,768	275,303	769,259 ,,

Value for the Eleven Months ended 30th November.

British India	£16,997,686	£25.749,991	£32.357.460
China	85,914	1,775,154	5,698,849

Of Sugar the import from Java and the Philippine Islands in the month of December in the present year was 10,151 cwt. of 3rd quality and 75,645 cwt. of the 4th. The return for the twelve months is as follows:—

Quantity for the Year ended 31st December.

	1862.	1863.	1864.
2nd quality (equal to Brown clayed)	35,999	3,423	438 cwts.
3rd (not equal to Brown clayed)	362,051	834,815	29.528 ,,
3rd (equal to Brown Muscovado)	—	—	151,440 ,,
4th (not equal to Br. Muscovado)	—	—	181,495 ,,

Quantity entered for Home Consumption for the Year ended 31st December.

2nd quality	52,370	3,583	13,230 cwts.
3rd (previous to April 16, 1864)	316,368	335,960	164,879 ,,
3rd (subsequent to that date)	—	—	205,507 ,,
4th (do. do.)	—	—	151,854 ,,

Value imported for the Eleven Months ended 30th November.

2nd quality	£49.736	£4.551	£634
3rd (previous to April 16, 1864)	308.692	692,886	41.205
3rd (subsequent to do.)	—	—	151,705
4th quality	—	—	131,415

Of Hemp the import from the Philippine Islands was, for December in the present year, 23,697 cwts., against 58,364 cwts. in the same month of 1863, and 38,123 cwts. in 1862. The import for the entire twelve months in the three years was as follows, beginning with 1864:—183,943 cwts., 312,871 cwts., and 173,478 cwts. The value for the eleven months ending the 30th November in each year is stated thus:—1864, £376,191; 1863, £333,458; 1862, £175,854.

The Coffee imported from Ceylon during December was in quantity 4,876,689 lbs., against 13,684,477 lbs. in the same month of 1863, and 3,431,129 lbs. in 1862. The quantity for the three entire years was as follows, placing 1864 first in the order:—69,131,044 lbs., 79,793,201 lbs., and 55,285,723 lbs. The value for the eleven months ended the 30th November in each of the three years is entered thus:—1864, £2,204,486; 1863, £2,421,570; 1862, £1,922,585.

The Declared Value of British and Irish Produce and Manufactures exported from the United Kingdom to the undermentioned countries and ports during the entire twelve months of the three last years is represented by the amounts placed against each:—

To	1862.	1863.	1864.
Singapore and Eastern Straits	£1,064.681	£1,486,774	£1,185,680
Ceylon	573,998	1,075,927	828,368
Hong Kong	1,113,224	1,473,222	1,610,957
China (exclusive of Hong Kong)	2,024,118	2,416,705	3,093,865
Japan	21	108,897	629,085
Netherlands India (Java, &c.)	776,564	650,424	796,582
Philippine Islands	458,404	556,863	765,764
Siam	21,907	11,984	15,130

ARTICLES OF IMPORT.

TEA.—The low and dusty kinds of Congou have sold at about former prices. Fair to good common kinds may be quoted about ½d. per lb. lower. Flavory kinds, of old Import, of fair quality, are now selling at about the price of good common Congou. Those of new Import have been much depressed, and prices have given way 1d. to 1½d. per lb. Good to fine Kaisows have been more firmly supported, but in these prices have given way ½d. to 1d. per lb. The finest kinds show no material change. Common to fair blackish-leaf, of old Import, remain much as before. Those of new season have been sold at a decline of 1d. to 2d. per lb. Good medium kinds have been freely offered, and the few sales made show a reduction of 1d. to 1½d per lb. Some sales of fine quality have been made at easier prices. In finest, scarcely anything has been done. Tayshans and new-make Canton kinds remain without alteration. Common to fair Oolongs continue difficult of sale, a few of the finer kinds have changed hands at about former prices. Some few sales of Souchong have been made at the low prices current, they being considered relatively cheap. In Flowery Pekoes there is no new feature to notice. The supplies of Scented Teas have been larger and freely offered. Sales have been made to some extent at fair prices, but latterly there has been less demand, especially for the finer kinds of Foochow make, both Capers and Orange Pekoes, and these must be quoted about 2d. per lb. lower. The Canton-make have been better supported, but the later sales of these show a decline of about ½d. to 1d. per lb. Uncoloured Japans have only been saleable to a moderate extent at the low rates current. A small public sale of Indian tea went off with less spirit, but the finer kinds fully maintained former value. In Green teas there has been a considerable pressure to sell, and prices of nearly all kinds have again declined from 1d. to 2d. per lb., the reduction being most marked in the Ping Suey kinds, of which large supplies have come to hand. There has been some inquiry for Hysons for export, which has caused them to rule firmly. Young Hysons, in the absence of Export orders, have been much depressed. In Canton-made teas there is no improvement, the good kinds of Gunpowder remain almost unsaleable; a few fine are inquired for. The quotations for Young Hysons are almost nominal.

SILK.—Very little business has been done since last mail; prices of the better qualities of China and Japan have been firmly maintained, but coarse and inferior descriptions can be bought on easier terms. At the public sales which took place on the 22nd and 23rd inst. there was no

Digitized by Google

bidding, except for about 200 bales of washed Japans from the wreck of the Nepaul, which sold from 23s. to 25s. 6d. for Mibash sorts, and 18s. to 21s. for the coarser descriptions. Deliveries from 1st to 24th inclusive—China, 1,949 bales; Japan, 761 bales; total, 2,710 bales. The quotations are:—No. 1, Tsatlee, 27s. 6d. to 28s.; No. 1, Taysaam, 24s. 6d. to 25s.; No. 1, Mibash, 28s. to 28s. 6d. There is very little business doing in the silk-markets of the Ardeche and Drome, in in consequence of the high price demanded by sellers. The breeders of silk-worms are preparing for the ensuing season by purchasing eggs of the Japan worm wherever they are offered for sale. The cold weather which prevailed in the Ardeche last week prevented many dealers in raw silk from attending the markets. The Marseilles silk-market is dull.

COTTON.—Has been in limited demand at Liverpool throughout the week, and the quotations show a further considerable decline, though in consequence of the confirmation received from New York of the failure of the Peace negotiations, more steadiness was exhibited for about four-and-twenty hours. Quotations of American are reduced 1d. to 1½d. per lb. East India has been very irregular in price, and the middling descriptions, in consequence of the difficulty of realising, have suffered a serious decline, amounting to fully 1d. per lb. China is again pressed for sale at a reduction of ½d. to 1d., while for Japan the inquiry is very moderate, and a fall of 1d. per lb. has been submitted to. Quotations of China:—Middling, 10½d.; fair, 11½d.; good fair, 12d. good, 12¼d.; fine, 13d. The London Cotton Brokers' Association reports the market as having been dull and depressed during the week, so that prices of all descriptions had declined ¼d. per lb. The total stock of China and Japan in London on the 23rd of February was 137,558 bales, against 76,735 bales at the same date last year. Quotations, China:—Middling fair, 10½d.; fair to good fair, 11d. to 11¼d.; good to fine, 12¼d. Japan: Middling fair, 11d.; fair to good fair, 11½d. to 12d.; good to fine, 13d. to 14d.

SUGAR.—The general tone of the market since our last advice has been steady, as, while soft and common brown kinds have been of slow sale at prices, in some cases barely equal to those previously obtainable, all strong refining sorts have continued in request, and been rather freely purchased at full to somewhat stiffer rates. A good demand prevailed on Friday, the 24th; and in the public sales of 8,315 bags Mauritius, middling strong refining qualities were taken off freely at prices, in many instances, showing an advance of 6d. per cwt. on those of the preceding Friday. 1,398 bags Penang were taken at and afterwards:—Fine brown and low yellow, 29s. to 29s. 6d.; low middling yellow, 30s. 6d. to 31s.

COFFEE.—The demand is only moderately active, and the value of Colonial has in some instances been scarcely supported. Ceylon: The auctions of Plantation have been limited to 320 casks, 352 barrels and bags, which brought previous rates, fine ordinary to middling, 79s. to 83s. 6d. 220 casks, 1,040 bags Native were mostly taken off, but at rather easier prices; small, 65s. 6d. to 66s. 6d., good ordinary, 69s. to 70s. Mocha and other East India: A fair inquiry has been made privately, and the sales effected have been fully on a par with the former currency. At public sale on the 24th, 190 casks, 380 barrels and bags Plantation Ceylon went off at previous rates; also the chief part of 500 bags Singapore, picked Bally, at 66s. 6d. to 67s.

RICE.—There has been rater more demand this week, and sales to some extent have been concluded at full rates, viz., about 40,000 bags, the bulk soft grain, Nakrenzie 8s. 7½d. to 9s. 3d., fine Rangoon, 9s. 6d. to 9s. 9d., white Bengal 11s. 3d. to 12s. 9d., and 200 tons Ballam at 10s. 6d. to 10s. 9d., ex-ship. The only parcel offered by auction was 364 bags soft grain, of indirect import, which went at 8s. 9d. to 9s. 3d. 7,800 bags Rangoon, offered by auction on the 24th, were held firmly, and bought in; 2,100 bags common heated to middling Moulmein sold at 7s. 6d. to 8s. 6d. The whole of the Rangoon has since been sold, and a further parcel of 12,000 bags of the same kind, low heated to middling, 7s. 9d. to 8s. 7½d.

CAMPHOR has been the subject of some speculation with exporters, and considerable business has been done up to 97s. 6d. per cwt. for China, in lead, but the market has latterly become rather less animated.

CASSIA LIGNEA has sold irregularly, but still with a downward tendency, and of 640 boxes at auction, two-thirds sold at 74s. to 86s. per cwt. for inferior 3rd to good 1st pile. Buds scarce, and wanted.

COCOA-NUT OIL.—362 casks Cochin, 336 Ceylon, and 401 casks Sydney were offered on the 24th. Cochin realised 38s. 6d. to 39s. 3d. for good fair to rather fine quality; dull lots 37s. 9d. to 38s. 3d. Ceylon of good description, 37s. 6d. Sydney, 36s. to 37s. for very good to rather fine descriptions; medium qualities at 34r. 6d. to 35s. 5d., and dull or dreggy goods at 33s. 6d. to 34s.

DRUGS.—Cubebs: Inquiry at present low rates, £3. 15s. to £4, continues. No auctions held. Dragon's Blood: Steady, but 4 cases at auction were retired. Galangal Root: Flat, and of 399 bags at auction a few sold at 16s. 6d. per cwt. for good. Rhubarb: Has brought about the previous value, and of 72 chests at auction two-thirds sold at 3s. 6d. to 5s. 1d. per lb. for ordinary to fair flat, and 3s. 5d. to 4s. 11d. round.

GUMS.—Benjamin: A recent arrival of Siam, 52 cases, sold at auction at very high prices, viz.: 1st, £48 to £50 per cwt.; 2nd, £32. 10s. to £42; 3rd, £28 to £34; seed in block, £25 to £28; dark gum, £22. 10s. to £24; and dust in block, £15. 10s. to £18. Of 52 cases Sumatra, a few sold at £6 for middling 3rd; good qualities very scarce. Damar: Steady, but quiet; of 129 cases at auction, very few found buyers at 48s. per cwt. for fair picked. Gamboge: Remains scarce and firm. Nothing of consequence doing.

GUTTA PERCHA.—Remains very flat: 4 tons at auction retired; private business unimportant. India Rubber: This market is quiet, without the least improvement in rates: only 76 baskets Penang at auction, retired.

HEMP (Manila).—This market has been very quiet, with scarcely any private trade; and of 719 bales at auction, a small proportion only found buyers at £27. 10s. to £27. 15s. per ton for common current roping.

HIDES.—There was a good demand for East India at the public sales on the 23rd, for home use, but only a limited one for export. The quantity offered, however, being moderate, the greater part found buyers at prices generally about the same as last sales, but in a few cases at a slight advance. 881 Singapore and Penang Buffalo Hides sold at 5¼d. to 5⅝d.; 647 Batavia Buffalo Hides offered and sold at 6d. per lb.

JAPAN WAX.—Firm, with little desirable offering; 139 cases at auction retired.

OILS.—Anniseed: Very quiet, at the higher quotations of 6s. 1d. to 6s. 2d.: 40 cases at auction all retired. Cassia: Very dull; and of 24 cases at auction, only one-fourth sold at the reduced price of 8s. per lb. Cinnamon: Steady; and of 14 cases at auction, one-half sold at 2s. 8d. per oz. for fair, and 6d. to 1s. inferior. Mace and Nutmegs: Nothing doing; 10 cases Nutmeg Paste at auction retired at 1d. per oz.

SAGO.—1,125 boxes, in auction, were taken off freely at full rates, middling to very good small Pearl 18s. 6d. to 19s. 6d., fine 20s. to 21s., fine small medium 19s. 6d. to 20s. Flour is dull of sale: 434 bags brought forward, were withdrawn at 14s. to 14s. 6d. Tapioca: 199 barrels gold bright Rio, from Havre, were about half taken at 5d.; 262 packages of sundry common descriptions were mostly taken in. 98 boxes fair to good Pearl were chiefly sold at 24s. to 24s. 6d. per cwt. 216 cases Flour were principally bought in for want of buyers, only a few fine selling at 3d. per lb.

SHELLAC.—This market has been more active, and prices have generally advanced 5s. per cwt., but yesterday Button, owing to the large quantity brought forward, lost more than the advance, going back 5s. to 10s. per cwt. Of 1,957 packages at auction, nearly two-thirds sold: Orange and Livery Orange, at £6. 5s. to £6. 12s. 6d. per cwt., Liver, £5 to £5. 12s. 6d.; Button, £4. 12s. 6d. to £7. 2s. 6d.; Native, £5. 2s. 6d. to £5.]17s. 6d.; and Block and Blocky, £4. 12s. 6d. to £6. 5s.

SPICES.—Cinnamon (Ceylon): We quote 1st sort, 1s. 8d. to 2s. 7d.; 2nd, 1s. 5d. to 2s. 3d.; 3rd, 1s. 3d. to 1s. 10d.; 4th and Jungle, 10d. to 1s. 5d. per lb. Limited business done since the sales. Cloves: Amboyna and Penang without change; of 12 casks of the former at auction, one-third sold at 6d. per lb. for fair; 10 cases Penang retired; of 2,201 bags Zanzibar, a small proportion only was quitted at 3½d. per lb. for fair. Mace: Steady, and 10 cases Penang and 2 cases Singapore at auction sold at 9d. to 1s. 6d. per lb. for low red to good reddish; arrivals and sales advertised. Nutmegs: Attract a little more attention from the trade at present very low prices; only 57 cases Penang sold at auction at 11d to 1s. 10d. per lb. for ordinary small to fine medium. Pepper, Black: Market still quiet, and Singapore the turn cheaper; Penang in rather more demand. 1,616 bags Singapore at auction sold at 3¼d. to 3⅝d. per lb.; and of 3,344 bags Penang, half sold at 3⅛d.; arrivals and sales advertised. White: Firm, and generally held for higher rates; no auctions.

TERRA JAPONICA.—Cutch, Pegue: Has realised 1s. per cwt. advance in private transactions; only 238 bags at auction, mostly sold at 21s. to 24s. 6d. per cwt. for middling old to good. Gambier: Quiet, and of 877 bales at auction, half sold at 27s per cwt. for good cubes; private transactions very limited.

MISCELLANEOUS.—Galls: Are very scarce, and Bussorah have realised as much as £11. 10s. per cwt. for a few bales. China and Japan quiet, being comparatively abundant. Rattans: Steady; only 929 bundles Penang at auction, sold at 5s. to 5s. 5d. per 100. Sapan Wood: Firm; 15 tons Siam at auction, sold at £9. 5s. per ton, and 3 tons Ceylon at £18. Mother o' Pearl Shells: Firm, with good enquiry from the trade for both Singapore and Manila. Soy: Remains firm, and scarce; no auctions. Star Anniseeds: Again rather cheaper; 234 cases at auction mostly sold at £5. 17s. 6d. per cwt. for good, and £5. 12s. 6d. to £5. 17. 6d. mouldy. Sticklac (Siam) Steady, and 155 cases at auction sold at 47s. to 49s. 6d. per cwt. for good. Tortoise-shell: No auctions held; a few cases sold privately on previous terms. Turmeric: No China offering; Jave also scarce. Vermilion: Firm, and in demand, at the quotations of 2s. 6d. to 2s. 8d. per lb.

ARTICLES OF EXPORT.

IRON.—The quotations in London are for Welsh bars, £7. 10s.; nail rod, £8. 15s. to £9; hoops, £9. 15s. to £10; sheets, single, £10. 15s. to £11; Staffordshire bars, £9 to £9 10s.; rails, £6. 10s. to £7.

STEEL.—Swedish keg, £16.

COPPER.—Sheet and Sheathing, £95 to £96 per ton; yellow metal, 8d. to 8¼d. per lb.

TIN.—95s. for block; 96s. for bar. Tin plates, best charcoal, I.C., 28s. to 29s.

LEAD, &c.—English pig, £20. 5s. to £20. 10s.; W.B., £21. 15s.; shot, patent, £23; sheet, £21; spelter, £19 to £19. 10s.; zinc, English sheet, £24; quicksilver, £8.

The following is from the Circular of Messrs. French and Smith:—The metal market continues inactive. The alterations in price are not of importance, but all in favour of buyers.

EXPORT OF BULLION TO CHINA, &c.

FREIGHTS AND CHARTERS.

Outward freights, notwithstanding the continued unsettled state of the weather, have during the past week shown some improvement, ships of good character being scarce and in demand. Advices from the East report no change in homeward charters, no vessels having been placed, except at very low rates. Coal freights for Galle continue to improve, but there is little or no demand for ships to China.

Current Rates of Freight for Vessels on the Berth:—To Yokohama: 50s. weight, 40s. to 50s. meast. To Nagasaki: The same. To Hankow: 60s. meast. To Amoy and Foo-chow-Foo: 50s. weight, 40s. meast. To Shanghai: 40s. weight, 25s. to 30s. meast. To Hong Kong: 40s. weight, 22s. 6d. to 30s. meast. To Manila and Labuan: 50s. weight or measurement. To Singapore: 25s. to 30s. weight or measurement. To Penang: 40s. weight or measurement. To Batavia: 40s. weight, 30s. measurement. To Bankok: 60s. weight or measurement. To Ceylon: 40s. weight, 25s. measurement.

The quotations for coal and iron from the North are as follows:—For Hong Kong: £30 and £1. 11s. For Shanghai: £40 and £1. 16s. For Manila: £1. 12s. 6d. For Batavia: £23 to £24, and £1. 2s. 6d. For Singapore: £24 and £1. 1s. 0d. For Galle: £25 to £26 and £1. 2s. These rates are from the Wear or Tyne, and Newport, Cardiff, or Swansea respectively.

CASUALTIES.

The Numa Vidal, Roura, from Marseilles, for Singapore, put into Mauritius, Jan. 12, with main-mast sprung.

The following three notices were posted at Lloyd's on the 17th inst.:—The Castle Howard, Lamprell, sailed from Shanghai for London, July 25, and has not since been heard of. The Beaufront, Coxon, from Sunderland, to Hong Kong and Shanghai, was spoken Sept. 6 in the China seas, and has not since been heard of. The Oriental Queen, Walshaw, from Sunderland, to Shanghai, passed Anjer Sept. 3, and has not since been heard of.

The Niemen, from Hong Kong, which arrived at New York, Feb. 4, had been cut into by ice, and had damaged cargo.

The Bengal, Bird, from Sunderland for Singapore, which arrived off Deal, Feb. 20, lost two anchors and chains, and was supplied.

The Maravi, Anderson, from China, having lost both anchors and chains off the North Foreland, was supplied from Deal.

The Isabella, from Penang for London, which arrived off Deal Feb. 19, lost an anchor and chain, and was supplied from Ramsgate.

The ship Claramont, which sailed 5th September from Shanghai for London, with 765,900 lbs. of teas, arrived at Ascension on the 6th of December, and left on the 8th, since which she has not been heard of. Sixty guineas net premium has been paid at Lloyd's on this vessel.

MISCELLANEOUS.

AT MAURITIUS—Jan. 7, from Colombo, H.M.S. Orontes, and sailed 12th for the Cape of Good Hope; 12, from Marseilles, Numa Vidal, Roura, for Singapore, (with damage).

LAUNCH OF THE "DILHAREE."—Messrs. Fletcher, Sons, and Fearnall, of Limehouse, launched a fine ship of 1,300 tons, intended for the East India trade; she is the property of Messrs. Smith, Fleming and Co., merchants and shipowners, of Leadenhall-street, and was named the Dilharee. She is built from the designs and under the special superintendence of Messrs. G. H. Harrinton and Co., constructors and ship surveyors, 27, Leadenhall-street, upon Lungley's patent combination principle, with iron frames and double teak planking, and, under special survey of Lloyd's, is classed A 1 for fourteen years. Her principal dimensions are as follow:—Length, 226 feet; breadth, 34 feet; depth 23 feet. The frame is composed of angle iron, with all the usual stringers and tie plates, as in iron ships. The inner skin is of teak planking, fastened to the frames with galvanised nut and screw bolts. Diagonal iron straps are then let in and on, and through fastened to the frames; the outer skin is then brought on longitudinally, as before, and fastened to the inner skin with copper clinch bolts. The vessel is then sheathed with yellow metal. The Dilharee has been fitted with all known and tried improvements; her lower masts and yards are made of cast steel; she has Brown and Harfield's patent windlass, with steam power attached, steam winches, and condensing apparatus, and is thoroughly ventilated and fitted for carrying troops when required, with ample accommodation for officers or other passengers.

IMPORTANT ANNOUNCEMENT.

JOSEPH GILLOTT,

Metallic Pen Maker to the Queen,

BEGS to inform the Commercial World Scholastic Institutions, and the Public generally that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions, which, for EXCELLENCE OF TEMPER, QUALITY OF MATERIAL, and above all, CHEAPNESS IN PRICE, must ensure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in boxes containing one gross each, with label outside, and the fac-simile of his signature.

At the request of numerous persons engaged in tuition J. G. has introduced his WARRANTED SCHOOL AND PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and 37, Gracechurch-street, London.

14, MINORIES, ALDGATE, LONDON,

CONTINUE to Manufacture their Pickles, Bottled Fruits, Jams, Jellies, Sauces, &c., with the greatest of care, for exportation, and at the same time paying strict attention to purity of quality, as will be seen by annexed extract from the "GROCER'S JOURNAL," June 12, 1863:—

"CHEMICAL LABORATORY,

"7, BURY COURT, ST. MARY AXE, LONDON, E.C., June 4, 1863.

"SIR,—I have analysed the two samples handed me on Tuesday, the 2nd inst., and found the 'Mixed Pickles' of H. and H. LEDGER, of 14, Mineries, Aldgate, to be quite free from adulteration and made with Pure Malt Vinegar.

"I also found H. and H. LEDGER'S 'Britannia Sauce' to be free from any injurious substances.

I have the honour to be, Sir, your obedient Servant,

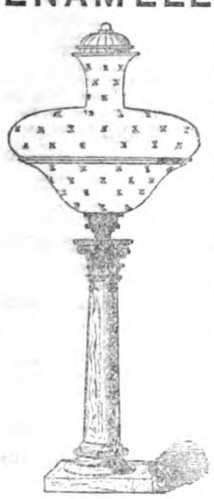
"For F VERSMANN F.C.S. Analytical Chemist.—ED. SCHREINER."

IMPORTANT TO RESIDENTS, MILITARY MESSES, &c., IN INDIA, CHINA, &c.

TUCKER AND SON'S

IMPROVED

ENAMELLED PUNKAH TABLE LAMPS.



THE celebrity which TUCKER AND SON'S LAMPS have acquired in the East for burning *steadily* under the Punkah or in side draughts, and *brilliantly* with any of the *coarse native oils*, renders eulogy unnecessary; but having been enabled, by increased facilities of manufacture, very considerably to *reduce the prices* of the above favourite (but hitherto expensive) description of their lamps, T. and Son beg to notify the fact to the Eastern public.

They are elegant and durable, are finished in exact imitation of many beautiful stones and marbles, such as Malachite, Lapis Lazuli, Serpentine, Sienna, Brocatella, Jasper, &c., and are not affected by heat, damp, friction, or insects; oil, spirits, or acids accidentally spilled. The enamel surface is so inseparable from the base (block slate, proverbial for its strength) that it cannot be removed except by an edged tool. It *requires* simply *dusting*, but if rubbed hard, it only adds a gloss to its appearance—at all times cool and agreeable.

After ten years' constant use and handling, these lamps are none the worse for wear.

Malachite (green), Serpentine (brown), or Lapis Lazuli (blue), are most recommended.

Table Lamp complete, with engraved glasses, as sketch, 72s.

A Plainer Lamp, without the Corinthian capital, 50s. complete.

Either pattern, with plain frosted glasses, 7s. 6d. each less.

*** *The above Lamps are supplied to burn Petroleum or Rock Oil also.*

Orders can be sent through any merchant or Agent, or, if accompanied by a remittance, direct to

MARSEILLES, 9, RUE PARADIS.

CAUTION.

THE GROSS FRAUDS which continue to be practised by obscure manufacturers, more particularly in Germany, by imitating the Labels attached to JOHN GOSNELL and Co.'s PERFUMERY, render it imperative upon the Proprietors to Caution the public against such nefarious proceedings, and to request their friends and patrons to purchase only of respectable dealers, who import direct from JOHN GOSNELL and Co., and invite special attention to the address, 12, THREE KING-COURT, LOMBARD-STREET, LONDON, E.C.

JOHN GOSNELL and Co.'s SELECT PERFUMES.—Ess Bouquet, Royal Yacht Club Bouquet, Jockey Club Perfume, Essence of Wood Violet, Victoria Bouquet, Garibaldi Bouquet, Frangipanni, Military Bouquet, The Bride's Bouquet, Tea Rose, Russian Leather Perfume.

JOHN GOSNELL and Co.'s Toilet Vinegar, Inexhaustible Salts, Aromatic Vinegar, Aromatic Eau de Cologne.

JOHN GOSNELL and Co.'s Prince of Wales Perfume.

JOHN GOSNELL and Co.'s Princess Alexandra Perfume.

JOHN GOSNELL and Co.'s La Noblesse Perfume.

JOHN GOSNELL and Co.'s La Noblesse Pomade.

JOHN GOSNELL and Co.'s La Noblesse Soap.

JOHN GOSNELL and Co.'s Real Old Brown Windsor Soap.

JOHN GOSNELL and Co.'s Golden Oil—Moelline—Macassar Oil, Bear's Grease, &c., for the Hair.

JOHN GOSNELL and Co.'s Extra Highly Scented Toilet and Nursery Powder.

JOHN GOSNELL and Co.'s Stereodesmic or Dentists' Tooth Brushes and Trichosaron Hair Brushes, warranted to purchasers.

JOHN GOSNELL and Co.'s Instantaneous Hair Dye.

JOHN GOSNELL and Co.'s Cherry Tooth Paste is greatly superior to any tooth powder, gives the teeth a pearl-like whiteness, protects the enamel from decay, and imparts a pleasing fragrance to the breath.

NOTHING IMPOSSIBLE.—The Greatest and most Useful Invention of the day, AGUA AMARELLA.—Messrs. JOHN GOSNELL and CO., 12, Three King-court, Lombard-street, London, Perfumers to Her Majesty, respectfully offer to the public this truly marvellous fluid, which gradually restores the human hair to its pristine hue—no matter at what age. The Agua Amarella has none of the properties of dyes; it, on the contrary, is beneficial to the system, and when the hair is once restored one application per month will keep it in perfect colour. Price One Guinea per bottle; half bottles, 10s 6d.

JOHN GOSNELL and Co., Perfumers to Her Majesty, and by Special Appointment to H.R.H. the Princess of Wales, London.

HOLLOWAY'S PILLS.—ENJOYMENT OF LIFE.—When the blood is pure, its circulation perfect, and the nerves in good order, we are well. These Pills possess a marvellous power in securing these great secrets of health by purifying, regulating, and strengthening fluids and solids. Holloway's Pills can be confidently recommended to all persons suffering from disordered digestion, or worried by nervous fancies or neuralgic pains. They correct acidity and heartburn, dispel sick headache, quicken the action of the liver, and act as alteratives and gentle aperients. The weak and delicate may take them without fear. Holloway's Pills are eminently serviceable to invalids of irritable constitution, as they raise the action of every organ to its natural standard, and universally exercise a calming and sedative influence.

Summary of News from the Far East.

JAPAN.

The French mail steamer brings no later advices from Yokohama.

NAGASAKI.

The Nagasaki correspondent of the *North China Daily News*, writing under date of the 12th January, states as the only item of news the approaching sale by auction of the Dutch Consulate buildings at Decima. [We reported in the *London and China Telegraph* of the 16th February that those buildings were to be sold on the 15th January.] It was rumoured that Sir Rutherford Alcock had directed their purchase for the use of the English Consulate. Trade was dull on account of the approach of the Japanese new year, and the Russian men-of-war in port were initiating a new round of festivities among the foreign residents, in honour of the Russian new year's day (the 13th January). The British barque *Diana* was loading tea for London at £4.

We have now an account of the reconnoitring voyage of H.M.S. Argus, which was despatched to Simonoseki to verify the report that Choishu was repairing and arming his batteries. The Argus left Nagasaki on the 14th December, and returned thitherjon the 20th. She reached the Straits on the 15th, and anchored opposite the large battery near the stockade which was carried by our Marines during the late action A party immediately landed, and ascertained that the works had not been repaired, nor had any guns been mounted. Everything was as it had been left by the fleet. The steamer Lotus, belonging to the Prince of Satsuma, which was anchored near the shore on the Kokura side, was next visited; but the party were not allowed on board. The Japanese said their officers were on shore, and they had been ordered not to allow any one on board during their absence. The Lotus had 400 soldiers on board and was very deeply laden. The Argus anchored for the night at Whitehead Bay; and at daylight on the following morning was appealed to, for assistance by the steamer Australian, whom she convoyed back to Nagasaki, under the circumstances detailed in our last, number. The people at Simonoseki were all wearing long hair, as a sign of mourning, they said, for the unsettled state of the country. No less than ten Japanese steamers were at anchor in the Straits, the Lotus, No One, Sarah, Fohkien, Stork Carthage, Cosmopolite, Taotai, Gazelle, and Swatow—all full of troops destined to attack Choishu. Thirty-two Daimios are said to be concentrating their forces on that Prince; so it is evident that the decree of degradation pronounced against him was *bona fide*.

CHINA.

SHANGHAI.

In our last issue, by a printer's error, the Commercial Bank of India was styled the Mercantile, in noticing the alteration of the bank's title.

The following notice appears in reference to the affairs of Kunst, Rohl, and Co.:—

Whereas G. Kunst and H. E. A. Rohl, trading under the firm of Kunst, Rohl, and Co., at this place, have declared their insolvency before me.—Notice is hereby given that all claims against the said firm must be handed in to this consulate and proved on or before the 22nd day of June, 1865, while all debtors to the same firm are hereby notified that payment must be made to this consulate on or before the 15th January next, and that until further notice the receipt of the undersigned will alone discharge them.—R. HEINSSEN, Hamburg Consul.

The minutes which we publish (*North China Daily News*) of a meeting of the Municipal Council held on the 11th instant, suggest two highly desirable improvements, though greatly differing in importance. One is the alteration in the bund line, which we are glad to see is now seriously contemplated, and the other the construction of a foot path on the so-called Yang-tze road. That portion of the former scheme which referred to altering the outlet of the Soochow creek, was fully

Digitized by Google

explained in our paper of the 20th October. It is hardly necessary therefore to repeat that it involves the extension of the consular bund some six hundred feet, so as to cause the waters of the creek to join those of the Wongpoo evenly in their downward course, instead of, as at present, flowing directly against the latter stream and causing dead water and deposit. It is now further proposed to extend the whole line of bund to the edge of the existing mud bank, for the double purpose of imparting an even flow to the river along the shore, thus averting deposit; and of avoiding the existing necessity for carrying cargo along an interminable jetty. The necessity for the alteration has become urgent, as the existing jetties do not extend nearly to low water-mark, and have to be extended by the aid of planks at low tide. The first object, of creating an even shore line, has been partially frustrated by the unfortunate obliquity imparted to the end of the French Bund, notwithstanding Mr. Clark's clear explanation of the error. But the inconvenience will be felt by the French rather than ourselves, in the deposit that will be caused by the Yang-king-pang. We abstain from commenting more fully on the scheme, until Mr. Clark's promised report has been made public; merely expressing a hope, in the meantime, that the great difficulty of ways and means may be overcome.

The following notices appear in reference to the firms winding up :—

In the estate of E. Eaton, an insolvent.

A meeting of the creditors under this estate will be held to-day, at half-past two o'clock P.M., at the office of Messrs. Cowie and Co., Foochow-road.—GEO. J. W. COWIE, Receiver, Shanghai, Jan. 14, 1865.

Consulado Geral de Portugal, Shanghai, Jan. 6, 1865

Whereas D. A. De Souza, for himself, and as principal in the firm of De Souza and Co., druggists at this place, has declared his insolvency before me, and handed in for the benefit of his creditors all his property and effects.—Notice is hereby given that all claims against the said De Souza, or the firm of De Souza and Co., must be handed into this consulate on or before 1st March, 1865; and debtors to the said insolvent, or to the said firm wherein the insolvent is the principal, are requested to make payments on or before the 15th Feb., 1865.—H. W. DENT, Consul-General for Portugal.

Notice.—Mr. H. Phillips, of Shanghai, having this day executed a deed of assignment of all his property of every description, and wherever situated, unto A. E. Rosenthal, in trust for such of his creditors as shall, before the 9th day of February next ensuing, execute the deed of assignment and release, creditors of said H. Phillips intending to take the benefit of said assignment, are requested to forward proof of their claims, and debtors of said assignor are requested to pay the amounts due, without delay, to Cope, Cheshire, and Co., accountants, whose receipts will alone discharge any debt due to said assignor.—A. E. ROSENTHAL.

Mr. Alexander Cock, of Shanghai, having this day executed a deed of assignment of all of his property of every description, and wherever situated, unto Charles Colnett and Thomas K. Holdsworth, in trust for such of his creditors as shall, before the 1st day of July next ensuing, execute the deed of assignment and release, creditors of the said Alexander Cock, intending to take the benefit of the said assignment, are requested to forward proof of their claims, and debtors of said assignor are requested to pay the amounts due, without delay, to said trustees; whose receipts, or the receipt of the receiver appointed by them, will alone discharge any debt due to said assignor.—C. COLNETT, THOS. K. HOLDSWORTH.

Notice.—Persons indebted to or having claims against the late Fred. Lis. Juvet, in Shanghai, are invited to communicate on or before the end of February, 1865, with Mr. Louis Ami Juvet for settlement.—ED. GRO. CLAUDE, Executor.

The *North China Herald*, in noticing the exports for 1864, mourns over the falling off. Judging from the losses, those interested in the result will consider it very satisfactory, instead of unsatisfactory. Shanghai exports, since 1860, have gone ahead too fast, and must now witness a wholesome check :—

"It is unsatisfactory to find that the export of the two principal articles of our trade with China was less during the year which has just closed than during 1863. The export of tea during the latter year amounted to 69,000,000 lbs., showing a large increase over 1862. But during 1864 only 65,000,000 lbs. left the port, of which 151,300 piculs were green and 335,000 black. The decrease is not great; but it would have been more satisfactory to have found the figures tending to progress. That a decline should have taken place in the supply of silk was to have been expected, as the depopulation of the silk districts was beginning to exercise its full influence. But the worst anticipation hardly pointed to a decrease of 11,000 piculs from the comparatively small quantity which was shipped during the preceding year. Such, however, appears to have been the case; only 22,000 piculs left the port in 1864, against 33,000 in 1863, and 63,000 during 1862. The direct export of raw cotton also shows a decline from 554,000 piculs to 430,000; but the re-exports of the same staple rose from 1,500 piculs to 77,000, bringing the total quantity which left the port nearly up to the total of 1863."

In reference to the poor at Shanghai, we find the following in the *North China Herald* :—

"Although there are, no doubt, many destitute foreigners in Shanghai whose sufferings claim our liveliest sympathy, there are also a large number of loafers who endeavour to impose on the feelings of the charaitable, and share in the benefits to which the really deserving can alone lay claim. Of this description is a man who is now endeavouring to enlist the sympathies of the foreign residents by a tale pathetic enough in itself, but utterly untrue from beginning to end. A few days since he called on a gentleman holding a public position in the settlement, and represented himself as an old soldier of the 99th Regiment, who had served his Queen and country for thirteen years, out of which time he had been a corporal for three years and a sergeant for eight. His own report of his conduct was satisfactory in the extreme. He had never been confined in the guard-room, or dragged up at the orderly-room to meet the eye of an infuriated commanding officer. Unfortunately he possessed neither discharge nor character certificates, but this was easily accounted for. He had, since his discharge from the English service acted as an officer in D'Aiguebelle's force, and while returning from Hangchow after the disbandment of that force his boat had been made off with by his boatmen. Of course his discharge and other papers shared the fate of his goods and chattels, and thus left him in a state of utter and hopeless indigence. He managed (so ran his tale) to get to Ningpo, where his sufferings were very severe, but at length, through the charity of somebody or another, he obtained a passage to Shanghai, where he arrived on the 4th inst. The gentleman to whom this chapter of untoward accidents was unfolded sent the sufferer with a note to Mr. Gould, telling him at the same time that as several of the old 99th men were in the police, he could not fail to find some one to testify to his character. Meanwhile his request for 'a few dollars' was refused, but he was assured that if the police gave him a good character, something would be done to set him on his feet again. The man started or seemed to start for the police office, but on the way managed to get drunk. The note addressed to the Secretary of the Municipal Council was found in one of his pockets when next he fell under the notice of the police, and the Superintendent considered it due to the charitable interest displayed by the writer to furnish him with one of those short biographical sketches which by a few skilfully drawn lines give an accurate idea of a man's moral physiognomy. This ex-officer of D'Aiguebelle's force who had arrived in Shanghai but a day or two before he claimed charity as we detailed above, had, in fact, monopolised much of the attention of the police for the past year, and had obtained several notices at their hands. Thus between June 30th and December 25th, 1864, he had been no less than ten times in custody on various charges ranging from 'vagrancy' to 'drunkenness and riot,' and had received sentences of imprisonment for periods of from three to ten days. Such was the gentleman who threw himself on the kindness of a charitable community. Our only fear is lest, while such an occurrence as this will naturally make us more careful in inquiring into the antecedents of men who claim assistance, it may at the same time do serious damage to many suffering and deserving foreigners who through no fault of their own have been plunged into want."

In our mercantile intelligence by this mail we learn that no further suspensions had taken place. Messrs. Watson and Co., we are glad to state, have resumed business, and all claims against the firm will be liquidated in full.

A Tientsin correspondent sends us the following list of ships in port :—Charles Simony, Mischief, Music, Queen of the Avon, Dolphin, Dorothea, Star of the Ocean, George, Burlington, and H.M. gunboat Weasel, which had put in short of coals.

There are further evidences of the value of land falling. Messrs. Cowie and Co. announce the following lots for peremptory sale :—

1. A lot of land, situated at the rear of the British Consulate, measuring 6*m.* 4*f.* 5*l.* 1*h.* (at 7,260 English square feet to the mow) or thereabouts; being bounded on the north by a frontage of 151 ft. 6 in. on Soochow Creek, on the south by lot 2, measuring 166 ft. 6 in.; on the east by the new road, running behind the said Consulate, measuring 198 ft. 6 in.; and on the west by the property of H. Ince, Esq., measuring 254 ft., registered at H.B.M.'s Consulate as lot 579. Title deed, 572.

2. A lot of land situated at the rear of the British Consulate, measuring 3*m.* 7*f.* 7*l.* 3*h.* (at 7,260 English square feet to the mow) or thereabouts, being bounded on the north by lot 1, measuring 166ft. 6in.; on the south by lot. 3, measuring 202ft.; on the east by the said new road behind the said Consulate, measuring 140ft.; and on the west by the property of Thos. Vincent, Esq., mersuring 143ft.; registered at H.B.M.'s Consulate as lot 578. Title deed, 571.

3. A lot of land situated at the rear of the British Consulate, measuring 4*m.* 2*f.* 8*l.* 1*h.* (at 7,260 English square feet to the mow) or thereabouts; being bounded on the north by lot 2, measuring 202ft.; on the south by Balfour Terrace and vacant ground, the property of Pedro Loureiro, Esq., measuring 219ft.; on the east by the said new road behind the said Consulate, measuring 140ft.; and on the west by property of James Whittall, Esq., measuring 140ft.; registered at H.B.M.'s Consulate as lot 577. Title deed, 570.

HONG KONG.

The English mail of December 10 arrived out on the 25th of January. The dates are down to the morning of the 26th.

The *Daily Press*, with its usual alacrity to condemn, states that "the Mint scheme is in a gnarl." It maintains that a quantity of the new dollars, sufficient to test the quality of the mintage and the Chinese taste in the matter, should have been sent out from London in the first instance, so that it should have been established as currency before the Hong Kong Mint began to work; that is the experiment that should have been tried, the *Daily Press* asserts, but was not, "because Governor Robinson is a cheese-parer." Somewhat inconsistently, the writer then goes on to give what he calls "the diagnosis of the plan" the Governor did adopt to try that very experiment; which was defeated, he states, by the unexpectedly large remittances of Mexican dollars to London reducing the price of silver, and upsetting the arrangement made with the Royal Mint there. Finally, the *Press* con-

Digitized by Google

cludes—"We should like to see the mint result in a successful manner, and for that reason advocate a supply of five thousand dollars per month on account and risk of the local Government, until either the mint be working, or until the new coin shall attain a premium—that is to say, if the banks choose to purchase the currency from the Royal Mint, let them do so, and then the local Government need give themselves no further trouble in the matter."

We (*Daily Press*) understand that the Ceylon Government have sent an agent here for the purpose of engaging coolies on the same terms and principles as prevail in West India emigration hence. We have not heard the species of labour which is required, nor the cause of the running short of the Cingalese working classes; but we learn that the agent has gone to Canton to carry out the arrangements he was deputed to complete.

The following mercantile announcements have been made:—

In consequence of the retirement of Mr. V. Kresser from the Comptoir d'Escompte, I have taken (under the power I possess from the board of directors) the management of the agency in this colony.—H. Kaiser.

Mr. John Middleton, jun., is admitted a partner in our firm.—Smith, Archer, and Co.

The partnership between Mr. Th. H. Elmenhorst, jun., and Mr. F. Sander having been dissolved, all outstanding accounts will be received by Mr. F. Sander, who will sign the firm in liquidation.—Elmenhorst and Sander.

The interest and responsibility of Mr. A. W. P. Kup, in our firm, ceased on the 31st ult. and Mr. Richard Deacon has been admitted a partner.—John Burd and Co.

We have authorised Mr. Frederick C. Adams to sign our firm per procuration.—Reiss and Co.

The business of the undersigned as Public Tea Inspector and Commission Agent at Foochow, will from this date be carried on under the style of Kinnear and Co.—W. B. Kinnear.

Mr. Bapoojee Pallonjee Ranjee has been admitted a partner in our firm from the 31st October, 1864.—P. F. Cama and Co.

Mr. James C. Wardlaw and Mr. John Paterson are admitted partners in our firm.—Tait and Co., Amoy.

We have this day established ourselves at the port of Yokohama, under the style and firm of Defflis and Co., as Merchants and Commission Agents.—Theodor Defflis, John Maack.

Mr. James Davis is this day admitted a partner in our firm.—Fergusson and Co., Chefoo.

Mr. William Parizot is authorised to sign our firm per procuration from this date.—Lutkens, Roesing and Co.

Mr. Thos. D. Tillinghast is authorised to sign our firm from this date.—De Silver and Co.

Mr. Patrick Gifford is admitted a partner in our firm from this date.—Gifford and Co.

The following notice issued by the Post-office at Hong Kong is important to all merchants in the China trade:—

It is hereby notified for general information that, commencing with the mails dispatched from the United Kingdom by way of Southampton on the 20th March, and by way of Marseilles on the 27th March next, which are due in Hong Kong on the 8th May, the system of delivering letters from or through the United Kingdom, addressed to Shanghai, to the agents of the persons to whom such letters are directed at this place, will be discontinued, and from and after the arrivals of the before mentioned mails all such correspondence will be forwarded to Shanghai direct from this department.—F. W. MITCHELL, Postmaster-General.

The French barque *Nepaul* has been sent down to the Quarantine ground, off Green Island, having small-pox on board: H.M.'s *Adventure*, having the same contagious disease on board, still lies within a stone-throw of Pedder's Wharf.

On the morning of the 17th January a number of thieves broke into a house in Bonham Strand, and effected a robbery of property of the value of $200. A box which had contained some silk which the thieves had carried off was found empty near the house. On the same evening the house of a Chinese schoolmaster in Hollywood-road, was broken into, and the thieves, having blinded the owner by throwing pepper in his eyes, broke open his boxes and carried off all his clothes. On the 21st fourteen men armed with swords and other weapons broke into a shop in Fish-lane and having wounded some of the inmates, broke open the drawers and possessed themselves of $140 in notes, $60 in silver and a large quantity of clothing, with which they got away up the hill before assistance arrived. Constable Phillimore, when on duty on Bonham-road about 3 o'clock on the morning of the 23rd, heard a musket discharged in the direction of Mr. Forth's house; on going towards the spot, he saw four men crossing Bonham-road, who, on seeing the constable, ran off towards the slaughter-house. Phillimore fired and one of the men fell, but immediately got on his legs again and escaped with the others. On examining the place where the man fell, spots of blood were seen. The mat sheds and huts in the neighbourhood were afterwards searched to find the wounded man, without success. On Saturday evening, the 21st, during the absence of Mr. Lewis and his company at the Theatre Royal, thieves carried off from his house in Spring Gardens a bag containing $560 and two gold watches.

We understand that the steamer *Defiance*, lately employed at Shanghai as a tug, is now offered for sale at Hong Kong. She was built by Messrs. John Laird, Sons, and Co., of Birkenhead, of the best materials, was launched in October, 1863, and her boilers and machinery are still in excellent order.

On the 17th of January "The Colleen Bawn" was played at the Queen's Theatre. The company has recently been strengthened by the arrival of Madame Duret and Mr. Leroy, the latter of whom played *Hardress Cregan* in the above-mentioned drama. Madame Duret has achieved a great success in the character of *Lucretia Borgia*.

The British barque *Ocean Bride*, which left this, with timber, &c., bound to Nagasaki, on 21st Dec., put back to-day, having encountered a terrific gale on the 11th instant, in which she lost a complete suit of sails, and sprunk a bad leak. The vessel, as she now lies in harbour, is making over twelve inches an hour; she will have to discharge her cargo.

The following items are from the *Hong Kong Evening Mail*:—

"On Tuesday afternoon the Hamburg barque *Ida Maria* was being hove down to Messrs. John McDonald and Co.'s hulk *Revenant*, when, in consequence of a leak in her topsides, a large quantity of water got into the hold. The tackles were slacked up, and fore and main topmasts cut away, but the vessel would not righten; and the water getting up the hatchways, she soon filled and sank, her topgallant bulwarks being just above the water. The vessel, we presume, will be towed ashore, and pumped out; but the stores and the captain's property will all be destroyed, so that the loss to Messrs. McDonald, in whose charge she was considered to be, will be considerable.

"We are glad to inform our readers that we are in possession of the very latest returns procurable for the Annual China Directory, issued from this office. The changes constantly occurring in mercantile houses have rendered it absolutely necessary that the most recent information in this respect should be waited for; and we are in hopes of presenting our readers within a few days of a manual in every respect reliable.

"The Sailors' Home was formally opened this afternoon under the most favourable circumstances. Every commercial house in the colony appeared to be duly represented, and the proceedings passed off in a manner which bodes the happiest results to the institution. Nearly a hundred sailors sat down to dinner, which we trust they enjoyed as heartily as the fact will please every well-wisher of the Home."

H.M.S. *Adventure* had arrived from Shanghai with a detachment of the 67th Regiment.

We regret to find the following in the *Evening Mail*. We hoped (but doubted) that gas would have been a success:—

We regret to state that the Gas Works promise to be a complete failure. On comparison of the accounts rendered for oil and for gas by the agents of the company, we discover that the Hong Kong Gas Company is totally unable to compete with China produce. There cannot be any doubt but that a gas company providing means of good lustration in Hong Kong must succeed; but it is also true that the charges rendered by one set of people must not present too strong a contrast to those which we have hitherto been accustomed to receive from our own coolies, squeeze us as they may.

It is impossible to deny that the gas provided by the company referred to is good and pure; and it is also well enough known that every encouragement has been given to the company's agents, with a view to seeing the lustrous fluid lighting up the entire colony. We are sorry, however, to believe that the course pursued by the agents here is most impolitic. The charges for gas appear to be—we shall not say exorbitant—but such as to enable our oil coolies (whose squeezes are notorious) to compete quite successfully with the new process of illumination. This is a pity, for the simple reason that money is always valuable in the colony, and that people cannot afford to throw it away. The only solution to the problem we have suggested is that the adoption of gas at the present rates must be abandoned, and that resort must be had to the use of oil. Such being the case, we take the opportunity of warning the shareholders of the Hong Kong Gas Company to be careful of their prospects. A few wealthy men may be able to afford themselves the luxury of gas; but there are many people in this colony who will never be able to pay for such an indulgence. The agents for the company seem to forget that the foreign residents here have no desire to disburse a larger sum for gas than they at present do for oil; and should it prove that the expenses entailed upon each consumer of gas is larger than that incurred by the latter, it is easy enough to suppose that oil will rise in the market.

We hear that several individuals and firms have already determined to discontinue the use of the fluid referred to, owing simply to the rates charged; and we are not at all surprised to hear it. We should advise all who have shares in the concern to take especial notice of this fact, as

Digitized by Google

their interests may be seriously affected thereby. Nothing has hitherto been said by us, with regard to this undertaking, except in terms of praise; and there is no reason to retract what we have advanced. At the same time it is necessary to state that, unless gas can successfully compete with oil, there is no use for its introduction into this colony.

The twenty-sixth annual meeting of the Medical Missionary Society in China was held in Canton, at the house of Messrs. Olyphant and Co., on the 17th January. The report of the hospital at Canton stated that the number of out-patients attended to in Canton was 15,936, and at Fuhshan, 5,015. The number of in-patients had been 427, and more than 400 surgical operations had been performed. The Dispensary at Shiklung had been kept up by the Rev. A. Krolezyk. The number of patients attended at the Dispensary at Shiuhing, under the Rev. R. H. Graves, M.D., was 2,160. The total expenses had been $1,098.50, leaving a balance of $222.77 to next year's account. The officers for the ensuing year were chosen, Dr. Colledge, now in England, being elected President, and a vote of thanks was passed to Drs. Dods and Wong Fun for important services rendered to the Hospital, to Dr. Kerr and Mr. Graves, and to the Rev. J. H. Gray, Vice-President, and Chairman of the meeting.

From *Saturday's Gazette* we extract the following notices:—

In the absence of A. W. P. Kup, Esq., his Excellency the Governor is pleased to recognize W. C. Van Oordt, Esq., as Acting Consul for the Netherlands in this colony.

His Excellency the Governor is pleased to recognise provisionally the Honourable James Whittall, Esq., as Consul General for His Hawaiian Majesty in this colony, until Her Majesty's pleasure be known.

By Order, W. T. MERCER, Colonial Secretary.

CANTON RACES.

As on a former occasion, the Stewards circulated their regulations the previous day. For the Griffin Plate the following only appeared, and are put down in the order they came in:—

The Confederates' g. n. c. p. Warrior	1
Mr. Charlstoun's wh. m. p. Chance	2
Mr. Southern's br. c. p. Charlie	3

A foul was claimed but disallowed,

For the STEWARDS' PLATE the following came to the post, and are given in order of coming in:—

Mr. Middleton's br. n. c. p. Cossack	1
The Confederates' bl. n. c. p. Black Prince	2
Mr. Rainal's br. n. c. p. Bob	3

The SHAMEEN CUP, presented by H.B.M. Consul, drew four to the starting post.

Mr. Form's br. c. p. Tiddley Winks	1
Mr. Rainal's d. c. p. Steeple Jack	2
Mr. Southern's br. c. p. Charlie	3

The CANTON CUP was to be the race of the day; but out of seven entries only four started, and a good deal of interest in the race was thereby lost. The following is the order of coming in:—

Mr. Middleton's c. n. c. p. Bog Trotter	1
The Confederates' b. n. c. p. Black Prince	2

For the CHA-SZE CUP no Canton-bred or owned pony was entered. The race was therefore limited to the stables of Mr. Middleton and the Confederates.

Mr. Middleton's c.n.c.p. Bog Trotter	1
Mr. Middleton's b.n.c.p. Cossack	2

The CONSOLATION STAKES, for all losers, was won by Mr. Charlstoun's Chance, Mr. Rainal's Steeple Jack being second, and the meeting terminated by the usual native scramble, which was won by Mr. Southern's Charlie.

SIAM.

The Siamese Commissioners to aid in settling boundary questions had left Bangkok to meet the British Commissioners at the Three Pagodas. It is hoped that there will now be an amicable and definite settlement of the boundary question between Siam and British Burmah, which has so long been left unadjusted. After the boundaries are settled, the British Commissioners, Mr. O'Riley and Colonel Blake, would come on to Bangkok.

We publish (says the *Siam Times*) His Siamese Majesty's Proclamation notifying the appointment of a new Prime Minister for civil affairs in the northern and eastern provinces, a new Lord Mayor for the city of Bangkok, and a Secretary or Second Minister for civil affairs. These are important appointments. Officers under the Siamese Government are appointed and ranked in pairs designated *Right* and *Left*. In position and honour, the *right* has the precedence. This we believe holds good in all cases except that of the two Prime Ministers. The one for the north is ranked as the Right. The Prime Minister of the south whose name appears in all treaties with foreign Powers, and known as his Excellency Chow Phaya Srisuriwongse Samuha Phraya Kralahom, &c., &c., is the Left, but so far as we know, has ever taken the precedence in all Government affairs, and the new appointment does not affect his position.

The *Siam Times* remarks, in reference to the prohibition of the exportation of rice:—

Should the present dearth of rice, owing to scarcity and excess of rain, lead to improvement in the mode of rice cultivation, the people of Siam may look back to the years 1864 and 1865 with feelings of gratitude. The system pursued heretofore has left the rice crop exposed to two possible evils, evils which, though opposite in their natures, are terribly similar in their effects. In one part of the country the rice crop has suffered from flood, in another from drought, but in neither portion of the country was the precaution taken to prevent the ravages of floods or to obviate the consequences of drought. Were the paddy fields surrounded by embankments, it is more than probable that the effects of the floods would not have been felt. These embankments, while effectually obviating one evil, would assist materially to obviate the other. There is no evidence to show that the drought has been so extensive in the eastern and northern provinces as to dry up the creeks, rivers, and canals; and so long as there is fresh water in these, and the paddy fields embanked, there need be no dread of scarcity should artificial irrigation be resorted to. In the first place, these embankments can keep off inundations; in the second, they retain the water; so that there need be no loss save by evaporation. These self-evident precautions taken, it must be clear that the country need not suffer from two evils at once, as in the present year. And if the severe lessons now received lead to the adoption of such precautions, it will be a subject for congratulation to future generations.

MALACCA STRAITS.

PENANG.

We regret that we have no papers or advices by this mail. The dates are, we believe, down to February 3.

The captain of the British brig *Fah Kee* has made the following statement in reference to the loss of that vessel:—

"We sailed from Bangkok bound to Hong Kong, laden with teak, sapanwood, rice, and pepper. On the 23rd November experienced light airs and calms up to the 25th, when a strong north-easterly wind set in. About 6 A.M. on that day found a considerable quantity of water in the hold; commenced pumping immediately, and continued for the space of two hours, when we found the vessel was filling fast. We then lowered the boats and towed them astern, and steered nearly west for the sea coast. About 3 A.M. on the 26th, the vessel capsized and settled away with her bilge just awash. This happened in Lat. 11 deg. North, Long. 10 deg. 32 East. The Hamburg brig *Superb*, Captain H. Von Appen, was in company with us the day previous. At 11 A.M. of the day my vessel filled, she came up from the northward, and the captain kindly furnished us with a chart of the Gulf of Siam and some provisions. As soon as our vessel had settled down we took the boats and steered for the Western coast, and reached Sangora on the 14th December, and after remaining there until the 30th, we were kindly sent on elephants to Keddah by the Rajah of Sangorah. We were furthered to Penang in a boat, by the King of Keddah. The chief officer (Mr. Sands) took the long boat and parted company with us before daylight on the morning of the accident."

The *Penang Gazette* states:—

Two boats left the ship, each with six men on board; one commanded by the captain and the other by the chief officer. The latter parted company during the first night of their having taken to their boats; the former made a landing on the coast, where they remained for three days. As long as their provisions lasted all was well, but after that, being pressed for provisions, it seems that one of them went on shore to search for food; the remaining people waited for twenty-four hours, and he not returning, they left in the boat and reached Sangora, five men in all. They were, according to accounts, hospitably received by the Rajah there, and forwarded on elephants to Keddah. During the journey one man died; and arriving at Keddah the remaining people were forwarded by the King of that State to Penang. The captain and two of the crew have gone per mail steamer to Singapore. One boy, a passenger, belonging to Hamburg, remains in Penang to recover from the effects of his exposure during the journey along the coast and across the peninsula.

Births, Marriages, and Deaths.

(Announcements for subscribers are made free of charge.)

BIRTHS.

ATKINSON.—On the 10th Dec., 1864, at the South Fort, Taku, the wife of Lieut. A. W. H. Atkinson, 99th Regiment, of a son.

CALLIS.—On the 19th Dec., at 17, Hollywood-road, Hong Kong, the wife of Thos. Callis, P. and O. Co., of a daughter.

RICHARDSON.—On the 16th Jan., at Swatow, Mrs. T. W. Richardson, of a son.

MARRIAGES.

LAWRANCE—LEE.—On the 19th Jan., at St. John's Cathedral, Hong Kong, by the Rev. John J. Irwin, D.D., Colonial Chaplain, Edward Lawrance, of Shanghai, solicitor, to Mary Matilda, eldest daughter of the late George Lee, Ceylon Civil Service.

TAYLOR—MACTAVISH.—On the 22nd Nov., at Planefield, Inverness, by the Rev. Alex. M'Gregor, of Inverness, Peter Taylor, of Linwood, Renfrewshire, late commander S.S. Lightning, to Helen Mary, second daughter of Duncan Mactavish, late of Garthbeg.

DEATH.

HOIJER.—On the 7th Jan., on board the Norwegian barque Chinese-ren, on her passage from Bangkok to Hong Kong, Louise, the beloved wife of Captain Hoijer, of that vessel.

JENSEN.—Drowned, from on board the Hamburg barque Ocean, on her passage from Hong Kong to Bangkok, C. Jensen, a native of Flensburg.

NASH.—On the 2nd Jan., at the General Hospital, Hong Kong, Mark Nash, Private 99th Regt., aged 29 years.

REED.—On the 15th Jan., at Macao, F. G. Reed, proprietor Royal Hotel.

SHERMAN.—On the 15th Nov., while in England on leave, Thomas P. Sherman, late usher of the Supreme Court, Hong Kong.

WITHERS.—On the 24th Jan., at the General Hospital, Hong Kong, John Withers, Private 20th Regiment, aged 34 years.

At Shanghai, Bills on India, Rs. 309 to 311 per 100 taels. At Hong Kong, Rs. 223 to 224 per $100. Bar Silver at Shanghai, 111 taels; at Hong Kong, 8 to 9 premium. Mexican dollars at Shanghai, taels 72 per 100, and Exchange on Hong Kong, 27 to 28 discount.

The shares of the Hong Kong and Shanghai Banking Company are quoted at 25 prem., and the Hong Kong Gas at 10 discount.

SHIPPING INTELLIGENCE.

ARRIVALS.

At SHANGHAI.—From Sunderland, Jan. 15, Empress Eugene.

At HONG KONG.—From London, Jan. 16, Annie Archbell; and 21, Borealis. From Liverpool, 21, London; and 24, Tricolour. From Glasgow, 16, Tamana. From Newcastle, 21, Orion. From Cardiff, 16, Kin Lin (str.). From Sunderland, 22, Camoens. From Hamburg, 23, Antelope. From Boston, 25, Waterloo. [By an error the arrivals at Hong Kong, in our last issue, were placed under Foochow.]

DEPARTURES.

From SHANGHAI.—For Montreal, Jan. 16, Princess of Wales.

From HONG KONG.—None.

FREIGHTS AND CHARTERS.

SHANGHAI.—To London and Liverpool: Tea, £3. 5s. to £3. 10s.; cotton, £3; and silk, £4. 10s. To New York, £3. 15s. per ton.

THE PATTERNS FOR CHINA.

(COMMUNICATED.)

In the prospect of increased facilities for foreign trade with the Central Provinces of China, facilities that must be accompanied by increased competition on the part of other nations, it becomes absolutely necessary that cotton manufacturers in this country, and, of course, those exporters who favour them with orders, should give more attention to the subject of patterns suitable for the China markets. The cottons turned out from the Lowell and other establishments in the United States, and which are designed for sale in the Far East, give evidence not only of extraordinary care, but of extreme versatility of talent, applied both to colour and design. Chinese taste has its own price, and the fantastic contrast of colour and the forms and symbols which it approves, will go far to compensate for quality. Like success is not to be expected without like means. The poorest boatman paddling on a Chinese creek is ambitious to be the owner of a few yards of American cotton goods set off with glaring devices. It was thus that the Swiss manufacturers of cotton goods, when they found themselves driven from every foreign market by the competition of England and France, applied themselves, and successfully, to recover their ground in all quarters, adapting their patterns to the caprices of foreign nations, the Chinese among the rest, and found that yet coarser cotton cloths, ornamented very much as an Indian tattoos himself, with exaggerated animals, nondescript reptiles, and mythical winged dragons on a red ground, realised higher prices than superior qualities, and obtained a more ready sale.

THE PROBABILITIES OF A WAR WITH THE COMBINED BELLIGERENTS.

(THE TIMES.)

As the Federal Government maintains that it has a quarrel with us in the shape of claims which we do not acknowledge, and it has a great deal to gain by a successful war with us, the question to which we have to address ourselves is simply whether they can go to war with us with a fair prospect of success. If they can, they certainly will. The first consideration that occurs is that if the Confederates are exhausted, the Federals are only less so; and if the latter only succeed by the exhaustion of their Southern foe, they are not likely to find success easy by turning against a new foe, with untouched strength and resources. It is true that there is a large army, many of whom may now be called veterans, and all in the hands of men with some experience of actual fighting. But the soldier, in all ages, after a certain period of hardship, pines for repose, and longs for his snug farm, even though after a brief interval he is again ready for fighting. Throughout the whole of the States industry is more or less at a standstill for want of men, and it offers wages that compete with the enormous bounties and pay of the soldier. The attraction of peace will be irresistible after five years or more of this desperate work. So, we must consider whether the men will enlist again for a new war against a new and certainly not less vigorous foe. They must be paid first on the old account; and there is not a soldier in the service whose pay is not many months in arrears. But that will be as a trifle compared with the new Bill. The American Treasury, hopelessly insolvent, will have to try conclusions with the Treasury which paid a hundred millions sterling for one war ten years ago, and has been reducing taxation ever since. It would have to do this with a crippled commerce, for though both would play this game, America would have her full share of its forfeits. For every *Alabama* that has sneaked out of our ports a hundred would steam out with the British colours. New York, too, which has hitherto fought at a distance and given money rather than men, would have to bear the brunt of the new struggle, and might haply share the fate of Charleston, Savannah, and a few other of its victims. The Federal territory might not be inviolate, and if Canada can be reached it can also strike home. Long wars, distant enterprises, familiarity with command, the exercise of proconsular authority, the mutual jealousies of chiefs, and a real dictatorship at head-quarters, are sure in the end to break up a Republic. The statesmen of that Republic have lately had some reason to survey their past policy, domestic as well as foreign, and to apply to it higher and truer principles than those which satisfy the vulgar tests of every day life. They may possibly have come to the conclusion that States are not to be founded on violence, aggression, and fraud. They may discover that, after all, the New World is amenable to the same moral code, the same political wisdom, the same laws of providence, as the Old. On comparing notes, they may find that the men and the States that successively started with a very reasonable hope of conquering and annexing all Asia, all Europe, all Africa, and even all together, did not succeed, and had even to pay fearful penalties, sooner or later for the very attempt. So, putting all things together, we are inclined to believe that the Government of Washington will not attack us immediately on the conclusion of this present war, and that it will therein show its wisdom. It would, however, be most inconvenient, and costly, and disagreeable to have the quarrel hanging over our heads waiting for American convenience and opportunity. When the time comes our statesmen will have to see that we are not placed under that penance. If that, indeed, is to be our fate, and if we are to live in daily expectation of news that the United States have marched upon our provinces for the satisfaction of some old claims vamped up for the purpose, then we may be excused if we are less anxious to see the present war over than we otherwise should be.

THE ROMANCE OF SPECULATION.—THE ABERAMAN IRON WORKS COMPANY AND ITS PROMOTERS.

The story of the origin of the "Aberaman Iron Works Company," as recently told in the Court of Queen's Bench, besides being curious and interesting, is full of suggestive information for the public at large. Before we come to the action of this drama, we suppose we must introduce and describe the *dramatis personæ*. The Aberaman Estate and Iron Works, in the North of Wales, were the property of Mr. Crawshay Bailey, M.P. for Monmouth. Mr. Wickens is a solicitor, practising in Tokenhouse-yard, with a keen eye to speculative investments elsewhere; and Mr. Folch, "a private gentleman," with an itching for public companies and promotion money; Captain Antrobus was formerly an officer in the 2nd Dragoons, then a coal and mine proprietor in Yorkshire, and is now a financial agent, and not over nice as to the character and antecedents of those whom he designates "his intimate friends." Mr. Hughson, according to Captain Antrobus, was formerly an attorney at Edinburgh, but, according to his own account of himself, he "has been a financial commission agent for the last twenty years." In 1845 he had offices in Edinburgh. In 1862 he came to London and became an "attorney's clerk at three guineas a-week." He modestly denied having been engaged as a "detective" in the infamous case of Mr. and Mrs. Windham, but he admitted that he was employed for seven months in going to the Haymarket night after night to watch Mrs. Windham and give instructions to the detective engaged in the case. In answer to the Lord Chief Justice he said he went to the Haymarket to watch Mrs. Windham's cross proceedings, and to protect Mr. Windham against them—that is, as he further explained, to prevent Mr. Windham condoning his wife's offences "by keeping him away from his wife." The reader might suppose that this was not a vocation favourable to the financial genius and ability of an experienced financial agent, but he would be mistaken if he did. One part of his employment was to "treat the ladies at Barnes's, when he went to the Haymarket of a night—ladies who were useful to Mr. Windham for giving information as to the whereabouts of his wife"—and this, no doubt, involved considerable expenditure, and numerous, if not very extensive, "financial operations." To complete Mr. Hughson's story, we may as well add that he was under the lamentable necessity of suing Mr. Windham for "the £400 expenses he had been put to" in this honourable vocation; but he lost his action; that he ought to have paid the costs, but did not, and took the benefit of the Bankruptcy Act instead; and, finally, that "there was no dividend"—the lawyers (ah, those rascally lawyers!) had it all, and Mr. Hughson "afterwards started afresh."

Such being the chief actors in this speculative drama, let us now glance at the parts they respectively played in it. Mr. Crawshay Bailey agrees to sell his estate and ironworks to Mr. Wickens, and Mr. Wickens agrees to purchase them for £250,000. We are not to suppose that Mr. Wickens intended to abandon the law, and become a great landowner and ironmaster in South Wales, or that he intended to invest so large a portion of his own funds in this purchase, for it does not appear that Mr. Wickens contemplated any such thing. His purpose was to buy the property from Mr. Bailey for £250,000, and to sell it again to a joint-stock company for £350,000, which would leave him the rather handsome profit of £100,000 for his trouble and expense in the little affair. This, if it could only be accomplished, would certainly be an improvement upon the routine practice of the attorney's office, and infinitely better than the slow accumulations of six-and-eightpences and three-and-fourpences from ordinary clients, however numerous or litigious they might be. In order that it might be accomplished, Mr. Wickens associated himself with Mr. Folch, the "private gentleman," and they mutually agreed to become the joint promoters of the intended joint-stock company, and joint participators in the profit to be made out of it. But, first and foremost, there was a deposit of £10,000 to be paid to Mr. Bailey, and as neither Mr. Wickens nor Mr. Folch had available resources equal to that demand, it must be "raised somehow." That required a "financial operation," and financial operations necessarily require financial agents, and forthwith Messrs. Antrobus and Hughson stepped upon the scene. Mr. Folch had known Captain Antrobus five or six years as a person engaged in financial transactions, and, meeting the Captain in the City, explained to him what they required. They had already been trying, through some third party, to get the £10,000 for the deposit from Messrs. Barclay and Co., but this third party, whose modest name did not transpire, wanted £75,000 out of the £100,000 profit, as his remuneration for getting the £10,000, and to leave the remaining £25,000 only for Messrs. Wickens and Folch. This the latter gentlemen evidently thought unreasonable;

Digitized by Google

and perhaps it was rather so. Even the Lord Chief Justice, who in his day has seen some practice, and had no little experience in such matters, could not help exclaiming that "these revelations were really startling." Mr. Folch explained that they were willing to give £5,000 for the advance of the £10,000 for six months; "but," said the Captain, "I said that was not sufficient, and that £10,000 at least would be required for the advance." "That," said the Chief Justice, "would be 100 per cent." "That," said Mr. Hawkins, "would be 200 per cent., for it was 100 per cent. for six months." But Mr. Folch, nevertheless, agreed to pay that amount. Besides this deposit, however, there was another financial operation to be achieved. The promoters were anxious that the company should come out with 10,000 shares already taken up; "because," said Captain Antrobus, "it would naturally look better before the public with 10,000 shares taken up." Mr. Folch thought "they could do 2,000 shares if Captain Antrobus could do the rest;" and this the Captain thought he could do.

And now we come to another important actor in the drama. Captain Antrobus mentioned the matter to his intimate friend Mr. Hughson, and Mr. Hughson shortly afterwards introduced him to his friend Mr. Logan, the manager of the London Bank of Scotland. Mr. Logan seems to have stipulated that, if his bank advanced the money, they should have the account of the company, and that three of the directors of the bank should be placed on the direction of the company, and for this honourable distinction he selected Mr. Cargill, M.P., Sir D. Hay, M.P., and Mr. Collins. Upon this understanding, although there was a good deal of "off and on" negotiation, the bank appears to have arranged to advance the whole or part of the £10,000 for deposit, and of the £8,000 for the 8,000 shares, for which they were to receive £8,000 bonus. And Mr. Folch at last appears to have agreed that Antrobus and Hughson should have two sums of £5,000 each for procuring somebody to advance the £10,000 and the £8,000. But in the meantime Mr. Logan had ascertained the amount the promoters were to make by these transactions, and he then found that a bonus of £8,000 was not enough for the advance of £8,000 on the shares, and wanted £16,000 for making that advance! At the mention of these astounding facts and figures the judicial wig of the Lord Chief Justice was seen to be slowly rising above his judicial head, and his lordship was constrained to explain this remarkable phenomenon by gravely telling the Court that "these revelations actually make one's hair stand on end;" on which the learned counsel, feeling his own horsehair rising, gravely replied, "Indeed they do, my lord." But even this was not the end of Mr. Logan's insatiable demands, for on the 16th June he wrote a letter stating that "a larger bonus than £10,000 would be required for the advance of the £10,000 than merely double that amount, but that the £16,000 could be settled as arranged." Mr. Wickens appears to have been party and privy to these arrangements with the London Bank of Scotland, but to have sedulously avoided any contact or intercourse with Messrs. Antrobus and Hughson, which might have committed him to the arrangements made with them by his co-promoter, Mr. Folch. What the bank ultimately advanced in these transactions, and what they made by their advances, we do not know, and do not care to inquire. At the last moment it seems the bank declined doing anything, but Mr. Wilkinson, their solicitor, at the same moment came forward and did everything that was necessary. Messrs. Wickens and Folch repudiated their engagements to Messrs. Antrobus and Hughson, and, therefore, Messrs. Antrobus and Hughson jointly sued Messrs. Wickens and Folch for the recovery of the two sums of £5,000 each, which they had agreed to pay them. All the agreement they could prove, however, was with Mr. Folch alone, and did not include Mr. Wickens, and they could not prove that the arrangement they had made with the London Bank of Scotland had been carried out, for it seems to have been carried out through their solicitor, Mr. Wilkinson. The jury found that the agreements aileged had been made, but not with both parties, and so the plaintiffs lost their action, and the other parties "got off." We can have no sympathy with either one party or the other, for neither of them merit any. But we beg to tell Mr. Logan, and the directors of the London Bank of Scotland, that such transactions, however profitable they may be, are not banking transactions, and do not fall within the legitimate province of joint-stock or any other banks, and that the transactions disclosed in this trial are thoroughly discreditable to each and every one, without any exception, of the parties concerned in them.

HONG KONG AND WHAMPOA DOCK COMPANY.

Pursuant to notice, a meeting of the shareholders of the Hong Kong Whampoa Dock Company took place on the 24th inst., at which the following proprietors attended:—

T. Sutherland, Esq., Peninsular and Oriental Steam Navigation Company.

Geo. J. Helland, Esq. (Messrs. John Burd and Co.).

Captain John Townsend, P. and O. ship Fort William.

John S. Lapraik, Esq., and Edward Wallace, Esq. (Mr. Douglas Lapraik's).

A. Sassoon, Esq. (Messrs. David Sassoon, Sons and Co.).

C. Bertrand, Esq., Messageries Imperiales Company.

W. Schmidt, Esq. (Messrs. Fletcher and Co.).

A. Booth, Esq., and A. Bourjau, Esq. (Messrs. Bourjau, Hubener, and Co.).

O. Burrows, Esq. (Messrs. S. E. Burrows and Sons).

H. B. Gibb, Esq. (Messrs. Gibb, and Livingston and Co.).

R. Brand, Esq., and Geo. Smith, Esq. (Messrs. Smith, Kennedy, and Co.).

E. C. Smith, Esq. (Messrs. Turner and Co.).

G. N. Minto, Esq., Manager Hong Kong and Whampoa Dock Company.

The following Resolutions were unanimously carried:—

I. Proposed by Mr. E. C. Smith, and seconded by Mr. M. Bosman—

That on the 1st July, 1865, the deed of settlement shall be altered so as to raise the subscribed capital of the company to $750,000 in 1,500 shares of $500 each.

II. Proposed by Mr. R. Brand, and seconded by Mr. W. Adamson—

That the existing 120 shares shall be sub-divided into shares of $500 each. Every proprietor of one old share receiving scrip for four shares in the new stock without further payment than that already made—viz., $1,500 dollars per share.

III. Proposed by Mr. A. Sassoon, and seconded by Captain Soames—

480 Shares being appropriated, according to the foregoing resolution, the remainder of the Stock, viz., 1,020 Shares, shall be offered to the Public, and allotted by the Directors according to the best of their judgment for the interests of the Company, applications from the present Shareholders having a right of preference.

IV. Proposed by Mr. Bosman, and seconded by Mr. Levysohn—

That the latest date for receiving Applications for Shares shall be the 30th of April next, and that the allotment shall take place in time to enable the first call to be paid on or before the first day of July following.

V. Proposed by Mr. H. B. Gibb, and seconded by Mr. O. Burrows—

That arrangements be made to register the Company under the Limited Liability Act, about to be passed in this Colony.

In conformity with the foregoing resolutions, the directors have to intimate that applications will be received for shares in the company's new stock to the 30th April next, immediately after which date the allotment will take place. It is also notified that the calls on the new shares are intended to be made in the following manner:—

On 1st July, 1865	..	$100 per share.
1st October, 1865 ..	..	50 „
1st January, 1866 ..	..	50 „
1st April, 1866	..	50 „
1st July, 1866	..	50 „
1st October, 1866 ..	..	50 „

Any further calls necessary will be made at intervals of not less than three months. Dividends will of course be payable from the actual date of calling up each instalment. Interest will be charged at the rate of 12 per cent. per annum on overdue calls.

Forms of application for shares and further particulars may be obtained at the secretary's office.

By order of the directors. D. LAPRAIK, Secretary.

Hong Kong, Nov. 28th, 1864.

THE NEW MINISTER FOR WASHINGTON—SIR FREDERICK BRUCE.

(THE TIMES.)

The public will hear with great regret that Lord Lyons has been compelled by the state of his health to resign the post of British Minister at Washington, which he has filled for six years with so much ability and judgment. No one, indeed, who knows the nature of the work which he has had to discharge during the last four years of his office will be surprised at his being compelled to retire. The mere physical labour which has been entailed upon him would alone be enough to account for the necessity of his resignation. Mr. Layard gave an account the other night of the business which has been transacted during the last three or four years at the Washington Embassy, and, except upon such authority, the amount would be almost incredible. The correspondence of one year filled sixty large folio volumes. In less than three years there were 13,948 entries of single despatches in the Foreign-office registers, and nearly all of these contained enclosures, one of them having no less than 203. The close and multitudinous relations of this country with America have, in fact, been entangled and twisted in inextricable confusion, and these voluminous letters and enclosures are probably but an inadequate representation of the innumerable knots which Lord Lyons has had to untie. Questions of blockade and of nationality, complaints from British subjects, demands by the British Government, the voluble despatches of Mr. Seward, and his incessant demands and representations—all these combined have tasked the energies of the Mission and the supervision of the Minister to a probably unprecedented extent. But the amount of the business thus transacted must, after all, have been the least part of its burden. The anxiety of the office must have been far more trying than its labour. Seldom has there been a more important post at a more critical time. The consequences which have depended for the last few years on the due conduct of our relations with the United States have been momentous in the extreme, and there has scarcely been any moment within that period at which those relations might not have been compromised by a failure in courtesy or discretion. Mr. Lincoln's Government, indeed, has, it must be confessed, displayed a creditable or a prudent self-control under the various excitements of the time; yet the temper of the American public has constantly been such that a slight indiscretion on our part might have made it impossible for the President and his Minister to be more moderate than the people whom they represent. It reflects the greatest credit on Lord Lyons that during this critical and difficult period he has uniformly smoothed the roughnesses and adjusted the difficulties which arose, and that Mr. Layard could say the other night that "in no one instance has he not received the entire approval of Her Majesty's Government."

The more satisfactorily, however, he has filled his difficult post, the greater our regret at his enforced retirement, particularly at a moment when clouds on all sides threaten a difficult if not a stormy course to the pilot of our interests in America. Lord Lyons has seen the ship of the American State drift from a safe harbour into the unknown waters of a dangerous and tempestuous sea. It is no wonder if he is overwearied by the strain of watching her perilous course, but he resigns a difficult and uncertain task to his successor. It is, indeed, extraordinary to reflect upon the changes which his comparatively short term of office has witnessed. A period is not always to be measured by the mere lapse of time, and a succession of events has been crowded into the six years of Lord Lyons's employment which would have been thought, not long ago, too many and too vast for the lifetime of one man. He was appointed in 1858, yet what an era has passed since then! Three short years have witnessed the violent disruption of the greatest Power in the New World, the growth of a war almost unexampled in its magnitude, and, whatever may be the ultimate result of the struggle, the utter subversion of all the most cherished institutions of a great and prosperous nation. When Lord Lyons went

Digitized by Google

to Washington the United States stretched in peaceful and prosperous dominion from the Gulf to the St. Lawrence and from the Pacific to the Atlantic, they were the favourite model of free and Republican institutions, they scarcely possessed an army, they had an absolutely insignificant debt, and the whole energy of their industrious and vigorous population was devoted to commerce, to agriculture, to learning and the arts. Lord Lyons leaves them in the convulsions of a political earthquake. One vast chasm yawns from East to West, dividing by blood and fire two hostile sections of a scarcely kindred race; Republican institutions are rapidly becoming Imperial in almost all but the name; personal freedom is a memory of the past; enormous armies, like swarms of locusts, devour the face of the country; a debt unparalleled for its growth and threatening aspect overshadows the resources of the nation, and the whole energy of the people is withdrawn from the lifegiving exercise of peace to the exhausting fever of war. When Lord Lyons first went to his mission the country he was accredited to was the United States. It is difficult to say what it should be called now, and impossible to foresee what it will be. Those six years, in fact, have seen the rise and the development of a tremendous revolution, and if we are sending out a new Minister it is to an entirely new state of things.

The successor of Lord Lyons in this momentous post will be Sir Frederick Bruce, who at present holds the office of Minister in China, but happens opportunely to be in England. There is no reason to doubt that in making this selection the Government have had ample regard to the qualifications necessary for the office. Sir F. Bruce has greatly distinguished himself by his conduct of our troublesome negotiations with the Court of Peking; and though he will have very different persons to deal with in Washington, yet a man who has been energetic, acute, and successful in one place, will probably be energetic and acute, and will at least deserve to be successful in another. Perhaps, in the surging sea which American politics represent at the present time an intimate acquaintance with the recent traditions of our Ministry at Washington may be of less importance than it would have been otherwise. The movements are so rapid, the influences so uncertain, that the course pursued at one moment may have to be forgotten the next. But though Sir F. Bruce has not been recently employed in any post connected with his new office, he is not entirely inexperienced in American affairs. His first employment was when attached to the late Lord Ashburton's special mission to Washington in 1842, when the famous Ashburton Treaty was negotiated. Subsequently, for a year, he was Lieutenant-Governor of Newfoundland, and from 1847 to 1851 he was employed in various posts in South America. Four years after this he went with his brother, Lord Elgin, to China, and has since been entirely employed in that country.

By a fortunate coincidence he will arrive in America just when Mr. Lincoln will have entered upon his second term of office. It will, perhaps, have an opportune significance that a new Minister should thus be accredited to the United States at the commencement of this new period in her annals. A wild fancy had a little time ago possession of the American mind that England and France contemplated a sort of underhand recognition of the Confederacy on the 4th of March by acknowledging Mr. Lincoln as President only of those States which had taken part in his election. The incredulous surprise with which this announcement of our intentions was received on this side of the water would have been sufficient to convince the public of most countries of their mistake. But the Americans are peculiarly hard to convince against their will, and it may be fortunate, therefore, a marked refutation will be given to their delusion. The arrival of a new Minister accredited to the Government whose authority we still acknowledge will be a more conspicuous evidence of the fallacy of these strange anticipations than the return of Lord Lyons. It may, perhaps, be made more evident that instead of in any way slighting their Government, we are paying it the distinct attention of selecting a new Minister to represent us.

THE LAST ACCOUNTS FROM CHINA.

(THE TIMES.)

The news from China is that every part of the vast Empire is more or less distracted by insurrection, brigandage, and discontent. Even the distant Western provinces, far away from us and our traffic, have each their little rebellion; and the rich Sz'chuen, where every Chinaman is said to be well fed and well dressed, has an immigration of the old Taiping locusts feeding on its fatness. It is the normal condition of an overpeopled country, with a chain of Government rusted and rotten in every link. The only matter which greatly interests us practically is to know how near these people are to our commercial ports, and what effect they are likely to have upon our interests. We heard some time ago that seven provinces had been proclaimed in the *Peking Gazette*, that a great number of cities had been just taken and sacked, and that a seaport which was about to be opened to our trade had been attacked and destroyed. But when we are now told that the disorganised bands of the Taipings are in considerable force in Fohkien, and hold a large portion of Chekiang, and have had hard fighting in Kiangsi, the ordinary reader derives about as much information from these tidings as if he had been given to understand that they had taken possession of that hemisphere of the moon which is hidden from human observation. It may be useful, therefore, to those who may desire to retain some general knowledge of the progress of events in the extreme East, to state that these two provinces of Kiangsi and Fohkien occupy that part of the empire which extends about a hundred and fifty miles south of our treaty port of Ningpo to a point about a hundred miles north of Canton, and that this region includes the habitation of nearly forty millions of inhabitants, and the larger portion of the coast line between Canton and Shanghai. Fohkien is a maritime province, and contains our two treaty ports of Foochow and Amoy, and Kiangsi is the province which lies immediately behind it, inland, and extends up to the Yangtze river. Its name, indeed, is said to mean "the Province West of the River." From the statement of our correspondent —who now appears to think that Canton itself is again in danger—it would appear that the operations of the insurgents are not confined to these provinces, and it may be generally assumed that the disturbances include all the coast countries which lie between Ningpo and Canton, and also the mountains and vast tea districts which lie inland from this coast. It would be scarcely worth while to offer this explanation. except to point out that, although the marauders have been driven away from the celebrated thirty miles radius round Shanghai, the countries they still infest are districts in which we have a special interest. We have a great although not quite a regular trade at Swatow; and Amoy and Foochow are two treaty ports, whence we export immense quantities of tea. From the districts lying behind these ports all that tea is brought down.

The new rebel chief who, with an army of 50,000 well-appointed troops, has established himself at a city called Chang-chow, within easy distance of Amoy, seems inclined to cultivate the good graces of our merchants, and hopes to be allowed to occupy the treaty port of Foochow. It is evident, indeed, that these chiefs are capturing large cities in the immediate neighbourhood of Swatow, Amoy, and Foochow, and it seems unavoidable that we must again be brought into contact with them, at places where it is by no means so easy to deal with them as it was at Shanghai. At Amoy there is no separate European settlement as there is at Shanghai, and Foochow is situate some miles up a narrow river of difficult navigation. In both these ports the Chinese and the European merchants are mixed up together in their habitations, and there would be great disaster if these places were sacked or burnt. We do not mean to suggest that there is any great danger of such an occurrence, but it is as well to be aware of the position. It will account for the intelligence that the *Janus*, the *Flamer*, the *Dove*, and the *Swallow* are all now lying at Amoy. It seems very hard that we never can be allowed to trade in peace with this strange people, and that a Government so intractable to foreigners and so absolute in many respects over their own subjects cannot or will not keep their own cities in a state of defence against mere brigands. So, however, it is, and there seems to be no help for it. We may congratulate ourselves. however, that there is no longer a costly China expedition engaged in this Far East, and as we must employ a large navy somewhere or other, and as the China trade is very profitable and very necessary to us, perhaps we ought not to repine at having to keep a ship or two and a few gunboats on the coast of China, where they see more service and are not more costly than they would be while expending their stores in the Channel or sunning themselves in the Mediterranean. This is the pleasantest way of looking at the affair, but, after all, we cannot help thinking that we ought not to have to do this work, and that the time may come when we may not be able to spare the men and ships to do it.

Our principal object, however, in calling attention at this moment to the Chinese news is to deprecate what seems to be a very imminent danger of European and American vagabonds being banded together to oppose these Asiatic vagabonds. The remedy for the desultory rebellion, which seems to find favour with the public of Shanghai, is that the Chinese officers shall, each in his city, district, or province, employ any European or American leader of mercenaries who may happen to be at hand. Wild adventure and rapid fortune are said to offer themselves as the certain prizes of this occupation. D'Aiguebelle, the leader of a Franco-Chinese contingent, is reported to have returned to France with immense wealth, accumulated during 15 months' service. There are thousands of martial adventurers in France who have been strongly excited by so seductive a success. Not only France, but Belgium, Spain, Italy, and England herself, might in a few days show a large number of daring freebooters all ready to cut slices with their swords out of this great China pudding. Is it quite certain, however, that the security of English merchants would be greatly increased, even at Swatow, or Amoy, or Foochow, if we had several bands of these chivalrous hirelings in our immediate neighbourhood? For our part, we would rather trust to force or negotiation to make terms with an army of Taipings than try conclusions with a civilized bully who had a crew of half-disciplined cosmopolitan ragamuffins at his back. About ten years ago the Portuguese of Macao were in the habit of fitting out convoy fleets, which undertook for a certain hire to protect the fishermen of the coast from the Chinese pirates. This lasted for some time, and was very profitable to the Portuguese; but the exactions, cruelties, and robberies of these "protectors" became at last so unendurable that the Chinese fishermen and villagers, aided perhaps by some rival convoymen, watched an opportunity and burnt the convoy fleet and massacred all the Portuguese officers and sailors, shooting them down in the very suburbs of Ningpo. Of course some inquiry was made in Europe, and Lisbon was in a ferment; but after the circumstances had been investigated the conduct of these men was found to have been so atrocious that it was thought better to let the whole matter slide into oblivion. This was but the natural end of any merely mercenary force. What happened on the sea ten years ago would happen in multiplied instances on the land now; and whether the leaders were English, French, or American, they and their followers would soon become much greater pests than even the Taipings themselves. We submit that instead of encouraging these hireling bands the policy of Europe ought to be to unite and put them down.

The time seems to be now come when our policy towards China should be to keep just force enough to protect our trade, and to leave the rest to the Chinese Government. We have arrived at the position which was anticipated by the late Lord Elgin in his address to the merchants of Shanghai. The moment seems opportune to remind them of the wise advice then given. "I am of opinion," said Lord Elgin, "that when force and diplomacy shall have done all that they can legitimately effect, the work which has to be accomplished in China will be but at its commencement." The work thus designated by Lord Elgin was pointed out by him to be of a mixed moral and physical character—the first and by far the most difficult, "to win a way for Christian civilisation among a sceptical and ingenious people." But "at the same time," said Lord Elgin, "the machine-facturing West will be in presence of a population the most universally and laboriously manufacturing of any on the earth. It can achieve victories in the contest in which it will have to engage only by proving that physical knowledge and mechanical skill applied to the arts of production are more than a match for the most persevering efforts of unscientific industry." This prediction is now performed. Force and diplomacy have gained all their reasonable conquests, and ought only to be used to preserve what has been won. It is in the spirit of Lord Elgin's counsels that we desire to keep these rowdy bands out of China.

LONDON, WEDNESDAY, MARCH 8, 1865.

THE EMPEROR OF CHINA.

IT has often been a subject of remark, on our own part as well as by others, that the information we possess respecting the inner life of the Court of Peking is scanty in the extreme, and, we may say, disappointingly so, when we reflect on the increased facilities for observation which the last few years have afforded. Three winters have now passed since the curtain which shrouds so jealously the "Forbidden Palace" was raised for a moment to disclose that strange scene of rivalry, intrigue, and sudden execution which terminated in the removal of the arrogant Council of Eight, in the elevation of Prince KUNG, the youthful SOVEREIGN'S uncle, to the highest posts of dignity and influence, and in the acceptance by the two EMPRESSES of the position of Joint-Regents. Since the memorable days of November, 1861, however, when the publication of a flood of State papers threw a temporary light on the arrangements of the Imperial household, we have had absolutely no particulars respecting the progress of Court affairs or the education of the youthful ruler. We have, on this account, made it our business lately to seek for such information as was attainable, and are glad in being able to present our readers with the results we have obtained from highly trustworthy sources. It will be remembered that, at the time of the death of the late Emperor, HIEN-FUNG, on the 22nd August, 1861, his only son, then only in his eighth year, was proclaimed as his successor, under the title of T'UNG-CHIH—two characters which it has been pronounced impossible to translate, but which may be rendered as meaning something like "Government by Union." The will of the deceased SOVEREIGN was proclaimed as appointing eight of his late Councillors, representing the most obstinate supporters of the old exclusive system, to the Regency of the Empire; but in the following November this arrogant and corrupt coterie was destroyed by the *coup d'état* carried out by Prince KUNG, who executed its leading members and banished the remainder, under authority derived from the EMPRESSES, declaring that they had promulgated false representations of the last wishes of their deceased master. The two ladies who figured so prominently in this Court revolution were both young, and doubtless beautiful, if judged according to the Chinese taste. The elder, though the principal consort of the late SOVEREIGN, had proved childless, whilst her associate, the fortunate mother of the heir to the throne, had been a mere concubine among the many who graced the Imperial harem. Resentment at slights to which they were subjected by some of the members of the Regency had induced them to favour the conspiracy which led to the destruction of that body; and, while accepting in name the vacant position, they were doubtless by no means loth to abandon to their brother-in-law Prince KUNG and his councillors the greater share of the labours of Government. A curious Chinese document is now before us, which we believe has never hitherto been published, and which contains the regulations adopted by the EMPRESSES on their acceptance of the Regency. A precedent had luckily been disinterred from among the venerable archives of the T'ANG dynasty, nearly a thousand years ago, which gave authority for the conduct of affairs of State by a female; and it was accordingly arranged, with solemn minuteness, that the Regents—shrouded by a curtain—should give audience to public functionaries, and in like manner preside at the official receptions, which form the principal duty of the occupant of the throne. Their Imperial son, young as he was, could not be exempted from the ceremonial, and, enthroned before the curtain, was to receive the homage of the prostrate officials, whilst his guardians pronounced from their seclusion their answers to memorials or their commands on the conduct of affairs.

Of the two EMPRESSES, we have been told that the elder, or EMPRESS DOWAGER (as she may be called, having been the principal consort of the deceased Sovereign), is of Manchoo origin, and had received a careful education, extending to both the Manchoo and Chinese languages. She is also said to be the guiding genius in the Government, being possessed of great powers of intellect and of much intelligence. The EMPRESS-MOTHER is also an able and energetic woman, but not educated, though well acquainted with the management of affairs. She makes many inquiries, it is said, with reference to the intrusive foreigners, who have caused so much confusion in the once quiet capital. We can scarcely hope that her surroundings are likely to convey to her very truthful notions of our real character, and it is probably fated that the throne in China will be the very last corner to which a gleam of enlightenment will be permitted to penetrate. This we cannot hope will take place until the SOVEREIGN himself shall have actually come in contact with the European Ambassadors, and shall have learnt from positive view and experience that the "barbarians" are not so terribly barbarous after all. The confessions of many high Chinese officials of their agreeable surprise on meeting with polished and intelligent persons when first making the acquaintance of the dreaded foreigners, shows to what an extent personal influence proves useful in subduing the prejudices with which the European character is still so largely invested; but it appears that Her MAJESTY'S Government has not yet thought fit to insist on our Ambassador's privilege of entering the Imperial presence. It is doubtless argued that during the minority of the boy-ruler an audience would be a purely formal ceremony, from which no diplomatic results could be extracted; but, on the other hand, it may also be said that so long as the Imperial circle derives all its impressions of the foreigners from the gossip of prejudiced courtiers or the reports of wily officials, we run a risk of gaining such a character as, impressed upon the EMPEROR'S youthful mind, may confirm him as he advances to maturity in unfavourable prepossessions. We trust that the time will ere long come when our Minister's position may be considered sufficiently well-established at Peking to warrant his demanding an occasional audience, which could be fully justified to the EMPEROR'S advisers on the ground of similar privileges in European countries.

Apart from his training in the grave deportment of the reception-hall, the young EMPEROR is, as may be expected, carefully instructed in all the Confucian writings, which constitute the "be-all and end-all" of Chinese State and family administration. His chief instructor, a Cabinet Minister of Mongolian extraction and of the highest reputation for wisdom and learning, is assisted by a shoal of lesser preceptors; and in the regulations prescribing His MAJESTY'S course of study it is expressly provided that the strictness of the teacher is not to be forgotten in the deference of the subject. The Imperial pupil takes his lessons seated at his desk, whilst the instructor stands a step lower and at the *side* of the table. Even here we find the cramped precision of Chinese etiquette binding mind and body in its unhealthy trammels. Will all the ethics of CONFUCIUS suffice to guard the youthful student's mind from the enervating influences of constant slavish adulation? It is not, however, in books alone that the EMPEROR is to become an adept. We learn from a correspondent in China that he is already trained in military exercises, which form the second branch of a Chinese polite education. Six hours are consumed every day in the study of the Confucian books and of caligraphy, after which His MAJESTY pursues a course of archery, of which he is said to be very fond, and which constitutes the principal portion of Chinese military excellence. As yet, however, the young EMPEROR is said not to have evinced any decided tendency to either *wen* or *wu*—to either martial or literary pursuits. He takes great delight in frequenting the pleasure-grounds which surround the palaces, both within and without the walls of Peking, and which have always been the glory of his ancestors, since first enlarged and beautified shortly after the conquest in the middle of the 17th century. Two or three boys, the sons of high officials, are selected as the fellow-pupils of the young EMPEROR, he being somewhat disinclined to study. It is hoped that emulation with other boys will excite him to studious pursuits.

Digitized by Google

The young EMPEROR is said to be of a very impetuous temper, and that he often quarrels with his teachers.

The inhabitants of Peking still speak of his father, HIEN-FUNG—who is remembered as a tall, emaciated figure, nearly six feet in height—tottering in these pleasure-grounds between two attendants, who supported nearly the entire weight of his body. Dissipation beyond all bounds had made him at thirty a feeble, querulous old man, and he sank, worn out in the prime of life, on a death-bed embittered by the remembrance of his recent defeat at the hands of the hated foreigners. We must hope that, as the years go on, any legacy of dislike which may be rankling in the mind of his young successor may be removed by just and sensible conduct on the part, not only of our own, but of all the foreign representatives at Peking.

SINGAPORE AND AUSTRALIA.

AMONG the enterprising projects of the day tending to develope the resources of our possessions in the Far East, and extend British influence to the *further South*, the most promising is the founding of the new colony of North Australia, on that portion of the island-continent marked on the maps "Arnhem Land." This undertaking has been matured by the Government of South Australia; who have the northern territory exclusively within their control, under the authority of Her MAJESTY in Council, in consequence of the public spirit shown by the colonists in supporting expeditions, especially that of the indefatigable explorer MCDOUGALL STUART, to discover the nature of the interior. Formerly that was supposed to be chiefly desert land, a second Sahara, incapable of supporting even the aborigines. This erroneous conclusion has been dispelled by the reality, which presents a rich country within the tropical zone capable of growing every product of the East, and pasturage on the upper lands for the beeves and flocks of the Australian settlers. This twofold advantage of the country possessing the capabilities of a temperate and tropical climate, will conduce greatly to its success as a field for rearing cattle and sheep on the one hand, and rice, cotton, and sugar on the other. From the latest accounts the expedition forming the government of the settlement, under the superintendence of Colonel FINNISS and a competent staff of surveyors, have fixed on a site for the future capital of the colony at "Adam Bay," near the mouth of "Adelaide River." This stream is described as being navigable for vessels of the largest tonnage, at least sixty miles inland, flowing through a rich alluvial country, well watered everywhere, abounding in good timber, and abundance of pasturage for cattle and sheep. Although the climate is tropical, there is evidence that it is neither so hot nor so humid as countries within the corresponding latitudes north of the equator; and there is every reason to conclude that it will partake of that general salubrity which characterises the southern regions of Australia compared with the healthiest in other parts of the world. But what particularly recommends this new colony to our notice is its proximity to the Eastern Archipelago, especially Singapore and her sister settlements in the Malacca Straits. Here is another link in the chain of the British dominions that encircles the globe; destined to divert the current of steam navigation and the lines of telegraph by a better route to the colonies of Eastern Australia than any yet in operation; and as the construction of a telegraph across the country to South Australia may be accomplished, it will supersede all lines in contemplation. Again, this new colony is in the route of ships bound from Java to Sydney; and a line of steamers might trade profitably from China and Manila *via* Torres Straits, where at present passengers have to travel the roundabout voyage by way of Point de Galle. In that case the long dreary passage of 3,336 miles between that point and King George Sound would be avoided; while the voyage from Hong Kong to Sydney, which now takes thirty-nine days, would be accomplished in twenty-four or twenty-five days, thereby saving a fortnight.

Once this new colony is matured there is every reason to expect a large influx of Malays and Chinese, who appreciate British rule above all others as a Government to live under in peace and security. So soon as they learn that the land is good for cultivating tropical products, and that the British flag flies there to protect them, they will come in large numbers to settle as coolies or small cultivators of rice and cotton. Already the natives of Timor and the adjacent islands visit the bays on the coast to fish for *trepang*, or sea slug, so much prized in the East as an article of food. These people used to call at the old settlement of Port Essington and evince a great desire to trade with the military and naval depot there, which they could not reciprocate as that was merely a harbour of refuge, since abandoned. There is every probability, therefore, of considerable traffic arising between the colonists of North Australia, and the inhabitants of these isles, many of whom are Christians, with an admixture of Dutch blood in their veins, from the seamen of that nation who settled there centuries ago. We learn, also, that many French creoles from the Island of Bourbon or Reunion are desirous of emigrating from that over-peopled little isle to settle in the northern territory of Australia as cultivators of tropical produce; and the local French newspaper there warmly advocates their immediate departure for the new British colony.

In view of these advantages for the successful colonization of this newly acquired territory by the Government of South Australia, a number of enterprising colonists and others have formed themselves into a company for the purpose of developing the scheme, which promises to be a profitable investment. The first and main object of the North Australian Company's proprietary was to secure large tracts of freehold land at the public sales established in London, in March, 1864, under the auspices of the Agent-General for South Australia. That object has been attained, and the company now holds the fee simple of many preliminary blocks of country lands and town allotments, or rather the "land orders," representing those sections, to be selected by a local manager as soon as the country is surveyed, and the land declared open for selection. Of course the prospects of this company depend entirely on the success of the colony itself, as the large extent of land which they hold in town and country must realize treble the cost at least, if there are people to buy the allotments. We wish both the colony and the company every success; and we have no fear that the energy and enterprise of the South Australians—who have overcome greater difficulties before now—will surmount all but the most overwhelming obstacles. Moreover, they are entitled to the full support of the Home Government, as the occupation of this outlying portion of Australia might be accomplished by the French, who are on the look out in those seas for the extension of their power in rivalry to the British. Further news is expected shortly from the Government Resident, Colonel FINNISS, which we shall not fail to put before our readers when it arrives.

CEYLON.

Every facility and accommodation in banking operations is now afforded to merchants, planters, civilians, and others connected with Ceylon, no less than four of the London banks doing business with the East having agencies in Ceylon, namely, the Oriental Bank Corporation, Chartered Mercantile Bank of India, London, and China, the Bank of Hindustan, China, and Japan, and the Asiatic Banking Corporation. Not only are the advantages of railways and telegraphs to be enjoyed by the colonists, but gas and water improvements are to be introduced. The Ceylon Gas and Water Company, whose offices are at 76, King William-street, City, are in negotiation with the Ceylon Government for a concession, and when the terms of this are definitively agreed upon operations will be commenced, and Ceylon will then not be behind the other Eastern colonies in the comfort and advantages that result from scientific appliances in illuminations, and ready and abundant water supply to dwellings.

FRENCH COMMERCIAL RELATIONS WITH CHINA AND JAPAN.

THE "Exposé de la Situation de L'Empire," presented a few days since to the French Senate, in commenting on the relations of France with the Far East, adverts to the increase of French tonnage on the coasts and rivers of China, the evidences as to the further development of commerce in that quarter, to the favourable influence on trade likely to be exerted by the acquisition of Nanking for a foreign settlement, and states that arrangements have been made for obtaining a suitable site in the suburbs of Hankow for French residents, that a consular office is about to be opened at Ningpo, and, finally, that special privileges have been obtained for French shipping in the trade between Cochin China and the Chinese ports. Improved relations with Japan are referred to with satisfaction; the attack on Simonoseki is regarded as having broken the spirit of resistance which impeded the fulfilment of treaties, and as having decided the Court of Yedo to execute its engagement with foreign Powers. The late Japanese Ambassadors to Europe undertook, among other

Digitized by Google

things, that a monetary compensation should be rendered for the murder of a French officer in Japan. The report looks hopefully on future trade relations with that country, and acknowledges the important service which the Japanese supplies of raw silk have conferred on the manufacturers of France.

SCHEME OF A FRENCH IMPERIAL FACTORY IN CHINA.

THE project entertained by the French Government of establishing an Imperial Factory in China, the headquarters of which shall be in Nanking and Shanghai, is not without certain recommendatory features. No means, probably, could be devised by our continental neighbours better calculated to promote, or, at least to stimulate their trading interests in that quarter, unwilling, as they are, to await the result of unaided individual enterprise and effort. A certain prestige would, no doubt, attach to the establishment and its branches that would not be without its effect on the Court of Peking, and induce the granting of special privileges to the agents of the Factory, privileges in which foreign nations would have no direct claim to participate. France relies on China for a supply of raw silk for her manufactures quite as much as ourselves on teas for consumption; but, we may be assured, France will not rest content with such a proportionate adverse balance, to be settled for in specie, as we are fain to put up with; she will, above all things, aim to enlarge the market for her productions and reach the great centres of inland distribution. We shall not be surprised to find, should the contemplated Factory be established, French steam-barges ploughing the Imperial canal, and its artificial and natural tributaries in all their length. A Factory will aid France, as it has before this aided other nations in the East, in carrying out a widely-extended system of barter, the most profitable form of interchange, especially in a country the Government of which is watchful that there shall be no export of the precious metals. In this barter trade, the obtaining of tea in exchange will almost be as great an object as silk; for, although France is but a moderate consumer of the article, a profitable re-export trade may be carried on with the Prussian and Russian ports. To French traders such a factory would afford special facilities. Not only could they replenish their stocks of goods and avail themselves to some extent of imperial means and imperial credit, and could always realise on teas collected from priests and farmers, or purchased from Mandarins, either obtaining the local market value or securing an advance, the difference to be made good upon advices received of sales in Europe. We are not yet informed as to the character of the special privileges accorded to French trade between Cochin and China, but these are not unlikely to aid the result. Our treaty right, however, to the establishment of inland stations will allow us to keep pace with French progress, favoured though it may be by certain prescriptive rights, and taking the empire as we are in flank, by way of Burmah and Thibet, and with more capital than ever invested in the trade, with the evident necessity that exists for the Chinese Government to enlarge the basis of foreign trade, if it would consolidate its power, we have no reason to suppose that France will steal a march upon us, whilst she is certainly free and welcome to pursue success in her own way.

CONDITION OF THE CEYLON ROADS.

CEYLON, at the present time, exhibits the strange anomaly of progress and retrogression. With a large increase in the annual area of cultivation, her roads have been suffered to go to ruin, to become under tropical rains like paddy grounds, their condition rendering whole districts barely accessible, limiting the means and enhancing the price of transport, and raising food to famine prices. But few new roads have latterly been opened, and districts demanding new outlets for their produce continue unprovided even with the requisite facilities for supplying their immediate wants. The condition of the roads has been pronounced infamous, yet with no less a sum than £214,000 in the Treasury, the few remaining labourers on the roads are called off for want of available funds; the headmen, whose name is legion, go unpaid; the Survey Department, so necessary to be kept in a state of efficiency, is lamentably restricted in its means; and the local Government fails to discharge its obligations in regard to native titles. The policy that has led to this neglect of roads is the more suicidal that tolls have remarkably augmented of late years, that the sums bid for Crown lands largely depend upon provided facilities of communication, and the amount of capital, skill, and labour invested in new districts on their accessibility, so that the moneys thus withdrawn are lost in another form. The disastrous effect on the fortunes of individual planters from the resulting cost of transport and price of food, compelling them to dispense with labour at a critical time lest their estates should be eaten up, and so narrowing the margin of possible gain that many of them must be reduced from competence to want, exhibits a picture of forlorn helplessness that we might have expected to find realised only under the exactions of some Indian rajah, or the uncontrolled cupidity of a Kandian prince. At one point alone in the Southern Province the estimated loss to planters from want of suitable repairs to roads is not less than £8,000 on 100,000 bushels of coffee there concentrated for delivery. Letters are before us showing that produce destined for shipment had been detained fully three weeks *en route*.

We may be sure the financial vultures have scented from afar their prey, and in the foreclosing of mortgages on estates on which advances have been made, will reap the present season their full harvest. Besides, impassable roads enhance the difficulty of providing satisfactory securities, and add to the charges on advances. The curtailment of investment of British capital will also be witnessed. English embarkers of capital in Ceylon are usually those impatient of low rates of interest, yielded by secure home investments and willing to undergo some risk, the risk of unpropitious seasons and uncertain labour. But in this neglect of arterial communication is a fatal impediment to success, to remove which the funds are actually on hand. Six years ago the roads of Ceylon were in excellent condition, its 150 miles of canal unobstructed; we witnessed none of the present hoarding up, the neglect to provide the essential means for giving vigour and activity to trade and industry. The witness who told the Trinity Board that Tenterden steeple was the cause of the Goodwin-sands was assuredly not far wrong, for we are gravely informed that the new railway, which in June next will be completed to Ambepussen, is the veritable cause of the bad roads. Not that it takes their route, or will supersede them, or can prove remunerative without feeders, but that the late Governor chose to construe home instructions, not to apply public funds to any work of magnitude until the cost of the railway had been met, to apply their repair. The contemptuous silence with which the late legislative application to the Colonial Office for *permission* to devote a surplus revenue, amounting to £214,000, to this and kindred objects, shows the opinion there entertained of men who have not energy or administrative skill sufficient to break their leading strings, manifestly afraid to take the initiative, to do their duty to the colony lest their own chances of promotion should be impeded; whilst in the demand to which the fictitious surplus has led, that the colony shall at once proceed to defray its military expenses according to an imperial estimate, an everlasting lesson is taught of the ultimate fruitlessness of long years of sycophancy. We regret the supineness of the Ceylon press in tolerating an accumulation of revenue at such a fearful cost, and cannot discharge altogether from blame the late unofficial members for waiting till "the floods came" before raising their voice of protest. It was in their power to have aroused public opinion before as well as now, and they might have appealed at least to the Home Government for redress. Nothing now remains but for the residents to agitate for an increase in the unofficial members of the Legislative Council from seven to ten, and to see that these individually represent the leading islands' interests; whilst we trust that the first act of the newly-inaugurated GOVERNOR will be to disburse in local improvements—more especially on roads, a balance that never should have existed. Let these roads be longer neglected, and their repair will be brought within the category of "works of magnitude," which the Home Government has for the present interdicted.

THE HON. SIR FREDERICK BRUCE, G.C.B.

As we intimated in January, Sir Frederick Bruce will not return to Peking, and the post now held by Mr. T. F. Wade remains to be filled. We believe that no settlement will be made until Sir Rutherford Alcock, who arrived by the last mail, has been consulted. Sir Frederick has been appointed to succeed Lord Lyons, who resigns on account of ill-health, as Minister at Washington. The dignity of G.C.B. has been conferred on Sir Frederick, and we understand he proceeds to his post on the 25th inst.

Sir Hercules Robinson, whose appointment to the Governorship of Ceylon we announced some months since, has been formally gazetted to that post. Nothing has been notified as to his successor at Hong Kong.

Mr. Algernon Bertram Mitford has been appointed Second Secretary to the Legation at Peking. He was temporarily attached to the Embassy at St. Petersburg, and appointed Acting Third Secretary in H.M. Diplomatic Service, 1863.

Mr. R. K. Douglas, of the China Consular service, has undertaken the post of Curator of the Chinese Library at the British Museum.

DETERIORATION OF HOME STOCKS OF TEAS.

(To the Editor of the *London and China Telegraph.*)

SIR,—Whilst allowing that the imperfect manufacture of tea is one primary cause of deterioration, there is no question that the dampness of our English atmosphere contributes in a very material degree to this result. An effective and economic correction may be found in the exclusion of atmospheric moisture from the warehouses in which China teas are stored by the introduction of a moderate degree of artificial heat. In fact, we do not deal tenderly enough with this sensitive product of an Eastern clime. All experience goes to show that a heat of 80 or 90 deg. will not injure tea, and so with the dry cold which the Russian overland teas encounter in winter time, on the Mantchurian and Siberian plains. Here I affirm, is the great preservative, arresting even the effects of faulty curing. Of course, such a suggestion as the above is sure to meet with opposition from warehousemen and dock companies; the objections of insurance offices and the regulations governing bonded warehouses would be met by introducing the heat through steam pipes, the boilers supplying the steam being at a distance. Whatever difficulties, however, may be raised, I cannot doubt but that means will be found for carrying this suggestion into practical effect, seeing that it is a matter of saving thousands of pounds annually to our tea importers.—Yours, &c.,

City, Feb. 20, 1865. MINCING LANE.

THE JAPANESE *QUID PRO QUO.*

(To the Editor of the *London and China Telegraph.*)

SIR,—I am not satisfied of the wisdom of the course pursued by foreign Ministers in Japan, in offering to release the Tycoon's Government from payment of any indemnity for the naval late operations, &c., provided that Simonoseki, or some more eligible port in the Straits, shall be opened to foreign trade. We have thus put a money value on the grant, as though the advantage were all on one side; instead of which it is our business to demonstrate to the Japanese Government and people themselves of free and unrestricted intercourse. The Tycoon's Government may be safely trusted for securing its own pecuniary enrichment, on duties levied on goods despatched by the guilds of Yedo to any foreign settlement, or foreign consular port, that may be opened in the Inland Sea. Because the Prince of Nagato would not pay that indemnity, his two palaces the one at Yedo the other at Kioto, were burnt, together with his servitors residing within them; and my own opinion is that, taking this barbarous act into consideration, the Tycoon's Government should have been compelled to pay at once the indemnity, in specie, to the uttermost farthing, instead of being offered the mild alternative of engaging to open to foreign trade a port in the territories of the hostile Daimio, over which it has never exercised the least control. But without further reference to civil or political complications, what I contend for is, that we should not be deprived of money so fairly earned, and so add to home burdens the expenses of an expedition undertaken to vindicate our treaty rights. Yours, &c.

Whitehall, Feb. 8, 1865. RED, WHITE, AND BLUE.

Literature.

Sequel to Some Glimpses of Life in the Far East By J. G. THOMSON, F.R.G.S. London: Richardson and Co., Cornhill.—The author of "Some Glimpses in Life in the Far East" has—as we prognosticated would be the case in our notice of that volume—been encouraged to publish the sequel he promised and, further than that, to throw aside his anonymous guise. The continuation is deficient in those personal details which communicated so much interest to its predecessor. The book before us partakes more of the nature of a collection of essays, many of which would seem to have already appeared in "The Journal of the Indian Archipelago," or to have remained in the essayist's writing-desk till the topic to which they refer has utterly faded from the sympathies and even memories of mankind. The first three-and-thirty pages are devoted to a history of the overbearing conduct of a Major Ross Macdonald, who was Superintendent of the island of Penang so long ago as the year 1796. The very titles of several of the other disquisitions show at once that they partake of the same defect, as belonging entirely to a state of things that passed away with the sovereignty of the East India Company, to which the author exhibits the same hearty antagonism that characterised his former volume. A large portion of the book is occupied in discussing, under one shape or another, what Mr. Disraeli made the conversation of clubs and drawing-rooms by introducing in one of his novels as "the Asian mystery." How is it, indeed, since all knowledge—whether physical or metaphysical—all arts, and all sciences, having sprung from the East, and thence been disseminated over the world, that the fountain and source of such benefits should seem in the present day to be either dried up, or that what current may still be flowing has lost its freshness and invigorating and vivifying power? This question Mr. Thomson assails in various ways, but without affording us a satisfactory solution. Is the fault in the people or their rulers? Has the race of Shem become utterly degenerate, or is it simply that the energy now lies slumbering in the mass, and demands the rod of some one of their old "world-tamers" to stir up the latent fire? To those whom such speculations delight, Mr. Thomson's pages will afford all that information which a long residence in the Far East and a thorough acquaintance with the native character and the language spoken over a wide area can alone confer. The reader for mere amusement will find such a treat as he has not met with for many a day in the story of "Sheik Abdulla the Younger," who gained from his instructor permission "to meet the Prince of the Devils, so that he might obtain an insight into his doings amongst mankind and other created things." The narrative abounds in incident, as may be supposed, and in Oriental fashion most of the mischief is laid to the door of the fairer sex, the more beautiful and handsome portion of whom his highness is pleased to call "my books." Of a very different nature, and of far higher import is the autobiography of Abdulla Moonshee, a native long connected with the first English Protestant missionaries to the Malayan Archipelago. Abdulla speaks in gratifying terms of the Milnes and Morrisons, and the plain unbiassed recital of their daily doings, given by one who was both their instructor and pupil, will form an eminently cheering fragment for those who yet hope to see Christianity triumph over Mahommedanism and Budhism. On the other hand, Abdulla's account of the German Missionary and his method of translating the Bible into Malayan, is like a chapter from Gil Blas, so naive and piquant is the disclosure. Abdulla's unvarnished tale is in reality one of the keenest satires on the countrymen of Niebuhr and Bunsen that ever was penned, and the telling force of the revelation consists in its evident truthfulness. A true German philosopher never has to learn, but always to teach. It is of little consequence to him whether his premises are right or wrong, or whether he has before him all those that might fairly lie within his reach. Two or three facts, or two or three words, will enable him to remodel a nation's history, or reconstruct a nation's grammar. The German knew nothing of Malay save what Abdulla taught him, but that did not prevent his insisting that the syntax and the spelling of the language should be altered to suit his theory of what it ought to have been. The next edition of the "Curiosities of Literature" should be enlarged by this singular chapter, and meantime we earnestly commend our readers to satiate their curiosity by perusing the "Sequel to Some Glimpses of Life in the Far East."

APPOINTMENTS, &c.

The Queen has been graciously pleased to give orders for the appointment of General his Royal Highness Albert Edward, Prince of Wales, K.G., K.S.I., to be an Ordinary Member of the Military Division of the First Class, or Knights Grand Cross of the Most Honourable Order of the Bath.

The Queen has been pleased to give and grant unto the under-mentioned officers Her Majesty's Royal licence and permission that they may accept and wear the Imperial Order of the Legion of Honour, conferred upon them by the Emperor of the French, as a mark of his Imperial Majesty's approbation of their services, in conjunction with the naval forces of his Imperial Majesty, during the recent operations in the Straits of Simonoseki, in Japan, viz.:—

ROYAL NAVY.—Sir Augustus Leopold Kuper, K.C.B., Rear-Admiral, with the temporary rank of Vice-Admiral while serving in China, the insignia of Grand Officer of the said Order; Captain John Montagu Hayes, C.B., the insignia of a Commander of the said Order; Captain William Garnham Luard, Captain William Montagu Dowell, C.B., Captain Charles Taylor Leckie, and Captain John Hobhouse Inglis Alexander, C.B., the insignia of Officer of the said Order.

ROYAL MARINE LIGHT INFANTRY.—Lieutenant-Colonel William Grigor Suther, C.B., the insignia of Officer of the same Order.

The Queen has also been pleased to give and grant to the under-mentioned officers of Her Majesty's Navy, her Royal licence and permission

Digitized by Google

that they may accept and wear the Military Order of William of the Netherlands, conferred upon them by the King of the Netherlands as a mark of his Majesty's approbation of their services, in conjunction with the naval forces of his Majesty, during the recent operations in the Straits of Simonoseki, in Japan, viz :—

Sir Augustus Leopold Kuper, K.C.B., Rear-Admiral, with the temporary rank of Vice-Admiral while serving in China, the Cross of a Commander of the said Order; and Captain John Montagu Hayes, C.B., the Cross of a Knight of the Third Class of the same Order.

FREIGHTS AND CHARTERS.

The shipping business has shown no animation since our last issue, chiefly owing to the wet weather which has generally prevailed. Coal freights have been less freely offered, and lower rates are asked. A few charters have been effected from Ceylon at 72s. 6d. to 75s. per ton.

Current Rates of Freight for Vessels on the Berth:—To Yokohama: 50s. weight, 40s. to 50s. meast. To Nagasaki: The same. To Hankow: 60s. meast. To Amoy and Foo-chow-Foo: 50s. weight, 40s. meast. To Shanghai: 40s. weight, 25s. to 30s. meast. To Hong Kong: 40s. weight, 20s. to 30s. meast. To Manila and Labuan: 50s. weight or measurement. To Singapore: 25s. to 30s. weight or measurement. To Penang: 40s. weight or measurement. To Batavia: 40s. weight, 30s. measurement. To Bangkok: 60s. weight or measurement. To Ceylon: 40s. weight, 25s. measurement.

The quotations for coal and iron from the North are as follows:—For Hong Kong: £30 to £32 and £1. 11s. For Shanghai: £40 and £1. 16s. For Manila: £1. 12s. 6d. For Batavia: £23 to £24, and £1. 2s. 6d. For Singapore: £26 and £1. 1s. 0d. For Galle: £25 and £1. 2s. These rates are from the Wear or Tyne, and Newport, Cardiff, or Swansea respectively.

The Admiralty have invited tenders for the conveyance of 95 tons naval stores from the river Thames to Trincomalee, also for 10 tons naval stores from the river Thames to Hong Kong.

CASUALTIES.

The Friesland (Dutch ship), from Amsterdam for Batavia, put into Rio Janeiro, Jan. 31, leaky.

Advices from Bordeaux under date March 1, state that a telegram from Royan reported that the Concorde (barque), Zisly, of and for Bordeaux, from Singapore and Penang, with black pepper and tin, had been stranded at Coubre Point in entering the river; crew saved.

Advices from Buenos Ayres, under date Jan. 11, state that the Geelong, Ferrier, from thence to Batavia, which struck on a wreck off Buenos Ayres, Dec. 8, had discharged to her light water-mark, and was being taken to the Tigre in charge of a pilot, when she got aground and became so leaky that she could not be kept afloat; when the tide left her there were only 3 feet water alongside, and her forefoot and keel, &c., were much damaged. She had been lying aground about a week, was strained all over, and her copper much broken. A survey had been held and she was recommended to be sold.

THE CAPE, INDIA, AND CHINA AGENCY.

CONTINUE to Manufacture their Pickles, Bottled Fruits, Jams, Jellies, Sauces, &c., with the greatest of care, for exportation, and at the same time paying strict attention to purity of quality, as will be seen by annexed extract from the "GROCER'S JOURNAL," June 12, 1863:—

"CHEMICAL LABORATORY,

"7, BURY COURT, ST. MARY AXE, LONDON, E.C., June 4, 1863.

"SIR,—I have analysed the two samples handed me on Tuesday, the 2nd inst., and found the 'Mixed Pickles' of H. and H. LEDGER, of 14, Mineries, Aldgate, to be quite free from adulteration and made with Pure Malt Vinegar.

"I also found H. and H. LEDGER'S 'Britannia Sauce' to be free from any injurious substances.

I have the honour to be, Sir, your obedient Servant,

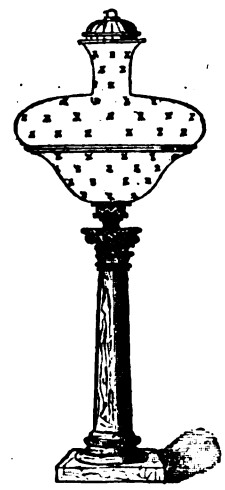
"For F VERSMANN F.C.S. Analytical Chemist.—ED. SCHREINER."

IMPORTANT TO RESIDENTS, MILITARY MESSES, &c., IN INDIA, CHINA, &c.

TUCKER AND SON'S

IMPROVED

ENAMELLED PUNKAH TABLE LAMPS.



THE celebrity which TUCKER AND SON'S LAMPS have acquired in the East for burning *steadily* under the Punkah or in side draughts, and *brilliantly* with any of the *coarse native oils*, renders eulogy unnecessary; but having been enabled, by increased facilities of manufacture, very considerably to *reduce the prices* of the above favourite (but hitherto expensive) description of their lamps, T. and Son beg to notify the fact to the Eastern public.

They are elegant and durable, are finished in exact imitation of many beautiful stones and marbles, such as Malachite, Lapis Lazuli, Serpentine, Sienna, Brocatella, Jasper, &c., and are not affected by heat, damp, friction, or insects; oil, spirits, or acids accidentally spilled. The enamel surface is so inseparable from the base (block slate, proverbial for its strength) that it cannot be removed except by an edged tool. It *requires* simply *dusting*, but if rubbed hard, it only adds a gloss to its appearance—at all times cool and agreeable.

After ten years' constant use and handling, these lamps are none the worse for wear.

Malachite (green), Serpentine (brown), or Lapis Lazuli (blue), are most recommended.

Table Lamp complete, with engraved glasses, as sketch, 72s.

A Plainer Lamp, without the Corinthian capital, 50s. complete.

Either pattern, with plain frosted glasses, 7s. 6d. each less.

*** *The above Lamps are supplied to burn Petroleum or Rock Oil also.*

Orders can be sent through any merchant or Agent, or, if accompanied by a remittance, direct to

Superintendence and CONTROL OF THE GOVERNMENT.

Sold in boxes containing one pound each.

PARIS, 22, BOULEVARD MONTMARTRE.

MARSEILLES, 9, RUE PARADIS.

London, 27, Margaret-street, Regent-street.

CAUTION.

THE GROSS FRAUDS which continue to be practised by obscure manufacturers, more particularly in Germany, by imitating the Labels attached to JOHN GOSNELL and Co.'s PERFUMERY, render it imperative upon the Proprietors to Caution the public against such nefarious proceedings, and to request their friends and patrons to purchase only of respectable dealers, who import direct from JOHN GOSNELL and Co., and invite special attention to the address, 12, THREE KING-COURT, LOMBARD-STREET, LONDON, E.C.

JOHN GOSNELL and Co.'s SELECT PERFUMES.—Ess Bouquet, Royal Yacht Club Bouquet, Jockey Club Perfume, Essence of Wood Violet, Victoria Bouquet, Garibaldi Bouquet, Frangipanni, Military Bouquet, The Bride's Bouquet, Tea Rose, Russian Leather Perfume.

JOHN GOSNELL and Co.'s Toilet Vinegar, Inexhaustible Salts, Aromatic Vinegar, Aromatic Eau de Cologne.

JOHN GOSNELL and Co.'s Prince of Wales Perfume.

JOHN GOSNELL and Co.'s Princess Alexandra Perfume.

JOHN GOSNELL and Co.'s La Noblesse Perfume.

JOHN GOSNELL and Co.'s La Noblesse Pomade.

JOHN GOSNELL and Co.'s La Noblesse Soap.

JOHN GOSNELL and Co.'s Real Old Brown Windsor Soap.

JOHN GOSNELL and Co.'s Golden Oil—Moelline—Macassar Oil, Bear's Grease, &c., for the Hair.

JOHN GOSNELL and Co.'s Extra Highly Scented Toilet and Nursery Powder.

JOHN GOSNELL and Co.'s Stereodesmic or Dentists' Tooth Brushes and Trichosaron Hair Brushes, warranted to purchasers.

JOHN GOSNELL and Co.'s Instantaneous Hair Dye.

JOHN GOSNELL and Co.'s Cherry Tooth Paste is greatly superior to any tooth powder, gives the teeth a pearl-like whiteness, protects the enamel from decay, and imparts a plesing fragrance to the breath.

NOTHING IMPOSSIBLE.—The Greatest and most Useful Invention of the day, AGUA AMARELLA.—Messrs. JOHN GOSNELL and CO., 12, Three King-court, Lombard-street, London, Perfumers to Her Majesty, respectfully offer to the public this truly marvellous fluid, which gradually restores the human hair to its pristine hue—no matter at what age. The Agua Amarella has none of the properties of dyes; it, on the contrary, is beneficial to the system, and when the hair is once restored one application per month will keep it in perfect colour. Price One Guinea per bottle; half bottles, 10s. 6d.

JOHN GOSNELL and Co., Perfumers to Her Majesty, and by Special Appointment to H.R.H. the Princess of Wales, London.

HOLLOWAY'S OINTMENT AND PILLS.—Lumbago, derangement of the kidneys, rheumatism, tic-doloreux, all excruciating pains of the muscles and nerves, are relieved with astonishing rapidity by the use of this extraordinary Ointment. The affected parts, previously fomented with warm water, have only to be rubbed briskly with this soothing unguent to obtain instant cure. Whilst the Ointment cures the local ailment, the Pills remove the constitutional disturbance, and regulate every impaired function of every organ throughout the human body. The cure is neither temporary nor superficial, but permanent and complete; and the diseases seldom recur, so perfect has been the purification performed by these searching yet harmless preparations.

PATENTEES W. TENT AND CO., 23, BIRCHIN-LANE, LONDON, E.C.

BOYVEAU LAFFECTEUR'S ROB.

The only one authorised and adopted in France, Belgium, Austria and Russia.

THIS Vegetable Syrup, prepared and guaranteed genuine by the signature of Dr. GIRAUDEAU DE ST. GERVAIS, is very superior to the purifying syrups. It effects a radical cure, without mercury, of all affections of the skin, scurf, scrofula, &c., and symptoms arising from the acrid state of the humours. The Rob is especially valuable in diseases which have resisted the effect of mercury or iodide of potash. The general entrepot is 12, RUE RICHER, PARIS.

Sold Retail.—London: Jozeau, Hannay. New York: Fougera, Gaudelet, Milhau. Gibraltar: Patron and Danilowich. Malta: Dr. Pirotti, Bugeja, Magri, and Rolando, Esperanza. Alexandria: Bellamore, Galette, Perinie, Bombay; Framjee Nesserwanjee and Co. Singapore: Martin and Little. Batavia: L. Platon and Co. Macao: J. D. Freita.

IMPORTANT ANNOUNCEMENT

JOSEPH GILLOTT,

METALLIC PEN MAKER TO THE QUEEN

BEGS to inform the Commercial World Scholastic Institutions, and the Public generally that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions which, for EXCELLENCE OF TEMPER, QUALITY OF MATERIAL, and above all, CHEAPNESS IN PRICE, must ensure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in boxes containing one gross each, with label outside, and the fac-simile of his signature.

At the request of numerous persons engaged in tuition J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York, and at 37, Gracechurch-street London

---

WHITWORTH RIFLES.

THE MANCHESTER ORDNANCE AND RIFLE COMPANY beg to give notice that WHITWORTH ORDNANCE RIFLES and AMMUNITION are manufactured by Mr. Whitworth's Patent Machinery only at their works in Sackville-street, Manchester.

Application may be made either at the above works, or at the Company's Office, 26, Pall Mall, London, S.W.

The Rifles and Ammunition may be also obtained through the agency of any respectable Gunmaker.

N.B.—In the International Match at Wimbledon in 1864 all the competitors used the Whitworth Rifle.

Summary of News from the Far East.

JAPAN.

YOKOHAMA.

Dates hence are to Jan. 18. The London mail of Nov. 10 arrived out on Jan. 8.

The matter that had excited most interest in the settlement since the departure of the preceding mail was an action brought before a Japanese judge, and a cross action in Her Majesty's Consular Court, the result of which was anything but creditable to a Mr. A. Edelman, a foreigner trading under British protection. The case was also remarkable for being that in which a great improvement in the administration of justice between British residents and Japanese, effected by Mr. Flowers, Her Majesty's Acting-Consul, was first introduced. Formerly, in cases in which the latter were defendants, they have been heard in all the secrecy of the Japanese Custom-house. The authorities have now been induced to hear and determine such cases (of course by their own officers) in the British Consulate Court. The plaintiff in the case tried by the Japanese judge, with Mr. Consul Flowers assisting, was Mr. Albert Edelman, and the defendant Shebia Seigoro, a Japanese silk merchant. Edelman alleged that, on the morning of the 7th of November, Shebia called at his office with a sample of silk, and he having agreed to purchase it, at 4 o'clock Shebia brought nineteen packages. Edelman said it was then too late to inspect the silk, and it was therefore put into the godown. Shebia requested the payment of $1,000, which was made. The silk was inspected by C. Reinhardt, Magachia, Motogora, and Kaiidso (Edelman's assistant and coolies) when rubbish and stones were found secreted in the silk. Edelman, having separated the stones and rubbish from the silk, preserved 5½ piculs of damaged cut silk, only equal to waste, of the value of only $165, thereby causing a loss to him of $835, and he requested that Shebia should be prosecuted with the utmost severity. Mr. F. Crutchley appeared as attorney for the plaintiff Edelman.

On the complaint being translated to the defendant, and on being asked what he had to say to it, he denied it in the emphatic words—"It's a lie."

After hearing the evidence of the plaintiff and his coolies, and also that of Mr. J. M. Jaquemot, who said that it was not the custom to open silk in the absence of the native merchant, and that he had been acquainted with Shebia for three years and a half, had had many transactions with him, and always found him strictly honest, the Japanese judge said, "My judgment will be that Mr. Edelman shall return the whole of the silk of Shebia Seigoro to that merchant, and when he has done so, the Custom-house will take care that he gets back his $1,000. This is my present opinion, but I will consider how to put it more officially, and will send in my final decision in writing."

That final decision had since been received in the following terms:—

"Mr. Edelman refused to have the nineteen bales delivered to him inspected, and detained them in his godown, when they were inspected the following day. Three or four stones were found among the silk, but the binding of the bundle in which the stones were found differed in form from the binding which our merchant made; therefore our merchant was in doubt, and requested to have all the bales examined in the presence of Mr. Edelman, but he only examined some of the bales and refused to have the others examined, and conveyed them to his godown. As the said act was very unjust, our merchant insisted upon the examination, but instead of complying, the bales were shipped next day by him. The injustice of Mr. Edelman is very conspicuous. Mr. Edelman was not obliged to buy the silk without first satisfying himself as to the weight and quality, and if he thought that the article was inferior, he had only to return it to Seigoro, who would have given back the $1,000. But he did not do that. He exported the silk without examining the other bales, which is unjust, and I am sure you will agree with us in saying this is likewise unjust. The stones which Mr. Edelman brought to the Custom-house were large, whilst the stones which were in the bundles were small; and the said bales were examined with the assistance of Keidsro, Tori-

Digitized by Google

itchi, and the servants of Mr. Edelman, Makasiki and Migostiki, after he had sent away Keidsiro for Seigoro, Torikitchi, Dudsiro, Eisock, and Kamekitchi; therefore we beg to request you will summon Mr. Edelman and said witnesses, and examine into the case.

"HAYAKAWA SIOZIRO,
"TOKI OSOOMI-NO-KAMI.

"8th day of 11th month (Dec. 6, 1864)."

In the British Consulate Court, Acting-Consul Flowers was Judge, Messrs. H. Wilgoss and J. Davison sat as assessors, and Shebia Seigoro was plaintiff. He claimed to recover from Edelman the sum of $4,918½ (errors and omissions excepted), balance due on 11 piculs and 147-10 catties of raw silk sold and delivered to defendant on or about the 9th of November, 1864, at the rate of $530 per picul. A Japanese officer attended to watch the proceedings on the part of the plaintiff. Defendant appeared by Mr. Frederick Crutchley, as his attorney. Application was made by defendant for the postponement of the case, which was overruled. Evidence on both sides was again heard. During the proceedings—the Court desired to inspect the defendant's books, and the constable was sent to bring them (the premises being in charge of constables who had been placed there when all the property of the defendant had been attached by the Consul), but returned with the intelligence that no books were to be found. Frederick Cullis deposed—

"I am book-keeper in Mr. Edelman's employ. I have seen no entry of nineteen bales of silk. I was not in Mr. Edelman's employ at the time of this transaction. I made some entries on the 17th in respect to some waste silk ex *Nepaul*. Of course I did not look over the books; I saw no entry of these nineteen bales; only 5½ and 4¼ piculs of waste silk. I saw no entry of buying or selling or shipping of these nineteen bales of silk. I merely made an invoice of 5½ and 4¼ piculs of waste silk sent to London. I do not know from whom it was brought; there were no entries about it. There have been no regular books kept since Mr. Edelman opened business. There was a rough cash book and a ledger, that was all. When I made out the invoices of which I have spoken. I obtained the particulars from Mr. Edelman's own mouth. I can't say what became of the books. I last saw them on the desk, about half-past two, on the day the godown was locked and sealed, when I went to the bank about a dishonoured cheque. I learned there that all Mr. Edelman's funds had been attached by the Consul. When I came back I found all the property had been attached, and an officer in charge. When I went to the house with the constable just now, I asked both Mr. Edelman and Mrs. Edelman where the books were? They said they had not got them, and did not know where they were."

Mr. Crutchley having addressed the Court for Edelman, the Court was cleared, and on the public being readmitted, the following finding was read.—

"The Court having considered the evidence in this case finds for the plaintiff, with costs against the defendant. The Court is satisfied from the evidence that the plaintiff on or about the 8th and 9th of November last sold and delivered to the defendant nineteen bales of silk, weighing between 10 and 11 piculs, at the rate of $530 per picul; and that of the amount due on the said silk plaintiff received only $1,000, leaving the balance claimed by plaintiff still due, namely, £4,918.50. The Court is also satisfied that the silk delivered by the defendant into the hands of Messrs. Wilkin and Robinson for sale or shipment, and upon which those gentlemen have advanced nearly $6,000, was the identical silk delivered by plaintiff to the defendant. It is clear from the amount advanced on that silk, and from the evidence of Mr. Robinson, a competent silk inspector, that the silk was value for the price claimed by plaintiff according to the agreement of sale. The Court finds, without prejudice to any ulterior proceedings which it may be necessary to take in this matter, that the defendant's conduct in this business has been irregular and censurable in the highest degree. If he had the intention of acting fairly and according to the usage of trade, defendant should have called for an assessment on the goods, and have laid the case before proper authority if any serious irregularity had shown itself, instead of which he caused the silk to be shipped in a manner which leaves defendant open to a very serious charge. The Court directs that judgment be entered up for the amount claimed by plaintiff, namely, $4,918.50, together with costs."

Mr. Consul Flowers had given notice that, on examining the voting papers for the election of delegates from whom the British members of the Municipal Council are to be chosen, the following gentlemen were found to stand the highest in the list:—A. J. Macpherson, N. P. Kingdon, F. C. Cornes, J. S. Barber, W. Kemptner, W. Macdonald, H. Willgoss, C. Rickerby, S. J. Gower, G. R. Davies, J. I. Miller.

The following notification, received from the Governor of Kanagawa, was made public on Dec. 31:—

It is hereby notified that as the new Mexican dollar will be received as current coin by foreigners, it will likewise be accepted by us as such. The above notification will be duly circulated in the native town.

(Signed) OFFICERS OF CUSTOM-HOUSE.

To the officers in Yokohama.

The weather had been seasonable, and there was but little sickness in the civil community. Small-pox, however, had been raging to a considerable extent on board some of the men-of-war in harbour, and among the garrison troops.

At the meeting of the British Episcopal Church Society, Messrs. Thomas and Wilkin were appointed trustees, and Mr. Malcolm treasurer, for the ensuing year; and it was determined that in order to relieve the treasurer from the necessity of being under cash advance, the pew rents should be collected at the commencement instead of at the end of the year, and at the same rates as heretofore. A vote of thanks was also passed to the Rev. Mr. Bailey for the trouble he had taken in looking after the making of the seats.

A sum of $2,594.50 had been collected for the sufferers by the late fire at Hommura, and distributed amongst them on the 6th and 7th January. The following acknowledgment had been received by Mr. Consul Flowers:—

I have to tender you my very great thanks for the kindness of the several nationalities in having united to collect so much money for the villagers living beyond the canal, whose houses were burned down by the sparks carried from the fire at English No. 66 (the United Service Club), on the 17th of last month (15th December). I thank you and the others who have taken so much trouble in this matter, of which I have already written to inform our Government. A respectful communication.

(Signed) HAYAKAWA SICJIRO.

10th day 12th month, 1st year of Genji. 7th of January, 1865.

The following is the report of Captain Kreeft, of the barque *Onward*, which was wrecked on the 29th December:—

"On the 27th December, after ten days fearful weather, the ballast shifted, and we were compelled to bear up for Yokohama. On the 29th at noon we were in lon. 142 deg. E., and 36 deg. 29 N., thick wet weather, wind veering from N.E. At 7 P.M. saw white water close ahead, and two minutes after struck; clewed the sails down, but kept them set all night. Wind increased to a gale, and the sea broke over the ship. At 1 A.M. she began to make water, and at daylight it was over her ballast. We were close to the beach, and at 10 A.M. effected a landing, erected a tent, and Mrs. Kreeft and child went on shore with the effects and treasure. I then wrote to Mr. Kingdon at Yokohama. We remained four days in the tent, receiving much kindness from the Japanese, but were at the same time closely watched. We were then removed to rooms in the temple, where we stayed until Saturday, the 7th of January, when H.B.M.'s *Coquette* hove in sight. The captain's gig came for us, and the crew and effects went off in a large boat. The gig had to put back, and did not get alongside until Monday, the 9th, causing us much anxiety, as we thought she must have been lost in the breakers. The Japanese have from first to last shown the greatest kindness and care for us, and they have my sincere and everlasting thanks. I would also tender my thanks to the captain, officers, and crew of H.B.M.'s *Coquette* for their great kindness.—F. C. KREEFT, Master."

The following notifications were issued at the New Year:—

Mr. Alexander Hutchinson Yule is authorised to sign per pro. for Ross, Barber, and Co.

Messrs. Wm. Bourne and Howard Galton have established themselves as Public Tea Inspectors and Commission Agents, also as Auctioneers for the sale of damaged goods, under the firm and style of Bourne, Galton, and Co.

Mr Frederick Horsfall Thompson is authorised to sign per pro. for Macpherson and Marshall.

Theodor Defflis and John Maack have established themselves under the style and firm of Defflis and Co., as Merchants and Commission Agents.

Messrs. A. Mundel and Co., of London, Paris and Shanghai, have established themselves as Merchants, Commission Agents, and General Storekeepers. Mr. E. Gadrat is authorised to sign for the firm at Yokohama.

Mr. Pauw is authorised to sign per pro. for Textor and Co.

V. Aymonin and Co. have established themselves as general Merchants and Commission Agents.

Geo. Smith and Co. have closed their business, and been succeeded by H. G. Farr and Co.

Dr. C. H. D. Visscher has also closed business.

CHINA.

TIEN-TSIN.

A letter from this place dated 8th Dec. states:—There has been but little business doing at this place during the summer, and that little has fallen chiefly to the share of the Chinese, who have been purchasing their goods and opium at Shanghai. A little camels' wool has been expected, as the duty has been reduced, but it does not pay to send any but the best to England; in fact, until trade is carried on directly with the Mongolians themselves, business will remain very slack in Western China. Nothing now will be doing, except a little in opium, until the China new year.

The ice was fast gathering in the river, and all vessels had cleared out but two. The steamer *Yeddo* was to leave on the 9th December. Most of the foreign residents had gone into the interior for the winter.

SHANGHAI.

The English Mail of the 26th November arrived out on the 19th January. The dates are down to the 26th. The following is rather a gloomy picture of the settlement:—

The attention of the public has lately been directed to the forlorn condition of numbers of foreigners who, from various causes, have been for a length of time unemployed, and know not from day to day where to find food to sustain life. Cast on this desolate shore, without money, without friends,

Digitized by Google

without a possibility of obtaining honest labour, these poor wretches fall victims to sickness, starvation, and eventually death. The climate, against which the wealthy are able to defend themselves by taking ordinary precautions in the matters of food, drink, and clothing, finds in the destitute foreigner a victim utterly unable to resist its insidious advances. Scantily clothed, he is obliged to lie in sheds and outhouses which do not shelter his shivering body from the poisonous night air. Hungry and faint, he is compelled to eat food which itself carries the seeds of disease with it, and to swallow such noxious stimulants as his scanty resources enable him from time to time to obtain. The nature of those stimulants is known to many of our readers. Brandy, so called, which is nothing but arrack slightly coloured; whisky, in which the worst Chinese samshu is the principal element, and gin mingled with the mineral oils. Such are the fluids which famishing foreign outcasts are compelled to drink in order to obtain a fictitious strength. The effects of such fluids on the coats of the stomach are manifest. A few short weeks suffice to lay the poisoned victim in a pauper's grave, or, as we fear is more frequently the case, to dry up the springs of life suddenly in some native place of low resort, where fear of consequences incites the owners to dispose quietly of the body. Such is the state of things in Shanghai. A year or two ago such a phenomenon as a distressed foreigner was unknown. We had, it is true, plenty of rowdies whose everyday-life necessitated a certain amount of misery in their domestic arrangements, but we never saw a foreigner of any shade or colour clothed in rags and imploring the passer-by for temporary assistance. Yet this is a sight which may now every day meet our eyes. The general stagnation of business has thrown numberless men out of employment, and thus, while the newspapers are filled with notices of "employment wanted," and the mercantile offices are besieged by men anxious to obtain work of any kind, the lower classes are in the same predicament without any means whatsoever of obtaining an honourable livelihood.

It is announced that the French authorities have, contrary to all the Foreign Consuls, allowed gambling on payment of license fees.

The Shanghai Gas Company have made a call of 25 taels on the new shares.

From Hankow we learn that the Mahomedan rebels have invaded the province of Honan and captured the city of Kai-fung-fu; so it appears that the efforts which are described as having been made to check them have as yet met with little success.

No decision has been as yet made public as to the building of a new church, save that the church is to be proceeded with as soon as possible. The plans brought out by the new chaplain in November last have been revised, as they did not in some points suit the requirements of the place, but they have not yet been finally approved of.

We have been favoured with the following report of a rock in the China sea not mentioned in any of the charts. Our informant is Captain E. Boudrouct, of the French ship *Robur*. His account is as follows:—

On the 28th December, at 10 A.M., I was off the Island of Formosa, with a strong breeze from the north, and dull weather. I took sights, and subsequently at noon I made careful observations. At 2.30 P.M. I noticed at the distance of about four or five miles a group of rocks about twenty metres high. At 2 o'clock they were bearing S. W. ¼ S. They seemed perpendicular on all sides, the summits being of a uniform height, broken in two or three places. The side which I saw seemed between eighty or 100 metres in length. At 3.30 P.M. I lost sight of them in a fog. At 4 o'clock I came in sight of the island Koumi, of the Majicosima group, when I rectified my position. The position of these rocks is lat. N. 24 deg. 09', long. E. 122 deg. 33'. They are probably the same as those seen by the *Langdale* in 1854, which are placed almost correctly on the chart with respect to longitude, but 13' too far north.

The Consular Court at this place has been engaged with an inquiry into the case of the French ship *General Meslin*, which was run into and sunk by the steamer *Promise*. The result of these actions was as follows:—The Court awarded to M. Parnet, $1,133 personal effects, $157 for loss on perishable stores, $275 for merchandise lost, and $150 for detention—in all, $1,715. To M. Pinaud, $881; to M. Desvachez, $270; M. Dubuquois, his claim in full, $495; M. Loquerier, in full, $460. The main damages, being for loss of vessel and cargo, have not yet been assessed, although by the judgment given in the first cause heard, the *Promise* was, on account of her faulty steering, declared liable for the damage incurred, subject, of course, to final assessment by the Court.

The cause Somerville, Primrose, and Co. *v.* Fletcher and Co., was commenced on 13th January. The following, supported by the evidence of sundry witnesses, shows the plaintiffs' case, as they put it through their counsel before the Court:—

M. Myburgh stated that, on September 8, Messrs. Fletcher and Co. made a contract with Messrs. Somerville, Primrose, and Co. for the supply of 5,000 bales of cotton at 19 tls. 2m. 5c. per picul. Mr. Brand, on the part of Messrs. Fletcher and Co., refused to accept the sample bale, saying they would prefer to wait for new season's cotton; then shortly afterwards another lot was offered, which was refused on the ground of being partly old and partly new. October 1, 100 bales of new season cotton were tendered and accepted, and Messrs. Fletcher and Co. informed the plaintiffs that if the remaining 4,900 bales was of the same quality they should be satisfied. It seemed that Messrs. Fletcher and Co. had a contract with Messrs. Turner and Co. to supply them with cotton. Some days after 30 bales were tendered, the delivery of which was delayed on account of the absence of Mr. Brand, Messrs. Fletcher and Co.'s inspector. During this delay the mail arrived with the news of the convention in the United States, and the consequent fall in the price of cotton in England, and Messrs. Turner and Co. refused to accept the cotton. It was then agreed to appoint arbitrators, the question to be decided being whether the cotton was up to muster. The arbitration took place October 15th. It was decided that the cotton was not up to sample, and it was agreed that Messrs. Fletcher and Co. should send a bale as muster. After the fifteenth application was made for this bale, and it could not be obtained, a bale was then sent by Messrs. Somerville, Primrose, and Co. as a muster. It seems Messrs. Turner and Co. refused this, and, in consequence, Messrs. Fletcher and Co. did the same. Mr. Myburgh was prepared to show that Messrs. Turner and Co. had an object in refusing the cotton, as the price soon went down to 16 taels. With regard to the quality of the cotton, he considered that the "best dry Shanghai cotton" meant the best that could be procured in the market, in large quantities for shipment. A verdict was ultimately given for the defendants with costs.

In a cause heard on the 17th of January, Dow and Co. *v.* Moses and Co., the claim was for $2,000, for two boxes of treasure, alleged to have been shipped on February 13th, in the steamer *Feima*, by Messrs. Moore and Co., of Ningpo, and consigned to Messrs. Dow and Co., but never received by them. On the part of the defendants, if was alleged that they did not promise to deliver, that they had delivered the treasure, and that, by the negligence of the plaintiffs, the defendants are freed from any liability. Verdict for plaintiffs, $1,500 with costs.

We noticed lately the existence of a man of immense stature in Shanghai, known as "The Fychow Giant." We have now to announce his probable arrival by the next mail, in charge of Mr. Marquis Chisholm, the pianist, and subjoin as a curiosity an appeal he has published to the people of Europe:—

THE GREAT FYCHOW GIANT'S APPEAL TO THE PEOPLE OF EUROPE.

"Rulers and people of the Western Countries.

"I am making preparations to leave for a time my native home in the Celestial East. I am restless and fond of travel, yet I will try to rest with you for a little time, when I have come to you. Your countrymen here have told me that I must go, and I am anxious.

"For what signifieth the height, and strength, and weight and greatness of my body, if my head and heart be empty of all knowledge of the vastness of great Joss's world.

"I, therefore, send my chin-chin to you, and in one other moon I will be with you. "CHANG.

"Shanghai, China, 24th day, 12th moon, 30th year Tung-Chi,—January 20th, 1864."

FORMOSA.

H.M.S. *Swallow* has lately been executing a much needed survey of the Pescadore Islands, and of the channels between them and the west coast of Formosa. None of these islands exceeds three hundred feet in height above the level of the sea, while many are mere coral reefs; and they are, therefore, especially dangerous to shipping. On the opposite Formosan coast sandbanks only a few feet above the water are not less dangerous. When it is added that tides run very strongly through the channel, and that no harbour is known on this part of the island, the careful avoidance of the passage by mariners so long as it was unsurveyed is not surprising. Ships, notwithstanding, are sometimes compelled to pass through it, and wrecks frequently happen. The chart now being compiled on board the *Swallow* will be an invaluable guide.

HONG KONG.

The English mail of December 10 arrived out on the 25th of January. The dates are now down to the morning of the 1st of February. There is very little news to add since our publication on the 8th inst., per French mail.

The *China Mail* on the military changes says:—"Simultaneously with these changes, we may mention that the *Tamar* is expected daily from Gibraltar, with the 2nd battalion of H.M.'s 9th Regiment for service in this part of the East."

"Some military changes may be noticed. The coloured regiments at present stationed in China are on the point of being withdrawn, and the different staff departments in this part of the East are to be immediately reduced in strength." Shanghai

Digitized by Google

and Taku are to be relinquished as military garrisons, while, following upon these changes, the 'Indian Allowances,' which have hitherto existed, greatly to the comfort and well-being of both officers and men are to be withdrawn. This is rather hard lines for the troops stationed here, and the proceeding seems in a manner to stultify the authorities at the War Department in having before considered such allowances necessary, as, indeed, most people in this most expensive of all parts of Asia consider them to have been. Five years ago 'Tentage Allowances' were withdrawn under circumstances of extreme hardship, the order being made retrospective and arrears accordingly called up. Surely Mr. Gladstone does not mean to improve his budget by means of this kind!"

The *Hindostan* has sailed for England with the Battery of Artillery who have so long and so honourably served in this part of the East. It is not empty praise to say that a better behaved set of men never served on this side of India. The theatres still continue to receive considerable attention; but the natural effect of the law of supply and demand appears to be thinning the attendances in some measure. Both companies, however, have occasionally good houses, and both deserve them. The Circus, also, gave a performance this week, under H.E. the Governor's patronage.

On the article which appeared in our last issue on the subject of gas we have the following:—

(To the Editor of the *Evening Mail.*)

Hong Kong, January 24, 1865.

DEAR SIR,—The remarks on the relative cost of oil and gas in your issue of the 20th are very pertinent and opportune; and at the rates proposed at present to be charged by the gas company, they may be quite sure that very few will decide to substitute gas for oil.

The case may be put to the gas company even more strongly than you have urged it. There is in the minds of many here a considerable prejudice against gas. Some dread the heat it will emit; others anticipate accidents consequent upon the proverbial carele-sness of Chinese servants. I do not share in either of these fears,, because of the improved system or ventilation which exists in our houses, as compared with residences in colder climates. I must say, however, that I participate in a decided and, as it appears to me, a well-grounded prejudice against the preliminary expenses attending the substitution of gas, in the shape of laying it on, whether to be paid directly by myself as landlord, or indirectly as a tenant by an increase to my rent. I also join in my neighbours' anticipations that if they lay on gas, their chandeliers, lamps, globes, &c., will be worthless except as adjuncts to the interesting and exciting game of "Aunt Sally."

The foregoing objections to the substitution of good for ill "lustration" are formidable enough without the additional difficulty of increased cost; and even if these objections are set aside by the rich and luxurious, to whom expense is no object, and who are willing to pay any money provided they can secure a better mode of lighting their mansions, such objections to the adoption of gas will be much greater among those of moderate incomes, and will be fatal to the use of gas among the Chinese.

I can only imagine that the company, having heard that the relative expenses in the East as compared with the West are as dollars to shillings have instructed their agent to charge four and a-half dollars per 1,000 feet because the London rate for that quantity of gas is four shillings and sixpence. If so, there can be little doubt that they have made a great mistake, and before very long they will discover that they must adopt a rate which will be within every householder's ability to pay, and thus render gas, as it is in London and other places, not only the best but cheapest mode of light.—I remain, dear Sir, yours faithfully,

OIL-GAS.

The *Evening Mail* of the 16th Jan. has an article upon the manner in which the funds of the Union Chapel have been managed, and complains that the committee had $10,000 lent out on interest the while they were soliciting fresh contributions for the purpose of building a new place of worship. The Rev. Dr. Legge, who is rather disparagingly adverted to, is a man of the most undoubted integrity, and has full and sufficient authority to sell the old building to defray the expenses of the new one. The whole affair is out of the control of the London Missionary Society, through whose instrumentality the first was built.

STRAITS OF MALACCA.

SINGAPORE.

We have dates to the 8th February. The French mail, with dates from London to the 17th December, reached on the 23rd January, and the regular London mail of the 26th December arrived on the 30th January by the P. and O. Company's steamer *Behar.*

The past fortnight had been a very quiet and unimportant one. The Chinese festival of their New Year commenced upon the 27th January, and had continued, with a few days of intermission, down to the time of the departure of the mail, being scarcely then finished. The Chinese compose three-fifths of the population, numbering, as they do, about 55,000 souls; and as they are by far the most extensive traders, this festival of theirs necessarily offers a considerable interruption to business. In addition to those on account of the Chinese festival, Monday, the 6th February, the anniversary of the foundation of the settlement, was observed as a holiday by the banks and all the public offices.

The temperature had been excessively high during the fortnight, and there had been no rainfall. A considerable amount of sickness had in consequence prevailed.

Two Courts of Inquiry had sat—one to inquire into the loss of the British barque *Canada*, Captain Orr, lost in the China Sea on the 24th December last, and the other to inquire as to the loss of the British steamer *Luzon*, Captain McGowan, on the coast of Luzon, near Manila.

The following notices have appeared in the *Government Gazette*:—The Governor has been pleased to grant Captain F. L. Playfair, assistant resident councillor, Malacca, leave of absence for ten days, for the purpose of visiting Singapore, to appear before a medical committee, preparatory to applying for furlough to Europe. The Governor has been pleased to make the following appointment as a temporary arrangement:—Mr. F. L. Baumgarten, to officiate as police magistrate and commissioner of the Court of Requests at Malacca.

PENANG.

For some days past (states the *Gazette*) the peace of the station has been broken by a feud between two of the principal Chinese secret societies, the Toh-peh-kong and the Ghi Hin. So far as we have yet learned, the former appear to have been the aggressors. Some time ago a new society called Ho Hap Siah was formed of separatists from Ghi Hin and others. The houses of members of this society were placarded with pieces of red paper having some figures engraved on them. It is said that this was to protect them from being attacked, and that if any of these houses be plundered the loss will be restored to the owners twofold. When men come into the streets and roads with the determination of fighting, they are known to each other by a piece of red cloth tied round their right wrists. If any are killed in the fight their relatives are to receive $400. Those who are sent to jail are to receive $4; if any were assaulted $120 a month for themselves or their families. Boats were sent out into the channel to waylay and attack boats belonging to men of the hostile society. We hear that at Telo' Ayer Tawar some violence was displayed by Malays, members of the Toh-peh kong, to Ghi Hin men. The first step taken by the Resident-Councillor on Thursday afternoon was to cause the head-men of the two societies to be summoned to serve as special constables and patrol the disturbed streets in company with the police. Yesterday morning he induced Khu Chau Sin, Ong Ah Ho, Tan Hap Swi, Neo Cham, Naina Merican Noordin, and two others, to act as mediators, and they were entirely engaged in putting a stop to further violence pending a settlement. Large bodies of peons, supported by a detachment of sepoys, paraded Bishop-street, Pinang-street, and the adjacent streets.

Last night (Feb. 3rd), it was rumoured that a disturbance was expected at Jalutong, and the Deputy Commissioners with a party of police proceeded to the spot. At first it appeared that all was quiet according to the account of the peon at Jalutong, who did not seem to know much about it. However just as the police came in sight, a Chinaman, who was dragging a curious sort of chest along the road, suddenly stopped, and seizing two muskets ran into the plantations on the sea side of the road. Finding himself hotly pursued he threw away the muskets; but as he emerged into the road some five or six hundred yards beyond the place where he left his small cart, he fell into the hands of the Deputy Commissioner, who was very opportunely at hand to receive him. One of his guns, loaded, was found close at hand, the other however was not recovered. This capture was the first instalment of the evening, and information being received of houses not far off in which Chinamen were lying in wait with their weapons, a search was immediately resolved on. The first seizure was of a stockade, constructed of sand bags, and two 4-pounder guns loaded nearly to the muzzle, together with several muskets, double and single barrelled, all loaded. Proceeding further, together with some of the headmen of the Chinese tribes, Oh Weekee, Tan Tek and Lee Coyin, another and a much larger and better constructed stockade was met with, and one of the men guarding it fired his musket, which, happily for the person first over, missed fire. The man, however, was soon overpowered, and an extensive seizure made of loaded muskets and spears. This last miniature fort was constructed of barrels filled with sand,

Digitized by Google

with sand bags atop, and in the form of a semicircle, forming very efficient protection to persons using small arms. The whole was destroyed, the barrels broken and upset, and the bags ripped up. Across the road and on the sea side a house was come upon, which contained a quantity of material stolen during these riots, and consisting of rice, paddy, tea, tobacco, lahksa, joss paper, and many other articles, which were identified by one of the Chinamen present, and which was placed under custody. Seldom has Penang been the witness of such scenes, and too many words of reprobation cannot be passed upon them. Should this state of matters go on, there will be little else for its prevention than a total disarming of the Chinese. During the last few days there has been a detachment of sepoys patrolling the town; the police have had th t fully occupied in endeavouring to quell these riots. A number of convicts have been added to the above, and the disturbed state of the Chinese community still continues.

Births, Marriages, and Deaths.

BIRTHS.

BERNARD—On the 27th Feb., at the residence of her father, S. Saul, Esq., Carlisle, the wife of Capt. Bernard, of the P. and O. Company's Service, of a son.

BROWNE—On the 26th Feb., at Berrylands, Surbiton-hill, the wife of Edwd. P. G. Browne, Esq., Commander in the P. and O. Company's Service, of a daughter.

CRIBB—On the 13th Jan., at Fuh-chau, China, Josephine, the wife of the Rev. Arthur W. Cribb, C.M.S., of a son.

CUNNINGHAM—On the 26th Jan., at Pecheli-terrace, Elgin-street, the wife of John Cunningham, Engineer, of a son.

HALKETT—On the 13th Jan., at Hankow, the wife of L. W. Halkett, of a daughter.

LAIRD—On the 3rd March, at Claughton, Birkenhead, the wife of John Laird, jun., Esq., of a daughter.

LYALL—On the 8th March, at 14, Gloucester-square, the wife of George Lyall, Esq., late of Hong Kong, of a son.

SOAMES—On the 19th Jan., at Hong Kong, the wife of W. Soames, commander P. and O. Company, of a daughter, stillborn.

MARRIAGES.

SCYMGEOUR—STEELE.—On the 2nd March, at Forfar, by the Rev. W. G. Shaw, incumbent of St. John's Episcopal Church, John Sturrock Scymgeour, Esq., Manager Oriental Bank Corporation, Singapore, to Susan, second daughter of John Steele, of 3, Castle-street, Forfar. No cards.

VARCO—GREEN.—On the 28th Feb., at St. Giles', Camberwell, by the Rev. Robert Tapson, M.A., William Brown Varco, of China, to Ellen, only surviving daughter of the late Thomas Green, of Westerham, Kent

HARLAND—WILSON.—On the 8th March, at Norton Church, Derbyshire, by the Rev. H. H. Pearson, vicar, assisted by the Rev. Francis Wilson, rector of Armitage, Staffordshire, both uncles of the bride, the Rev. Albert Augustus Harland, M.A., Oxon, curate of St. Michael's, Chester-square, London, son of William Harland, Esq., M.D., Scarborough, to Louisa Ellen, youngest daughter of Henry Wilson, Esq., Westbrook, Sheffield.

WRIGHT—COLLETT.—On the 21st Jan., at Shanghai, by the Rev. C. H. Butcher, M.A., Consular Chaplain, William Algernon, eldest son of Rev. Dr. Wright, Colchester, Essex, to Bertha Emily, youngest daughter of Rev. Woodthorpe Collett, Brigatwell, Suffolk. No cards.

DEATHS.

DODGE—On the 8th Jan., on passage from Shanghai to Hong Kong, Mr. Dodge, 3rd Engineer of the steamer Ordhamme.

FINDLAY—On the 7th March, at Surbiton-hill, Surrey, George Findlay, Esq., late of Messrs. Fletcher and Co., China.

GUTHRIE—On the 12th March, at 8, Upper Wimpole-street, Alexander Guthrie, Esq., late of Singapore, aged 65 years.

HANSON—On the 29th Jan., at the Civil Hospital, Hong Kong, Edward Hanson, seaman.

MACKENZIE—On the 23rd Jan., at the Exchange Hotel, Hong-que, David Mackenzie, of Tairs, Rosshire, aged 28 years.

MARBLE—On the 22nd Jan., at Shanghai, Danforth Marble, United States America, aged 32 years.

MILLAN—On the 29th Jan., at the Civil Hospital, Hong Kong, William Millan, seaman.

MORISON—On the 4th March, at Hastings, John Scott Morison, grandson of the late Rev. John Morison, D.D., LL.D., minister of Trevor Chapel, Brompton, aged 18 years and 3 months.

GREENWOOD—On the 27th Jan., at the General Hospital, Hong Kong, John Greenwood, Private 67th Regt., aged 28 years.

TARRANT—On the 14th Jan., of inflammation of the lungs, Martha King Helena, youngest daughter of W. Tarrant, Esq., of the "Friend of China."

WITHERS—On the 24th Jan., at the General Hospital, Hong Kong, John Withers, Private 20th Regt., aged 34 years.

WOOLLETT—On the 4th March, Edith, the beloved wife of Wm. Sanford Woollett, Esq., of Havre, aged 24 years.

COMMERCIAL REPORT.

CHINA EXPORTS.

TEA.—CANTON.—The business done in this market during the fortnight has been chiefly confined to common and medium Canton teas, whereof settlements have been made on easier terms. Only one chop of Country Congous has been settled at 20 tls., being about 1½d. over last home rates. The holders of this description will be heavy losers because of the excessive transit fees, and are consequently very firm. The supplies of Country Green for the season to date approach 15,000 pkgs., the Hysons being for shipment to India. The rates for Canton made teas, both Scented and Green, have declined; the Gunpowders have been for shipment to France. The settlements of the fortnight are reported as under:—Congous: 1 chop Oonam at 20 taels, and 400 half-chests Canton packed at 16 taels. Scented Teas: 1,500 boxes Orange Pekoe, at 20 taels to 32 taels, and 7,500 boxes Caper, at 15 taels to 28 taels. Country Greens: 173 half-chests Hyson, at 66 taels. Canton Greens: 1,400 boxes Gunpowder, at 11 taels to 18 taels. The unsold stock on the market is stated as under. Congous: Country, 25 chops Canton packed, 3,000 half-chests; Oolongs, 4,000 half-chests; Scented Orange Pekoe, 6,000 boxes; Scented Caper, 10,000 boxes. Country Greens, 15,000 packages. Canton Greens, 20,000 packages.

FOOCHOW.—There has been little doing during the past fortnight, partly owing to the proximity of the Chinese new year, and partly to the firmness of holders. Common kinds, though in less demand, are fully maintained, whilst flavoury kinds have advanced the last day or two 5 mace to one tael.

KIUKIANG.—Advices from this port come down to the 16th instant. Green Teas: Since the 31st ultimo about 6,000 half-chests had been settled at a decline of 3 taels on common and 1 tael on fine teas, the supply of the latter class being comparatively small. Should teamen come to terms, a large business would probably be done after the holidays were over. Quotations were—Moyune, fine, 34 to 35 tls. per picul, common, 29 to 31 tls. per picul; Fychow, medium to fair, 27 to 30 tls. per picul, common, 26 to 27 tls. per picul; total settlements and shipments, 57,900 half-chests or 3,206.200 lbs., against 166.800 half-chests or 8,418.900 lbs. last year. Black Teas: One chop of the three on the market had been shipped on to Shanghai on native account, leaving two in stock. Quotations were as before.

HANKOW.—The settlements for the fortnight amount to only three chops, making the total for the season 727 chops, and leaving a stock on the market of four chops of a very undesirable description. The teamen evince no inclination to accept a reduction, and the present asking prices offer no inducement to Exporters to operate. Quotations are—Oonams, 12 to 15 tls.; Oopacks, 18 to 20 tls.

YOKOHAMA.—Better classes of medium and fine teas have arrived, but rather on a limited scale. Some few days back an easier feeling pervaded the market inducing purchases both for England and America, a few fair parcels of medium being bought at $23.50 to $26.00 per picul. Teamen, however, soon evinced more firmness, demanding former rates, and although prices are high and far beyond last season's, a fair business continues at quotations. Settlements for the month are estimated at 5,100 piculs, and unsold stock about 3,000 piculs. Common, $12.00 to $15.00 per picul; good do., $15.50 to $23.00 per picul; medium, $23.50 to $27.00 per picul; fine, $27.50 to $31.00 per picul; finest, $33.00 to $40.00 per picul. Total exports from 1st June to date, 3,743,526 lbs. against 3,683,188 lbs. same period last season.

SHANGHAI.—Black: Transactions have again been very trifling, and prices remained unchanged. Settlements have been 2,700 chests of fair to good Black Leaf, at 16 to 23 taels, Re-shipments amount to 6,100 chests the stock is reduced to 4,200 packages. Quotations: Ningchow and Oopacks, medium to good, 24 to 25 taels. Oonams, medium to good, 21 to 24 taels. Fair Black Leaf, 17 to 20 taels per picul.

RAW SILK.—The steamer from Japan to Shanghai, brought 835 bales, which, with a very trifling quantity shipped at Shanghai, comes on by this mail. Shanghai: Throughout the fortnight we have had a heavy market, th e transactions barely amounting to 500 bales. Prices may be considered the same as last mail, but as there has been so little business during the past few days, they must be looked upon as nominal. Contrary to the usual custom at this season of the year, there is an abundance of Sycee amongst the Chinamen, which allows the dealers to remain firm holders of silk, there being no inducement to realise, with the unusually low rate of interest. The unsold stock is estimated at 1,500 to 2,000 bales, characterised by a scarcity of good silk. The Japan mail steamer arrived on the 23rd inst. with 853 bales. Prices at Yokohama are quoted the same as last mail, and the stock is reported as from 400 to 500 piculs. The settlements of the fortnight are reported at 500 bales against 268 bales corresponding fortnight last season, 1,700 bales the season before, and 3,400 bales season 1861-62. The present stock is computed at 2,000 bales against 5,000 bales same period last season, and 4,400 bales season before.

YOKOHAMA.—Since the date of last report, the native dealers having shown a little more inclination to meet the market, a fair business has been done at slightly lower prices. Owing to the approach of the holidays, the Japanese bring their produce forward rather more freely, and, being anxious to close their accounts, we anticipate that some little concession may be further obtained for some few days to come. The best descriptions of all kinds are becoming extremely scarce, and are held with a comparative firmness; but the medium and inferior qualities are plentiful. The unsold stock now on the market amounts to about 700 or 800 bales. The total settlements to date may be estimated at 9,600 bales, against 13,250 same time last season. Ida, best, none; medium, 690 to 700; inferior, 670 to 700. Mybash and Sinchu. Best parcels offering, 690 to 700; medium, 670 to 680; inferior, 640 to 660.

RAW COTTON.

CANTON.—The sales of the fortnight are reported as under:—Shanghai, 1,074 bags at tls. 18.5 to 18.9; Ningpo, 1,267 bags at tls. 19.3 to 19.8; Shanghai, 948 bags at tls. 17.4 to 17.9; Japan, 272 bags at tls. 20 to 20.5.

HONG KONG.—The unsettled state of the Liverpool market with respect to this article has caused many exporters hence to retire from the trade. The local demand has continued sufficiently large to absorb the small imports from the North. Rates have been maintained, and consequently little has been shipped to Liverpool. The quotations are:—Shanghai, $25 to $26; Ningpo, $27 to $28; Japan, $31.

SHANGHAI.—The news brought by the English and French mails caused the rise last noted in this staple to continue till it reached its highest point about four days since when good dry Shanghai was worth taels 18.60 per picul. To the disappointment of holders, however, no large business was transacted, and the price has again fallen and closes weak at taels 17.50 to 18. The news of the advance brought large supplies in from the country, and there is a very considerable stock on the market, requiring however great care in selection.

YOKOHAMA.—Former advices in this connection may well be confirmed. Home markets still offering no inducement for operations at prices at which dealers seem willing to bring the staple forward, hence but a few small parcels have been offered at nominally quoted rates, while natives still assert commensurate prices to those asked can be obtained for their own consumption, the truth of which it is diffisult to ascertain or contradict, thereby implying that the crop has failed, to some extent, as last season's remunerative prices must have caused a much larger portion of land to be placed under cultivation, for that which proved so important an article of export.

CHINA IMPORTS.

COTTON YARN.—Does not meet with much inquiry at the hands of the dealers, and although quotations show for some qualities an advance upon previous quotations of about $3 per picul, the amount of business reported is

Digitized by Google

confined to the settlement of 70 bales. Grey Shirtings: There is moderate amount of inquiry for these manufactures, which are at present in very small stock, but the dealers do not show any inclination to purchase beyond immediate requirements, and the transactions of the past fortnight do not exceed 4,000 pieces. Quotations show an advance of about 10 cents per piece upon the prices previously current, and importers are now demanding higher rates. White Shirtings: There is not much alteration noticeable in the value of these goods, but they are now beginning to attract more attention, the sales of the past fortnight amounting to 1,000 pieces. T-Cloths are in considerable stock, and have for some time past remained without much inquiry; recently, however, they have been in rather more request, and as their price is low when compared with the value ruling for Long Cloths, it is not unlikely that we may see a considerable improvement in their value when business is fairly resumed. The settlements effected during the past fortnight amount to 5,000 pieces. American Drills: The market is quite bare of these goods. White Spotted Shirtings, Dyed do., Brocades, White and Coloured: The sales of these goods reported during the past fortnight amount to 850 pieces Dyed Shirtings, and 400 pieces of Coloured Brocades, at $2.50 per piece. Damasks: There have not been any sales of these goods reported. Chintzes: 250 pieces have found buyers. Handkerchiefs have been placed to the extent of 1,200 dozens at previous rates.

WOOLLENS.—Spanish Stripes, Medium Cloths, Ladies' and Habit Cloths: These goods remain without any inquiry, and there has not been a single sale reported during the past fortnight. Long Ells remain at the prices previously quoted, with a moderate amount of business doing in the article; the sales of the fortnight amount to 1,000 pieces. Camlets have been in moderate request at the quotations previously current, and the settlements of these goods amount to 540 pieces. Lastings: 300 pieces have found buyers at about the prices previously current. Blankets: There are not any sales to notice.

METALS.—Iron Flat, &c.: The price of nail rod iron, both here and in the Canton market, shows a material advance upon the quotations given under date of last report, and it has also been dealt in to a considerable extent, the sales of the past fortnight being put up at 2,400 piculs and 2,800 piculs respectively. Lead: Quotations remain as under the date of last circular, with sales in this colony to the extent of 240 piculs. In Canton, where prices also show no improvement, the sales are put at 1,400 piculs. Tin: 675 slabs have changed hands. Tin-plates have been placed to the extent of 468 boxes.

EXCHANGES ON LONDON.

[For dates, see first page.]

			Bank.	Private.
At Shanghai (per Tael.)	6 months sight.		6s. 6¼d. to 6s. 7d.	6s. 6d. to 6s. 7d.

SHIPPING INTELLIGENCE.

ARRIVALS.

At YOKOHAMA.—From Amsterdam: Jan. 11, Petronella Catharina.

At SHANGHAI.—From London: Jan. 9, Polmaise; 24, Alexandrina. From Sunderland: 15, Empress Eugenie. From Cardiff: 20, Blackwood.

At FOOCHOW.—None.

At HONG KONG.—From London: Jan. 16, Annie Archbell; 21, Borealis; 29, Fiery Cross. From Liverpool: 24, Tricolor. From Glasgow: 16, Tamana. From Newcastle: 21, Orion. From Sunderland: 21, Camoens. From Hamburg: 23, Antelope. From Boston: 25, Waterloo.

At MANILA.—From London: Jan. 16, Angela. From Liverpool: 18, Espana.

At SINGAPORE.—From Liverpool: Jan. 28, Ellen Sears; Feb. 1, Bentinck; 3, Velos; 5, Princess Dagmar. From Cardiff: 2, Arab. From Sunderland: 4, Ocean Pearl; 6, Antrim. From Shields: 5, Britannia. From Hamburg: 3, Marie Lucie.

At PENANG.—From Plymouth: Jan. 11, Johore (str.). From Sunderland: 20, Antrim.

At BANGKOK.—None.

DEPARTURES.

From YOKOHAMA.—None.

From SHANGHAI.—For Liverpool: Jan. 19, Spes.

From FOOCHOW.—For London: Dec. 26, Sydney Eggers; Jan. 2, Star of the North; 15, Dilkhoosh. For Falmouth: 9, Kite.

From HONG KONG.—For Portsmouth: Jan. 26, Hindostan.

From MANILA.—For Falmouth: Jan. 17, Monarchy.

From SINGAPORE.—For London: Feb. 7, Hawthorn. For Liverpool: Jan. 27, Lady Bowen. For Montreal: 31, Zizine.

From PENANG.—For London: Feb. 2, Avalanche.

From BANGKOK.—None.

VESSELS LOADING.

At YOKOHAMA.—For London: Gabalva. For New York: Benefactress.

At SHANGHAI.—For London: Beatrice, Benvenue, Belle, and Naomi. For Liverpool: Carrizal, John Nicholson, Stuart Wortley, Spirit of Trade, Sailors Home, Constance, and Her Majesty. For New York: Fenella.

At FOOCHOW.—For London: Laurel (full), J. M. Joshua, Maiden Queen. For New York: Queen of the Seas.

At HONG KONG and CANTON.—For London: Lochnagar. For Liverpool: Lockett, and Prince Arthur. For New York: Diana, and Europa.

At MANILA.—For New York: Alhambra.

At SINGAPORE.—For London: Alexandra, British Crown, Betty Perlbash, La Serana, and Norval. For Liverpool: Springwood, St. Magnus, and Sharpshooter. For Channel: F. O. Blohm, and George Heinrich. For Nantes: Emile. For Gibraltar: F. O. Lotus. For Boston: Rocket.

At PENANG.—For London: Dunmore.

At BANGKOK.—None.

FREIGHTS AND CHARTERS.

YOKOHAMA.—To London and Liverpool: Tea and cotton, £3. 10s. to £4; silk, £5 per ton of 50 cubic feet.

SHANGHAI.—To London: Tea and silk, £2. 15s. per ton.

FOOCHOW.—To London: £2 per ton.

HONG KONG AND CANTON.—According to the circular of Geo. Holmes, the only charter for Europe is the Fidelio (292 tons), at £2. 15s. per ton, the Europa (130), at £2. 15s., and Diana (322), at £3, both to New York. Some charters have taken place to load at rice ports to Europe at £3. 10s. to £4 per ton. To Rangoon and back the rates are 65 cents; Maulmain, 70 cents; Bangkok, 40 cents per picul.

MANILA.—There are again no settlements for the U.K. to report, but a few moderate-sized vessels could now obtain cargoes at £3 for sugar, and £4. 5s. per ton for hemp.

SINGAPORE.—To London: £2. 15s. dead weight, and £3. 10s. per ton light freight.

PENANG.—The Dunmore is the only vessel on the berth for Europe, and is loading light freight at £3. 5s. per ton.

BANGKOK.—The freight market continues exceedingly depressed.

PASSED STRAITS OF SUNDA.

From ENGLAND and CONTINENT to CHINA, &c.—Jan. 10, Stad Assen, from London to Batavia; 13, Esperance, Bordeaux to Saigon; Java packet, Amsterdam to Batavia; 19, Wm. Dixon, Liverpool to Singapore; 20, Turandat, Hamburg to Singapore; Charlotte Jane, Falmouth to Singapore.

From CHINA, &c., to ENGLAND and CONTINENT.—5, Maria Agusta, Singapore to Copenhagen; 12, Comet, Japan to London: Courier, Shanghai to London; 13, Star of the North, Foochow to London; Anglo-Saxon, Shanghai to London; Jas. Vennicombe, Hong Kong to Liverpool; O'Thigen, Manila to London; 15, Bedfordshire, Shanghai to London; Sydney Eggers, Foochow to London; Mercator, Sarawak to Liverpool; 17, Maury, Singapore to London; 18, Anna Helen, Shanghai to London; Canadian, Shanghai to London; 19, Corneille David, Manila to London; and, 22, Spirit of the Deep, Shanghai to Liverpool.

COMMERCIAL POSTSCRIPT.

ARRIVALS NOT INCLUDED IN THE TABLES.—March 13, at Falmouth, from Macao, Nornen; 10, off the Lizard, from Banjoewangie, Johanna; 14, at Deal, from Colombo, Elizabeth Ann; 11, at Texel, from Batavia, Elshout; 12, at Brouwershaven, from Banjoewangie, Noach; Feb. 21, at Havana, from Macao, Joseph; March 14, at Youghal, from China, M. S. Elphinstone; 14, at Portsmouth, from Ceylon, H.M.S. Orontes.

DEPARTURES.—March 13, from Liverpool for Shanghai, Sarah Scott; 14, for Galle, Blanche Moore; for Shanghai, Sea Mew.

SPOKEN.—Helen Cook (?) (Dutch), Bali to Amsterdam, 41 days out, 35 S., 35 E.; Lutcken, Hamburg to Macassar, Jan. 19, 1 S., 23 W.; Maalstroom (Dutch barque), Amsterdam to Japan, Jan. 11, 17 S., 31 W.; Shark, Manila to Queenstown, Feb. 10, 4 N., 26 W.; J. Stanton, Shanghai to Liverpool, Jan. 17, 32 S., 13 E.

MISCELLANEOUS.—At St. Helena: Feb. 6, from Macao, Isabel, Decourt, and sailed, 7, for Havanna; 7, from Batavia, Duke of Newcastle, Mackenzie, and sailed, 9, for Texel; 9, Wilhelmina and Clara, Abrahams, and sailed for Amsterdam; 13, from Manila, Theresa, Denicke, and sailed for Liverpool.

At Port Elizabeth: Feb. 2, from Shanghai, Diligentia, Porter, and sailed, 3, for London.

SIR R. ALCOCK, K.C.B.

Sir Rutherford Alcock was yesterday presented to Her Majesty by Earl Russell, and in the evening dined with the Prince of Wales at Marlborough House.

THE SANCI DIAMOND.—The *Owl* states that the celebrated Sanci diamond has been purchased by Messrs. Garrard, of the Haymarket, for Sir Jamsetjee Jejeebhoy, of Bombay, for £20,000. The historical interest attached to this stone is remarkable, and quite authentic. It formerly belonged to Charles the Bold, of Burgundy, then passed into the possession of the Sanci family, from whence it took its name, ultimately became one of the Crown jewels of France, was worn at the coronations of Lewis XIV. and XV., and was stolen at the sack of the Tuileries in 1789; it then passed to the Queen of Ferdinand VII., of Spain, who gave it to Godoy, Prince de la Paix, and from him was transferred to the Demidoff family, its last possessors.

SUGAR REFINING IN JAPAN.—The *Greenock Advertiser* says:—One of the Japanese princes has resolved to erect a sugar refinery in Japan, and has engaged two skilled Europeans to assist him in carrying out his project, one of these being a Greenock man who has been for some time employed as pansman in two of the principal sugar refineries in this town. He left for his future sphere of employment early last week, and his engagement is for three years.

PROPOSED CHINESE SETTLEMENT IN BRITISH GUIANA.—It is rather a rare event for all the papers in the colony to be unanimous, but in the matter of the proposed Chinese settlement all of them are agreed that, at all events, the experiment ought to be tried, believing that, if successfully carried out, it would be to the advantage of the colony at large. Notwithstanding the opposition of the elective section of the Court of Policy, we trust and believe it will be carried out. The West Indian mail just arrived from Demerara brings intelligence of the arrival of the ship *Brechin Castle* at Georgetown, from Whampoa, with 269 emigrants. She was the first arrival from China this season; and at the time of her leaving there were six other vessels loading for the West Indies, out of which four were for Demerara.

The telegraph between India and Europe has been completed. As early as 8.25 A.M. on Wednesday, the 1st inst., a telegram dated Kurrachee, *the day before*, reached London, announcing that the line was open. One of the first announcements is to the effect that the ship *Warrior* sailed from Kurrachee on the 28th of February, for Liverpool. The International and Electric Telegraph Company have published their tariff for messages, which is as follows:—To Kurrachee, £4. 10s. 6d.; to Point de Galle, £5. 8s. No money returned for messages not delivered.

President Lincoln has approved the Bill for the establishment of a mail steam ship company between San Francisco and China.

HOUSE OF COMMONS.

TAXATION AT HONG KONG.

(6th.) Mr. LESLIE asked the Secretary of State for the Colonies whether the Government still intended to levy an assessment of £20,000 per annum on property at Hong Kong towards defraying the expense of maintaining the garrison there, and whether he would lay upon the table of the House copies of all correspondence with the local authorities, the memorial of the resident community of Hong Kong, and the reply of Her Majesty's Government relative to the proposed tax.—Mr. CARDWELL said it was intended to adhere to the arrangement by which the colony of Hong Kong was called on to pay the very reasonable contribution of £20,000 a year to its military and naval defence. If the hon. member would move for the papers, he should be perfectly ready to give them.

THE AGRA AND MASTERMAN'S BANK (LIMITED).

The thirty-first annual general meeting of the shareholders of this bank was held at the London Tavern, Bishop-gate-street, on Saturday 11th inst.; GEORGE GORDON MACPHERSON, Esq., in the chair.

The GENERAL MANAGER (Mr Mackintosh Balfour) read the notice convening the meeting. The report of the directors has already appeared in our journal.

The CHAIRMAN said: I rise to move the adoption of the report that has just been read, a copy of which has been in the hands of the proprietary for some days; but previously to doing so, I propose, as is usual on occasions like the present (when we have the pleasure of seeing so many of our friends and shareholders assembled together), to enter into some details on the matters referred to in the report, as well as to offer a few observations, which I trust may prove interesting and acceptable to you, in relation to the administration of your affairs, which have been under our control during the past year. In the first place, I would remark that although this is the thirty-first annual general meeting of the Agra Bank, it is the first that has been held since it was amalgamated with another and assumed its present designation of the Agra and Masterman's Bank; and I feel sure that it cannot fail to be highly gratifying to you to be informed that the amalgamation has been completed in the most satisfactory manner. (Hear, hear.)

There must be, as I dare say many of you are aware, considerable difficulty in bringing two large establishments together and into good working order, even where the accounts have been kept on the same principles; but in our case the difficulty was greatly increased, from the circumstance of the accounts of the two banks having been formerly conducted upon two different systems, which rendered the necessary fusion a work of time and of extraordinary labour on the part of our establishment. Some estimate may be formed of the vast amount of extra labour that was thus imposed on our establishment, when I inform you that it required for months the daily attendance of a large proportion of our staff many hours after the usual time of business before all difficulties were surmounted, and a correct and complete fusion of the accounts accomplished—a result most creditable to all concerned, and obtained, too, in the midst of the late commercial crisis, which of itself was quite sufficient to tax the best energies of any banking or commercial establishment. It is now, therefore, a very pleasing part of my duty to express to you how much we owe to, and how highly the board of directors appreciate the great ability, zeal, and perseverance displayed by our excellent managers, and the combined staff under their supervision, at a period of so much importance—(hear, hear)—and I feel very sure that it will gratify you to learn that the directors have recognised such devotion to the interests of the bank in a liberal and substantial manner. (Hear, hear.) Having made you acquainted with some of the difficulties we had to contend with in consequence of our amalgamation, I have now much greater pleasure in referring to some of the advantages we have thereby obtained and now enjoy. We have acquired a large increase to our London business—(hear). Secondly, we have become members of the Clearing-house, a position which it was absolutely necessary we should obtain to enable us to carry on our London business successfully and with satisfaction to ourselves and mercantile customers—(hear). Thirdly, we have become the possessors of one of the most valuable freehold properties in the City of London—(hear). Fourthly, we have moreover the benefit of the advice and assistance of our new colleagues, the partners of the late firm of Messrs. Masterman, Peters, Mildred, and Co., not only at our board, but daily in the bank parlour, which has greatly tended to keep their old and valuable connection together, notwithstanding the numerous and various expedients had recourse to in these days of hot banking competition (to use the mildest phrase) to induce customers to take their accounts elsewhere.

We have, however, you will be glad to hear, managed to keep not only what we got, but we have gained an accession of valuable business, and if that business continues to increase as it has done since the amalgamation, I see no reason why the Agra and Masterman's Bank should not rival the oldest and greatest of its competitors in the field of public estimation. (Hear, hear.) Having now mentioned what may be considered the practical results arising from the amalgamation, I must add that every liability incurred thereupon has been discharged, and the directors have been enabled to increase the reserve fund to £500,000 sterling—a sum at which, as stated in the report, they propose it shall stand. (Hear, hear.) You will observe from the balance-sheet that we have taken the opportunity to classify our liabilities or engagements, so as to afford the information to all which the most eminent writers and authorities on banking consider essential. We have given equally full particulars as to our assets. Amongst them you will see one, which I have no doubt will elicit the usual annual inquiry from a shareholder (now present), and I may as well answer it in anticipation. I allude to Government securities, which, according to the report, stand at £397,280. (Hear, hear.) This is largely in excess of the amount of the reserve fund, before the addition was made to it; and since the 1st January last purchases have been made which swell the amount to £521,214. This I mention to show how keenly alive the directors are to the expediency of keeping at least the amount at credit of the reserve fund in Government securities. (Hear, hear.) The next point to which I would beg your attention, and upon which I think we have reason to congratulate our shareholders, is the manner in which the new capital has been subscribed during a time when money has been so exceptionally dear, and when pressure has been so severe on all sides. (Hear, hear.)

The number of our shareholders was 725 last year, and the number now on the register is 908, a very satisfactory proof of the estimation in which the bank is held by the public. You will appreciate this the more fully when I tell you that a majority of the new shareholders are gentlemen who are likely to benefit us as well as themselves by joining our bank. (Hear, hear.) I shall now make a few observations on the working of the bank during the past year, and, considering the difficulties I have already alluded to, the large addition to our capital, and the salutary restrictions which from the depressed state of trade it became necessary to impose on business both at home and abroad, the result which has enabled us to pay dividends equal to 20 per cent. per annum on the whole capital of one million and a half sterling, and to carry forward a handsome sum, cannot but be considered highly satisfactory. (Hear, hear.) Notwithstanding the restrictions I have just alluded to (and in proof of them I may mention that our acceptances since 1st January have been decreased by more than one million sterling)—I say notwithstanding these restrictions, and all our caution and prudence, it would be affectation—nay, it would be untrue—if we attempted to disguise from you that we have suffered losses by the late failures, and heavier ones, too, than were by any means pleasant; but it will be cheering to our shareholders to know that ample provision has been made out of the profits of the year, not only for all the bad, but also for the doubtful debts, thus rendering our position safe and comfortable, after the effects of a somewhat critical and disastrous period in the commercial world. (Hear, hear.)

You have doubtless learned from the public press that the monetary difficulties had extended to China, which from the very depressed state of the trade we were led to expect, and I have great pleasure in stating that at the present moment we have no reason to anticipate any loss from our branches in that country—(hear). In Bombay there has been excessive speculation and inflation of credit, but latterly regular business appears to have been entirely neglected, and public attention has been directed to reclamation schemes, financial companies, and new banks—a triad which was worked so well that the shares of all rose to a very high premium before one foot of land was reclaimed from the sea, or a single share allotted. I need scarcely tell you that we have held entirely aloof from such business—(hear)—and quietly await results which a recent telegram leads us to suppose are not far distant. This state of things, as well as the unsatisfactory future of cotton, led the directors some time since not only to curtail their local business in Bombay, but to limit the shipments of gold from Australia, for which purpose the sub-branch at Melbourne was principally established. I think I have now alluded to every point likely to interest you, but should I have omitted anything, or failed in making myself sufficiently clear on any of the subjects I have referred to, I shall be happy to supply any deficiency that may be pointed out to the best of my ability. I now beg to conclude by moving that the report of the directors and balance sheet be received and adopted—(hear).

Alderman FINNIS (deputy chairman) had great pleasure in seconding the proposition. He felt that after the clear and lucid statement of their excellent chairman he (Alderman Finnis) need only refer to one point, and that was the very large increase of shareholders. And if each of those would bring new customers to the bank he thought he could safely say that next year, instead of a dividend of 20 per cent., the shareholders would receive 25 per cent. (Hear, hear.) The resolution was put and carried unanimously.

Upon the proposition of Captain J. G. JOHNSTON, seconded by Mr. C. R. TULLOCH, the retiring directors (Major General James Ramsay, Colonel James Holland, Mr. G. Hay Donaldson, and Alderman Finnis) were unanimously re-elected. Alderman FINNIS, in acknowledging the vote, thanked the shareholders for their renewed mark of confidence, and assured them that the re-elected directors would do everything in their power to promote the prosperity of the bank. (Hear, hear.)

Upon the proposition of Colonel W. MACGEORGE, seconded by Colonel MARSHALL, the retiring auditors (Mr. J. H. Williams, and Mr. W. Farr, D.C.L., F.R.S.) were unanimously re-elected.

Upon the proposition of General W. M. RAMSAY, seconded by Mr. W. F. FAWCETT, it was unanimously resolved that the thanks of the shareholders be given to the board of directors, to the general manager (Mr. Mackintosh Balfour), to the London manager (Mr. W. Shipman), and to the local committee and managers of the branches, for their able and satisfactory management of the bank's affairs for the past year, and to the auditors for their efficient supervision of the accounts. The vote was appropriately acknowledged by Major MACGREGOR. A vote of thanks to the Chairman terminated the proceedings.

LONDON, WEDNESDAY, MARCH 15, 1865.

OUR TEA TRADE WITH RUSSIA.

NOTWITHSTANDING that our Tea trade with Russia has not, as yet, corresponded to the expectations entertained when the new tariff came into force, and that the Russian Minister of Finance has estimated his receipts from Customs' duties on this article at a lower sum than was realised in 1863, which he styles an abnormal year, we have good reason to believe that the Russian market will ultimately provide a valuable vent for much of our surplus stock. It is true that the irregular manner of doing business in Russia is the greatest difficulty with which the exporter has to cope, and can only be overcome by the adoption of the system which suits the English market; that teas are not moved off with any regularity; that in the finer descriptions of our re-exported teas a vacillation of taste on the part of the higher classes has baffled all calculation, and that the present modified tariff rate is much too high to encourage consumption of the article in a country almost destitute of a middle class. On the other hand, the importations of tea by way of Kiachta has almost ceased; our inferior teas, after paying duty, compete favourably, both as to strength and price, with the lower sorts of caravan tea, and it is highly probable that the Russian Government will shortly establish a differential duty for the latter class of teas, so as to admit them at 32½ copecks per lb., instead of 65 copecks (2s.), as at present. Not that the Russian Government designs striking a blow at the Kiachta trade, or restricting the importations at that station to those China wares which already exceed even the tea in value, but that it evidently seeks to bring this beverage within the means of the artisans and agriculturists who compose the mass of the population. The recent expedition by the Amoor river and its Sangura tributary, to the very capital of Mantchuria, with a view to commercial purposes, shows that Russia looks rather to the extension than otherwise of direct importation, favoured not only by a drawback of 15 per cent. on the present tariff rates, but possibly, and in their own interest, by the abolition of the present heavy transit duties which the Chinese have hitherto levied on the overland trade. No country is more interested than Russia in securing direct intercourse with the Far East, for to her the "route" of trade is also the predestined line of conquest. The northern traders have in part themselves to thank for the foreign competition now induced, whilst their demand for better descriptions were simply exorbitant. In addition to this, the deterioration in the caravan tea had reached a point demanding the corrective, which competition from other quarters could alone supply. Our own importers have latterly had to make complaints of defective curing and manufacture, but, in addition, the adulteration of the Kiachta teas has been extreme, even to the introduction of leaves of unknown plants. Our superior teas re-exported to the Baltic ports are pronounced superior both in flavour and other qualities to those received from the North, and in other descriptions it is allowed that we give a better article at a cheaper rate. A barter trade, however, is never very sensitive, and the established organization for the distribution of caravan teas is not easily set aside. Russian manufacturers, moreover, are eager to avail themselves of this barter trade to dispose of their cloths and woollens, and the value of the Kiachta teas, the imports of which in each of the last few years has reached 15,000,000 lbs.

A country combining, as Russia does, an aptitude for the adoption of both Western and Oriental tastes cannot fail, hereafter, to consume largely a beverage which in such a climate is as much a necessity as a luxury. The Russian Government derives a revenue of £20,000,000 from the spirits distilled from the cereals of the country; but even should the increased use of tea affect this revenue, it would find compensation from other directions. Leitch Ritchi has written amusingly on the civilising influence of tea; it is certain that its more extensive use in Russia would exercise an ameliorating and appreciable influence on the character of the Muscovite population. Our own interests are purely commercial, but whilst urging on the Russian Government the establishment of a differential duty in favour of lower class teas, we may be permitted to point to those which primarily affect itself alone. It is evident, then, that the present tariff rate on tea, virtually excluding the mass of the people from its use, must encourage an enormous amount of smuggling along the extended frontiers of the empire, and that this smuggling must continue on the increase until the Customs' duties be reduced. The 2,000,000 lbs. of tea sent yearly from Prussia into the neighbouring Russian provinces probably represents less than half the amount which finds its way thither from Konigsberg. When regular traders are also smugglers, it is evident that we can be undersold, and it is far from surprising that Prussian exportations of the article should find a market at St. Petersburg as well as Moscow. All this, however, admits of remedy. As the chief factors of exported China teas, as having a larger trade with Russia than any other country, and able to provide the cheapest transportation, it evidently rests with us to hold in our hands the virtual monopoly of further supplies arising out of increased demands. The Kiachta trade has been singularly stationary for years together, even in the absence of competition by sea or land; and it is evident that we must command the area of distribution within the circle of the wide circumference of which the completed lines of railway from northern and southern Russia, centering at Moscow, will be the radii. Our supply of tea to the southern Russian ports are encouragingly increasing, and it is noticeable that both at Taganrog and at Odessa the supplies are all from England. Our entire exportation of tea to Russia last year amounted to 1,714,031 lbs., against 2,859,828 lbs. in 1863. To our total supplies to the Russian market may fairly be added 1,500,000 lbs. sent from Prussia into the neighbouring provinces.

STEAMERS, &c., FOR CHINA.

Messrs. Denny and Co., Dumbarton, will despatch on the 21st inst. a steamer named the *Corea*, 874 tons, and 150 H.P. We believe she proceeds to China to find a market; from all accounts she is a first-rate vessel. Her passage out, however, will settle many points to enable a competent judgment on her qualities.

The screw-steamer building on Clyde for Messrs. Robertson and Co., to replace the *Sea King*, will shortly be ready to launch; and the clipper also building on Clyde, under the superintendence of Captain Maxton, will be ready to launch in June. Captain Roberts, late of the *Mirage*, is superintending the building of a large screw-steamer at Aberdeen, in conjunction with Messrs. Mackay and Co. She is to proceed to Australia, and thence to China, to load home, and we hear that Messrs. Smith, Kennedy, and Co. have an interest in her, and will act as the consignees in China.

A fine clipper ship, named the *Robin Hood*, has been launched at Sunderland for the China trade. The steamer *Shaftesbury* leaves Liverpool on the 16th with a general cargo for Singapore, Hong Kong, Shanghai, Nagasaki, and Yokohama. She is 1,200 tons burthen, and 250-horse power; commanded by Captain Aitkin, and despatched by Messrs. Wakefield, Nash, and Co.

Correspondence.

THE STRAITS AND THE RAJAH OF JOHORE.

(To the Editor of the *London and China Telegraph.*)

SIR,—The Tumongong of Johore has on several occasions been rather hardly dealt with in your columns, and in your number of the 28th

Digitized by Google

ult. I find a letter from a correspondent, who calls himself "An Old Resident," discussing the politics of that country in a spirit which evinces a strong feeling of hostility towards its ruler and his immediate predecessors. Your correspondent writes in the interests of the titular Sultan of Johore, on whose behalf he is pleased to vilify the policy of our own Government in upholding the Tumongongs past and present. According to him, this policy was attributable to the "piratical proficiency" of the late Sovereign of Johore which "brought him into notice," and induced Governor Bonham to take him by the hand, &c.

This is rather a strong statement, considering that the Prince alluded to was brought up, almost from childhood, in Singapore, that he was constantly under the eye of the local authorities, and was a pensionary of the Government, whose goodwill he had every reason to conciliate. But why did not "An Old Resident," in further illustration of the policy which he denounces, proceed to inform your readers that, during the administration of Governor Bonham's successor, Colonel Butterworth, this same Tumongong was (nearly twenty years ago) presented with a sword by the Supreme Government of India inscribed in acknowledgment of his successful services in putting down piracy? The fact might perhaps have been regarded by your correspondent as supplying somewhat too strong an evidence of the disposition of the British Government to act on the rule of contraries, when punishment would have been so justly due and so easily administered; but your readers may judge for themselves how far its suppression is evidence of "An Old Resident's" fairness and candour.

Then, as to the treaty between the two parties, entered into under the cognizance of the Government of India, by which the so-called Sultan finally and in express terms yielded up to the Tumongong the territory and sovereignty of Johore; your correspondent not only says that "it was the result of an unfair exercise of the power of Government," but that "both Colonel Butterworth and Mr. Church, the Resident Councillor, regretted afterwards what they had done, and the latter has left his opinion upon record."

Why, the treaty in question was concluded ten years ago, when Governor Butterworth, not content with merely seeing to its due execution, took especial pains to give the affair all the significancy and *eclat* in his power, and made it the occasion of an imposing ceremonial, at which the principal Europeans (one of them, in all probability, "An Old Resident") and native inhabitants of Singapore were assembled. This was only a few months before Governor Butterworth finally took his departure for Europe, after administering the Government for 12 years, during which he must have become perfectly familiar with the whole bearing of the questions at issue between the parties—and yet in the short space of these few months he repented of his share in the transaction! This is another strong statement, in opposition to which I venture to assert that Colonel Butterworth from first to last never expressed himself but with feelings of very great satisfaction with the whole transaction, and, as to his sagacious and experienced subordinate, Mr. Church, taking to sackcloth and ashes for his share in it, there is no doubt in my mind that *his* repentance will be found equally apochryphal. Nothing less than a "record" will indeed be sufficient to substantiate your correspondent's allegations on this point, and, if he can produce it, so much the better for him.

But in truth there could be no room or cause for these alleged regrets. The treaty, in everything but the pecuniary benefit it secured to the Sultan, was virtually no more than a formal recognition in terms of a state of things which had been in existence from the very commencement of our relations with the Sultan and Tumongong. The former was then nothing more than the shadow of a name, and the circumstance of his being allowed to retain the title of the ancient Kings of Johore is no more a proof of his rights over the territory, properly so called, than it proves his rights over Pahang, Bintang, including Rhio, Battam, the Carimon, Lingin, and various other adjacent countries and islands, which, in former times, composed what has sometimes been called the *Empire* of Johore. A truce, therefore, to reproaches against our government for unfair exercise of its power, in lending effect to a convention which only put the seal to what had already been so long an accomplished fact.

So far I deal with mere matters of fact in "An Old Resident's" communication, and I do not think it neccessary to follow him into the views and opinions he expresses regarding the general state of the countries of the Peninsula governed by Malayan Princes, or the policy he recommends in respect to them, which may be summed up in his recommending our hoisting his friend the Sultan to the top of the tree, with the addition of "an able Resident, as at Mysore," to assist him in the development of the territorial resources of these countries, &c. I confine myself to what is going on in Johore, under the influence of the only Malayan Princes who can be said to possess enlightened ideas of government; and if your correspondent will remain blind to the first promising symptoms of a state of things which he professes a wish to see realised throughout the whole Peninsula, I am happy to be able to show that the press in Singapore is not equally short-sighted on the subject:—"In the South (of the Peninsula) the late as well as present Tumongong of Johore have anxiously applied themselves to the improvement of their dominions. As far as possible, the elements of good government have been introduced, and every encouragement has been given to settlers of industrial pursuits. This has resulted in a large increase of population, and a consequent augmentation of the revenue." Such is the language used by the principal newspaper of Singapore more than two years ago; and the agency of the same enlarged ideas, under which these good fruits have been produced, has not since been in less active operation. In addition to the Johore Saw Mill Company, alluded to by your correspondent (of course, invidiously), other establishments under the management of Chinese have been formed—the prospectus issued of a joint-stock company for the cultivation of sugar, towards which the Tumongong, with his usual liberality, has agreed to give a free grant of a large tract of land, and mineralogists have been and are now exploring the country. This may be considered as affording some answer to the question asked by your correspondent, "Can life and property be safe under such a system?—so far, at least, as *one* territory of the Peninsula is concerned, with respect to whose sovereign I may hope, if I do not expect, to find him more just in future.

—Yours, &c.,

A SINGAPOREAN.

March 6, 1865.

COST PRICE OF TEA.

(To the Editor of the *London and China Telegraph.*)

SIR,—I find the chairman of one of our Indian Tea Companies putting the cost price of producing a pound of tea at 6d.; in the work of Sir John Davis on China the average price given by the teamen of that country to the priests and farmers, of whom they make their collections, is stated at 3d. per pound. Here is a difference of 50 per cent., easily accounted for by the newness of the enterprise in India, and the cost of labour; even Chinamen having been imported to attend to growth, culture, and manufacture. It appears to me that our Indian Tea Companies would find their account in extending their orders for Chinamen, who, unlike the Indian coolies, are usually inclined to hold to their contracts, and are not so apt to make themselves "scarce."—Your, &c.,

City, March 3, 1865. DARJEELING.

Monetary and Commercial.

The directors of the Oriental Hotels Company (Limited) have issued a circular, in which they describe the steps that have been taken for the erection of a first-class hotel at Cairo, in Egypt. The foundation stone was laid on the 18th of January. Arrangements have also been made for establishing an hotel at Galle, existing buildings having been utilised for that purpose. The prospects of the undertaking are referred to in favourable terms, and the report concludes with the remark that "the two hotels will demand all the present capital of the company, and the directors propose to devote the whole of their attention to them, until they are in active and successful operation."

The directors of the East Indian Railway Company have announced that they are prepared to receive applications at par to the extent of £1,200,000, for 5 per cent. debentures, for five years, and renewable at the option of the holder for a second term of five years. These debentures will also carry the option of conversion into shares. Payment of both principal and interest is guaranteed by the Secretary of State for India.

A call of £2 is to be paid on the 10,000 new shares, numbered from 10,001 to 20,000, in the Bank of Hindustan, China, and Japan (Limited), by the 3rd of April.

Mr. Gwyther, who lately returned from China, has joined the London office of the Bank of India, Australia, and China.

The Singapore Gas Company have made a call of £1 per share.

The letters of allotment of the China Steam and Labuan Coal Company have been distributed. The shares are now at 2 discount.

The *Money Market Review* has the following on the fall of cotton prices:—

"Continuously since the vast speculation in raw cotton last November we have written that a great fall in the price was inevitable, and that, with the fall in cotton, money, or the price of discounts, would also tend downwards. The two events are now in course of realisation. The supply of cotton exceeds the demand, and stocks rapidly accumulate. There is now no longer the inducement to send abroad the precious metals wherewith to buy raw cotton, and while cotton accumulates in Liverpool, bullion and specie increase in the Bank vaults. Cause and effect were never more clearly traced, but as regards money there is this additional reason, that, with the decline in raw cotton, and the losses of cotton speculators, the disposition to speculate in anything is gone. Speculative winners, as a rule, increase their stakes, but speculative losers close their books and grow sick at heart over their losses. The demand for money is, therefore, reduced by two distinct causes, but both arising from the cotton famine and the American war.

"Present indications, however, lead to the inference that our money market will not again be much disturbed by the cotton famine and its results. The neck of the speculation is clearly broken at last, without, in our view, much prospect of its revival. The numerous cotton circulars of the 1st of the month all report a nearly hopeless decline during the month of February, while Messrs. Neill Brothers put down the London imports at 57,719 bales from 1st January to 24th February, against deliveries of 29,227 bales, and a stock in Liverpool of 578,000 bales on the 24th February, against 466,000 on the 1st January. In fact, the stock of raw cotton now on hand in Liverpool is larger than at any period since December, 1861. The prices of cotton have fallen during February about 2½d. per lb. for American, 3½d. for Egyptian, and for short staples 1d. to 2d.; while since the 1st January the fall has been 7½d., 8½d., and 4½d. to 5d. per lb."

The Returns of the Board of Trade for the month ending the 31st of January in the present year give the total declared value of exports for the month as £10,489,339, against £10,413,586 in the month of January 1864, and £8,045,155 in the same month of 1863. Amongst the principal changes in the exports there is again a considerable increase in arms, ammunition, and military stores. Of beer and ale there has been a slight decrease. There has also been a decrease in coals and culm, but an increase in cotton piece goods, the figures of the latter being 123,695,916 yards, against 114,565,058 yards

Digitized by Google

in January 1864. The trade with the Far East furnishes the following figures to the present return :—

EXPORTS TO CHINA AND HONG KONG.

	1863.	1864.	1865.
	For the Month of January.		
Cotton yarn	130,000 lbs.	1,000 lbs.	153,722 lbs.
Cotton manufactures	1,356,838 yds.	2,135 981 yds.	4,138,368 yds.
Worsted stuffs	462,990 ,,	743,014 ,,	576,978 ,,
Woollen and worsted cloths	93,491 ,,	78,293 ,,	65 604 ,,
Lead	568 tons	506 tons	333 tons
	Value for the month.		
Cotton yarn	£12,198	£180	£17,571
Cotton manufactures	32,481	63,251	101,093
Worsted stuffs	31,263	53,865	48.437
Woollen and worsted cloths.	19,024	16,947	13,207
Lead	12,202	10,810	7,710

The quantities and values of Cotton Manufactures exported to other ports and countries of the Far East during the first month of the present and two preceding years is returned as follows :—

	1863.	1864.	1865.
	For the Month of January.		
Ceylon	498 672 yds.	1,728,083	542.912 yds.
Singapore	1,263.009 ,,	660,508	2,653.494 ,,
Java	813,876 ,,	361,415	1,386,927 ,,
Philippine Islands	—	2,213,905	3,051,403
	Value for the month.		
Ceylon	£10,788	£53,471	£16,620
Singapore	31,679	15,818	62,588
Java	19,757	11,125	36,435
Philippine Islands	—	61,003	79,872

Of Cotton Yarn 79,400 lbs. was despatched to Singapore in the month of January last, valued at £8,591.

IMPORTS.

Of Raw Cotton we have now the quantity imported from British India and China for the month of January, and the value for the month and year ending 31st December :—

	1863.	1864.	1865.
	For the month ended 31st January.		
British India	76,426	29,973	27,861 cwts.
China	—	7,851	17,396 ,,
	Value for the Month ended 31st December.		
	1862	1863.	1864.
British India	£5,044.695	£8,950,670	£5,857,263
China	23,081	389,841	543,655
	Value for the year ended 31st December.		
British India	£22,042,381	£34,700,661	£38,214,723
China	108,995	2,164,995	6,242,504

Of Unrefined Sugar imported from Java and the Philippine Islands the quantity for the month of January is stated to be 485 tons of the 3rd quality, and 20,672 tons of the 4th quality. We have now also the value for the month and year ended the 31st December :—

	1862.	1863.	1864.
	For the month ended 31st December		
2nd quality (not equal to White)	—	£6	—
3rd (not equal to Brown clayed)	£43,570	148,330	—
3rd (equal to Brown Muscovado)	—	—	£9,897
4th (not equal to Br. Muscovado)	—	—	70,602
	For the year ended 31st December.		
2nd quality	£49.736	£4,557	£634
3rd (previous to April 16, 1864)	352,262	841,216	41,205
3rd (subsequent to that date)	—	—	161,602
4th (do. do.)	—	—	202,017

Of Hemp, the quantity imported from the Philippine Islands during the month of January in the present year was 7,781 cwt. ; and the value of the import for the month and year ended the 31st December in the three last years is stated thus :—

	1862.	1863.	1864.
For December	£49.560	£87,546	£33.060
For the Year	225,414	421,004	309,251

Coffee, from Ceylon, there was imported in the month of January in the present year of 2,812,099 lbs., against 3,619,207 lbs. in 1864, and 4,827,164 lbs. in 1863. The value for the month and twelve months ending the 31st December was as follows :—

	1862.	1863.	1864.
For December	£122,540	£476,516	£169,813
For the Year	2,045,125	2,898,086	2.374,299

The amount of bullion by the P. and O. Company's steamer Ellora, from Southampton on the 4th inst., was :—In gold, to Madras, £866 ; in silver, to Calcutta, £10,000 ; to Singapore, £86,250 ; to Hong Kong, £27,696 ; to Shanghai, £14,750. Total, in gold, £866 ; in silver, £138,696.

ARTICLES OF IMPORT.

TEA.—Within the past ten days the business transacted has been mostly of a forced character and at a further decline ; the recent disasters in the China trade and imports being still beyond all precedent, most importers continue to press Teas forward, in some cases without regard to cost, whilst the trade act with the greatest caution, and hold no more stocks than is absolutely requisite for their immediate requirements. For export the continental demand has been on the smallest scale, but transactions to Canada have been more extended, still not on the same scale as in previous years. The deliveries for home consumption continue satisfactory, and must convince operators in China that the losses incurred are not from any fault in the home trade, but to the simple fact of season after season paying too high a scale of prices, and shipping the season's yield in six instead of extending it over the twelve months. Home consumption for London from 1st January to 28th February, 1865, 9,843,000 ; for 1864, 9,882,000 ; export from do., 1865, 2,800,000 ; for 1864, 2,526,000 ; sent coastwise from do., 1865, 4,700,000 ; for 1864, 5,453,000 ; total for 1865, 17,343,000 ; for 1864, 17,861,000. Blacks.—There has been a full supply of dust and siftings on offer, most of which have been disposed of at 7d. to 9d. per lb., the inferior to good flavory, as well as Kaisow kinds, although taken largely for immediate use, have continued in over supply, and prices have given way another ½d. to 1d. per lb. Medium to fine Kaisows have sold at rather lower prices, and for finest the inquiry is still limited, with but little offering. The common kinds of imitation Kaisow, made from Tayshan leaf, have sold lower by 1d. per lb. ; in medium and fine there have been no transactions. In black leaf of common to fair quality sales have been made with much difficulty, and invariably in favour of buyers ; several chops of medium second crop Oopack and Oonam kinds have sold from 1s. 4d. to 1s. 7d. per lb., and for fine and finest a little better inquiry has existed, and 2s. 3d. has been paid for a few first crop Monings. There have been but few transactions either in Souchong or Oolong. Scented Tea: Considerable sales were effected the early part of the month both in Canton Orange Pekoe and Caper. The demand latterly has subsided, and late transactions in Caper have been at 1d. per lb. decline for medium qualities. Foochow Orange Pekoe has also given way, say 2d. per lb., as the supply to hand of late is in excess. Arrivals of Caper have come in more freely, but, owing to previous moderate supplies, have realised full rates. Green : Until within the last week the business done was confined to home purchases ; latterly buyers for Canada have entered the market, taking good common to fair Young Hyson and a few finest. The trade have bought mostly of Imperial and Gunpowder of Ping Suey growth, as no arrivals have taken place of this season's Fychow or Moyune. In Japan growth the late imports of uncoloured have sold at 1s. to 1s. 1d. for good common to fair, 1s. 2d. to 1s. 4d. for good to medium ; the demand for such, however, is by no means active. The sales which commenced on the 7th comprised 35,987 packages, of which 29.489 were without reserve. The quotations are : Broken leaf, 7d., fair red leaf 11d. to 12½d. A chop of common black leaf, 10½d., and two chops late import 10½d. to 11d. Fine Moning (bulked) 2s. 1½d. Fair Oolong, 8½d. to 9d. The imports at 1st March stand at nearly 36 millions, against 26 in 1864. The deliveries about 18 in each year. Stock 112, against 97 in 1864.

SILK.—Good and fair Tsatlees maintain their price well, but coarse and inferior Taysaams, which form the bulk of the recent arrivals, are heavy of sale, and can be bought cheaper. In Japan Silk there has been some little business in Mibash at a decline of 1s. to 1s. 6d. per lb. from the highest point ; we are still without any arrivals of the finer qualities, the stock of which is now nearly exhausted. The deliveries for the month, 2,312 bales of China, and 889 bales of Japan, show that high prices are beginning to tell upon consumption. The China letters by last mail report total exports since 1st July of China and Japan Silk, 30,300 bales, against 30,100 bales in 1863, and 52,100 in 1862.

SUGAR.—Messrs. Carey and Browne state, in their circular of the 9th: The low range of prices ruling at the date of our last, afterwards induced the home trade to operate with more confidence, and with a gradually improving general demand, stiffer rates were realised for strong refining sorts, and many holders having withdrawn their parcels from the market, increased firmness has since been manifested, and some further advance has been established, so that the value is now 6d. to 1s. per cwt. above our quotations of the 9th ultimo ; the soft and inferior brown descriptions, however, have mostly been in but moderate request, and the transactions in these have been only practicable at comparatively cheap rates. Of the sales in the month we note 260 tons Penang, good brown to middling yellow, 28s. to 31s. ; good middling and good, 32s. to 33s. ; 400 tons Clayed Manila, at 28s. to 28s. 6d. ; 100 tons grey Java, at 35s. ; and 70 tons from Singapore, very low pasty brown, 20s. 6d. to 21s. 6d. ; middling and good white Siam, 35s. 6d. to 36s. 6d. The total imports into the United Kingdom in the first two months of the present year have been about 26,000 tons more than the scanty supplies of 1864, and notwithstanding an increase of 21,000 tons in the aggregate deliveries, by which the general stock has been reduced 10,000 tons since the 1st February, the comparative surplus is larger than previously, amounting to 62,000 tons Raw, and 4,000 tons Foreign Refined, above the quantity on hand at the same time last year. According to the Board of Trade Returns for the month of January, recently published, the total of the duty-paid entries in the United Kingdom during that month were 40,180 tons, against 28,680 tons in 1864, and 38,880 tons in 1863.

COFFEE.—Only a moderate degree of animation has been observable in the colonial market during the past month, but as good qualities in the Dutch sale went off at some improvement, and the supply of Plantation Ceylon has been very scanty, this description has met ready buyers at extreme prices. The Native kind has been brought forward freely, and in the early part of the month the value somewhat declined ; more recent transactions, however, have been on a par with the rates current on the 9th ult., and the total business is again of rather important amount. Supplies of Mocha have been very limited, and for retail lots of good and fine qualities, advanced prices have been paid The transaction of the month are as follows :—800 casks, 1,060 barrels and bags Plantation Ceylon, fine ordinary small to bright colory (part of the new crop), 78s. to 87s. ; 500 casks, 6,000 barrels and bags Native—small 65s. 6d. to 66s. 6d., good and fine ordinary 69s. to 72s., pickings 40s. to 42s. ; 200 packages Mocha—chiefly fair clean garbled, 97s. ; 1,500 bags Manila —even pale yellowish 72s. 6d. to 74s., good ordinary brownish mixed 67s. to 68s., low ordinary 54s. ; and 1,200 bags Sundries—picked Bally

Digitized by Google

Singapore 66s. 6d. to 67s., fair 58s. to 60s., Madras garblings 37s. The arrivals in this port since the 4th ult. have continued of moderate extent, and as the deliveries for export have augmented, the stock is 1,000 tons lighter than that of a month since, and also below the corresponding one of 1864.

RICE.—With the exception of a temporary increase of demand about the middle of the month, when important transactions, chiefly in soft grain kinds, were effected at full rates, the market has had a dull tone, and old white Bengal, which has been offered more freely, has recently declined 6d. per cwt. The total business done is about 130,000 bags, fair to fine Rangoon 9s. 3d. to 9s. 9d., low heated to middling 7s. 9d. to 8s. 7½d., middling to good Nakrenzie 8s. 7½d. to 9s. 3d., low 7s. 6d., common heated to middling Moulmein 7s. 6d. to 8s. 6d.; middling to fair pinky Madras 11s. 3d. to 11s. 6d., low middling to good old white Bengal 11s. 3d. to 12s. 9d., good pearly Moonghy 11s., and 400 tons Ballam, at first at 10s. 6d. to 10s. 9d., lately at 11s. 1½d. to 11s. 3d. ex ship.

CAMPHOR.—Has been very inactive, and recently at auction declined 2s. 6d. to 5s. per cwt., three-fourths of 200 cases China, in lead, selling at 92s. 6d. to 95s.

CARDAMOMS.—Good Malabar scarce and dearer, and other kinds firm: 11 cases Malabar sold at auction at 5s. 8d. per lb. for good; and of 48 packages Madras more than half sold at 3s. for fair long, and 3s. 4d. to 3s. 5d. fair Aleppy; 12 bags Ceylon retired.

CASSIA LIGNEA.—In moderate demand at the previous value, and of 3,762 boxes at auction one-third sold at and after the sales at 75s. to 87s. per cwt., for 3rd to fine 1st pile. Buds: Being in better supply are materially cheaper, and of 91 boxes at auction three-fourths sold at £11 to £11. 2s. 6d. per cwt. for good.

CINNAMON.—We quote 1st sort 1s. 8d. to 2s. 7d.; 2nd 1s. 5d. to 2s. 3d.; 3rd 1s. 3d. to 1s. 10d.; 4th and Jungle 10d. to 1s. 5d. per lb. Very little business doing.

COCOA-NUT OIL.—The market has been more firm and active, especially Cochin, which has advanced 10s. per ton, with good business; only 67 casks Cochin at auction.

DRUGS.—Cubebs: Very quiet: 100 bags at auction retired. Dragon's Blood: Good and fine scarce, and wanted; common quality cheaper; 42 cases ordinary lump sold at auction at 72s. to 84s. per cwt. Galangal Root: Steady; 52 bags at auction sold at 16s. per cwt. for fair. Rhubarb: Firm, but quiet; 20 cases at auction all retired.

GUMS.—Benjamin: Nothing of any consequence doing. Damar: Remains steady, but quiet; 209 cases at auction all retired. Gamboge: Of 28 cases at auction, one-third sold at £10 to £10. 10s. per cwt. for fair pipe, being cheaper.

GUTTA PERCHA.—Remains very quiet; no auctions held; private business very small; fine would sell readily, and there is some inquiry for ordinary at present low prices. India Rubber: Of 112 baskets Penang at auction, half sold at 1s. 2d. per lb. for mixed but good average; 157 packages Assam sold at 6d. to 1s. 0¼d. ordinary to fine; private transactions very limited.

HEMP (MANILA).—This market has been very quiet, with scarcely any business: no auctions held. Quotations: fair to good roping, £27 to £28 per ton.

HORNS (DEER).—Firm: 7 tons Ceylon, 6 Madras, and 4 Singapore sold at auction at 50s. to 52s. per cwt. for 1¾ to 1¼ lb. average; 42s. to 46s. for 2 to 1¾; and 30s. for 2¼.

JAPAN WAX.—Very quiet: 200 cases at auction all retired; very little doing privately.

OILS.—Anniseed: Sales are reported to have been made at 6s. to 6s. 1d. per lb., and more recently in small quantities 6s. 2d. Cassia: Very dull; no auctions, demand very small. Cinnamon, and Mace and Nutmegs: Nothing doing in either of these Oils.

SAGO.—Large dearer; small steady; 513 packages at auction sold at 23s. per cwt. for good large, and 18s. 6d. to 19s., middling small. Flour: Flat, and rather cheaper: of 1,352 bags at auction, one-third sold at 14s. per cwt.

SHELLAC.—This market has once more become very quiet, prices generally going back slightly; of 1,067 packages at auction, one-third sold: Orange, at £6 to £6. 10s. per cwt.; Garnet, £5. 12s. 6d. to £5. 17s. 6d.; Liver, £5. 10s. to £5. 12s. 6d.; Button, £6; Native, £5; and Blocky, £5. 10s. to £5. 17s. 6d. Very little trade privately.

SPICES.—Cloves: Penang rather dearer: 4 cases sold at auction at 1s. 3d. to 1s. 3½d. per lb. for fair; Zanzibar, ⅜d. lower; and of 2,517 bags, two-thirds sold at 3d. to 3⅛d. for middling to good. Mace: Only 8 cases Penang at auction, sold at 11d. to 1s. per lb. for ordinary red, being firm. Nutmegs: Firm: 60 cases Penang at auction sold at 2s. 2d. to 2s. 6d. per lb. ordinary to middling bold, and 10d. to 1s. 4d. inferior small to fair medium. Pepper: Black, in improved demand, and at prices not previously obtainable, Sumatra realising 3⅞d., and Penang, 3⅛d. to 3¼d. per lb., and both very firm thereat. White: Is 1d. per lb. dearer, and good business has been done in Singapore up to 6¾d., and in Penang (very common) up to 6¼d.

TERRA JAPONICA.—Cutch. Pegue: Is again dearer; and of 1,760 bags at auction, half sold at 24s. 6d. to 25s. per cwt. for good. Privately limited business has been done up to 25s. 6d. to 26s., for fine. Gambier: Steady, but quiet: and of 1,425 bales at auction, three-fourths sold at 27s. per cwt. for good cubes, and 22s. 6d. fair block: private transactions very limited.

MISCELLANEOUS.—Camphor: Has been very inactive, and recently at auction declined 2s. 6d. to 5s. per cwt., three-fourths of 200 cases China, in lead, selling at 92s. 6d. to 95s. Galls: Are very scarce, and Bussorah are quoted at £11 to £12 per cwt. for good blue. China much dearer: 384 cases sold at auction at 58s. to 59s. 6d. per cwt.; with siftings at 40s. to 41s.; and 12 cases Japan, at 54s. for good clean: subsequently large business done up to 65s. to 67s. 6d. per cwt. for China. Musk: Has realised fully former value, with good competition at auction; and 50 cases Tonquin sold at 22s. 6d. to 25s. 6d. per oz. middling to fair; 1 tin Nepaul, at 15s. 6d.; 3 tins Cabardine, 10s. 6d. to 11s. 3d.; and 6 tins Grain at 18s. to 25s. 6d. for ordinary. Rattans: Auctions have embraced 8,959 bundles Singapore, and 7,559 bundles Penang, the whole of which sold, and generally at higher prices—4s. 8d. to 8s. 9d. per 100 Sapanwood: Firm; 10 tons Siam at auction sold at £10 per ton, and 10 tons very fine Batavia at £14. 15s. to £15. Mother-o'-Pearl Shells: Steady; of 195 cases Manila at auction, three-fourths sold at £5. 7s. 6d. to £5. 10s. per cwt.; 50 cases Singapore retired. Soy: Remains firm and scarce, with inquiry at the higher quotation, but none offering. Star Anniseeds: Steady; 150 cases at auction sold at £5. 15s. to £5. 17s. 6d. per cwt. for good. Sticlac (Siam): Fine dearer; 161 cases at auction mostly sold at 36s. to 56s. per cwt. for ordinary small to very good. Tortoise-shell: Very dull, and only saleable at low prices; of 7 cases Singapore at auction, three sold at 13s. 6d. to 14s. per lb.; 4 cases Mauritius sold at 11s. to 15s. 6d. and hoof 19s. 6d.; and of 2 cases Sydney, one sold at 11s., and 4 cases indirect retired. Turmeric: No China offering; Java scarce; nothing of any interest doing. Vermilion: Of 32 cases at auction half sold at and after the sale at 2s. 6d. to 2s. 8d. per lb.; privately 2s. 6d. has been accepted, but no more to be had at that price.

ARTICLES OF EXPORT.

IRON.—The quotations in London are for Welsh bars, £7. 10s.; nail rod, £8. 15s. to £9; hoops, £9. 15s. to £10; sheets, single, £10. 15s. to £11; Staffordshire bars, £8. 15s.; rails, £6. 10s. to £7.

STEEL.—Swedish keg, £15.

COPPER.—Sheet and Sheathing, £95 to £96 per ton; yellow metal, 8d. to 8¼d. per lb.

TIN.—95s. to 96s. for block; 96s. to 97s. for bar. Tin plates, best charcoal, I.C., 28s. to 29s.

LEAD, &c.—English pig, £20 to £20. 7s. 6d.; W.B., £21. 15s.; shot, patent, £23; sheet, £21; spelter, £19. 15s. to £20; zinc, English sheet, £24. 10s.; quicksilver, £8.

The following is from the Circular of Messrs. Frenc and Smith:—Throughout the past month our market has continued dull, with but little variation in prices, business being confined pretty much to immediate requirements. Iron: Welsh has been rather more in demand, but without any improvement in price; in Staffordshire no increase of orders, and in Scotch Pig there is no activity. Copper: The quotations for both English and foreign are rather firmer, although comparatively but little business has been done. Tin: English is in moderate demand and rather better in price; Straits declined from £92, which it reached early in February, to £87. 10s., but is now firm at £88. 10s. Tin Plates continue dull in demand, and prices remain the same. The shipments last month were 75,000, against 64,000 in February, 1864. Lead is also very dull, quotations unaltered but not very firm. Spelter improved during the month about 15s. per ton; and in consequence of Zinc having advanced in price in Paris since the close of February month, there has been a good deal of business in Spelter here within the last few days, and prices have gone up to £19. 15s. and £20. The stock in London is 8,575 tons, against 8,220 same period 1864.

EXPORT OF BULLION TO CHINA, &c.

The following return shows the shipments of bullion from Southampton from the 1st January by the P. and O. Company's mail steamers.

FREIGHTS AND CHARTERS.

The export market has of late worn a more animated appearance, and there having been but few arrivals from the Eastward, we have now to report a slight but marked improvement in outward freights. According to latest advices, a little inquiry has been made for ships from Java to the Continent or United States at 70s. to 75s. per ton, but beyond this little business has been done in homeward charters. Coal freights to China continue dull, but the P. and O. Company have made a contract for the delivery of 10,500 tons at Galle.

Current Rates of Freight for Vessels on the Berth:—To Yokohama: 50s. weight, 40s. to 50s. meast. To Nagasaki: The same. To Hankow: 60s. meast. To Amoy and Foo-chow-Foo: 50s. weight, 40s. meast. To Shanghai: 40s. weight, 25s. to 30s. meast. To Hong Kong: 40s. weight, 20s. to 30s. meast. To Manila and Labuan: 50s. weight or measurement. To Singapore: 25s. to 30s. weight or measurement. To Penang: 40s. weight or measurement. To Batavia: 40s. weight, 30s. measurement. To Bankok: 60s. weight or measurement. To Ceylon: 40s. weight, 25s. measurement.

The quotations for coal and iron from the North are as follows:—For Hong Kong: £33 and £1. 8s. For Shanghai: £40 and £1. 18s. For Manila: £1. 12s. 6d. For Batavia: £23 to £24, and £1. 2s. 6d. For Singapore: £26 and £1. 1s. 0d. For Galle: £25 and £1. 2s. These rates are from the Wear or Tyne, and Newport, Cardiff, or Swansea respectively.

The Admiralty have invited tenders for the conveyance of 95 tons navy provisions, &c., 14 tons naval masts, and 38 small spars, from the river Thames to Trincomalee.

CASUALTIES.

Later advices from Buenos Ayres, under date Jan. 26, report that the Geelong was still lying aground, and that pumping her had been given up.

The Amelia, Valentine, arrived in the River Thames from Yokohama, reports that on the 27th February, Beachy Head bearing N.W., distant about 16 miles, she was in contact, in a dense fog, with a barque, and had foreyard and topmast backstays carried away, with other damage.

Accounts from Tremblade, dated 2nd March, state that the Concorde, Zisly, of and for Bordeaux, from Singapore, which was stranded at Coubre Point, had broken up.

The Friesland, Sipkes, from Amsterdam for Batavia, which put into Rio Janeiro 31st Jan. leaky, has discharged part of her cargo there.

The Priam, Irvine, from Clyde for Singapore, put into Lisbon leaky.

MISCELLANEOUS.

At ST. HELENA.—Jan. 20, from Batavia, Jacoba Cornelia, Lowens, sailed for Amsterdam; 22, from Manila, Ocean Home, Brown, and sailed, 23, for Queenstown; 25, from Banjoewangie, Columbine, Koh, and sailed, 27, for Rotterdam; from Canton, Magenta, Janvrin, and sailed 26, for New York; from Batavia, Anna Digna, Ouman, and sailed, 26, for Amsterdam; 26, from Amoy, Falcon, Watson, and sailed for New York; from Batavia, Graf v. Hoogendorp, Frabricius, and sailed, 28, for Rotterdam; 28, from Banjoewangie, Kon. Ned. Yacht Club, Zwart, and sailed for Amsterdam; from Patjitan, Nova Zembla, Mammes.

At ALGOA BAY.—Jan. 17, Alcyone, Kruisinga, sailed for Batavia Maria Catherina, de Bos, sailed for Java.

At NATAL.—Jan. 4, Frede, sailed for Singapore.

At MAURITIUS.—Jan. 18, Rainbow, Kelly, sailed for Batavia.

LIGHTS ON THE YANG-TSE KIANG.

Hydrographic Office, Admiralty, London, Feb. 17, 1865.

The Harbour Master at Shanghai has given notice that on and after the 5th day of December, 1864, lights would be exhibited from the Kiu T'Oan Beacon, on the south side of entrance to the Yang-Tse Kiang, on the east coast of China.

The upper light is a fixed white light, placed at an elevation of 70 feet above the mean level of the sea, and in clear weather should be visable from a distance of five or six miles.

The lower light is a fixed red light, at an elevation of 30 feet above the mean level of the sea. This light is intended to keep vessels clear of the dangerous spit that has formed off the beacon, and it will not be visible from a vessel's deck 15 feet above the sea, until she is in 18 feet, low water springs.

The Beacon is chequered Red and White, and surmounted by a brigh brass ball. By command of their Lordships,

GEO. HENRY RICHARDS, Hydrographer.

Mem.—This notice affects the following Admiralty charts—China. East Coasts, sheets 8 and 9, Nos. 1,199, 1,480, 2.412. Estuary of the Yang-tse, No. 1,602; and Hong Kong to Lian Tung, No. 1,262; also China Pilot, p. 211, and Hydrographic Notice, China, East Coast, No. 2.

BOYVEAU LAFFECTEUR'S ROB.

The only one authorised and adopted in France, Belgium, Austria and Russia.

THIS Vegetable Syrup, prepared and guaranteed genuine by the signature of Dr. GIRAUDEAU DE ST. GERVAIS, is very superior to the purifying syrups. It effects a radical cure, without mercury, of all affections of the skin, scurf, scrofula, &c., and symptoms arising from the acrid state of the humours. The Rob is especially valuable in diseases which have resisted the effect of mercury or iodide of potash. The general entrepot is 12, RUE RICHER, PARIS.

Sold Retail.—London: Jozeau, Hannay. New York: Fougera, Gaudelet, Milhau. Gibraltar: Patron and Danilowich. Malta: Dr. Pirotti, Rugeja, Magri, and Rolando, Esperanza. Alexandria: Bellamore, Galette, Perime, Bombay; Framjee Nesserwanjee and Co. Singapore: Martin and Little Batavia: L. Platon and Co. Macao: J. D. Freita.

THE BANK of HINDUSTAN, CHINA, and JAPAN (Limited).

NOTICE of CALL of £5 per Share on 20,000 New Shares Third issue.

NOTICE IS HEREBY GIVEN, that the Directors have This Day made a CALL of £5 per Share on the 20,000 New Shares in this Company, PAYABLE on the 12th day of April, 1865, at the Banking-house of the Company, 1, Bank-buildings, Lothbury, London.

Interest at 10 per cent. per annum will be charged on all calls not paid on the above date.

By order of the Board,

R. SWIRE TOMLIN, Secretary.

No. 1, Bank-buildings, March 13, 1865.

WHITWORTH RIFLES.

THE MANCHESTER ORDNANCE AND RIFLE COMPANY beg to give notice that WHITWORTH ORDNANCE RIFLES and AMMUNITION are manufactured by Mr. Whitworth's Patent Machinery only at their works in Sackville-street, Manchester.

Application may be made either at the above works, or at the Company's Office, 28, Pall Mall, London, S.W.

The Rifles and Ammunition may be also obtained through the agency of any respectable Gunmaker.

N.B.—In the International Match at Wimbledon in 864 all the competitors used the Whitworth Rifles

THE AGRA & MASTERMAN'S BANK

(LIMITED).

THIRTY-FIRST ANNUAL GENERAL MEETING of Shareholders of the AGRA and MASTERMAN'S BANK (Limited), held at the London Tavern, Bishopsgate-street, E.C., on SATURDAY, March 11, 1865,

GEORGE GORDON MACPHERSON, Esq., Chairman, in the Chair.

The Notice convening the Meeting and the following Report and statement of accounts were read:—

The Directors, in submitting to the proprietary the audited accounts for the year ended 31st December last, beg to report that, after making ample provision for bad and doubtful debts, the available surplus is £263,120. 8s. 6d. Out of this sum the Directors have paid two half-yearly dividends at the rate of 10 per cent. per annum each on the original shares of the Bank, adding a bonus of £2 per share for the first six months, and of £3 per share for the second six months, thus making the total distribution for the year 20 per cent., free of income-tax, on the original capital of one million sterling.

The directors have also paid a dividend at the rate of 10 per cent. per annum on the new capital of £500,000, adding a bonus of £1. 5s. per share, together equal to 20 per cent. per annum free of income-tax, for the half-year just ended. The balance of £16,321. 11s. is carried forward to credit of profit and loss account for the current year.

The Directors have the pleasure to report that the amalgamation with the private bank of Messrs. Masterman, Peters, Mildred, and Co., has been successfully completed, and that the new capital authorised by the special resolutions passed at the extraordinary general meetings of the Company held on the 7th and 21st May last has been subscribed.

Every arrangement incident to the amalgamation has been made, and the Directors, after fulfilling the engagements into which they entered, have been able to make up the reserved fund of the Bank to £500,000, at which they propose that it shall in future stand.

The sanction of the Board of Trade has been obtained to the present designation of the Bank, and the Directors have applied to Parliament for an Act to enable the Bank to divide their shares.

Since last annual meeting the Directors have opened a sub-branch of the Bank in Melbourne.

They have also arranged for the sale, on satisfactory terms, of the premises, No. 27, Cannon-street, and of the building now occupied by the branch of the Bank in Calcutta.

The present auditors being eligible for re-election, in terms of the deed of settlement, offer themselves accordingly.

By order of the Board,

MACKINTOSH BALFOUR, General Manager.

G. B. DALBY, Chief Accountant.

We have examined the preceding Statements (Nos. 1, 2, and 3) with the Books, Vouchers, and Securities, at the Head Office in London, and with the detailed Returns and Balance-sheets signed by the Auditors of the several Branches, and we hereby certify to the correctness and satisfactory character thereof

London, 2nd March, 1865.

WILLIAM FARR,
J. HILL WILLIAMS, } Auditors.

The following resolutions were duly moved, seconded, and carried unanimously:—

1. That the report and statements now read to the meeting, and previously circulated to the shareholders in Europe, be adopted.

2. That Major-General James Ramsay, Colonel James Holland, George Hay Donaldson, Esq., and Alderman Thomas Quested Finnis, be re-elected Directors.

3. That John Hill Williams, Esq., and William Farr, Esq., F.R.S., be auditors for the present year.

4. That the thanks of the shareholders be given to the Board of Directors; to the General Manager, Mr. Mackintosh Balfour; to the London Manager, Mr. William Shipman, and to the local committees and managers of the branches for their able and satisfactory management of the Bank's affairs for the past year; and to the Auditors for their efficient supervision of the accounts.

5. That the thanks of the meeting be given to the Chairman for his able conduct in the chair.

G. G. MACPHERSON, Chairman.

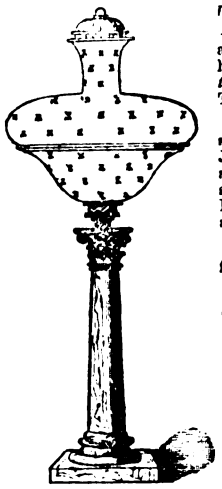
TUCKER AND SON'S

IMPROVED

ENAMELLED PUNKAH TABLE LAMPS.



THE celebrity which TUCKER AND SON'S LAMPS have acquired in the East for burning *steadily* under the Punkah or in side draughts, and *brilliantly* with any of the *coarse native oils*, renders eulogy unnecessary; but having been enabled, by increased facilities of manufacture, very considerably to *reduce the prices* of the above favourite (but hitherto expensive) description of their lamps, T. and Son beg to notify the fact to the Eastern public.

They are elegant and durable, are finished in exact imitation of many beautiful stones and marbles, such as Malachite, Lapis Lazuli, Serpentine, Sienna, Brocatella, Jaspez, &c., and are not affected by heat, damp, friction, or insects; oil, spirits, or acids accidentally spilled. The enamel surface is so inseparable from the base (block slate, proverbial for its strength) that it cannot be removed except by an edged tool. It *requires* simply *dusting*, but if rubbed hard, it only adds a gloss to its appearance—at all times cool and agreeable.

After ten years' constant use and handling, these lamps are none the worse for wear.

Malachite (green), Serpentine (brown), or Lapis Lazuli (blue), are most recommended.

Table Lamp complete, with engraved glasses, as sketch, 72s.

A Plainer Lamp, without the Corinthian capital, 50s. complete.

Either pattern, with plain frosted glasses, 7s. 6d. each less.

*** *The above Lamps are supplied to burn Petroleum or Rock Oil also.*

Orders can be sent through any merchant or Agent, or, if accompanied by a remittance, direct to

ED. PINAUD, CHEMIST-PERFUMER, Rue St. Martin, No. 298. PARIS.

ED. PINAUD, whose House we specially recommend, is distinguished by the strictly hygienic and tonic quality of his productions, and for this reason his articles are in high favour with the *beau monde*.

HIS Establishment is the only one of its kind in which the recent Discoveries in Chemistry and the Arts have been put into practice. The proof is that ED. PINAUD obtained the Medal at the last London Exhibition.

The Productions of this House may be obtained at the Chief Perfumers in France and Abroad.

JUST PUBLISHED. CHAPMAN AND HALL.

THE "LONDON AND CHINA EXPRESS" ON SALE

UMBRELLAS and SUNSHADES suitable for all Foreign Markets and the Colonies are supplied to Shippers on the most favourable terms by JOHN MORLAND and SONS, Wholesale Manufacturers 50, Eastcheap, London-bridge, City. Silk, Alpaca, Gingham Steel Frames, Canes, Fittings and all kinds of Material for the Trade. Oiled and japanned silks and cambrics.

CAUTION.

THE GROSS FRAUDS which continue to be practised by obscure manufacturers, more particularly in Germany, by imitating the Labels attached to JOHN GOSNELL and Co.'s PERFUMERY, render it imperative upon the Proprietors to Caution the public against such nefarious proceedings, and to request their friends and patrons to purchase only of respectable dealers, who import direct from JOHN GOSNELL and Co., and invite special attention to the address, 12, THREE KING-COURT, LOMBARD-STREET, LONDON, E.C.

JOHN GOSNELL and Co.'s SELECT PERFUMES.—Ess Bouquet, Royal Yacht Club Bouquet, Jockey Club Perfume, Essence of Wood Violet, Victoria Bouquet, Garibaldi Bouquet, Frangipanni, Military Bouquet, The Bride's Bouquet, Tea Rose, Russian Leather Perfume.

JOHN GOSNELL and Co.'s Toilet Vinegar, Inexhaustible Salts, Aromatic Vinegar, Aromatic Eau de Cologne.

JOHN GOSNELL and Co.'s Prince of Wales Perfume.

JOHN GOSNELL and Co.'s Princess Alexandra Perfume.

JOHN GOSNELL and Co.'s La Noblesse Perfume.

JOHN GOSNELL and Co.'s La Noblesse Pomade.

JOHN GOSNELL and Co.'s La Noblesse Soap.

JOHN GOSNELL and Co.'s Real Old Brown Windsor Soap.

JOHN GOSNELL and Co.'s Golden Oil—Moelline—Macassar Oil, Bear's Grease, &c., for the Hair.

JOHN GOSNELL and Co.'s Extra Highly Scented Toilet and Nursery Powder.

JOHN GOSNELL and Co.'s Stereodesmic or Dentists' Tooth Brushes and Trichosaron Hair Brushes, warranted to purchasers.

JOHN GOSNELL and Co.'s Instantaneous Hair Dye.

JOHN GOSNELL and Co.'s Cherry Tooth Paste is greatly superior to any tooth powder, gives the teeth a pearl-like whiteness, protects the enamel from decay, and imparts a pleasing fragrance to the breath.

NOTHING IMPOSSIBLE.—The Greatest and most Useful Invention of the day, AGUA AMARELLA.—Messrs. JOHN GOSNELL and CO., 12, Three King-court, Lombard-street, London, Perfumers to Her Majesty, respectfully offer to the public this truly marvellous fluid, which gradually restores the human hair to its pristine hue—no matter at what age. The Agua Amarella has none of the properties of dyes; it, on the contrary, is beneficial to the system, and when the hair is once restored one application per month will keep it in perfect colour. Price One Guinea per bottle; half bottles, 10s. 6d.

JOHN GOSNELL and Co., Perfumers to Her Majesty, and by Special Appointment to H.R.H. the Princess of Wales, London.

HOLLOWAY'S PILLS.—Bilious affections and stomach complaints induced by atmospheric heat or too liberal diet, if not early checked, are often attended with serious consequences. When anyone finds his ideas less clear than usual, his eyesight dimmed, and his head dizzy, while he is indisposed for all exertion, physical or mental, he may be quite sure that he is in immediate need of some cooling and purifying medicine. Let him send at once for a box of Holloway's Pills, after a few doses of which his head will be clear again, his spirits be elevated, and all his energies restored. Printed directions for the guidance of patients in the use of this admirable medicine are affixed to every box.

O. de Zarate, Baron R. de Tuyll.

Summary of News from the Far East.

JAPAN.

YOKOHAMA.

Dates are to the 1st February. The London mail of the 26th November arrived out on the 25th January.

The newspapers received by this mail may, perhaps happily, be said to contain nothing worth extracting. All is quiet; and in the intervals of business the inhabitants of the settlement have been enabled to amuse themselves unchecked by apprehension or anxiety. The lovers of skating have had a long burst of that pastime; the Garrison Games were held on the 26th January; and equestrians have begun to resort in considerable numbers to the splendid Park-road (from the Bluff and Creek, round the Mississippi Valley and hills), which is now near completion.

Colonel Fisher, the United States Consul, is accused of being opposed to the establishment of a Municipal Council on the plan proposed; and the difficulties he has it in his power to throw in the way of a Council formed without his sanction are great. The *Japan Herald* says:—"Though many respectable Americans are, we know, willing to pay their share of the expenses, and conform to the rules of a municipal body, still, especially on questions of keeping order in the streets and in licensing and controlling public-houses, the municipality would be constantly in collision with the United States Consul, and we fear that almost insuperable difficulty would be found in working it." However, we learn that a meeting of the delegates elected by all the other nationalities, to decide finally on the question, was appointed for the 6th February.

Several cases of smallpox had occurred in the camp and afloat, but we hear of none amongst the civil community. A scheme for an ice-house has been started by Mr. Risley, who is supported by a list of subscribers, who are willing to unite in providing means for the erection of the necessary structure, the working the ice, &c. The ice thus provided is to be sold at ten cents per lb.

The following commercial changes are notified:—

The interest and responsibility of Mr. Wm. Hallensleben in the firm of Grosser and Co. ceased on the 31st December.

A. N. Shillingford and S. Rowell dissolved partnership as Civil and Mechanical Engineers on the 31st December.

NAGASAKI.

Messrs. Maltby and Co.'s tea-firing establishment was burned down on the 13th January. The newly-formed fire-brigade rendered able assistance, and were well seconded by the crews of several men-of-war in port. The property was insured in the China Fire Insurance Company, for about $8,000.

CHINA.

SHANGHAI.

The English mail of 10th Dec., arrived out on the 31st Jan., and the French mail of 17th Dec. on the 6th Feb. The dates are down to the 9th.

From the *North China Herald* we gather the following items.—The Chinese new year festivities have passed by without any demonstration of rowdyism on the part of either foreigners or natives. Our readers will recollect the circumstances of a case that occurred during last December, in which an Englishman named Dodds fired recklessly into a Chinese boat, and

Digitized by Google

mortally wounded a woman. The prisoner was sentenced to deportation, and to pay a fine of $500.

A meeting of the pew-renters, and others interested in the English Church at this port, was held at the British Consulate. Sir Harry Parkes occupied the chair. The report for the past year was read, and the accounts submitted and passed. After much discussion, it was resolved that Mr. G. G. Scott's plans for the new church, as enlarged by Mr. Kidner, be adopted, and that the appointment of a clerk of the works be left in the hands of the trustees. It was also resolved that building operations shall commence so soon as, in addition to the sum of Tls. 25,000 at present available, Tls. 20,000 shall be collected. The remainder of the sum required will subsequently be raised by mortgage, or by such other means as may seem advisable to the pew-renters. The plans submitted by Mr. Kidner will afford room for seven hundred and fifty sittings, while Mr. Scott's plan, if adopted in its integrity, would accommodate no more than four hundred and sixty. A letter from the Secretary of the Municipal Council, proposing that a portion of the Church compound should be devoted to the erection of a town-hall, and enclosing plan, was read, but it was unanimously resolved that the Church compound should not be infringed upon.

The eighteenth annual meeting of the friends and supporters of the Chinese Hospital was held on Tuesday the 31st Jan. The following are the names of the office bearers appointed for the year 1865 :—

TRUSTEES.—T. Hanbury, Esq., W. Lockhart, Esq., H. W. Dent, Esq., R. R. Tyers, Esq., W. G. Cuthbertson, Esq., R. C. Antrobus, Esq., F. R. Gamwell, Esq.

COMMITTEE.—H. W. Dent, Esq., Treasurer; T. Hanbury, Esq., Auditor; Rev. W. Muirhead, John Major, Esq., P. Loureiro, Esq., Dr. Johnston, Dr. Henderson, Secretary.

MEDICAL OFFICERS.—J. Henderson, M.D., F.R.C.S.E., Surgeon; J. Johnston, M.D., M.R.C.S.E., Surgeon.

We have already announced the anticipated departure of the 67th Regiment, and we now learn from intelligence lately received from Hong Kong that the 2nd Beloochees and the 22nd Regiment of Madras Infantry will leave for India within this month or early in the next, while the 99th have been countermanded. Taku and Shanghai will thus be left without the protection of a foreign garrison, but there will be two regiments stationed at Hong Kong and one in Japan, which will suffice to ensure the safety of the foreign settlements.

A second report has been issued by Mr. Clarke to the Municipal Council of Shanghai respecting the bund line, upon which the *North China Herald* has the following remarks :—

The deterioration of the river channel, the inconvenience and offensiveness of the mud bank—which is extending so rapidly in advance of the bund—and the utter insufficiency of the present jetties, have been so often dilated on and are so fully admitted, that to insist further on the necessity for adopting some remedial measures is needless. The urgency of the case is fully admitted by everyone except the Chinese ; but they, while acquiescing with apathetic readiness in every representation made on the subject, appear utterly unable to contemplate the necessary improvements otherwise than as a remote contingency. The closing of the Soochow creek alone appears to excite some anxiety in their minds. When, on a recent occasion, Mr. Clarke marked out the proposed new bund line for the Taotai's inspection, the latter approved complacently of his suggestions, but said that Peking must be consulted before so extensive a design could be carried out. When, however, the possibility of walking across the Soochow creek at low water was practically demonstrated, he suddenly manifested a much deeper interest.

The weather has been changeable, with two days of nearly continuous rain. The thermometer shows maximum by day 68 deg., and the minimum by night 34 deg., against maximum 70 deg. and minimum 33 deg., the register during the previous week.

Tseng Kuo Tsueh, whose degradation we mentioned some weeks ago, has since died, either by his own hand, as some assert, or from disease brought on by exposure and dissipation.

The clipper ship *Serica* arrived in ninety-five days from Torbay. The *Serica* was the first ship home last year, and she has now added additional renown to her name. Last year the *Fiery Cross* accomplished the run in the same time.

The property of Mr. James Cock has been made over to Mr. Charles Cumine and Mr. F. R. Gainwell.

Mr. T. B. Twiss has also made over his estate to J. D. Cope and W. Cheshire.

The members of the Sussex and Northern Lodges, the Zion Chapter, and the Celestial Encampment met at a Masonic banquet given by them in honour of R. W. Bro. S. Rawson, P.P.G.M., P.G.S. of Royal Arch Masonry, and P.G.C. of Templar Masonry in China. R. W. Bro. Rawson's departure from China will be deeply felt by the brethren in Shanghai, as for many years, both at this place and in the south, he has devoted his attention to the advancement of the interests of the craft.

A general meeting of the Shanghai Rowing Club was held on the 2nd of February, when Mr. Hayes, the Hon. Sec., presented the balance-sheet for the past year. The old committee having retired in accordance with the rules, Mr. Maitland proposed that the following gentlemen should form the committee for the ensuing year :—H. W. Dent, Esq., R. C. Antrobus, Esq., H. S. Geary, Esq., W. Stout, Esq., Captain ; H. Cope, Esq., Hon. Sec. Mr. Hayes seconded. Carried unanimously.

A trial of some interest took place before the Consul, Sir H. Parkes, between the owners of the ship *Her Majesty*, and Dadabhoy and Co., on the 24th of January :—

The parties to this suit had agreed, by a charter-party dated September 14, 1864, that the ship *Her Majesty* should take on board at Shanghai a cargo of cotton, or other merchandise, and therewith proceed to London or Liverpool, as ordered by the charterers ; the ship to have a lien on cargo for freight £3. 10s. per ton of 50 cubic feet. Seventy working days to be allowed, and demurrage beyond that time to be paid by the charterers at the rate of $80 a day. The plaintiffs had done everything to entitle them to have the cargo on board the ship, but the defendants had not fulfilled their agreement, and the plaintiffs claimed £6,500 in consequence.—The defendants replied that the time allowed for the loading of the vessel had not elapsed, and that the plaintiffs had wrongfully refused to receive cargo tendered by the defendants in pursuance of the agreement which had been concluded between them. The plaintiffs had thus discharged defendants from the performance of the charter-party.

The Court decided that the charter-party continued in force, and ordered Messrs. Dadabhoy 80 Mexican dollars demurrage per day, from the 7th to the 24th Jan., and after that date 100 do. per day.

Another action before the same Court was between the master and owners of the steamer *Titan*, and the master and owners of the steamer *Fire Dart*, and *vice versâ*. This was a cross action in which both cases were merged in one by mutual consent. The plaint brought on the part of the steamer *Fire Dart* was to the effect that the persons having the management of the steamer *Titan* did on or about the 7th of January, 1865, in or near the entrance to the Wongpoo, so negligently and unskilfully navigate and direct their vessel that she came into violent collision with the steamer *Fire Dart*, and in consequence the *Fire Dart* was greatly injured and delayed ; the collision was entirely attributable to their fault and misconduct, and the sum of tls. 1,453 was claimed as compensation. On the part of the *Titan* a general denial was made of the above charge. The cases occupied a long time in the trying, and so conflicting was the evidence that, had not the disinterested evidence of Lieutenant Chowne, of the *Barossa*, who witnessed the collision been forthcoming, the Court would have found difficulty in deciding. That officer's evidence, however, showed that the *Fire Dart* put her helm a-port, in order to avoid collision with a vessel that was approaching her on her starboard bow. The rule that two ships meeting should put their helms a-port was misapplied under these circumstances ; as it is only intended to be followed when vessels meet "end on, or nearly end on," and this could not be construed to mean two or three points on either board. When collision became imminent, the *Titan* stopped her engines and put her helm hard a-starboard, while the *Fire Dart* simply kept her helm hard a-port, without attempting to stop, and kept her engines going even during the time that the vessels were in collision. The Court therefore decided in favour of the *Titan*.

HANKOW.

We learn that so much apprehension is felt lest the rebels should spread into the adjacent provinces, that Tseng Kuo-fan has detached five thousand picked men, under an experienced general, to guard the city of Ying-chou-fu, on the borders of the Anhuei province, about two hundred miles south of Kai-fung. It is strange that the Mahometans did not seize the opportunity afforded by the unsettled state of the empire during the Taiping occupation to push their designs, but if they now prosecute their present undertaking the insurrection will in all probability prove as serious in its character as was the Taiping movement.

HONG KONG.

The French mail of 17th Dec. arrived out on the 1st Feb.; the English mail of 26th on the 7th. The dates are now down to the 15th.

The leading item of interest was the robbery of the vaults of the Central Bank of India. It appears that the amount carried off by the thieves is somewhere about $115,000. Of that sum a small portion has been recovered. The affair was managed by means of a tunnel, which was dug between a drain and the floor of the bank's treasury vault, a distance of sixty feet. A flag was raised up and entrance to the vault obtained. Here were many bags of dollars, four boxes of gold bars. several boxes of small silver coin, and $63,000 in bank notes, The bank not having a note-issue of its own, the notes were those of various other banks, and their numbers had not been taken, it not being customary in Hong Kong to keep the numbers of bank-notes on hand. Two boxes of gold bars were removed, as well as all the paper money, also two bags of dollars and a box of ten-cent pieces. The authorities at Canton and Macao were at once communicated with, so that they might be upon the alert, and we hear that some arrests have been made at Macao. The police of Hong Kong made vigilant search throughout the city and the island, and succeeded in apprehending between twenty and thirty men on suspicion. On the person of one of them was found $5,755, and two bars of gold having the bank's mark upon them. Further search being made, seven gold ingots were found on the premises (a matshed at Wanchi) where the man (along with others since discharged for want of evidence) was taken. The latter has admitted his guilt, and has given up the names of eight Chinamen who were engaged with him in the robbery. He has also made statements which, with other evidence of a direct nature, have led to the taking into custody of the bank's comprador, two shroffs, and two coolies. The charges against them have been made at the Police Magistrate's Court, and a remand granted for the production of further evidence.

H.M.'s troop ship *Tamar* has arrived with the 2nd Battalion 9th Regt. from Gibraltar. She is to proceed to the Cape with the 99th Regt., and thence home with return troops.

The weather had been unseasonably warm, and the hope of any winter was almost given up.

The *Fiery Cross* arrived from England in 88 days, from pilot to pilot.

The *Evening Mail* notices the following items :—

The competition between the H.K.V.A. and the H.K.V.R.—or the carbine versus the long Enfield, resulted in a slight advantage to the former, the scores being 440 against 412. A few remarks were made concerning the prospects of the race meeting; and as the various classes of horses are this year well represented, while it is said they will likewise be unusually well ridden, the races next week promise to be as full of interest as on any previous occasion. There was a meeting of the Legislative Council, when some rather important matters were disposed of. The most serious part of the business was the defeat, on the second reading, of the Limited Liability Ordinance; this has aroused a strong feeling against the pseudo-popular element in the Legislative Council, and an effort will probably be made for some reform in that direction. The Governor, it is believed, is himself in favour of the defeated measure; and were he to exercise his prerogative of passing it on his own responsibility, it is very certain that he would be supported by public opinion. The military mulct was likewise formally consummated by the production of the reply of the Secretary for the Colonies brushing away every objection, and giving instructions to raise the money wanted. Other colonies have been treated in much the same way; and we observe from some Cape Colony papers that the Mauritius has been subjected to an increase of £13,000 a year, raising the sum now annually raised there to £45,000. An indignant member of the Council there showed some spirit by stigmatising it as "a peremptory summons," "an autocratic act," and so forth; but the money, of course, was voted; and Cape Colony is in momentary expectation of a like demand. The autocratic element is a somewhat novel feature as thus presented in English administration.

His Royal Highness, Lee-Shai-yin, Shee-king, and Imperial Protector General of the Celestial Dynasty—for such are the high-sounding, though rather empty, titles assumed by the rebel chief, Shi-Wong—is now at Changchow, between Foochow and Amoy, and has employed his leisure moments in composing two proclamations, which for philanthropic professions and enticing promises of doubtful value, are almost unequalled. And yet they are of some importance, for they show how little confidence he feels in his own success, and the utter mistrust of those to whom he appeals. His first manifesto is merely an apology for his rebellion, winding up with a touching reference to the past wickedness and deserved downfall of the present dynasty, and calling on the people to aid him in his self-imposed task. In his second he changes his tone a little, and, alluding to the crops which are now ready for harvest, and had been deserted on his approach by the inhabitants, who fled with all their portable goods to the nearest cities, he says, "Come and gather in your fruits without fear, and humbly pay your taxes to me," and goes on to pledge himself that no harm shall accrue to them from his soldiers, if they will only accede to his demands. This may be all very fair and straightforward, or it may be only a lure, and as such the Chinese are inclined to consider it. The penalty of non-payment of taxes is more than dimly hinted at in the "proclamation;" and as it is possible (1) that many of the farming population may have no ready cash to pay the taxes with; (2) that the taxes may be so high as to leave little or nothing to make farming worth while to the husbandman; (3) that the people have no faith whatever in rebel promises; or (4) that they would not be able to get a fair market for their grain when it was gathered in, but would have to sell it to the followers of the Shi Wong at the latter's own price, it is not likely that the proclamation will have the effect of luring the fugitive peasantry within the rebel lines. The whole spirit of the document evinces a desire to inspire confidence in the people, and it directly confesses that such confidence has been lost, if indeed it ever existed, which is doubtful. It is quite clear that, as a body, the Chinese are much more inclined to remain as they are, than to risk their lives, or property, for other new rulers.

The *Canton Observer* has been recently established at Canton.

As the *White Cloud* steamer was returning to Hong Kong, a young man, who lately was clerk in a good position at Canton, made a most determined effort at suicide by leaping overboard, but was fortunately rescued just in time.

At the Queen's Theatre Madame Denet has earned laurels in "The Creole," and Miss Jenny Arnot in "Nan Good for Nothing." Mr. Taylor also acted creditably on the occasion of his benefit, as *William* in "Black-eyed-Susan." The "Lady of Lyons" brought out Miss Edorim and Mr. Creswick very favourably.

A fire broke out in a matshed situated just below Messrs. Dent and Co.'s new stables. The flames, quickly spreading, caught the matsheds under which the building is going on, and had it not been for the energy displayed by some of the spectators in pulling down a portion to leeward, much greater damage might have been done; as it was, a pretty large stack of wood in the gorge beneath was entirely destroyed. Messrs. Dent and Co.'s and the police engines were quickly on the spot. It is stated that, in order to cover the military contribution of £20,000 per annum, a stamp-tax must be introduced as in India and Singapore. We hope the residents will be able to avoid such a vexatious impost on mercantile operations.

On the Volunteers the *China Mail* says :—After three years' existence the Volunteer Corps of Hong Kong continues to flourish, having been, moreover, strengthened by a company of Rifles and an excellent band, which latter continues to practise with undiminished ardour, and to improve with more than usual speed. Since the departure from the colony of Major Brine, R.E., who so effiently discharged the duties of colonel to the corps, Major Scott, of H.M.'s 22nd N.I., has been elected colonel, but, unfortunately, that regiment is about to be withdrawn, and it will be necessary to obtain the services of another officer to supply his place.

The *Government Gazette* announces that the Police and Lighting-rate for 1865 for houses in the city is eight and a quarter per cent. (Is the odd quarter just to exercise the brains of the collectors?) This rate, as regards houses in Victoria, will be levied exclusive of a Lighting-rate of one and a-half per cent. under section 12 of the above Ordinance, and of a half-yearly Water-rate of two per cent. per annum under the provisions of Ordinance No. 12 of 1860.

Tenders will be received at the Surveyor General's office for the extension of the Praya in the neighbourhood of Bonham

Digitized by Google

Strand; also for the erection of 1,500 ft. of sea wall, and for the erection of a new harbour master's office.

A reward of $1,500 is offered for the capture and conviction of the robbers of the Central Bank of India, noticed above.

SIAM.

The *Siam Times* aduocates the introduction of the telegraphic wire into Siam, connected with a line from Rangoon to Penang and Singapore. Our contemporary urges—"But we need not wait to become connected with the great lines of India before availing ourselves of its benefit. A line from the city of Bangkok to the mouth of the river is demanded at once. The inconvenience, to say nothing of the losses, which merchants and business men have suffered during the last few years, would have paid the cost of it. We are informed that responsible parties have offered to furnish all the material, and put up a good substantial line from the city to the village of Paknam at the mouth of the river, for three thousand dollars. This is certainly a small sum for the immense advantages it would confer. But the line ought to go further, and extend to the Bar, where a station could easily be made, so as to connect immediately with the shipping. To extend it to the Bar where vessels could report themselves at once, with whatever news they might have, would probably cost only about another thousand dollars and more than double its benefits."

The American steam rice mill is undergoing thorough repairs preparatory to future operations. This mill was the first in the field, and laboured under many difficulties in preparing and adapting machinery to Siam rice. Messrs. Odman and Co.'s, steam rice mill has recently, been considerably enlarged by the arrival of new machinery most of which is set up and will be ready as soon as there is any rice to hull or clean. The new steam rice mill of Messrs Markwald and Co. now in process of erection, on the piece of ground recently purchased by them for that purpose, is making good progress. These three mills when in operation will perform the work of many thousands of coolies, whose labour will then be available for branches of industry to which machinery cannot be applied.

Two more of the vessels which we reported some time ago as in a forward state of construction, have now been launched. One is upwards of 700 tons and the other about 200 tons burthen. All the vessels built by the Siamese this season display a manifest improvement in modelling.

A notification dated "Bangkok, Dec. 31," states that the interest and responsibility of Mr. David King Mason in the firm of D. K. Mason and Co. having ceased, the business will continue to be carried on by Mr. Robert Simpson Scott, under the firm of Scott and Co.

JAVA.

The *Javasche Courant* publishes the following statement, which speaks for itself:—

COMPARATIVE STATEMENT.

	1863.	1864. Probable crop.
Coffee	1,100,891 pic. ..	479,946 pic
Sugar	1,104,256 „ ..	1,116,766 „
Indigo	518,849 lbs. ..	446,748 lbs.
Tea	1,139.189 „ ..	575,617 „
Pepper	18.609 „ ..	—
Cinnamon	159,373 „ ..	169,505 „
Cochineal	8,872 „ ..	15,000 „
Tobacco	9,000 „ ..	—

The coffee and tea crops show a falling off of no less than 620,945 pic. and 563,572 Amsterdam pounds respectively. The failure in the crop of the former article is to be attributed to the heavy and continuous rain during 1863.

The same paper gives the following statement of the private crops during the same period, including the deliveries to Government:—

	1863.	1864. Probable crop.
Coffee	137,818	84 220
Sugar	1,008.209	797,483
Indigo	206.646 lbs.	199.085 lbs.
Cochineal ..	16 000 „	Not yet known.
Tobacco ..	132.485 pic... ..	46,594 pic.

showing a difference in the two first articles of 53,598 pic. and 210,721 respectively.

If we take the difference of the Government Coffee crop between 1863 and 1864 at an average rate of 38½f. per picul, we find the Government a loser by 23,906,382f. Add to this, 130,000f.—the export duty on 53.598 piculs private coffee, at the same average valuation, which would otherwise have flowed into the Treasury, but which is now lost—we get the enormous sum of twenty-four millions, thirty-six thousand, three hundred and eighty-two guilders, a dead loss to the Government in the matter of Java Coffee alone.

MALACCA STRAITS.

SINGAPORE.

Our intelligence is to the 22nd February. The London mail of the 10th January arrived out on the 14th February, and the London letters and papers by the French mail of the 17th January were delivered on the 20th February.

The Chinese holidays that cause such an interruption to trade, and which form a somewhat prominent feature in the social aspect of the settlement at this season of the year, have now closed, and that utilitarian but singular people have once more returned to the ordinary channels of their industry. A large number of deaths from cholera have occurred among the native population.

According to a *resumé* of the Straits Budget for 1865-66, put forth in the *Penang Argus*, the total estimated receipts are 2,114,676 rupees. The total disbursement on account of the Straits is 1,108,011 rupees. The *Argus* says:—"We find the sum of Rupees 91,500 for sales of postage stamps, and 46,950 for collections made by the post-offices, making a total of 138,450, placed to the credit of the General Government of India; and Rs. 27,344 for post-office establishments, contingencies, and discounts for postage stamps to its debt. By this arrangement, made conformably to the rules of the Supreme Government, the sum of Rs. 121,106, being the net proceeds of the postal revenue of the Straits, are taken off, which if placed to the credit of the Settlements, as in fairness they should be, the Budget would show a surplus of Rs. 1,127,776. The troops in the Straits cost Rs. 754,000, which sum is not included in the Straits disbursements, but placed to the debit of Madras."

The *Straits Times*, taking the revenue of 1863-64 for the basis of its argument, states:—"We present a secure Government revenue of £192,000, or at about the rate to our population of 15s. a head, and this independent of the municipal rates of the three stations, which alone support an extensive police force. The entire expenditure, for the same period, including every payment except that for Military, amounts to about £115,000. We have thus a balance of £77,000, out of which the cost of Military has to be paid. In the last year the full cost of this was £64,000—so that, even after payment of such a large sum, we are left with our accounts on the right side by something like £12,000. These figures are taken from the Administration report itself, so that there can be no gainsaying them."

The Post-office was removed on the 10th Feb. to the premises formerly occupied by the Supreme Court. In addition to the greater accommodation afforded by the building, various improvements have been made in order to expedite the delivery of letters.

Captain F. L. Playfair, Madras Staff Corps, Assistant-Resident Councillor at Malacca, is granted leave of absence for twenty months, from the date of embarkation, for the purpose of proceeding to Europe, on medical certificate. Mr. F. L. Baumgarten assumed charge from Captain Playfair of the office of Police Magistrate and Commissioner of the Court of Requests at Malacca on the 1st Feb., the date from which the latter officer availed himself of the leave granted to him.

On the 7th February, the chief officer of the British ship *Pudsey Dawson* was charged by the master with riotous and insubordinate conduct. The charge was proved, and the defendant sentenced to four weeks' imprisonment in the House of Correction. The accused stated to the Court, in answer to a question, that he was a lieutenant in the Royal Navy on half-pay.

The case of the master of the British ship *Beth Shan* against the master of the Siamese ship *Resolute*, on a petition to recover $4,000 for salvage, assistance rendered, and in a claim for damage by collision, was heard on the 20th January, before the Hon. Sir R. B. MacCausland, Recorder. The Court decided that the damage sustained by the *Beth Shan* by the collision with the *Resolute* was an accident; that the towage or salvage was not completed; and therefore the tender of $2,000 by the supercargo of the *Resolute* as compensation was ample; and that each party pay his own costs.

Captain Flarty, of the British barque *Mary Spencer*, which arrrived on the 14th Feb. from Rio Janeiro, reports that

Digitized by Google

in coming through the Straits of Malacca when close to the light-ship, he was in company with a large British ship deeply laden, showing 2nd pen. No. 4,577, of Marryat's Code (answering to *Mantheo*). The vessells kept in sight of each other for two days, and when the *Mary Spencer* lost sight of the *Mantheo* on the night of the 10th, the latter vessel was apparently steering too far mid-channel, and in the direction of a reef to the southward of the South Sands. Captain Chant, of the English barque *Skiddaw*, from the Mauritius, arrived on the 15th February, reports that he saw a large ship on shore on the South Sands, and that she struck about 5 o'clock on the morning of the 11th. The vessel made no signal whatever, and the *Skiddaw* kept on her course.

The Court of Inquiry into the loss of the British barque *Canada*, from Bangkok to Hong Kong, found she ran on a reef, supposed to be a continuation of the Lizzie Webber shoal. "Though this reef is only shown in the chart to be about two miles in extent, yet by observation the captain got when in his boat, it appears to extend about 25 miles in a south-west direction from where the vessel ran ashore, viz., in latitude 8 degrees 11' north, and longitude 113 degrees 2' 7" east." Mr. Peter Orr, the master, was acquitted of blame.

During the downward passage from Bangkok of the steamer *Chow Phya*, a supposed rock or reef was sighted; the steamer was steered towards it to examine it, but on coming up to it, it was found to be a vessel bottom upwards. The *Chow Phya* then proceeded on her passage. The mate and one hand of the Hong Kong schooner *Fah Kee*, loaded with timber bound to Hong Kong, which was capsized, came down to Singapore in the *Chow Phya*.

The chief officer of the British barque *Fearnot*, Captain Cathbert, reports the loss of that vessel on Lincoln Island, at three A.M. on the 14th of January last. The vessel was bound on a voyage from Amoy to Singapore, and at the time of the wreck experienced thick weather, with a north-east wind. After the vessel was wrecked, the captain left in the long-boat, with six men and three Chinese, with the intention of going to Saigon for assistance. The chief officer, with five seamen and six Chinese, were left on the island, which place they subsequently left in the pinnace on the 22nd Jan. on account of pirates boarding the wreck, which contained specie amounting to $5,000, and were picked up on the 5th Feb. by the barque *Cedars*, bound to Rangoon.

At a meeting of the Sporting Club held at the Exchange Rooms, the days for the coming races were fixed for 25th, 27th, and 29th April. Mr. Fergusson was elected secretary in place of Mr. Lochiel, who tendered his resignation.

The finding of the Court of Inquiry relative to the loss of the *Luzon* was—

That the vessel was wrecked on a reef call Palauig, which appears on the Spanish chart of the island of Luzon, and this reef is not so clearly laid down on the chart with which the *Luzon* was navigated. That the loss of the vessel was attributable to this circumstance. The Court finds that every precaution had been taken by the captain in navigating the vessel, but at the same time it is of opinion that he was very imprudent in hugging so closely, on a dark night, a shore of which he had not a chart in his possession on a large scale, and of which he had no previous experience. The Court considers the conduct of the second mate, Mr. Alexander Reid, highly reprehensible, in not at once putting the helm hard-a-port without calling for the captain when he heard a noise on the port beam supposed to be breakers, he being at the time the officer in charge of the deck, and considers him deserving of reprimand, and reprimands him accordingly. The Court regrets not being able to obtain the evidence of the chief mate and others of the crew who are now in Manila. Finally, the Court begs to put on record the kind treatment shown by the authorities at Luzon to the shipwrecked crew.

PENANG.

The British brig *Hero*, which left this for Rangoon on the 5th February, returned to port on the 12th, her commander, Captain Gallacher, having died suddenly at sea, about four days after the vessel sailed.

At the close of the late session the Grand Jury made a presentment to the Judges, in which they stated—

That there have recently been riots of the most serious nature among the Chinese population, leading to robbery, arson, and murder, in broad daylight, by gangs of armed men. That this is only an aggravated repetition of outrages that have for years disgraced this station, and are evidently increasing in magnitude, and threaten the most serious consequences to al classes of the community. In practice it is found that the present state of the law and the defective organisation of the police totally fail to prevent the recurrence of these outbreaks. They are solely the effects of Chinese Secret Societies, whose pernicious influence has been often denounced by Grand Juries of the Straits Settlements. The Jurors believe that the respectable portion of the Chinese themselves would gladly see these societies suppressed or rendered harmless, but for obvious reasons are afraid to move in the matter, or take any steps towards so desirable an object. The jurors consider that special legislation should be adopted to meet this grave evil, as has been done in the United Kingdom in the case of Secret Societies in Ireland, and so in that of the crime of garotting.

The Recorder remarked in reply that "he quite agreed as to the necessity of repressing the Chinese tumults, and for that purpose he thought that some legislation was desirable, not to suppress those societies—that was out of the question—but to register them, and deal with them as Friendly Societies were dealt with in England. The disorders which broke out occasionally among the Chinese owed their gravity and importance unquestionably to those societies, and it would be desirable to try whether their purses might be reached when it was so difficult to get at the persons who misconducted themselves. As to the danger to be apprehended from the Secret Societies, different persons measured it by different standards, and he, personally, did not view them in quite as serious a light as they seemed to see them. There was no disaffection towards our Government, no attacks upon the public force, or even upon private persons unconnected with the societies. They beat, sometimes killed, the members of their rival societies, and destroyed their property, but there the mischief, serious enough no doubt, closed."

Births, Marriages, and Deaths.

BIRTHS.

ATHLUMNEY—On the 23rd March, at Somerville. Lady Athlumney, of a son.
AUCHINCLOSS—On the 15th Feb., at Batavia, the wife of P. W. Auchincloss, Esq., of a daughter.
FABRIS—On the 31st Jan., at Shanghai, the wife of E. A. Fabris, of a daughter.
GUNTHER—On the 5th Feb., at Shanghai, the wife of G. Gunther, of a son.
HANCE—On the 3rd Feb., at Whampoa, the wife of Dr. H. F. Hance, H.B.M.'s Vice-Consul, prematurely of a daughter, stillborn.
HOUGHTON—On the 18th March, at 33, Gordon-square, Mrs. Henry J. Houghton, of a daughter.
MAYNE—On the 2nd Feb., at Tanglin, Singapore, the wife of Capt. J. O. Mayne, R.E., of a son.
MCCLELLAND—On the 11th March, at Trearne House, Ayrshire, the wife of Charles Grey McClelland, Esq., of Singapore, of a daughter.
MORRISS—On the 2nd Feb., at Shanghai, wife of Edward Morriss, Esq., of a daughter.
SILLAR—On the 25th March, at Richmond, Surrey, the wife of David Sillar, Esq., of a daughter.
STRACHAN—On the 15th March, at 4, Leamington-terrace, Edinburgh, the wife of George Strachan, Esq., late of China, of a son.

MARRIAGES.

JACKSON—WEDGWOOD.—On the 11th February, at St. John's Cathedral, Hong Kong, by the Rev. J. J. Irwin, D.D., Colonial Chaplain, Thomas Wilde Jackson, of Ningpo, to Margaret, daughter of T. B. Wedgwood, of Rock Ferry, Cheshire
OLSEN—WATSON.—On the 14th Feb., by the Rev. C. J. Watchouse, A. Olsen, Master Mariner, to Arabella Catharine Watson.
ROCHE—STEVENSON.—On the 21st March, at Blackheath Congregational Church, by the Rev. Edward Steane, D.D., and the Rev. Joseph Beazley, Edward Roche, Esq., of Belmont-hill, Lee, late of Shanghai, to Emily Ada, youngest daughter of the late Leader Stevenson, Esq., of Vambrugh Fields, Blackheath. No cards.
SCHEBACH—ROHDE.—On the 25th Jan., at Shanghai, in Trinity Church, by the Rev. Mr. Butcher, Mr. C. Schebach, to Miss Emma Rohde.

DEATHS.

ARMSTRONG—On the 31st Jan., Mr. Adam Armstrong, of Singapore.
DORAL—On the 30th Jan., at Singapore, after a painful illness, Mathilda, the beloved wife of Mr. John Doral, aged 32 years.
DEVINE—On the 5th Feb., at Shanghai, Thomas J. Devine, pilot, aged 31 years.
DWYER—On the 9th Feb., at the General Hospital, Hong Kong, Thomas Dwyer, private 6th Regiment, aged 26 years.
DE FARIA—On the 4th Feb., at Macao, Francisco Xavier Lobato de Faria, Lieut. Asst.-Commandant of Police Force, of apoplexy.
LINSTEAD—On the 15th March, Emmeline Rose, aged 28, the beloved wife of T. G. Linstead, Esq., of Hong Kong, and second daughter of H. P. Wellborne, Esq., of Adelaide Villa, Camberwell.
ROBB—On the 18th Feb, at Marine Villas, Singapore, John Riach Robb, eldest son of Daniell Robb, Esq., shipbuilder, aged 2 years.
ROBERTSON—On the 3rd Feb., at 4, Coleman-street, Singapore, Archibald James Spottiswoode, second son of Dr. Robertson.
RICHARDSON—On the 31st Jan., at Kowloon, Geo. Richardson, private 99th Regiment, aged 27 years.
TALLMAN—On the 2nd Feb., at Shanghai, on board the Fire Dart, H. C. Tallman, 1st Assistant-Engineer, aged 21, of New York City, U.S.A.
WILLIAMS—On the 1st Feb., at the Civil Hospital, Hong Kong, John Williams, seaman.

COMMERCIAL REPORT.

CHINA EXPORTS.

TEA.—Exporters appear to be more cautious than they were. The teamen, though very firm, appear inclined to yield a little, but to nothing like the extent required, and the consequence is that but a small business has been done.

CANTON.—Country Congous: Teamen remain very firm while bids become weaker, consequent on the discouraging mail news. No settlements have taken place during the fortnight. Country Greens: Nothing has as yet been done in these kinds beyond the Hysons already advised. Canton made Teas: Scented Teas have within the last two days received more attention, and some small settlements have taken place at about former rates. The settlements of the fortnight are reported as under:—Scented Caper: 1,200 boxes at 17 to 24 taels. Canton Gunpowder: 750 boxes at 13 taels. Country Greens: 87 chests Hyson at 58 taels.

AMOY.—Throughout the month the market has been inactive, and prices have had a downward tendency. Oolongs: Settlements reported amount to only 2,156½ at $13½ for inferior, $16½ to $18 for common to fair, and $22½ to $26 for good to fine cargo. Of the latter description there are now very few left, but common to fair cargo teas are in tolerable supply, and we quote common to good common $15 to $16½, and fair cargo $17 to $18. For Anhois at present there is no inquiry. Congous: 207½ c. have been taken at $ 16½ to $18, which lays down considerably over present home rates.

FOOCHOW.—The few settlements reported since the despatch of the last mail, have been effected at an advance of about five mace, and consist of the following:—Congous, 3,708 hf. and 814 ch. do. at taels 7¾ to 10¼ for dust and broken leaf, taels 14½ to 16¼ for common to good common, and

Digitized by Google

taels 17¾ to 19¼ for inferior flavory. Pekoe: 168 ch. common at 18¼ to 19 taels. Oolong: 1,950 hf. ch. at 12½ to 16¼ taels for inferior to fair cargo.

SHANGHAI.—Business has been almost entirely suspended during the last fortnight, owing to the Chinese holidays.

HANKOW.—The few chops remaining on our market have been settled at Tls. 12.50 to 19.00 per picul, which we estimate lay down in London at 1d. per lb. over last home rates. The settlements, amounting to 17 chops, consist of common to fair Blackish Leaf Teas, greatly wanting in strength. About 5 chops are still expected to arrive before the end of the season, which, if not exceeded will make the export from this port one million pounds over that of the previous year. The export for this season to date now stands thus:—Season 1864-65, 744 chops, 408,660 chests, 36,776,500 lbs.; Season 1863-64, 661 chops, 392,393 chests, 35,355,464 lbs. Being an increase this season of 1,421,064 lbs. The stock 31st January 1865, nil.

KIUKIANG.—Green Teas: 6,000 packages had been settled during the fortnight, chiefly in barter at full rates for medium, but with a decline of one tael for common Moyunes. These purchases with the shipments had reduced the stock to 139,000 half-chests. Teamen were not anxious to sell, but they would soon be obliged to realise to obtain funds for the purchase of leaf for the new season.

NAGASAKI.—Transactions have been made at slightly higher prices. About 1,0 0 piculs medium to fine leaf have been purchased since the native new year, and there is every appearance of holders obtaining higher prices, as stocks are now much reduced, and purchases must be made in order to keep the tea firing-places at work.

YOKOHAMA.—A trifling business done in this staple; indeed, owing to the New Year's festivities in this as in other exports, matters have been unusually quiet. A few transactions, say 2,000 piculs, principally for the American market, reported.

RAW SILK.—SHANGHAI.—The Native New Year holidays have of course interfered with purchases in the country. Our unsold stock is therefore reduced to about 1,500 bales. Until the home advices become more favourable and the demand here less sluggish, the silkmen are not likely to operate in the country, where the supply of silk is very limited and prices extremely high. Tsatlees, No. 1 chops, Tls. none, 2 do. taels 470 to 480.

YOKOHAMA.—Some of the dealers, being desirous of closing their accounts, made slight concessions, but the generality of the others stood mostly firm. The market has been closed for the last five or six days for the festivities of the Japanese new year, but will re-open shortly. However, as the last advices from Europe are rather unfavourable, and the exchanges rising again, we hope some effort will be made to obtain a reduction of the present prices. The unsold stock amounts to between 600 and 700 bales, mostly composed of second-rate and inferior descriptions. Settlements to date are about 10,000 bales, against 13,400 same time last year; and there is a very general impression that the total exports of this season will not exceed 15 to 16 thousand bales, or about the same quantity as last year.

CAMPHOR.—HONG KONG.—No further supplies to hand since the issue of last report, and the only sales reported are 100 piculs at $19, and 100 piculs at $18 packed. Balance of stock is held at $19 per picul packed, which must be called market value to-day.

RAW COTTON.

HONG KONG.—There is little to report by this mail. Shippers to England are out of the market, and Chinese dealers are the only purchasers—these buy only small lots. The settlements have consisted principally in Shanghai staple at from $25½ to $27. A few parcels of Ningpo have also been placed at $28 to $28.50. The sales of the fortnight amount to about 4,000 bags, the imports for same period exceeding 6,000 bags. The market appears to harden, owing to the local demand being about equal to the supply; shipments to England are thus checked, especially as the last advices are not encouraging.

SHANGHAI.—Purchases were made for Liverpool at 17 taels for good Shanghai, and 18 taels for best Kongpoot. The total settlements of the fortnight are estimated at 5,000 bags for Hong Kong, and 7,000 bags for Liverpool. Since the new year the supplies from the country have ceased, and stocks are consequently small. The exports to Great Britain since 1st June amount to 179,000 piculs, against 239,000 same period last season, and 67,000 the season before.

YOKOHAMA.—The market has re-opened by purchases of about 2,000 piculs at $25 to $26 (the exact price is not known), and the demand has not become general yet. There is no stock in the market, but should the demand continue no doubt fresh supplies will soon reach. The exports from June 1 to date amount to 22,910 bales, against 92,399 bales same period last year, and 6,050 do. the year before.

CHINA IMPORTS.

COTTON YARN.—Meets with hardly any inquiry, and prices of the lower numbers show some decline upon the quotations given under date of last circular. The sale of the fortnight amount to 295 bales, in addition to which some 50 bales of damaged Twist have been moved off by public auction. Grey Shirtings: During the early part of the fortnight, and prior to the arrival of the English mail steamer, these goods showed an advance of about 10 cents per piece upon the quotations previously current. Since then their value has declined about 5 cents per piece, and settlements are put at 8,500 pieces. White Shirtings: There are not any material alterations to notice in the value of these manufactures, which have been in moderate request, the sales of the fortnight reaching to 5,000 pieces. T-Cloths: Have met with a fair amount of inquiry since the beginning of the month, but prices are, perhaps, slightly easier; the settlements of the fortnight amount to fully 10,000 pieces, in addition to which 4,650 pieces have found buyers at public sale. American Drills: This market is quite bare of these manufactures, but a sale of 800 pieces of English Drills, at $5 per piece, is reported. White Spotted Shirtings, Dyed do., Brocades, White and Coloured: Have been in very moderate request at previous rates, and the sales reported amount to 500 pieces of Dyed Spots, and 300 pieces of Coloured Brocades. Damasks: There have not been any sales of these goods reported. Chintzes: 1,500 pieces of Chintzes have found buyers. Handkerchiefs have been in moderate request, and sales of 1,200 dozens are reported.

WOOLLENS.—Spanish Stripes, Medium Cloths, Ladies' and Habit Cloths: These goods continue to meet with but slight inquiry, and the sales of the past fortnight do not exceed 200 pieces of all descriptions. Long Ells: These manufactures show some improvement in value, and have been freely taken during the fortnight, the bulk of the purchases being on foreign account; settlements amount to fully 3,500 pieces. Camlets: There has not been quite so much inquiry for these goods, during the past fortnight, and prices remain unchanged, the sales amount to 350 pieces. Lastings: There are not any sales of these goods to report. Blankets: The purchases effected during the fortnight amount to 600 pairs.

METALS.—Iron, Flat, &c.: Without much alteration to notice in value, the transactions in the various descriptions of Iron imported amount to a moderate average, and consist of the sale of 1,680 piculs of Nail Rod, and 2,300 piculs of Bar Iron at the quotations previously current. There is not any business reported from Canton. Lead: There has not been any inquiry for Lead in the Hong Kong market, and not more than 220 piculs are reported sold. In Canton the settlements amount to 1,200 piculs at previous rates. Tin: 650 slabs have changed hands. Tin-Plates: Have met with considerable inquiry during the fortnight, and have found buyers to the extent of 1,260 boxes.

EXCHANGES ON LONDON.

[For dates, see first page.]

SHIPPING INTELLIGENCE.

ARRIVALS.

At YOKOHAMA.—From London: Jan. 22, Cymbeline.

At SHANGHAI.—From London: Jan. 27, Cissy; 28, Egmont; 29, John Norman. From Liverpool: 27, Lauderdale and Nonpareil; 29, Bella. From Sunderland: 29, Shakespeare. From Newport: 25, Nicolo Barabivo. From Shields: 25, Vanguard. From Cardiff: 30, Pilen Elena. From New York: Feb. 7, City of Mobile; 9, Heversham.

At FOOCHOW.—None.

At HONG KONG.—From England and Gibraltar: Feb. 7, H.M.S. Tamar. From Liverpool: 12, Banda. From Sunderland: 11, Eudora.

At MANILA.—None.

At SINGAPORE.—From London: Feb. 13, Early Dawn. From Liverpool: 14, Macassar; 17, Governor Longdon. From Sunderland: 14, Skiddaw. From Hamburg: 11, Turnadot.

At PENANG.—None.

At BATAVIA.—From Glasgow: County of Ayr.

DEPARTURES.

From YOKOHAMA.—None.

From SHANGHAI.—For London: Jan. 25, Jubilee; 25, Countess Russell; 26, Naomi; 31, Belle; Feb. 6, Benvenue. For Liverpool: Jan. 31, Sailors' Home; Feb. 1, Constance; 4, Spirit of Trade.

From FOOCHOW.—For London: Jan. 28, Laurel. For New York: Feb. 5, Queen of the Seas. For Montreal: Jan. 30, Shelburne.

From HONG KONG and CANTON.—For Liverpool: Feb. 4, Lockett. For Cowes: Kite. For Bordeaux: Jan. 29, Jean D'Arc. For New York: 17, Europa.

From MANILA.—None.

From SINGAPORE.—For Portsmouth: Feb. 14, Hindostan. For Falmouth: 14, Blohm. For Boston: 16, Rocket.

From PENANG.—None.

LOADING.

At YOKOHAMA.—For London: Gabalva and Mirage. For New York: Benefactress.

At SHANGHAI.—For London: Bertrice and Stanley. For Liverpool: Carrizal, John Nicholson, Stuart Wortley, Blackwood, Agamemnon, and Celestial. For New York: Fenella.

At FOOCHOW.—For London: Maiden Queen.

At HONG KONG and CANTON.—For London: Lochnagar, Ocean, and Silome. For Liverpool: Prince Arthur. For New York: Diana.

At MANILA.—For Falmouth: Kestrel, Madura, Oliver Cromwell, For New York: Alhambra.

At SINGAPORE.—For London: Alexandra, British Crown, Betty Pearlback, Norval, and La Serena. For Liverpool: Springwood and Sharpshooter. For Channel: George Henrich.

At PENANG.—For London: Dunmore and Alice.

At BATAVIA.—For Channel: Adelaide, Willy, Mauritius. For Amsterdam: Huntress, Java Packet, Jan Van Schaffelaar, Zeenymph, and Theodore Machtilda. For Rotterdam: May Queen, Ouderkerk, a. d. Amstel, Medea, and Johannes Anthonius.

FREIGHTS AND CHARTERS.

YOKOHAMA.—To London: Cotton and tea, £3. 10s. to £4 per ton; silk, £5 per ton of 50 cubic feet, nominal.

SHANGHAI.—The only settlement reported is the Agamemnon, for Liverpool, at £2. 17s. 6d. per ton, 45 lay days.

FOOCHOW.—To London: £2 per ton.

HONG KONG AND CANTON.—The circular of George Holmes gives the following settlements:—The Ocean (450 tons), on the berth for London, at £3 to £3. 5s. per ton; Sir W. F. Williams (1,000), Manila or Zebu, to London at £3 sugar, £4 hemp; Fiery Cross (689), Rangoon to Hong Kong, at 60 cents per picul; several other vessels have been taken up for Rangoon or Bassein at 60 to 65 cents per picul.

MANILA.—There is no unemployed foreign tonnage in port, and as there will no doubt soon be a demand for vessels for the U.K., rates should advance. At present £3 to £3. 10s. for sugar, and £4. 5s. per 20 cwt. for hemp could be secured.

SINGAPORE.—The tonnage in harbour is large, the following rates for U.K. are maintained with difficulty, viz.:—Tin, £2 to £2. 5s.; Gambier and Sago flour, £2. 15s.; and £3. 5s. Light Freight. There is no demand for vessels to load home from Rice ports.

PENANG.—For London: The Dunmore is loading at £3. 5s. per ton dead weight, £3. 10s. light freight, and £4 measurement.

BATAVIA.—To United Kingdom, Rice, £2 to £2. 5s.

PASSED STRAITS OF SUNDA.

From ENGLAND and CONTINENT to CHINA, &c.—Jan. 31, Hampton Court, Cardiff to Bangkok; Feb. 6, Maria Anna, Rotterdam to Batavia; 7, Watergens, Sunderland to Singapore.

From CHINA, &c., to ENGLAND and CONTINENT.—Feb. 6, Molderian, Sarawak to London.

CASUALTIES.

The British barque Fear-not, Capt. Cuthbert, from Amoy, bound to Rangoon, went on shore on some portion of the Paracels on the night of Jan. 14th. A portion of the crew have arrived at Hong Kong, reporting the total loss of the vessel, and the fact of some of their companions being left behind.

COMMERCIAL POSTSCRIPT.

The Persian Gulf telegraph, or, as it is termed, the "Direct Overland," brought us on the 24th advices of Tea, Silk, and Exchange from Shanghai to 21st, and Hong Kong Feb. 26, in anticipation of the French mail due on 7th April. It is stated that telegrams are in the city of three days later.

ARRIVALS NOT INCLUDED IN TABLES.—March 23, at Cuxhaven, from Manila, Malvina Vidal; 27, at Deal, from Ceylon, Venilia; from Manila, Ocean Home; from China, J. Stanton, jun., and Elizabeth Dawson; 26, at Falmouth, from Rangoon, Colonist; at Queenstown, from Singapore, Kirkconnell; 22, at Scilly, from Yokohama, Little Edith; 25, at Liverpool, from Manila, Olano; off Torbay, from Batavia, Wildeman; at New York, from Shanghai, Magenta; from Amoy, Falcon; from Batavia, Rangoon; 25, at Brouwershaven, from Batavia, Gysb. K. G. v. Hoogendorp; off the Start, from Ceylon, Clodian; 4, at Havana, from Macao, Emigrante; 28, at London, from Colombo, &c., Mary Scott; 28, at Deal, from Ceylon, Johann Daniel.

DEPARTURES.—March 11, from Rotterdam for Batavia, Marie; 25, from London for Hong Kong and Canton, Yaratilda, for Colombo, Jeddo; 24, from Liverpool for Manila, Tigris. March 25, from Clyde for Singapore, Sparkler; 27, from London, for Sunderland and Galle, Juanita; 25, from Sunderland for Yokohama, Harkaway; 28, from Liverpool for Batavia and Sourabaya, Affghan.

SPOKEN.—Gysbert Karel Gr. *v.* Hogendorp, Batavia to Rotterdam, Jan. 17, 32 S., 14 E.; Johann Daniel, Colombo to London, Jan. 30, 12 S., 10 W.; Nicolina (Hamb. ship). Batavia to Amsterdam, Feb. 20, 3 S., 19 W.; Corea (barq.), New York to Shanghai, Feb. 24, 3 N., 23 W.; Sylphide, Batavia to Rotterdam, Jan. 13, 34 S., 28 E.; Ocean, Singapore to Marseilles, March 1, off the Azores; Daybreak, Shields to Hong Kong, Dec. 20, 40 S., 58 E.; Edinburgh Castle (ship), Clyde to Singapore, Dec. 26, 37 S., 77 E.; Ala (British ship), bound to Ceylon, Jan. 2, 40 S., 59 E.

CASUALTIES.—The Johannes, Rademakers, from Batavia for Rotterdam, which put into Simon's Bay, leaky, Dec. 6, has been condemned

Digitized by Google

there. The loss of the Fear Not in the China Seas has been reported at Lloyd's.

The Carausius (barq.), of Hartlepool, from Shields, for Colombo, got on shore on the north part of the Goodwin Sands, March 23, but was assisted off by a Trinity steam vessel, and proceeded without apparent damage.

The Bravo, Nordstrom, from Batavia for Amsterdam, arriv4d off Dover March 27, with loss of mainyard, canvas, and other damages, and would be towed in the next day.

The Charlotte, of Derby, Longmead, from Schiedan, for the Amoor, put into Falmouth, March 27, leaky, and with cargo shifted.

The Kaap Hoorn, Dik, from Batavia, which arrived off Dungeness, March 16, and sailed for Holland, put back to Dungeness Roads, March 22, from the Noord Hinder Light ship, with loss of sails.

The Carausius, Baird, from Shields for Colombo, which went on shore on the Goodwin Sands 23 March, has put into Plymouth to examine her bottom; but no damage is anticipated.

MISCELLANEOUS.—The Admiralty have ordered the Wellington for Trincomalee, and the Avondhu for Hong Kong, to be surveyed.

LAID ON AT LIVERPOOL.—For Manila, Olano; for Singapore and Penang, Simoom.

OPENING OF WESTERN CHINA.

Though Indian news may be thought somewhat foreign to the topics to which the columns of this journal are more properly devoted, nevertheless that conveyed in the following letter from a Bombay correspondent is not without special interest, referring as it does to the possibility of an immediate extension of our Indian frontier to Thibet on the north, and on the east to within a few hundred miles of Western China. Should, therefore, as hinted at by our correspondent, the annexation of Bhootan become an unavoidable measure, then the problem of communication with China through our Indian possessions, which has been so long advocated by us, will be in a fair way of solution from a direction hitherto overlooked. It is along the frontiers of Bhootan that the principal tea-growing districts of British India lie, and the great difficulty in developing the trade is the want of coolie labour, the natives of Bengal disliking the climate. The conquest of Bhootan might thus render available a fine hardy race, whose labour would become highly prized by those engaged in the culture of tea in the vicinity of their native territory. It is too wide a subject however at present to speculate on, and our information too imperfect with reference to the course about to be adopted. For the present, therefore, all we can do is to watch the course of events.

Bombay, 28th February, 1865.

It will be fresh in the memory of your readers that some two months ago a force, the details of which appeared in your columns, was despatched from the north-eastern frontier of India into the adjoining State of Bhootan, for the purpose of annexing a tract of land intervening between the British territory and the highlands forming the southern boundary of Bhootan; the land in question being known as the Dooars. The cause of this annexation was the repeated raids made by the Bhootanese against the property of natives living under British protection.

The expedition was entirely organised by the local Indian Government, and, with the exception of a few Europeans to man the Armstrong mountain guns, it was determined that the force should be entirely composed of native troops. At the time, a strong feeling adverse to so dangerous an experiment was expressed, and the Commander-in-Chief, Sir Hugh Rose, was strongly opposed to the measure, and urged the necessity for a portion of the force being formed of European Infantry. The Govenor-General, however, overruled the opinion, and disregarded the advice of this distinguished and experienced soldier. The result has been disaster and disgrace, with an enormous outlay, and great sickness and mortality in prospective, from the necessity having arisen to employ a large European force on the frontier of Bhootan, at the very period of the year when it was decided to be dangerous even to keep native troops there.

As no European troops accompanied the force, and the Bhootanese were apparently viewed as an enemy so little dangerous as to admit of being disposed of by native troops alone, but little interest originally attached to the expedition. About the end of November, the force being all ready, advanced from four different points along the British frontier; namely, from Julpigorie, Cooch Behar, Goalparre, and Gowhatty; the former being the extreme west, and the latter the extreme east of the line of operations, about 180 miles intervening between them. The Julpigorie column advanced into the Dooars, and after a very trifling resistance captured the fort of Dalimkote; the only loss being three officers and some men killed by the accidental explosion of one of the artillery waggons. This was the only military event of any interest. The other three columns advanced, and took possession of the passes through which the descents on British territory were effected, and the affair was believed to be over, and orders had been issued for the withdrawing of the force before the sickly season commenced.

The most eastern post thus held was Devangiri. There, a force of 700 native infantry and a mountain battery were stationed. On the 29th of January, at a time of fancied security, the Bhootanese came down and attacked the place. They were so imperfectly repulsed, that they continued their endeavours to dislodge the garrison, and at the interval of a week had so nearly succeeded that, as a last resource, the British troops, under cover of night, evacuated the place, and made a disorderly and disastrous retreat, abandoning their guns, and leaving a portion of their sick and wounded behind. Thus will have to be done over again, with a large force chiefly composed of Europeans, that which the native troops were thought to be more than equal to triumphantly effecting.

Sir John Lawrence and his coadjutors in this badly managed affair, having now had their eyes completely opened to their folly, in supposing that such a measure as annexation of territory from a fine hardy hill people could be efficiently carried out by native troops, have applied to Sir Hugh Rose for assistance to save the frontier from attack, now thought imminent; and three European regiments, with a large force of artillery, are about to be despatched for the protection of the north-eastern frontier the moment the necessary transport can be got ready. The troops now under orders are the 55th Regiment from Lucknow, the 80th Regiment from Dum Dum, and the 2nd Battalion of the Rifle Brigade from Meerut; also a battery of artillery from Fort William, at Calcutta, and another from Barrackpore. In addition to this European force, the 29th, 30th, and the 31st Native Infantry Regiments (Punjaubees) are also ordered up without delay. The 55th are to defend the frontier on the east, the head-quarters going to Gowhatty. The 80th are to defend it on the west, the head-quarters going to Darjeeling, to which place also several engineer officers are ordered to proceed to place it in a state of defence. Great activity prevails in the arsenal at Fort William, getting munitions of war ready. So we are again in for another of these troublesome, dangerous, and most expensive mountain wars. So much for Bengal civilians being allowed to interfere in military matters! So much also for the overweening conceit of Indian officials in the prowess of their native army, and also for a certain amount of the spirit of jealousy and antagonism towards what is more purely British!

Devangiri will have to be retaken; but the question which the Government finds it difficult to decide is, whether to attempt it at once or wait until next November, as it becomes unsafe to move troops into the Dooars after the middle of March, owing to the malignant fevers and dysenteries that commence there and prevail for several months, so much so as to make the Dooars dreaded by the Bhootanese themselves, who avoid them during the pestilential period of the year. Altogether, we have made a sad mess of the business, and the first event of importance of Sir John Lawrence's Viceroyalty has been by no means creditable to his judgment, or reassuring with respect to his capacity for the high and important post which circumstances have led to his being called on to fill.

An impression prevails amongst some well qualified to judge of the matter, that it is simply folly endeavouring to carry out the annexation of the Dooars, unless we are prepared to live in a state of chronic frontier warfare with troops ready to replace those that will be from time to time swept off by sickness; and that we must either make peace with the Bhootan Government, and endeavour in a friendly spirit to prevent the raids complained of, or we must annex the whole country. In other words, conquer Bhootan, and extend our frontier to Thibet, and thus at once open up direct overland communication with China through that country, which, being tributary to the Emperor, might not be a matter of very great difficulty. Thus the matter at the present time stands—a large European force under orders for the frontier of Bhootan, and the Government undecided as to the course of action to be pursued.

Since writing the foregoing, later news has been received from the frontier, which verifies the fears entertained that the Bhootanese, emboldened by their recent successes, would immediately commence aggressive operations within the British territory. Armed parties have descended from the hills, and are now engaged ravaging the frontier to the eastward, plundering the inhabitants, carrying them off prisoners, burning hamlets and villages. General Mulcaster, the present commander of the expedition, is stated to be hemmed in, and hardly able to move beyond the space occupied by his camp. This officer is about to be superseded by Brigadier-General Tombs; an appointment the expediency of which is strongly questioned, as, though he is an Indian Artillery officer of some distinction, he is not looked upon as possessing the special qualities that are deemed essential for the successful management of a hill campaign. By the last accounts from Calcutta, the 55th Regiment had arrived there, having come down by express train from Lucknow, and was to start immediately for the eastern extreme of the operations. The 80th Regiment also was on the point of starting for the western extreme. The Rifle Brigade had not arrived when the last news left. The Artillery force was having mountain Armstrong guns substituted for their ordinary field guns.

P.S.—It has been decided to send howitzers and not Armstrongs.

THE LATE SIR ROBERT H. SCHOMBURGK.

We notice with regret the death at Berlin, on the 11th inst., of Sir Robert Hermann Schomburgk, a scientific traveller and official whose name was well known in all learned circles, and who was the son of the Rev. J. F. Lewis Schomburgk, Protestant minister in Thuringia, by his wife, Mdlle. Krippendorff, daughter of Herr J. Kreppendorff, councillor of the Princes of Reuss Gerr. Although he had attained to three score years his constitution had been much broken by long residence in trophical countries. In the years 1835 to 1839 he undertook expeditions into the interior of British Guiana, under the direction of the Geographical Society of London, and in the years 1840 to 1844, as Her Majesty's commissioner for surveying the boundaries of British Guiana between Brazil and Venezuela. On the latter occasion, after enduring much fatigue and great privations with his small party, he completed the circuit of the colony from its sea boundary to within forty-two miles of the equator, in the course of nearly three years. An abstract account of this expedition is given in "Simmond's Colonial Magazine," vol. I., p. 40, 1844. For these services he was knighted by Her Majesty, and it was in these expeditions that he discovered and introduced into Europe the beautiful and gigantic water lily, which he named after the Queen, and which he assumed for his crest.

Sir Robert was well known to the scientific world as an eminent naturalist and geographer, and a good geologist and surveyor. The following is a list of some of the papers contributed by Sir Robert to various publications of which we have a knowledge:—"On the Lake Parima, the 'El Dorado' of Sir Walter Raleigh, and the Geography of Guiana."—"Simmond's Colonial Magazine, vol. 5, p. 381. "A Description of the Muriche, or Ita Palm of Guiana (*Mauritia flexuos*), and its uses by the Aborigines."—*Ibid*, vol. 6, p. 43. "On the Geological Structure of Barbados."—*Ibid*, 7, p. 470. "A Visit to Turner's Hall Wood, Barbados, in 1846."—*Ibid*, 8, p. 482. "On the Commercial Statistics of the

Digitized by Google

Republics in South America."—*Ibid*, 13, p. 260, 14, p. 40. "On the Manufacture of Beetroot Sugar in the Zollverein."—*Ibid*, 14, p. 134. "On a Comparative Vocabulary of Eighteen Languages and Dialects of Indian Tribes Inhabiting Guiana."—*Ibid*, vol. 15, p. 46. "On the Heavy Swell along some of the West India Islands called the Ground Sea, or North Sea."—Journal Royal Geographical Society, 5, p. 23. "On the Currents and Tides of the Mona Passage." — Nautical Magazine, 1850. p. 585. "On the Vegetable Products of Siam."—Technologist, 1, p. 355. "On Siamese Products transmitted to the International Exhibition, 1862."—*Ibid*, 2. p. 444. "On the Ton-khai, or Paper Tree, of Siam (*Trophis aspera*)."—*Ibid*, 4, p. 337.

Sir Robert was also an extensive contributor to the Magazines and "Annals of Natural History," the "Proceedings of the British Association," and other journals. His published works are the following:—"A Discription of British Guiana, Geographical and Statistical," with map, 155 pp.; Simpkin and Marshall: 1840. "Views in the Interior of British Guiana," folio, 52s. 6d.; coloured, 84s.; Ackerman: 1841. "Journal of an Expedition from Pirama to the Upper Country, &c., and from thence o Demerara," executed by order of Her Majesty's Government, with maps, reprinted from the "Journal of the Royal Geographical Society," 1845. the "History of Barbados," royal 8vo., with an accompanying maps of the island, 722 pp., 31s. 6d.; Longman and Co.: 1848. "Ruin British Guiana under Jahren," 1840-44, 3 vols. imperial 8vo., 70s.; Williams and Norgate: 1849. Sir Robert was a Philos. Dr. and Knight of Royal Prussian Order of the Red Eagle, of the Royal Saxon Order of Merit, and of the French Legion of Honour, corresponding member of the Royal Geographical, Zoological, and Entomological Societies of London the Ethnological of Paris member of the Imperial Academy, &c.

In the close of 1845 Sir Robert, then acting as chairman of a company originated by Mr. Simmonds, to establish a railway in the island of Barbados, was deputed by the directors to proceed to the island to examine and report upon its facilities and resources, and, during a lengthened sojourn, made a complete survey of the island. He was soon after appointed British Consul for San Domingo, and subsequently Consul-General of Siam, and his official reports to the Board of Trade contained much valuable imformation. He, in 1859, proceeded, with Mr. Clark as interpreter, on an overland tour to Maulman, through Changmei, the capital of the tributary kingdom of Laos, and returned to the seat of his consulate on May 9, 1860. Sir Robert returned last year to Europe, having retired from official duties, but passed the whole winter confined to his bed. His funeral at Berlin was attended by a large number of scientific men, and also the English Ambassador, Lord Napier, the Minister for Paraguay, the Prussian Minister for the Interior, Count D'Eulenburg, and many notabilities of the scientific world of Berlin.

THE MADRAS AND COLOMBO STEAM SHIP COMPANY (LIMITED).

This company have just completed their second steamer, the *Negapatam*, of 340 tons, and she will be shortly despatched to Negapatam to take up her post. Should the company succeed in obtaining a subsidy from the Ceylon Government of £3.000 per annum, the communication will be efficiently maintained and coolies conveyed at a reduced rate, and for a subsidy of £8,000 the coolies will be conveyed free. Here is another question awaiting the decision of the new Governor, Sir Hercules Robinson.

THE HAMBURG STEAMER "CHINA."

This vessel, which was noticed in our last Hamburg correspondent's letter, came over to Grimsby for coals, and proceeds to Singapore and Hong Kong. She is commanded by Capt. Muller, late of the *Sir Geo. Grey*, and will be consigned to Messrs. Siemssen and Co., in China.

Correspondence.

(To the Editor of the *London and China Telegraph.*)

SIR,—Allow me a few lines in reply to the letter from "A Singaporean" which appeared in your last issue. That writer assumes that I am an enemy of the Tumongong of Johore. I am no such thing. Those have been his enemies who, by an act of injustice, have placed him in a false position, have isolated him from his brother chieftains, and have prevented the political and commercial development of the Malay Peninsula.

To this policy I have ever been, and ever shall be, the uncompromising opponent.

I maintain what I asserted in my last with reference to "piratical proficiency;" to the coercion employed towards the Sultan; and to the regret expressed by Mr. Church. Evidence is easily procurable which will prove the two first assertions, and as to the latter I have seen and read the record of it.

I must decline to admit that the prospectus of a sugar company, *in posse*, is any proof of commercial progress; nor can I allow that monopolies, actual or attempted, indicate the possession of enlightened ideas of government. Those are principally to blame for the censure the Tumongong has obtained who have stimulated his rapacity and pandered to his ambition. But, after all, the Sultan and Tumongong are but secondary objects. The chief question at issue is this—Is the policy at present pursued that which is best adapted to establish British influence over the native chiefs, and to develope the neglected riches of their territories? Justice, and a due regard to the feelings and wishes of the natives, should be our rule; and I maintain, and the opinion is that of officials with whom I have conversed on the subject, that the reconstruction of the empire of Johore in the Peninsula is the most easy, honest, and politic means to attain such an end. This would not affect the true position of the Tumongong.—Your obedient servant,

AN OLD RESIDENT.

London, March 18, 1865.

Parliamentary Intelligence.

HOUSE OF COMMONS.

BRITISH SUBJECTS IN CHINA.

(20th.) Colonel SYKES, in calling the attention of the House to the alleged inability of the British Government to enforce Orders in Council and ordinances by Superintendents of Trade, relating to British subjects in China, said that he did not see the Under-Secretary for Foreign Affairs in his place, but as the noble lord at the head of the Government, who was always in his place, was present, he would probably give a more explicit reply than the House could hope to obtain from the Under-Secretary. The statement that the Government could not enforce these Orders in Council and ordinances for the control of British subjects in China would, if it went abroad, necessarily have a mischievous effect. China swarmed with freebooters, filibusters, rowdies, and deserters from ships who were seeking their fortunes in that empire, ready at all times to take service on one side or the other, and to keep up the existing anarchy. His object was to make it understood that the Queen's orders could be and would be enforced. Parliament authorized the issue of these orders for the control of Her Majesty's subjects within the Chinese dominions, or 100 miles of the coast thereof; and in 1855, by virtue of the powers vested in him, the Chief Superintendent in Hong Kong, Sir John Bowring, issued an ordinance declaring, among other things, that any British subjects taking part with the Government or the rebels would be guilty of a misdemeanor, punishable by not more than two years' imprisonment, or by a fine of not more than 5,000 dollars. This ordinance was in operation during the whole time that our officers—Sir James Hope, General Staveley, Captain Dew, and others—were fighting against the rebels, so that by siding with the Chinese Government those officers actually committed a misdemeanor, for which they were punishable, as he had mentioned. An order was published in Her Majesty's name granting permission to Captain Osborn and Mr. Lay to enlist British subjects, not for the service of the Emperor of China, but expressly for service under Captain Osborn and Mr. Lay. The House would not fail to remember the dreadful events which followed from the perfidy of the Futai, the ally of Captain Gordon, under whose guarantee the princes of the rebels surrendered only to be assassinated, and yet Captain Gordon remained in the service of that Mandarin. Her Majesty's Government, however, upon learning the facts, with very proper feeling issued an ordinance that all British subjects should withdraw from the service of the Emperor of China or of the Mandarins. It had been argued, most incorrectly, as he believed, that the orders did not apply to all British subjects in the service of the Mandarins of the Emperor of China, but he submitted that it was unquestionable that those orders did apply to all Her Majesty's subjects, and therefore the orders ought to be enforced. The question then remained, were there any British subjects now in the service of the Emperor of China or of his Mandarians? The Consuls were quite aware of their powers, and only required stimulating to put those powers in force. Nothing was required but an expressing of will on the part of Her Majesty's Government to induce the Consuls to act upon those powers. He held in his hand a narrative written by a merchant in Shanghai who, finding since the occupation of the silk districts by the Imperialists that the supplies of silk were diminishing, made a journey through those districts in order to discover the cause of such diminution. An extraordinary statement had appeared in a leading journal to the effect that since the rebels obtained possession of the silk producing districts there had been a gradual diminution in the supply of that article, while from official returns it appeared that from May, 1860, when the rebels first obtained possession or those districts, the supplies of silk had gone on annually increasing until the Imperialist regained possession. The gentleman to whose narrative he had referred stated that he was informed that under the Taiping rule the country seemed happy and flourishing, and from personal observation in other districts where the rebels exercised authority, the people of those districts had nothing to complain of in the working of Bentham's theory of the greatest good for the greatest number. The gentleman he referred to next proceeded to ascertain whether the mulberry trees were as numerous as before, knowing that unless those trees were maintained the supply of silk must fall off. When Colonel Burgevine went to Nanking, the country between that city and Soochow was a garden, and thickly inhabited; but now the country was a desert, the houses had disappeared, and the inhabitants had all fled from the Imperialist victors, whom they dreaded as tigers. At a distance of about twenty-seven li from Soochow, this gentleman came to a place which was formerly a custom-house station, but now occupied by a portion of Gordon's old force. There, too, he found seven British subjects—Colonel Doyle, Major Murphy, Major Lawless, and four others, who were engaged in drilling an artillery force for the Emperor's service. There were heavy guns of foreign manufacture, large quantities of English gunpowder, shot, and shell, and all that, notwithstanding the ordinance of 1855, which made it a misdemeanor in any British subject to supply warlike materials to either party. This gentleman further stated that he found the anti-foreign feeling was reviving, the people being indignant with those who had assisted to re-establish the power of the Mandarins. In another place he found a Dr. Macartney, formerly of the 99th Regiment, superintending the manufacture of rifle bullets, and thus it might happen that the merchants of Shanghai would have to seek shelter on board our ships from an enemy who used against them the rifle bullets which Dr. Macartney had taught them to manufacture. At Ningpo, under the very eyes of the Consul, Major Pook and other officers were engaged in the service of the Mandarin. Then, when the gentleman came to look for the mulberry trees which were so important for the production of silk, he found that in the conquered districts they had all been cut down by the Imperialist troops for firewood. Her Majesty's acting Consul at Amoy had recently issued an ordinance that passengers coming in British ships were not to be allowed to land without proper passports, but were to be detained by the captain of the ship until the fact had been notified to the Consul, who would give or withhold his permission, as he thought fit, and that all persons leaving the port in British ships must have their passports *vised*. Some time ago the Ministers of the four great Powers had agreed to re-

Digitized by Google

commend to their Governments the withdrawal of their subjects from the service of the Emperor of China. He was not aware whether that agreement was still in existence, but as a matter of policy it ought to be acted upon; and he, therefore, begged to ask the noble lord at the head of the Government whether, in the name of humanity, our Consuls ought not to be called on to withdraw all British subjects from the the service of the Emperor of China and the local Mandarins, who were evidently manufacturing *materiel* of war, no doubt to be used against ourselves ultimately from the feelings which were now being manifested.—The ATTORNEY-GENERAL said that, though the question had not been addressed to him, yet, as it involved a matter of law, perhaps the hon. gentleman would allow him to say a few words in reply. The hon. and gallant gentleman seemed entirely to overlook the nature of consular jurisdiction in China, or any other foreign country where such ajurisdiction had been conferred by the local Government, in assuming that Consuls had the same means at their control for the enforcement of the laws they had to administer as were possessed by the authorities of the country in whom the territorial jurisdiction resided. In this country the Government had at its disposal the police, the *posse comitatus*, and the army, if necessary, for the enforcement of the law; but a Consul had no power except what he derived from the co-operation of his countrymen, or which might be conferred on him by the Government of the country in which he lived. Upon these circumstances, it was clear that, if the law were violated, Consuls in no case could proceed except upon information properly before them, or proper evidence that a breach of law had been committed. It was impossible that they could send a roving commission all over China to find out who might be or might not be disobeying the law, and to summon them, whether they were in the service of the Emperor or not, to answer for offences of which no one had accused them. The Consular Courts had the same duties to perform as other courts in criminal cases—they had to receive information properly verified, and to decide according to law; but they were not to go about all over China trying to find out all possible offenders. The Government of this country could not be held responsible for the discovery and punishment of all British subjects who might commit offences in any part of China. When these subjects were within the consular jurisdiction, and were properly accused—on proper evidence—then it would be time enough to inquire whether they had offended against the ordinances. It was quite impossible that these ordinances could be executed all over a great empire like China—they would only be enforced in those places where our Consuls were situated.

CONSULAR COURTS IN CHINA.

(23rd.) Mr. KINNAIRD asked the Under-Secretary for Foreign Affairs whether it was proposed to take any steps to remedy the evils arising from the Consular Courts in China being the only accessible courts for the trial of civil and criminal as well as the ordinary police cases, the Consuls not being lawyers by education, and the amount of business having become very large.—Mr. LAYARD said that measures were in progress for establishing a Judicial Court at Shanghai, and a judge, an assistant-judge, and a law secretary would be appointed. All the provincial consular courts in China would be under their jurisdiction; the consular judge would have the power of going circuit; there would be an appeal from the provincial courts to his court, and from his court to the Privy Council.

INDIAN ALLOWANCES IN CHINA.

(March 23.) Mr. W. LESLIE asked the Under-Secretary for War whether the Indian allowances hitherto made to Her Majesty's troops serving in China were about to be withdrawn.—The Marquis of HARTINGTON said that after the withdrawal of the Indian troops serving in China, the Indian allowances, given to the British troops with the view of placing them on the same footing as the Indian troops serving in that country, would be withdrawn, and a new scale of allowances would be fixed suitable to the circumstances of the case.

"THE TIMES'" CORRESPONDENT.—The *Herald* has the following letter on *The Times'* Shanghai correspondent's letter of Jan. 25:—In to-day's *Times* I find this statement in the article headed "China:"—"From 70,000 bales in 1862 the export of silk fell to 30,000 in 1863, and to 27,000 in 1864, and yet people have been known to maintain that the presence of the rebels had an encouraging effect upon trade." Now, Sir, this passage evidently implies that the fall off of silk was caused by the rebels (Taipings). This I entirely deny to be the case. The Taipings captured Foochow in May, 1860, and from that time until the middle of 1863 held and occupied the whole silk district of Chekiang. I am one of those who maintain that they did increase our trade, and I give the following figures to prove it; they are copied from the "Overland China Trade Report:"—The last year previous to the capture of Foochow and the occupation of the silk districts, the export during the season, 1st of June to end of May, 1859-60, amounted to 69,137 bales; after the producing districts fell into Taiping possession, the export increased to 88,754 bales, season 1860-61; to 73,322, season 1861-62; and to 83,264, season 1862-63. These figures cover the period of entire occupation of the silk districts by the Taipings, and extend to the end of May, 1863. Since that time, by the instrumentality of Major Gordon's and other mercenary legions, we English have carried the horrors of Manchoo war and triumph into these districts, and have succeeded in driving out those Taipings who were not slaughtered by our long-ranged artillery, starved to death, or tortured to death when captured by the Imperialists. This is the result. From 83,264 bales in the season 1862-63, the exportation of silk has fallen to 45,861 bales, season 1863-64; and up to present dates the export is 5,854 bales less than during the corresponding period of last season. Had the Taipings not acted with wonderful forbearance during their unjust expulsion from the silk territory by British means, we should have had no silk at all since that event; as it is, we have only felt the natural consequences of the hostilities carried on by ourselves. To-day's *Times* also contains a wildly-eulogistic leader upon Major Gordon, though further than the effect his exploits have produced by the fall-off of silk, destruction of life, and replacement of the Bible by Buddhism, it would be difficult, indeed, to know what good that gallant officer has accomplished. The Taipings now hold possession of the famous Vu-e, or Bo-hea tea districts; they are operating successfully within a few miles of our treaty ports, Amoy and Foochow; therefore, I ask, what has been the result of our needless intervention in China? What temporal or spiritual benefit has been obtained by the sacrifice of many thousands of our fellow-men, who have adopted our Bible and declared us their "foreign brethren?" I have knelt many a time among the Taipings, and with them prayed from our Bible; those holy books have been destroyed by our mistaken interference, and the idols have been re-established on their ashes. We have driven the Taipings from Shanghai and Ningpo, but they have reappeared before Amoy, Foochow, and Swatow; and, unless we massacre them again, will undoubtedly capture those important treaty ports. The silk has fallen off more than half its former amount, and the silk districts, free and open under Taiping rule, have become shut against Europeans by the very Imperial mandarins we have placed in possession of them. These facts are incontrovertible, and sufficiently illustrate the evil and suicidal policy pursued by our present Government towards China. Time and space prevent a notice of the subject at length, but I trust in a short time to give the justice-loving British public a work showing the Taiping side of the Taiping movement.—ANGLO-TAIPING, 15th March.

A FEMALE SEAMAN FROM CHINA.—Captain Dewar, master of the *Amoy*, appeared at the Thames Police Court, before Mr. Woolrych, to answer the complaint of Sarah Thomas, who, although a woman, claimed wages as a "seaman" for services on a voyage from Hong Kong to London. Mr. Smith stated the case for the complainant. She claimed a balance of £9. 10s. for her services in the ship. Mrs. Dewar had only been eight days out of her confinement when the vessel sailed, and Mrs. Thomas, who was a married woman, was engaged to attend upon her on the voyage. The complainant expressed a wish to sign the ship's articles, but this was objected to, and a special agreement was signed by the complainant, her husband, and the defendant. Mr. Smith then read the agreement, which stipulated that, in consideration of her services she should have a free passage to England, and receive £20. The sum of £10. 10s. was paid in advance under this agreement, and £9. 10s. was due. Mrs. Thomas had applied to defendant, and he said "I can't pay you; I must pay it to your husband." He contended the complainant had a clear right to her wages, not as an able seaman, but as an able sea woman. Stewardesses, nurses, and midwives had sued for wages at sea in the Thames Police-court, and been successful. The sex was immaterial. Mrs. Thomas acted as a steward.—Sarah Thomas, a respectable young woman, said she was a servant at Hong Kong. On the 20th of September, 1864, she signed the agreement now produced. Captain Dewar said she was under services to Mrs. Dewar. She attended wholly and solely to Mrs. Dewar and the children, except as to repairs and alterations of the captain's under-clothing. Mr. Woolrych ordered the defendant to pay the sum of £10. 10s. and £1. 1s. costs.

A ROMANTIC COURTSHIP AND MARRIAGE.—The *Sunderland Times* prints the following:—"Some time ago the mate of a Sunderland vessel, while at a Chinese port, fell ill of fever and subsequently died An Englishman and his wife, living in the land of 'barbarians,' were kind to the dying man, and in his last moments strove by their attentions to ease, as far as they could, his passage from this troublesome world. The kindness shown to the suffering seaman came to the knowledge of his widow in Sunderland, and she, in a letter to the Englishman and his wife, thanked them for what they had done, and begged they would, in return, send her their *cartes* as a remembrance of the debt she owed them. After the lapse of some months, she received an answer from the Celestial Empire, from the Englishman, in which he conveyed the melancholy intelligence that, shortly after the departure of the vessel to which the mate belonged, he had the misfortune to lose his wife, who now lay interred by the side of his friend, the husband of the woman to whom he was writing. Acting upon the high encomiums he had heard of the character and qualities of his fair correspondent, he judged she was a suitable person to fill the place of his deceased partner, and at once 'popped the question,' giving as a reason for his promptness that so long a time was required for the transmission of a letter and its answer, it would be half a year before he knew what her reply would be. Enclosed was his portrait, and he begged a return of the favour. The letter, as may be imagined, was a surprise to the widow; but after weighing all the circumstances, she consented to be 'wooed.' The courtship, thus strangely commenced, continued to progress until a few weeks ago, when the happy man who was to be the bridegroom arrived in England, was not long in finding his way to Sunderland, and the 'banns' were at once proclaimed in Bishopwearmouth Church."

GOVERNMENT COLLECTION OF SPECIMENS OF EASTERN ART.—In order to exhibit to manufacturers, and especially cotton-manufacturers, the wants of our Indian people, Government has collected, at great expense and much trouble, specimens of all the most characteristic, useful and costly of the native manufactures in cotton, silk and wool. Not only does the collection of these specimens represent every class of frabric now manufactured and worn in India, but it exemplifies the characteristic art of the people of the East in decorating the materials with those admirable patterns and colours which are the inheritance of their race. These patterns and colours are enjoyed by the people; and it will be hopeless to attempt to rival them without an equal knowledge, not only of the mechanical processes of manufacturing the material and copying the patterns, but also of the feeling for art which inspires that decoration. It is felt that, as we buy an enormous quantity of cotton and silk from India, while the people there take only bullion from us in exchange, the balance of trade is against us, and that our manufacturers would secure an ample field if they could enter the Indian market with textile fabrics fit for native use, and decorated in accordance with native tastes. In order, therefore, to enable English manufacturers to study the demands of the Indian market, the collection of textile fabrics and patterns above referred to, which contains twenty specimens of each sort, has been divided into twenty complete sets; the objects have been placed in volumes, each set amounting to eighteen substantial folios, comprising about 700 examples. These sets of eighteen folios each are to be distributed to the leading seats of manufacture in this country, and deposited in the Chambers of Commerce in those localities where they may be consulted by those desirous of information.

NEW K.C.B.'s.—Her Majesty was graciously pleased to approve of the

Digitized by Google

appointment of Vice-Admiral the Hon. Sir Frederick William Grey, K.C.B., First Naval Lord of the Admiralty, to be a Grand Cross of the Order of the Bath. Admiral Grey is the third son of Charles, second Earl Grey, K.G., who was Premier in 1830. Sir Frederick never saw much active service. At the same time, Her Majesty also approved of the appointment of Rear-Admiral Sydney Colpoys Dacres, C.B., Commander-in-Chief of the Channel Feet, to be a Knight Commander of the Order of the Bath. Admiral (now Sir Sydney) Dacres, K.C.B., served with great distinction during the Spanish war, and was nominated for his services during that period a Knight of the Legion of Honour and of St. Ferdinand. In 1855 he served in command of the *Sanspareil*, 70, in the Crimea, and for distinguished service was again nominated a Knight of the Legion of Honour, and a Knight of the Order of Medjidie, receiving the Cross of the Redeemer of Greece, the Order of St. Ferdinand, besides several medals and other decorations. Sir Sydney Dacres is the second son of the late Admiral Sir Richard Dacres, who represented a younger son of the ancient baronial house of Dacres of Gilleland.

STEAM SHIPBUILDING ON THE CLYDE.—The *Tarifa*, another of the Mediterranean steamers belonging to Messrs. Burns, has made a trial trip, under the command of Captain Inglis. She is upwards of 2,000 tons burden, and has engines of 300-horse power; she was built by Messrs. Thomson, of Govan. In "running the lights" she attained a speed of 13 miles per hour,—a rate which is expected to be considerably increased when she is under canvas. The *Tarifa* has since left the Clyde for Liverpool, from which port she will make her first voyage for Egypt. The Turkish Government has ordered an iron-plated ram on the Clyde. She is to carry guns of heavy calibre, and will be provided with an iron beak upwards of 20 feet in length, projecting underneath from the stem. Messrs. Hedderwick and Co., of Govan, have launched for the Madras and Colombo Steam Navigation Company (Limited) a smart screw of 340 tons, named the *Negapatam*. She is being fitted with engines of 60-horse power by Messrs. J. Howden and Co.

SALE OF MODERN PICTURES BELONGING TO DUNCAN FLETCHER, ESQ.—Messrs. Christie, Manson, and Woods have given notice that they will, in May, sell by auction the beautiful collection of pictures formed by the above-named gentleman, who is leaving London. The catalogue will include 18 pictures of the highest importance, viz., an English Landscape, by Sir A. W. Callcott, R.A., and Sir E. Landseer, R.A., one of the chief attractions of the celebrated Bicknell collection; also the Prize Calf, by Sir E. Landseer; Good Night, by T. Webster, R.A.; and a Street in Cairo from the same collection; the Palm Offering, one of the finest works of F. Goodall, R.A.; and a Welsh Scene with Figures, by the same artist; Contrabandista, a grand work of C. Stanfield, R.A.; Sheepwashing, by Sir D. Wilkie; Eastward Ho! by H. O'Neill, R.A.; an Italian Vintage, by T. Uwins, R.A.; Dunstaffnage Castle, by Copley Fielding; a Landscape, by P. Nasmyth; a Chef-d'œuvre of Rosa Bonheur; and four exquisite works of Edouard Frere; also a beautiful collection of exquisite Carvings in Jade; splendid specimens of ancient Chinese enamel, porcelain, Japan cabinets, &c.

POST OFFICE DEDUCTIONS.—Some important alterations have taken place both in the home and foreign services. Book packets now going to Malta or Egypt are carried at 2d. instead of 3d. per 4oz. weight, while packets for Malta, which formerly could only be sent *via* Southampton, can now go by the Marseilles route as well. The last notice refers to book packets addressed to Shanghai, Canton, Amoy, Foo-chow-Foo, Ningpo, Swatow, or Whampoa. It states that they may be forwarded by the British mail steamers, either *via* Southampton or *via* Marseilles, under the same conditions in all respects as book packets addressed to Hong Kong. The charge will be as follows—viz., *via* Southampton, for a packet not exceeding 4oz., 4d.; above 4oz. and not exceeding ½lb., 8d.; above ½lb. and not exceeding 1lb., 1s. 4d.; above 1lb. and not exceeding 1½lb., 2s.; every additional ½lb., 8d.; *via* Marseilles, for a packet not exceeding 4oz., 6d.; above 4oz. and not exceeding ½lb., 1s.; above ½lb. and not exceeding 1lb., 2s.; above 1lb. and not exceeding 1½lb., 3s.; every additional ½lb., 1s. The postage must in all cases be paid in advance.

PATTERN POST TO FOREIGN PORTS IN CHINA.—On the 1st April next, and thenceforward, patterns or samples of merchandise may be transmitted by post between England and Amoy, Canton, Foo-chow-Foo, Ningpo, Shanghai, Swatow, and Whampoa, by British packet, either via Southampton or via Marseilles. The following will be the rates of postage, which must be prepaid by means of postage stamps, viz.:—Via Southampton—For a packet not exceeding 4 oz., 4d.; above 4 oz. and not exceeding ½lb., 8d.; above ½lb. and not exceeding 1lb., 1s. 4d.; above 1lb. and not exceeding 1½lb., 2s.; above 1½lb. and not exceeding 2lbs., 2s. 8d. Via Marseilles—For a packet not exceeding 4 oz., 6d.; above 4 oz. and not exceeding ½lb., 1s.; above ½lb. and not exceeding 1lb., 2s.; ab ve 1lb. and not exceeding 1½lb., 3s.; above 1½lb. and not exceeding 2lbs., 4s.

THE LATE MURDERS IN JAPAN.—There was distributed this morning a Parliamentary document bearing the title of "Japan, No. 3, 1865," and containing "Further Papers respecting the Murder of Major Baldwin and Lieutenant Bird, at Kamakura, in Japan." The papers relate entirely to the executions that took place at Yokohama, in December, of the principal and accomplices in the crime, and embrace the official reports of the British officials who attended on those occasions. These have already appeared in the *London and China Telegraph*. A dispatch from Sir R. Alcock to Earl Russell, dated Dec. 23, informs him that "Toki Osumi no Kami, the Governor of Kanagawa, who was so tardy in giving information to Her Majesty's Consul, and in other respects gave rise to very sinister suspicions, has been removed from his office, and disgraced at my requisition. It was necessary that he should be punished, if only as some guarantee for the future; and once satisfied that I had just cause for complaint, I am bound to say the Gorogio yielded, after some delay it is true, but with a very good grace in the end." After Sir Rutherford's departure, Mr. Consul Winchester, in a despatch dated Dec. 29, narrating the execution of one of the actual perpetrators of the crime, observes on it:—"Every unprejudiced mind must consider it as evidence of a great change in the policy of the Government towards Foreign Powers. A year ago it would have been in vain to hope for such an exhibition of strength on the part of the Administration of the Tycoon. It could not have dared to face the outcry which such a proceeding would have created. Happily, the force imparted to it by the destruction of Choshiu's power at Simonoseki, has enabled it successfully to take a step entirely consonant with the true principles on which the friendly intercourse between nations is founded." Extracts are given from the *Japan Herald*, showing "the true political significance and importance of this act of the Japanese authorities—" referring to the execution of the two men first arrested.

SALE OF THE HOUSE AND FURNITURE OF DUNCAN FLETCHER, ESQ.—Messrs. Christie, Manson, and Woods respectfully give notice that they will sell by auction, in April (unless previously disposed of by private contract), the valuable lease and contents of the mansion, 12, Hyde Park-square, the residence of Duncan Fletcher, Esq., who is leaving London. The house has been quite recently substantially repaired and decorated in the most beautiful taste, with every modern convenience and elegance, and forms a most *recherche* and attractive residence; and the whole furniture and fittings have been selected with great taste, and executed by Messrs. Jackson and Graham in their best style within the last eight months.

THE SAILORS' HOME AND ADMIRAL HALL.—The annual meeting of the Southampton Sailors' Home was held a short time ago, on which occasion it was unanimously resolved to present an address to Admiral W. H. Hall, C.B., F.R.S., in token of the important service which he had rendered to sailors' homes, as one of their originators. Subsequently the gallant admiral was entertained at a banquet on board the steam-ship *Poonah*, when the presentation of the address took place, and when he was highly complimented by the Mayor of Southampton and several other gentlemen, on the great services he had rendered his country in China, and subsequently in the Baltic during the Russian war.

NEW IRON SCREW TRANSPORTS.—The Lords of the Admiralty have ust given orders for the construction of an iron screw steam fleet, upon a noble scale, for the conveyance of our troops to India, and to maintain the efficiency and punctuality of reliefs for our army in that part of the world. The firms to whom the Admiralty have entrusted the construction of this fleet include the most eminent shipbuilders in the world. The dimensions and capacity of these vessels, presenting a pleasant contrast to the unhealthy and comfortless transports of old times, may be judged from the following details of the ship contracted for by Messrs. Money Wigram and Sons, of Blackwall-yard. The length of this vessel between perpendiculars will be 360 feet, and that of her keel for tonnage, 326 feet 9½ inches. Her extreme breadth, as well as that of her tonnage space, will be 49 feet; her depth in hold will be 22 feet 4 inches, and her burthen 4,173 tons. The engines of this ship, furnished by Humphreys and Tennant, will be of the nominal power of 700 tons, but under the perfection to which engine-making has been brought by the great firms of the present day, they will really be capable of exerting the enormous power of 4,200 tons. She will be furnished with surface condensers, and all modern improvements for economising fuel, as well as with various features contributing to the health, convenience, and safety of all on board. The speed of this ship is to be 15 knots, and she will have ample accommodation for 1,200 men, besides the numerous officers and crew required by so large a vessel. There will be four other vessels of nearly similar dimensions, proportions, and general arrangements, one of which will be built by the Thames Ironworks and Shipbuilding Company, with engines also by Humphreys and Tennant; another will be built by Palmer Brothers, of Newcastle-upon-Tyne, with engines by Maudslay and Gield; another by Laird and Co., of Liverpool, with engines by themselves; and the fifth by Messrs. Napier, of Glasgow, who will also furnish their own engines.

THE "SPIRIT OF THE OCEAN" V. "ROBIN HOOD."—This was a suit instituted by the owners of the ship *Spirit of the Ocean* against the owners of the ship *Robin Hood* (which vessel our readers will remember was sunk in the Channel outward bound to China) for the purpose of obtaining a decree of limitation of their liability under the 54th section of the Merchant Shipping Act Amendment Act of 1862. The two vessels came into collision off Dungeness on the 22nd November last, when the *Robin Hood* sunk. She had a general cargo on board, which was lost. The owner of the *Robin Hood* had instituted a suit against the owners of the *Spirit of the Ocean* to recover the damages occasioned by the collision, and the question was whether the owners of the latter vessel were entitled to a decree that they are not liable in respect to the damages caused by the collision beyond £8 or each ton of the registered tonnage of their vessel.—Judgment for the owners of the *Spirit of the Ocean*, with costs occasioned by the opposition of the owners of the *Robin Hood* to the prayer of the petition.

IN RE FRANCIS PEARSON, CHINA MERCHANT BANKRUPT.—The adjudication in this case was obtained upon the petition of the Fore-street Warehouse Company (Limited), and the bankrupt was described as of 20, Threadneedle-street, and also of Shanghai, in China, merchant, in copartnership with George Seymour. At a first meeting, now held, Mr. Robert Slater, of the Fore-street Warehouse Company, was appointed creditors' assignee. The debts and liabilities are believed to be about £6,000, and the assets consist for the most part of balances upon consignments to Shanghai and Japan. The bankrupt did not surrender.

EXPORTATION OF OPIUM FROM INDIA.—A return recently issued shows that in the official year of 1863-64 there were exported from our Indian possessions 42,621 chests of opium, principally to China. The gross revenue realised thereon was Rs. 5,20,72,358. In 1829-30 the exportation consisted of 9,678 chests, and since then it has been increasing, though not always regularly. In 1854-55 it rose suddenly to 51,421 chests, but the following year it fell to 44,938 chests. With these exceptions the exportation for the official year first mentioned was the highest.

CHINESE COINS PACKED IN COTTON.—While unpacking a bale of Chinese cotton at Bacup, the other day, the men so employed discovered two gold coins, one about the size of a threepenny piece and the other smaller, with holes punched through them, wrapped up in a piece of rag. Many silver pieces have also been found amongst this kind of cotton, and a curious sheet of Chinese characters, printed on a sort of straw paper, carefully folded, was found in a bale at Bacup last week.

DEPARTURE OF SIR FREDERICK BRUCE, G.C.B., FOR WASHINGTON.—The Royal Mail steamer *China* left the Mersey early on the 25th for New York, with a full cargo and a fair complement of passengers, among whom was Sir Frederick Bruce, the newly appointed British Minister and Envoy Extraordinary to Washington.

LONDON, WEDNESDAY, MARCH 29, 1865.

COLONEL SYKES ON CHINA.

IF it were not for Colonel SYKES, Parliament and the public would forget that England had any relations with China. Here has a moribund session been sitting night after night for the last two months, and not a debate about his favourite topic, "the Taiping Rebellion." Bad luck to GORDON for putting an end to that most uncivil of civil wars, for his political capital is gone. It was the chief subject for him to make a speech upon, so that his constituents knew that he was at his post. But, bother it! here it was put an end to, and a dissolution fast approaching. So, like Paddy at Donnybrook Fair, he trailed his coat through the House of Commons the other night, hoisted the Taiping banner, and flourished his mulberry-tree shillelah, daring any man to tramp on the tails of his upper garment. In affectionate terms he dwelt upon the ill-usage his protegés had met with at the hands of British subjects, and hoped that Her MAJESTY'S Government would carry out the instructions to Consuls, forbidding them to enter the service of belligerents in China, to the strict letter of the law. This he interpreted in the most extended sense—that the whole Empire of China should be searched by officers of the Consulate to discover and seize offenders wherever located, and bring them before the nearest Consul for punishment. In proof of his assertion that there were numerous British subjects illegally drilling Chinese artillerymen, he flourished in the face of members a copy of what he termed the "leading journal at Shanghai," wherein a silk inspector, travelling on business, had seen seven of these delinquents drilling men, and one actually teaching the Imperialists to manufacture rifle bullets, while shot and shell, gunpowder and guns, of English manufacture, were stored in the Chinese magazines. This no doubt is a crying shame, as his friends, who used to supply the Taipings with rifles of the umbrella pattern, and percussion caps in the style of HOLLOWAY'S pills, have lost that lucrative trade; which apparently this silk buyer found to his cost when he had to pay dollars for the product instead of smuggled munitions of war, on which he had 100 or 200 per cent. profit. Then this Parliamentary representative of defunct Taipingdom gave another flourish to his shillelah, and with a "hooroosh" tried to bespatter the name of Colonel GORDON with dirt, but it was perfectly ineffectual, and made his hands uncleaner than before; as also his attempts to blemish the reputation of Dr. MACARTNEY. He wound up his speech by asking the noble lord at the head of the Government whether the Consuls ought not to be called on to withdraw all British subjects from the service of the Emperor of CHINA and the local mandarins. The rodomontade uttered by the gallant member for Aberdeen will be found in another column, as well as the decisive and curt reply to his question by the ATTORNEY-GENERAL, who answered instead of the Premier or Under Secretary for Foreign Affairs, as it involved a matter of law. In that short speech it will be observed how neatly, with one prick from the point of legal acumen, the bladder which Colonel SYKES had puffed out to such large dimensions, immediately collapsed. He simply showed that consular jurisdiction in any foreign country had no power beyond the co-operation of British subjects resident there, or what might be conferred on them by the Government of the country in which they lived. He further showed the absurdity of giving a roving commission to any officers of the Consulates, all over China, to examine their countrymen suspected of being in the service of the EMPEROR. Just imagine the chief constable of the Shanghai Consulate, with his *posse comitatus* of three policemen, travelling among a population of four hundred millions, to find out any stray Englishmen, and apprehend them if not able to give an account of themselves. But why did he not include the British officers in the Chinese Maritime Customs, who are in the EMPEROR'S service? The whole topic was sufficiently puerile to drop after the ATTORNEY-GENERAL'S reply, as members have had this subject brought up *usque ad nauseam* by the Colonel and his fellow advocates of Taipingism.

THE NEW MINISTER FOR PEKING.

We have to announce that, as intimated previously, Sir Rutherford Alcock has been appointed to succeed Sir F. Bruce as Minister at Peking at the reduced salary of £6,000, and will leave this country with Lady Alcock next September. The announcement that Sir Rutherford would proceed *via* Siberia is premature; this route would convey him to Peking direct, and deprive him of the opportunity of visiting the consular ports, which it is desirable he should do before settling down at Peking. The antecedents of Sir Rutherford Alcock are too well known to need any description from us. The post which he has just quitted as Minister in Japan has been fraught with overwhelming danger and difficulty, and we tremble at his removal from that quarter. It is not yet decided who is to be appointed as his successor. Colonel Neale was requested some three months since to proceed as *Chargé d'Affaires*, but was obliged to decline on the ground of ill health; and our information is that the matter remains in abeyance. It was a capital mistake for our Government to recal Sir Rutherford in the middle of his policy. In glancing over the list of names in the China Service, there can hardly be two opinions as to the best person to fill the post being Sir Harry Parkes. It is of the last importance, that a man of considerable energy and pluck should be nominated, or we shall certainly have to face a war with Japan to maintain our Treaty rights. It was averted last year simply by Sir Rutherford attacking Cho-shiu, and insisting on the opening of the Straits of Simonoseki.

The following notice appears in the *Spectator*:—

As we supposed, Sir Rutherford Alcock has been appointed Envoy Plenipotentiary at Peking, in succession to Sir F. Bruce. We trust the Regent of China will like a change everybody else is certain to approve, and is prepared to observe treaties a little more strictly than heretofore. If he does not, Sir Rutherford Alcock will be quite prepared to make him, and has fought Taoutais at Shanghai and Daimios in Japan quite long enough to know how. The appointment will, we believe, either consolidate British influence in Peking, meaning by "influence" the power of guidance, or produce another war, and the first result is by far the more probable of the two. We congratulate the Daimios on their liberty, and the Mandarins on having found a master.

PROPOSED AMENDMENT OF THE PRUSSIAN TREATY WITH JAPAN.

OUR Hamburg correspondent adverted in a recent letter to negotiations about to be opened by the Government of Prussia with that of Japan for securing an exchange of Prussian money, weight for weight, with Japanese coins of similar intrinsic value, and the circulation of the former throughout the Empire at this valuation, modifying to this extent Article XV. of the Prussian Commercial Treaty. The demand—which would not only displace in Prussian dealings the Mexican dollar as a medium of exchange, but overthrow the present conventional assessment, nearly as it approaches to the true spirit and intent of our own Treaty—is both too general and too specific; first, as undertaking to accomplish more than any one Power will itself succeed in, and omitting consideration of any Japanese silver coin with which either the Prussian thaler, itself 750 fine, or the double thaler, 900 fine, is at par; and, secondly, as demanding an interior circulation on which we have ceased to put any great value, requiring, as we do, simply an equitable exchange. To argue, as our representative did, when he consented to forego our treaty-right in the matter of currency, that an exchange on the terms it provided would be an infringement of the prerogatives of the Sovereign of the Empire, was to overlook the great fact that the rate merely denoted the equivalent obtainable at the Imperial Mint, and by no means implied circulation of foreign money in the interior and along the coasts, against the policy of which there might be many and various

Digitized by Google

reasons. It is true that the symbol of three (ichi-) bous* is stamped on each Mexican dollar received, but our complaint is, not that it fails to be circulated throughout the Empire at this value, but that it should be appraised at the Imperial Mint as silver bullion brought thither from the mines of Niphon, or at less than one-third its value, and the value of the metal as coined into Japanese money taken weight for weight. This concession of vantage ground on the currency question, leading to the manufacture by the Japanese of a special coin for purposes of exchange, was the more unreasonable in view of the abundant evidence we have had of the very effectual control exercised by the Japanese Government over the amount and character of the coinage of the Empire, as shown in the premium such money carries, and the preservation for centuries of the same standard as between the gold and silver currency. Allowing that the Mexican dollar had been all along exchangeable for three native circulating (ichi-)bous, it is plain we would have had the same advantage whether it circulated or not; and as to any additional premium such an exchange involved, this, we may be sure, would have been amply counteracted by present Government transit dues and commissions on the sales of native merchants. It is impossible that the question of foreign exchange in Japan, resting as it does on a purely arbitrary basis, can long remain in abeyance. We cannot coincide with the *North American Review* when it asserts that, provided we can buy tea and silk, and camphor and coal at a profit, the use that the Japanese Government makes of our coin is nothing to us. It is to be remembered that the merchant's profit consists properly in the difference between the true local value and that determined in foreign markets (less freightage, sales' commissions, &c.). Is it nothing to us that the Japanese Government should appropriate one-third of the value of our coin in addition to an arbitrary control in the supply of the fictitious coin manufactured for the settlement? Permitted aggression in one form invites it in another. The letter we recently published from a merchant at Hakodadi complaining that only 3,600 kas could be obtained in exchange for the dollar instead of 5,000 as formerly, is an instance in point. If the Japanese have any standard it is the 100 *kas*; and, allowing for the additional valuation placed on this coined copper and iron money, such a deduction from exchangeable value is far beyond the premium it carries. Immediate attention should be given to this point, a further depreciation being thus imposed on the Mexican dollar to the injury of our local trade. The overthrow of the whole present system of exchange implied in the Prussian demand is not, we apprehend, to be accomplished without the co-operation of the other great maritime and commercial Powers. Such co-operation would not be wanting to any well-devised plan. In the currency is an instrument of power which may be employed to vitiate every newly conceded privilege, and accordingly we would advise that communications at once be opened between the great maritime Powers as to the claims to be jointly put forward in the matter.

THE MEMORIAL FROM CEYLON.—CEYLON MILITARY EXPENDITURE.

Our colonies, which form so material an element in the greatness and power of Great Britain, find their value, not like those of Greece and Rome in the military force they can furnish to defend the great central heart of the Empire, but, there giving scope to industry and offering investments to capital, in the advantages they offer for the development and extension of our trade, the employment of our shipping, materials for our manufactures, and contributions to our revenue through the duties levied on their products. But the value to strictly Imperial interests of such colonies as the Cape of Good Hope and Ceylon, which unite to these advantages the merit of being important strategical positions indispensable to the protection of foreign commerce and general trade, is incalculable. What would not France give, what price would be too high for Russia, in acquiring such a colony as Ceylon? So far does the military outweigh the agricultural worth of Ceylon from this point of view, that we preferred to let the Dutch have in preference the rich island of Java, though the work of clearing its forests was before us. What Cuba was to Spain as a key to her extensive dominions in the Mexican Gulf, Ceylon is to Great Britain. This

"Utmost Indian isle of Taprobane"

is the outpost of our Indian possessions, the natural basis of naval operations, the rendezvous of our Pacific fleets—a leading station on the overland route, and the first object of attack by any maritime Power in case of war. To a colony like Ceylon, furnishing productions peculiar to tropical climates, and receiving in exchange our manufactures in return, it might have been supposed easy to apply those liberal principles which Parliament and public opinion have engrafted on our colonial policy; to deal, at least, in a conciliatory spirit, without the intervention of restrictive or oppressive regulations. "Plenty of good land and liberty to manage their affairs in their own way," appeared to ADAM SMITH to be "the two great causes of the prosperity of all new colonies." Ceylon, it appears, has the former but not the latter; and matters are all the worse that the chart by which her local pilots have steered her course has been marked with unintelligible hieroglyphics mapped by some "hidden hand" in Downing-street. Although acquired in 1796, Ceylon is to all intents a new colony, and the policy dealt out to her is only comparable to a nipping frost, threatening the early promise of the harvest. A surplus heaped up at such a fearful cost to acquired proprietary rights has been turned into a financial rod, and on the assumption of an overflowing cup she is commanded by the Home Government to contribute immediately £137,000 per annum, to be gradually augmented to £200,000, for military expenditure. Without any reference to public opinion, even as to the amount of the assessment, an ordinance permanently alienating this amount of her revenue was made a *conditio sine qua non* for allowing her Council hereafter to initiate their own measures in dealing with the revenue and matters of internal administration—a right, by the way, conceded years since by her charter. The Home Government knows well that the elective and representative members are swamped in the Legislative Council by a preponderance in numbers of obsequious officials; hence the passage of the ordinance, as directed, does not relieve the Colonial Office from the disgrace of its high-handed and arbitrary act. The same official impatience which overlooked their stolid neglect of duty as the cause of the surplus, which failed to foresee that the representative members would resign rather than immolate themselves, could not possibly take into account that the millions of pounds sterling invested in Ceylon, not only in the purchase of land and its culture, but in advances on growing crops, is for the most part London capital, and that the main returns are realised here. Arrogance is seldom unallied with impatience. Mr. CARDWELL, when writing his despatch, was probably as unaware of the truth as the Knights of St. ARTHUR of the presence of the holy Sangriel.

What the colonists contest is not the principle of contributing to military expenditure, but the right of being consulted in the matter of this demand as those who have to meet it. The Home authorities have been boldly bearded. The merchants, planters, and the whole body of British residents, are united in a phalanx against this form of despotic rule; not in a factious spirit, but with the natural resentment of a community dealt with in an inconsiderate manner. The course taken has proved as impolitic as it was hasty. There is no more sure way of repressing those noble elements which make defence glorious in an unequal contest, or stimulate a people successfully to repel aggression, than to make them feel that tinge of shame which comes from being thought only worthy to be driven. What are the Courts of Europe to think of a despatch implying that a British colony must be officiously coerced before it will properly contribute to its defence? What are other colonies to think of it? Sound feeling and good sense underlie the Ceylon memorial to the Home Government. This resolution of right is sufficient to make the ghost of more than one dead Colonial Secretary rise protesting from its ashes. We trust the matter will excite the attention of Parliament, affecting as it does the abnegation of those principles of colonial policy it has endorsed. The Ceylon colonists are

* We here give the true spelling of the Japanese coin in accordance with the somewhat guttural native pronunciation, and it is only for the sake of clearness we avoid giving the plural denomination in its true etymological form. Some consideration must be accorded for the present to custom, as represented by the uniform practice of foreign residents and consuls in maintaining the use of the same prefix, however they may spell it or pronounce it, for a single coin or any number of coins. *Ichi* literally signifies *one* bou, *Ichi* being the Japanese for one, just as *ni* bou is expressive of the dual number, or *two* bous, and so on. The plural of the coin as distinct from any specific number would be *bous*, to follow the idiom of our language. It is singular that writers on Japan should have missed this point, for the contraction of any term in commercial use is always a desideratum.

Digitized by Google

willing to pay, and to pay well, for their defence; why insult them by giving to the tax the character of a forced contribution?

Literature.

Etudes Asiatiques de Geographie et d'Histoire, by LEON DE ROSNY. 8vo. Paris: Challamel, Ainé.—This volume contains a number of articles from the practised pen of M. Leon de Rosny, the perpetual secretary of the Ethnographical Society of Paris, author of several works on the Japanese language, on the figurative writing and hieroglyphics of various nations, ancient and modern, and, in conjunction with M. Cortambert, of an important descriptive work, illustrated with maps and engravings, entitled *Tableau de la Cochin Chine*.* M. de Rosny treats of Annam, Siam, Persia, the Parsis and China, but his chief topics are Japan and the Japanese, for both of which he has an evident liking. Speaking of the laws of that empire, our author says:—"I avow, however, that from certain points of view the Japanese code is excessively severe. On the other hand, the law is precise, clear, and simple, and every one is made acquainted with it at the earliest moment. Everything considered, Japanese legislation is as good as that of Europe; it punishes less frequently, without, however, allowing more guilty persons to escape, and with all its rigour causes less blood to be shed than our European laws." M. de Rosny dwells forcibly on the superior position of Japanese women as compared with those of any other Eastern nation, and the following passage, if not over-coloured, may naturally make us ask whether we in the West can lay claim to such high praise:—

"The education of girls is the object of special attention with the Japanese. A woman is expected to know how to read and write thoroughly, which is not an easy matter considering the number and often complicated forms of the Japanese letters. She is expected to have some knowledge of history, geography, and the natural sciences, and her education is not considered complete unless she adds to these some talent for painting, music, and poetry. Women who excel in this last-named art, and they are not few in Japan, pass for accomplished women. Many poets of the fair sex enjoy a high reputation, and their works are in every one's hands. There are few ladies in Japan who are not passionately fond of reading, and who do not give the greater portion of their time to the perusual of the romances and other works with which the literature of the country is annually enriched. Endowed with such an education, the woman of Japan becomes the life and soul of the family in which she enters: she takes an interest in her husband's affairs; she directs those of the house, and, when a mother, becomes the first instructress of her children. Besides the elementary knowledge which she is capable of disseminating around her, she teaches the precepts of religion, and inculcates the sentiments of family and of country in the hearts of her pupils. The three ideas of family, country and religion, are perhaps more intimately bound up together in Japan than anywhere else. Each family is under the care of a chief who reigns absolute master over the domestic hearth, and in the same way the nation is governed by a chief who reigns in the name of the religious sovereign as his lieutenant and vicar. Thus is maintained throughout the whole Archipelago the sentiment of national unity which is the first condition as regards the duration and the future both of States and peoples."

M. de Rosny's opinions with respect to the Government of Japan will doubtless not be universally accepted, but his claim on behalf of that people of great superiority over their neighbours, not only with respect to capacity for practical matters, but in the knowledge of the principles of science and art, and for the care which they bestow on literature, will hardly be questioned. M. de Rosny's book, like that of every impartial and thinking man who has written upon Eastern nations, should teach us that we have a good deal to learn before we are in a position to decide on the relative advantages of our own civilisation as compared with that of other nations. M. de Rosny has collected a great deal of interesting matter from ancient Chinese and other documents respecting Cochin-China, Annam, and Cambogia, and his papers relating to these countries acquire an additional interest from the important events which have made Saigon a French dependence.

Continental Intelligence.

HAMBURG.

(FROM OUR OWN CORRESPONDENT.)

MARCH 14.

A capacious iron screw-steamer of 900 tons, with engines of nominally 150-horse power, built for the China trade, has been successfully launched from the works of Messrs. J. C. Godeffroy and Son of this city. She has been christened the *China*, and is the longest vessel ever built at Hamburg, her length on the water line being 230 feet. On the slip just vacated by this launch another large iron vessel for the Eastern trade is to be constructed for account of another ship-owning firm of this city, the keel of which has already been laid down.

The board of directors of the Suez Canal Company have invited the Board of Trade of this city to send delegates to Egypt to be present at the opening of the canal on the 9th of April, and to make the passage of the whole length from Port Said on the Mediterranean to Suez, and from Ismaila to Zagazig, in a barge drawn by a steam tug. The canal has at present everywhere a minimum depth of five feet, with a width of fifteen metres. At the instance of the Canal Company, the administration of the French Post-office steamers in the Mediterranean have agreed to grant a very liberal reduction in the fare for the company's invited guests, who will be conveyed from Marseilles to Alexandria for the charge of 341 francs, and the same sum for their return. During their stay in Egypt the expenses for board, lodging, and local conveyance of the invited delegates from their arrival at Alexandria on the 6th of April till their departure from thence on their return to Europe will be liberally borne by the Suez Canal Company, and suitable arrangements for that purpose are now being made by them at Alexandria, Cairo, Suez, Port Said, Ismaila, and Zagazig.

The Old Giro Bank of Hamburg now publishes weekly the amount of bullion in its cellars. The returns for last week were:—

	Value Bco. Marks.
Bars of silver	11,234,610
Silver coin	6,426,525
Gold in coin and bars	495,262
Total ..	18,156,397

Great disappointment is felt at the result, it being generally supposed that the amount of silver in the bank was considerably larger.

HOLLAND.

(FROM OUR OWN CORRESPONDENT.)

ROTTERDAM, March 14.

Our papers are filled up with particulars relating to the funeral procession that will escort the corpse of the Queen-Dowager from her late residence to the royal vault at Delft, on the 17th inst. Several Princes have arrived at the Hague, besides some Ambassadors, who, in the name of their respective Sovereigns, will pay the last honours to the corpse of our most beloved Queen-Mother. The Netherlands Indies will be represented in the procession by the Colonel-Commandant, an officer, a corporal, and an invalid from Bronbeek.

Mr. Philippus van Blom has been elected member of the Second Chamber for Dokkum.

I have to mention the loss of two very hopeful artists, Mr. A. G. Bilders and Miss Steffens, who both died suddenly, in the first years of their prime. Their pictures are highly valued by amateurs.

It is a fact worth recording that a Paris house has given an order to the well-known firm of Hermans and Co., of the Hague, for thirty-three carriages for British India. This speaks volumes for the manufacture of these gentlemen, whose reputation stands high in Netherlands India.

I told you that Captain Kool appealed against the verdict of the Court. A few days ago the matter came on before the Provincial Court at the Hague. The Advocate-General, however, asked at once that the accused should be arrested, and that the judges should pronounce a penal verdict.

The King has been pleased to confer on W. A. Jellinghaus the knighthood of the order of the Netherlands' Lion.

ROTTERDAM, March 24.

Our papers are still filled with particulars of the funeral of the late Queen Dowager, which took place on the 17th inst. The ceremonies were as usual, and the curiosity of the public not less than is customary on such occasions.

Political news is very scarce. Parliament is still discussing the Medical Laws. The debate has been already thrice adjourned, and the Bills are hardly recognisable, so numerous and important have been the amendments. The general opinion is that finally they will be rejected.

The International Sugar Convention meets with much opposition from the trade in general.

I expect to be able, within a short time, to give your readers some particulars as to the cargoes loading for the Far East.

At the yard of Messrs. Paul van Vlissingen en Dudok van Heel, at Amsterdam, the keel is laid for an iron screw steam

Digitized by Google

ship of 600 tons, named *Minister van Staat Rochussen*, for account of the Netherlands India Steam Navigation Company (Limited) at London.

COMMERCIAL.

COFFEE.—The auction of the Trading Company, held on the 15th, went off very satisfactorily. Good ordinary quality was paid with ½ to ¾ cts. beneath valuation; the other qualities were paid with ¼ to ½ cts. above valuation. Since the auction there was a good demand, 8,100 b. Padang, ex Mentor; 3,300 b. Java, ex Tinnevelly; 1,200 b. ex Druses, changed hands at auction prices, besides 1,000 b. Macassar, ex Elizabeth and Jacoba, sold at prices that did not transpire.

TEA.—The market is inactive, the trade being occupied in inspecting the parcels to be offered in the sale on the 5th, arrived here per Freya; the black sorts are highly esteemed, as they are in general of a good and fine quality.

SUGAR.—In waiting for the auction of the Trading Company the market was dull, and nothing could be realised unless the price was lowered with ¼ f. to ½ f.; some parcels Java were sold at 4½ f. under November. The auction of the Trading Company, consisting in 76,770 kr., went off as follows (all were sold):—

	Standard.	Kranjangs en Kan.	Average good to fine. March 22, 1865.	Average good to fine. Nov. 25, 1864.	Average weak. Mar. 22, 1865.	Average weak. Nov. 25, 1864.
Yellow ..	.. No. 10	273	—	—	—	30¾
„ ..	.. „ 11	676	—	—	27	32½
Grey ..	.. „ 12	1,392	30¼	—	27¾	33¾
„ ..	.. „ 13	3,434	31¼	36¾	28¾	35½

„ ..	.. „ 18	18,730	34	42¾	32¾	—
„ ..	.. „ 19	11,891	34½	43½	33	—
„ ..	.. „ 20	2,391	35	—	—	—

RICE.—The market has become flat, with sellers where there were before buyers.

TOBACCO (JAVA).—The market remains inanimated; the arrivals are very large; the stock now at Amsterdam amounts to 10,241 p.

COTTON.—According to the Liverpool market, the prices were better here for the last days, but only a limited business was transacted in E.I. sorts for export.

BANCA TIN.—The sales have been extremely light, and at rather lower prices. 500 bl. were sold at 56¾f., and 400 bl. at 57f.

HIDES.—1,400 p. E.I. sold per Loevesteyn, 2,746 p. do. ex Sirius, besides 176 p. Buffalo ex do.

CAMPHOR.—In much demand; sellers decline, however, to operate without an advance.

COCHIN COCOS OIL.—25½f.

CASSIA VERA.—The 1,718 p. Cassia Vera, ex Mentor, were sold at inscription at prices that did not transpire.

VANILA.—On the 30th, 90 ch. Java and 300 ch. Bourbon, just arrived, will be offered in sale.

RATTANS.—With much transactions at firm prices; 2,251 b. ex Loevestein, 1,400 b. ex Leaping Water, 15,334 b. ex Wilhelmina, and 1,500 b. ex Elizabeth and Jacoba, were sold.

INDIGO.—Only 30 chests Java, private import, were sold at full October prices. The Trading Company has fixed that the Spring Auctions shall take place on the 2nd and 4th of May. At these sales will be offered 4,047 ½ and ¼ chests Java, besides 80 chests Java. Cochineal, the valuation is on average 30 cents higher, compared with the October prices. These sales are the most important of the last year; in every quality there is a nice choice. The private stock is not large, and the general belief is that the good qualities will be paid above the valuation. The private stocks consist of 373 chests Java, and 26 chests Manila, Indigo, which will be partly sold on the 4th of May. The quality of the Cochineal is good. The prices will be regulated after the London market.

MONEY.—The funds' market showed dulness, at the present higher level of prices. With regard to public securities generally, it may be remarked that the influence exercised by the favourable condition of the money market is counteracted by the dulness which prevails in some of the staple trades, as well as in the produce markets. Bank discount bills, 4 per cent.; acceptances, 4½ per cent.; open market, 4 to 4½ per cent.; N.W.S., 2½ per cent., 62 1-16th; 3 per cents., 72 13-16th; 4 per cents., 96 per cent.; Handelmaatschappy, 144⅞; Turin Bank, 100. Change: London, 3 mo. f.11.68½; 2 mo. f.11.73; short, f.11.84; Paris, 3 mo. f.46.42; 2 mo. f.46.56; short, f.46.85; Hambro, 3 mo. f.34.87; 2 mo. f.34.95; short, f.35.10.

SHIPPING.—ARRIVALS.—March 16, at Brouwershaven, from Banjoewanie, Cherokee; at Texel, from Batavia, Anna Digna; 18, at Texel, from Banjotwangie, Zeemanshoop; 21, at Brouwershaven, from Banjoewangie, Cortgene; 22, at Browershaven, from Batavia, President van Ryckevorsel; from Passaroean, Robertus Hendrikus.

DEPARTURES.—March 18, from Brouwershaven to Sourabaya, Salatiga; 19, to Batavia, Delft; 20, from Texel to Java, Baltimore.

READY TO SAIL.—Galilei, Jason, for Batavia; Frederik Hendrik, for Padang; Baltimore, for Sourabaya.

LOADING AT AMSTERDAM.—For Kanagawa and Decima: Jacqueline and Elise, Julie, Bantam, Batavia. For Padang: Pauline, Constance, Eleonore, Brouwershaven. For Macassar: Elizabeth and Jacoba. For Batavia: India Packet, Staatsraad van Ewyck, Krimpenerwaard, Kandanghauer. For Samarang and Batavia: Maduru, Vertrouwen, Koning Willem II. For Batavia and Sourabaya: Anna and Sophie, Maria Regina, Koophandel. For Samarang: 'Estafette, Sliedrecht, Mathilde, Maria Veronica. For Sourabaya: Petronella, Quintet, Staatsraad, Van der Houven.

FREIGHTS.—Quotations of Messrs. Fauchey, and de Vletter, Shipbrokers at Rotterdam.—The only alterations since our last are:—For Batavia and Sourabaya, Johannes Lodewyk, 755 tons; Triton, 750 tons, 18f. to 20f. for B., 25f. to 30f. for S. For Sourabaya direct, Antonio Petronella, 711 tons, 25f. to 30f. For Batavia and Samarang, Hendrika, 752 tons, 18f. to 20f. for B., 25f. to 30f. for S. All per last of 2,000 ks., or 120 cubic feet. Amsterdam 15 per cent.

PASSENGERS INWARD.

From JAVA.—Per Joseph William, Capt. Bik: Messrs P. T. Uhlenbeck and fam., P. S. Vasseur and Doruis. Per Anna Digna, Captn. Auman: Messrs G. P. W. Boers, Vos Kuil and Strom.

PASSENGERS OUTWARD.

To JAVA.—Per Catharina Wilhelmina, Capt. de Boer: Mr. van Neck and Mrs. Schluter. Per Frederik Hendrik, Capt. Glazener: Mr. H. W. Hamilton, of Silverton Hill.

HAMBURG.

(FROM OUR OWN CORRESPONDENT.)

MARCH 24.

Last week a meeting of more than fifty of the most eminent merchants, manufacturers and shipowners of Copenhagen was held in the reading-rooms of the Exchange in that city, for the purpose of taking into consideration a proposal that has been started under very high patronage for the formation of a joint-stock shipping company, in shares, with a view to develop the Danish carrying trade in the Far East. Amongst the gentlemen present was Vice-Admiral Bille, who, it will be remembered, was sent on a diplomatic mission last year to Peking to exchange the ratifications of the Treaty of Commerce concluded between Denmark and China, and who communicated to the meeting some interesting particulars of the extent of the trade in China, and various episodes founded on the result of his own experience. As might have been expected, the general feeling of the meeting was highly favourable to the execution of the project. Several gentlemen of commercial experience and high standing delivered their opinions as to the best course to be pursued, and all agreed that the time was well chosen, and that there was every chance of its becoming a successful, patriotic, and profitable undertaking. The meeting, over which presided Herr Hansen, Judge-Advocate of the Supreme Court at Copenhagen, eventually elected six gentlemen to form a provisional committee, and to draw up the prospectus and statutes of the new company, to be submitted at the next sitting. The gentlemen thus elected were—Admiral Bille; Privy Councillor of Legation, Mr. Strike; Mr. Boy, Councillor of State; Bank Director Tietgen; Mr. Le Maire, merchant at Copenhagen; and Mr. Holm, shipowner at Aalborg.

The lamented death of the late Sir Robert Schomburgk on the 11th inst., at Berlin, was inserted in the Hamburg papers by his brother, Mr. C. Schomburgk, a merchant in this city.

I have to report the death of Mr. J. H. Baur, the senior partner of the old and eminent firm of Messrs. J. H. and G. F. Baur, of Altona, who have for many years had very extensive dealings with China and other parts of the East. The deceased lived to the patriarchal age of ninety-six, and during his long and successful commercial career had acccumulated a princely fortune, which rumour asserts to be forty millions of marks banco (about three millions sterling), the whole of which he bequeathes to his grandchildren, who carry on the business under the old firm.

The proposed new flag for the Duchies of Schleswig and Holstein does not appear to find favour with the public, and at a meeting of shipowners and captains of vessels held a few days ago at Altona, it was resolved by those present to decline the use of it, at all events till generally recognised by maritime States. One of the captains present related that after the revolution of 1848, when he was authorised to display the German tricolour (black, red and gold), he had occasion to visit Chinese and other ports in the East, and the flag being unknown and unrecognised, he was everywhere presumed to be a pirate. He therefore fully concurred with the opinion so unequivocally expressed by the meeting, that under present circumstances it was far more safe for them to sail under the Prussian or Austrian flag, of which they now enjoyed the option. In consequence of this decision, the eminent shipbuilder and large shipowner of Altona, Herr Dreyer, who is at present fitting out a vessel to load for China, has applied for and received permission from Berlin, to sail her under the Prussian flag, which is now pretty well known in the Far East.

A painfully interesting letter from a young Hamburg sailor, of the name of Peter Christensen, to his parents in this city, came to hand by the last overland mail, with a description of his adventures and sufferings, he being the sole survivor of the crew and passengers of the Hamburg three-masted schooner *Canton*, Capt. Neufing, totally lost in the Chinese waters in January last. The ill-fated vessel was a fine craft of 327 tons, nearly new and well found, the property of Mr. J. Elderts, of this city, by whom she was built expressly for the China trade, and left this port last year. When the catastrophe occurred she was on a voyage from Swatow to Singapore and Penang, and had no less than 540 coolies on board as passengers, all of whom, together with the captain, mate, and a crew of

Digitized by Google

ten men, have found a watery grave, with the single exception of the young man Christensen. From his description, it appears that they left Swatow on the 29th of December, and, after a prosperous run, came in sight of the lighthouse of Pedro Branca in the Straits of Singapore early in the morning of the 6th of January. About 4 o'clock A.M. the captain altered the course of his vessel and bore up to the north-west, when she suddenly struck with great violence on a sunken reef, and nearly filled with water. She, however, soon got off again and floated into deep water, but as the pumps were of no use and the vessel was quickly settling down there was no time to launch the barge stowed on deck, and only one small boat could be let down, but this was immediately swamped from overcrowding by the unfortunate coolies. In the meantime the foremast fell overboard, and the bows were under water. When the stern part of the vessel had sunk to within three feet of the surface, Christensen, who had lashed himself to a plank, jumped overboard, and was carried by the current to the island of Bitang, where he arrived on the 8th, having been for fifty hours in the water. He was kindly received by the natives, and when he was somewhat recovered, forwarded to the hospital at Tandjang, Penang, where he wrote his letter and expected shortly to be in a condition to be removed to Singapore. He appears to be the sole survivor, as assistance was sent off immediately to the North Coast, but the people returned without finding any one alive, after burying eighty corpses that had been washed on shore, among whom were ten Europeans. The vessel was insured in this city for 150,000 marks banco.

COMMERCIAL.

COFFEE.—Short supplies from over sea, and the poor assortment offer but few inducements to buy, nevertheless prices of all descriptions are well supported. Sales of the week, 6,000 bags.

SUGAR.—Both Raw and Refined quiet, with no alteration in values.

RICE.—Nothing of importance to notice; cleaned grain continues to have a steady sale at full quotations.

SPICES.—Some fresh arrivals of Cassia Lignea have come to hand, but are not yet brought to market. Ginger is again lower. There is an improved demand for Pepper, which has given greater strength to the market. A parcel of 404 gonjes of cloves has arrived, but was sold afloat previously.

DRUGS.—There is an increased demand for Chinese galls and prices are considerably higher. Camphor is also in more request, with an improvement in the values. Amongst the sales of the week were 150 chests of candied ginger, 200 chests of Chinese galls, 10 chests of Rhubarb, 17 casks of Balsam Copaivæ, and 10,000 lbs. of Refined Camphor.

SPELTER.—A further rise has been established, and greater confidence is felt in this metal. Since last mail the following sales are reported:—4,500 centners for spring delivery, and 1,500 centners in loco at 13 Mks. 4 Sch. Bco., 500 centners spring delivery at 13 Mks. 6 Sch., and 3,000 centners for delivery in July and August at 13 Mks. 4 Sch. Discount, 2¾ to 3¼ per cent.

SHIPPING.—SAILED FROM CUXHAVEN.—Raleigh, to Decastries Bay, Ellida, to Nicolayefsk, Amoor.

IMPORTS OF THE WEEK.—From Canton, Hong Kong, Whampoa, and Macao, per Emily, per Minerva, per Gustav, and per Ernst: 1,762 chests and 460 half-chests of Tea, 4,300 chests of Cassia Lignea, 727 chests of Candied Ginger, 16 chests of Porcelain, 125 chests of Star Anniseed, 268 rolls of matting, 90,000 Canes, 190 chests of Galls, 1,000 chests of Fireworks, 30 casks of Soy, 50 chests of Oil of Anniseed, 50 casks of Cocoanut Oil, 170 chests and 26 packages of merchandise.

RUSSIA.

The Cabinet of St. Petersburg has forwarded a circular to its diplomatic agents abroad, with reference to the position of Russia in Central Asia. Russia, this document states, has had to take measures for imposing respect on inconvenient and turbulent neighbours, which has been also the task of the United States in America, of Holland in her colonies, and of England in India. This reason has actuated Russia in establishing herself, upon the one side at Syr-Daria, and upon the other at Lake Issyk-Koul, and in consolidating these two lines by advanced forts, which have gradually been pushed forward into the heart of those distant regions, without, however, securing the permanent tranquillity of the frontiers of the empire. For, first, between the extreme points of this double line there is an immense unoccupied space in which the forays of pillaging tribes continue to paralyse colonisation and hamper trade through caravans. Further, Turkestan and Kokand, now united, now separated, always at war, either with each other or with Bokhara, render fixed relations and regular intercourse utterly impossible. The Cabinet of St. Petersburg is nevertheless unwilling to adopt the line of policy England has followed in India, by subjugating in detail the small adjoining States. Russia desires not to aggrandise herself beyond bounds in Central Asia, but to consolidate the organisation of the provinces she possesses. Thence the Russian Government has determined upon three principal measures. First, that the two fortified lines, the one reaching from the Chinese frontier to Lake Issyk-Koul, the other extending from the Sea of Aral to Syr-Daria, should be united by fortified points, so as to place all the posts in a position mutually to support each other, and not to leave any gap through which the invasions of the nomadic tribes can be carried out with impunity. When the line is thus completely advanced, forts are to be established in sufficiently fertile places, not only to secure their provisionment, but also to facilitate regular colonisation, an essential condition of the future prosperity of the country and of the civilisation of the neighbouring tribes. Lastly, this fortified line must be fixed in a definitive manner, in order that the Russian Government may escape dangerous encroachments, which, from reprisal to reprisal, would culminate in a policy of unlimited extension. The circular concludes by alluding to the mission often attributed to Russia, viz., to carry civilisation into the Asiatic countries adjoining the empire. Civilisation possesses no more efficacious agent than commercial relations, and these, which everywhere require order and stability, render a radical transformation of manners in Asia essential. Above all, it is important to make Asiatics understand that it will be more to their advantage to favour and protect trade through caravans than to plunder the traders.

FRANCE AND THE FAR EAST.

The *Moniteur* publishes a letter from Shanghai, according to which the inhabitants of Honan, who have hitherto been the staunch supporters of the Government, and afforded great assistance in putting down the rebellion of the Taipings, are becoming very discontented themselves, and are preparing for a revolt, for which purpose they have engaged the services of Chen-Kao-Shui, formerly an Imperial general, but now in disgrace, and no longer in the army, to organise their military forces. The heads of the Honan authorities have already purchased for ready money a large quantity of arms and ammunition - amongst other things 10,000 lbs. of gunpowder—from the European merchants at Shanghai. In the other provinces, especially Kiang-su and Che kiang, a better feeling of royalty prevails. The fears entertained at Amoy of an attack from the rebels have for the present been dissipated, as the latter appear disinclined to come into contact with the 'foreign devils."

The *Courier de Saigon* of January 20 now announces officially that the French treaty with the Court of Annam has not been ratified by the Emperor Napoleon, and adds that the original draft of M. Aubaret has been mutilated by additional claims that cannot be allowed, as the King of Annam will not recognise the French protectorship over the six provinces that were ceded, and, moreover, had introduced new clauses tending to fetter the free extension of French commerce. For these reasons M. Aubaret refused his signature. The above-named colonial official organ states that the harbour and roadstead of Saigon presented a very lively appearance, and that last year more than fifty vessels had cleared out with cargoes of rice for adjacent countries where there was a scarcity of that grain.

The *Pays* states that the Mikado, who for some time past had resisted European influence, had at length recognised the treaty of Simonoseki. A fresh territory of land near Yokohama has been ceded to France by the Temporal Sovereign, and workshops, magazines, and a hospital were being erected on it. A mixed commission, consisting of officers of the different European naval squadrons, has surveyed the "Inner Sea," and designates the harbour of Simonoseki as the most important one to open to European trade. The Tycoon has further granted permission to the European Powers to appoint consular agents for that port.

COLONEL GORDON.

(THE TIMES.)

The merchants who trade in China have done a graceful act in sending Colonel Gordon home to us with a vote of thanks and congratulation. This officer has just closed a career of foreign service which reflects equal credit upon himself and upon the community which claims him as a compatriot; and there is nothing exaggerated in the terms of the address which has been presented to him at Shanghai. His position has been, as the Shanghai merchants say, one of unequalled difficulty. He has been conspicuous for gallantry and for ability in organisation and command, and he has given to the Chinese Government an example of a foreign officer serving them with honourable fidelity and undeviating self-respect. This spectacle of high principle and chivalrous conduct in a soldier who had every opportunity to satisfy any amount of greed of gain is not only gratifying to our national pride, but it is also valuable to our national interests. When a British officer is emancipated from the stringent obligations of his own service, and allowed to go forth with an independent command in a *melée* of barbarians, it is satisfactory to know that he comes back to us untarnished in fame, and that he has left behind him among those barbarians memories of acts of humanity, disinterestedness, and gallantry which even they must admire, although they may feel no desire to imitate. Colonel Gordon seems to have well earned the golden opinions he has gained, and we think we may ratify in England all the fervid testimonies which come with him from China.

To this Captain of Engineers the Chinese Government owes that the organisation of the rebellion is broken up, that the old capital of China is recovered to the Emperor, and that the silk districts are freed from the locusts that were devouring them. To him also the European community owes the comparative safety and quiet which exist in that portion of China which is most immediately concerned with our principal trading operations. It is now five years since the banditti, who had so long harboured at Nanking, issued in what seemed to be irresistible force from the shells of the cities whose substance they had devoured. They spread themselves over the great alluvial plains which lie between Nanking and Shanghai; they sacked the towns, they slaughtered the people, and they drove before them an unresisting multitude, which no man might number, but which rolled on in waves of famine, until it surged against the outer ramparts of the European settlement at Shanghai. Then it was that the hideous scenes of slaughter and the broad horizon of blazing cities moved our Admiral and our Commander of the Land Forces to draw a cordon of 30 miles round the settlement, and to make this a frontier line beyond which the murderers should not murder and within which the fugitives might at least starve in peace. The Chinese officials were abject and useless before this great invasion. They were ready to catch at any offer of assistance. Something must be done. These millions could not be left to starve in their asylum, where nothing was afforded to them but immunity from violent death. Then first arose the offers of foreign mercenary bands, who proposed to go beyond this cordon of 30 miles, and drive back the rebels, and recover the land from which the fugitives had been expelled. Ward, the American, a brave, energetic, but rapacious adventurer, who had been too unscrupulous to be tolerated even in California, was the first to raise a rowdy band of European and American desperadoes, and to offer them for hire to the Chinese Governor of Shanghai. The exigency was so great that even our Admiral patronised "General Ward," and condescended to act with him. But the "General" sold his victories at so much apiece, exacted contributions on every side, and was rather more formidable to the Chinese governors than to the Taipings. He was, however, brave, as a leader of ruffians need be, and he fell fighting. He was succeeded by Burgevine, also an American, one of the episodes of whose career was his desertion to the Taipings. It was the intolerable evils attendant upon the employment of these adventurers

Digitized by Google

which compelled the Chinese Governor of Shanghai to apply to Admiral Hope and Brigadier-General Staveley to nominate some English officer, who might form a force of disciplined Chinese to act against the Taipings beyond the radius. This application led to the appointment of Captain Gordon, an officer of engineers, who had distinguished himself in the Crimea, and who was then serving at Shanghai. Gordon accepted the very perilous offer. He went upon half-pay, thus risking his prospects of promotion, and taking a step in which only one officer—a medical officer—was found to follow him. He applied himself diligently to the formation of a force of 5,000 disciplined Chinese, whom he was compelled to officer by European soldiers and sailors and non-commissioned officers from the army and navy and mercantile marine. It was with these very difficult materials that Gordon did his work. He assumed his command in March, 1863. By dint of a prompt provost-marshal he pommelled the Chinamen into a sense of the impropriety or impolicy of general plundering; by higher qualities of command he managed to obtain the confidence and even the obedience of the rough soldiers whom he had converted into lieutenants and captains and majors. In April, 1863, he took the field against 100,000 fighting Taipings, and he went out into those vast plains where the paddy fields and cotton fields alternate with mulberry plantations and bamboo groves, where a network of canals intersects the unvarying flats, and where nothing breaks the line of vision but the waving reeds of the funeral mounds and the charred ruins of walled cities. Here he worked with immense patience and courage. His difficulties were greater with his own troops than with the enemy. He could organise an artillery, he could teach the Chinamen to manage the cast-away smooth-bore muskets of the Indian regiments, he could even form a steam navy of two boats drawing three feet of water each; but he could not always get the Chinese Governor to pay his troops, and he could not always get his troops to follow him without their pay. The barbarous names of the cities he recovered would rather repel than excite the attention of the reader; and the slaughter he inflicted, the reverses he sometimes underwent, and the wounds he suffered would never give dignity or interest to a story which must be told of such places as Chang-Chow, Kin-Tan, and Sang Kiang. Soochow, however, may claim to be known even in Europe; for the city is famous for all that is imagined to be excellent in Chinese art, and has long been the seat of the most costly and elaborate manufactures which survive in that degenerating land. Having reduced all the surrounding country, Gordon had planted breeching batteries round the walls of this city, and had it in his power. The Taiping chiefs, finding resistance hopeless, surrendered on conditions, and the troops of the Chinese Governor were admitted within the fortifications. The Chinaman immediately gave loose to his instincts, broke all engagements, and, despite Gordon's indignation, the city was sacked. This was an outrage which neither Gordon nor the British Government could endure. Gordon retired from the active service of the Chinese Government, but was persuaded after a time that the evils which would accrue from leaving his followers without a leader would be so great that he must continue at least nominally at their head. When the news of the treachery of the Chinese Governor at Soochow reached England the order in council under which Colonel Gordon had obtained leave to serve was revoked. Gordon, however, had in the meantime accepted as his mission the task of destroying the rebellion. Although no longer able to command, he accompanied the Imperial army which besieged Nanking, and it was he who really took that city. The Chinese owe to him the recovery of their empire.

It must be admitted that these services have been handsomely acknowledged by the Government of China. The *Peking Gazette* has followed the career of this officer victory by victory, and he has received all sorts of quaint titles and high military grades in the Chinese service. On the other hand, he has been often left without money to pay his troops or rations to feed them, and he has had ample means of knowing how difficult it is to prevent an Imperialist force in China from degenerating into plunderers by sheer necessity. Ward and Burgevine were not without excuse for even their worst acts if such excuse can be found in the faithlessness of their Chinese superior officers, and in the destitution among their followers, which the misconduct of these officials occasioned. Whatever may be the credit due to Colonel Gordon for his skill and gallantry in the field, he deserves much greater credit for the higher moral qualities which enabled him to refrain from acts of resentment under unmerited ill-usage, and to hold in hand a European staff recruited from a low class of Europeans and a barbarian soldiery who were generally unpaid and often ill-fed. This was what very few men could accomplish, and what nothing but a high sense of professional honour, and a deep feeling of responsibility for the character of his country and his service, could have given even to Colonel Gordon the strength of purpose to carry through

ALTERATIONS IN THE FRENCH MAIL SERVICE.

A new convention, concluded between the French Government and the steam company of the "Messageries Imperiales," has been laid before the legislative body for their approbation and ratification, the chief stipulations of which are as follows:—The branch line of steamers between Saigon and Manila is abandoned, and the company no longer bound to continue that service, by which a mileage of 7,264 marine leagues is saved. On the main line to India and China the steamers will no longer touch at Penang,* thus effecting a further saving of 752 leagues. The company engages to run a monthly mail steamer, beginning on the 22nd of January, 1866, for the whole period of the contract, between Shanghai and Yokohama, in Japan, in connection with the line from Saigon to Shanghai. The distance between Shanghai and Yokohama is 345 leagues, so that in twelve voyages out and home the steamers will pass over 8,280 leagues. The company binds itself that the mail steamers to the island of Reunion (formerly Bourbon) shall, from the 22nd July next to the 9th of September, 1871, go up to Suez instead of touching at Aden to receive and deliver the mails, as at present, calling off Mahé, with the exception of the monsoon months of June, July, and August. This line will be no longer a branch of the great India and China route, but a separate and independent one, to be called "the Reunion and Mauritius Mail Line." By this alteration the steamers will have to run annually 10,464 leagues between Suez and Aden on the Reunion line, in addition to the other routes, down to the 9th of September, 1871. For the 8,280 leagues to be run between China and Japan, the company is to receive a compensation of 41 francs 22 centimes per league, the same rate as is now paid for the line between Saigon and Shanghai, making an annual subvention of 341,301 francs 60 centimes. This subvention, payable in monthly instalments, will thus be as follows:—

From January 22,	1866,	to July 22,	1867,	433 857 frs.	97 cents.
„ July „	1867	„	1870. 404,934	„ 11	„
„ „ „	1870	„	1873, 376 010	„ 24	„
„ „ „	1873	„	1876, 347,086	„ 83	„
„ „ „	1876	„	1882, 318 162	„ 51	„
„ „ „	1882	„	1888, 289,238	„ 50	„

For the 10,464 additional leagues that the company is bound to run over annually, between Suez and Aden, on the Reunion line, from the 22nd of July next till the 9th of September, 1871, they receive from the French Government a compensation of 256,681 francs per annum, being at the rate of 24 frs. 53 centimes per league, or one-half of the subvention paid on the voyages between Aden and the Mauritius.

* They never did in reality, but it was agreed.

Naval and Military.

It is rumoured that the battalion of Royal Marines serving in Japan, under the command of Lieut.-Colonel W. G. Suther, C.B., will shortly return to England in H.M.S. Conqueror, provided Admiral King is of opinion that their presence is no longer required in Japan or China. Capt. Suther, who lately left for China and Japan, has been recalled.

It would appear from the following return that the 31st Regt. bears the palm for flogging. From this it may be concluded that Dr. Rennie, the author of "British Arms in China and Japan," has by no means exaggerated the acts of these men in China, although a correspondent in the *Army and Navy Gazette* would have it so believed:—A return has been issued, pursuant to a resolution of the House of Commons, showing the number of men flogged in the British army, whether at home, in India, or the colonies, in the year 1862, with details of their punishment, what for, when and where carried out, the number of lashes ordered, and if all were inflicted. Besides this, there is a simple return of the number of men who were during that time branded with the letter D or with the letters B C. One line suffices for the militia in these statistics, no single instance of either description of punishment having been ordered. In the cavalry regiments but very few cases of flogging occurred; in no regiment more than three, and in many of those having any cases only one such punishment was carried out. The 31st Regiment has a pre-eminence for the number of lashes which were inflicted in its ranks, thirty-three cases having been so punished; and the 67th Regiment comes next, with twenty-six cases. The others had much fewer. The 14th had fourteen; the 19th, twelve; Rifle Brigade, nine; the 8th, nine. Some others had nearly as many as this last; and a considerable number but very few. Many are not reported at all. There were forty-three cases in the Royal Artillery. The number of lashes ordered was in almost every case fifty, and in very few instances was any part of the punishment remitted. The offences were in all places of a similar description; insubordination, violence to superiors, desertion, disgraceful conduct, making away with necessaries, habitual drunkenness, &c. In all there were 379 cases, for which 18,600 lashes were decreed, and for which 18,180 were inflicted. There were 1,492 men marked with the D, and thirty-seven with the B C.

We have heard by the last advices from India that Rear-Admiral St. Vincent King, C.B., in his flag-ship Princess Royal, would leave Trincomalee for Singapore on April 4.

Deputy Commissary-General Maturin has arrived in England from China; on the termination of his leave of absence, it is rumoured he is to proceed to the Cape of Good Hope.

Captain William Haskoll, R.N., died on the 10th inst. at his residence, 39, Great Percy-street, Pentonville. He entered the navy on the 1st of March, 1809, as first-class volunteer on board the Victorious, 74, and attained the rank of lieutenant, after serving abroad and at home, on Dec. 18, 1826. His last appointment was on Feb. 17, 1838, as first, to the Cruizer, 16, in which he accompanied the armament to China in 1840, and in the course of the same year was present at the capture of Chusan and the blockade of Ningpo. On the return of the Cruizer with Sir Hugh Gough to China, having been sent with despatches to India, Mr. Haskoll commanded the second division of boats at the taking of Fort Macao on March 13, 1841, and assisted in the two series of operations against Canton, having charge, during the second, of the gunboats at the capture, May 25, of the fort below the Folly. He invalided on June 30, 1841, and on his arrival in England found he had been promoted to the rank of commander by commission dated 8th of that month. His captain's commission is dated April 23, 1856

The *United Service Gazette* urges that the appointment of Paymaster-in-Chief should be made to the flag ships at our principal ports at home as well as those on the China, Pacific, and other stations.

The Serpent, 4 screw gun vessel, fitting at Sheerness for surveying service on the coast of Japan, is to have a complement of 90 officers and men, and to be commanded by Commander Charles James Bullock, who served as lieutenant of the Merlin in the Baltic during the Russian war and commanded the Dove, tender to the Actaeon, on the coast of China and Tartary, from October, 1856 to the spring of 1862.

The new transport fleet which the Government have decided upon building for the conveyance of our troops out and home from India is to consist of the Crocodile, to be built by Messrs. Wigram, with engines by Ravenhill, Salkeld, and Co.; the Serapis, by the Thames Shipbuilding Company, engines by Humphreys, Tennent, and Co.; the Euphrates, by Laird Brothers, who also will supply the machinery; the Jumna, by Palmer and Co., with engines by Humphreys, Tennent, and Co.; and the Malabar, by Napier and Son, who build both ship and engines. The tonnage of the ships is fixed at 4,173 tons, and the nominal horse power is to be 700. It is stated that the two first-named are to run on this side, and the remaining three on the other side of the isthmus.

Monetary and Commercial.

—o—

We regret to announce that no better feeling exists in a commercial view. The state of the markets for East India and China produce, noticed in our usual place, fully justifies this. With losses on Tea reaching 40 and 45 per cent., and the same on Cotton, it is not surprising that several houses should be talked of as being in difficulties. The failure has been announced of Messrs. James Smith and Co., of Liverpool, and Messrs. Smith, Douglas, and Co., of London, in the Calcutta trade. The joint liabilities are stated to be nearly half a million, and it is apprehended that the liquidation will prove unfavourable. Their friends in Calcutta, Grant, Smith, and Co., it is said will not be compromised.

A general meeting of the shareholders of the Chartered Bank of India, Australia, and China is called for the 12th, of the Commercial Bank Corporation on the 26th, and of the Oriental Bank Corporation on the 20th of April. Mr. Charles J. F. Stuart, the chief manager of the latter, lately left for India and China to make a tour of the branches, and give his advice on the present state of business in those countries.

The first ordinary general meeting of the Netherlands India Steam Navigation Company (Limited) is called for the 30th.

The provisional scrip for the new issue of shares in the Asiatic Banking Corporation are now ready for delivery, in exchange for the bankers' receipts.

In January tenders were invited for the conveyance of the mails between Ceylon and Sydney, the steamers to call at King George's Sound, Kangaroo Island, and Melbourne, on the passage, both outwards and homewards, to land the mails. An amended form has just been printed, but the alterations are not shown in italics, and are only to be discovered by a careful comparison of the two documents. In tender No. 1 the service was fixed by the calendar month, or bi-monthly, which gave 12 or 24 trips yearly. The second tender gives the parties tendering the option to put in for a fortnightly or four-weekly service. Every 14 days gives 26 voyages yearly, and every four weeks 13 completed voyages. All tenders must be sent in on or before the 10th of April.

The directors of the Scinde Railway Company have issued their tenth annual report, previous to the general meeting on the 29th of March. We observe that during the half-year ending December 31, 1864, the average weekly receipts amounted to £1,679. 11s. 1d., the gross returns of the half-year being £43,668. 8s. 2d; the receipts per line of mile opened were £415. 17s. 9d., or £15. 19s. 11d. per week. The number of train miles run was 158,988, the total receipts per train mile being about 5s. 6d. From the commencement of the line £1,977,659. 3s. 8d. has been received, and £1,938,819. 7s. 11d. has been expended. The Indus Steam Flotilla, Punjaub Railway, and Delhi Railway Companies, have also issued their reports in conjunction with the Scinde.

The company of the Isthmus of Suez has made propositions to several English capitalists to cede to them the right of constructing a railway from Alexandria to Ramlé. The conditions attached are very advantageous, and such as are likely to lead to its acceptance. The execution of the project would involve the construction of a floating bridge over the Nile, a novelty in railway engineering.

Mr. George Ross, late of the Oriental Bank Corporation, has been appointed Manager of the Colombo Branch of the Bank of Hindustan, China and Japan, in succession to Mr. David Hean, who will take charge of the Shanghai Branch.

The amount of bullion by the P. and O. Company's steamer Ceylon, from Southampton on the 20th inst., was:—In gold, to Hobson's Bay, £100; to Madras, £785; in silver, to Madras, £10,002; to Calcutta, £10,000; to Singapore, £11,500; to Hong Kong, £29,935; to Yokohama, £1,250; to Foo-chow-Foo, £2,500; to Shanghai, £30,600. Total, in gold, £885; in silver, £95,787.

THE EXPORT OF BULLION.

The circular of F. M. PAGE states the export of bullion and specie to the East via Alexandria, in the first two months of this year at £2,093,456 against £6,408,007 in the same period of 1864, the export in January last being £1,342 346, and in February £751,110; being less for the former month by £2,663,500, and in the latter by £1,641,051 than in the same period of the previous year. The bulk of these moneys have, of course, gone to India. There is a falling off in the shipments this year at all points. China is debited with £250,826 for January and February of 1864, but in the same months of this year we have despatched but £135,970, the greater portion, £98,672, in February. To Ceylon the disproportion in shipments is yet more striking, this island figuring for £19,746 in the first two months of 1864, but only for £5,576 in the corresponding period of the present year. Shipments to Penang, Batavia, and Saigon for the two months reach £127,179, against £54,823 in January and February, 1864. We despatched to Madras up to the 1st inst. specie and bullion of the value £125,169, against £236,894 last year. Of the total export *via* Alexandria, in January and February last, £737,161 was in gold, £216,664 in Mexican dollars, and £1,139,631 in bar silver and coin. In neither month did we send any gold to China; our shipments of Mexican dollars thither were of the value of £93,580.

ARTICLES OF IMPORT.

TEA.—The market continues its downward course. The public sales of last week, principally common to medium red and black-leaf kinds, with some large parcels of Ping-Suey Green, passed off with heaviness, and a decline of 2d. per lb. on Green, but which has been partially recovered privately, as some parcels have been sold at a profit of 1d. to 1½d. per lb. For export to the Continent, there is not a single transaction to record; to Canada a few purchases have been made in inferior to good flavoury kinds at 10½d. to 11½d. per lb. In red leaf, dust siftings and broken leaf have met with fair inquiry, and, as the supply on offer is moderate, prices are maintained; the inferior to good flavoury as well as Kaisow kinds are still in excess, and all sales have been in favour of buyers. Medium to fine Kaisow has been rather more inquired for, and last sales have recovered the decline noticed in our last; in finest the transactions are trifling. In Black leaf: Common to fair must be quoted lower, as well as good to medium; some chops of strong Oopack kinds fetching 1s. 4d. to 1s. 5d. per lb., and with rather strong to strong Pekoe flavour, at 1s. 6d. to 1s. 8d. per lb., those with full Pekoe flavour at 1s. 9d. to 1s. 11d. per lb. are scarce, but there are sufficient at 2s. to 2s. 3d. offering to meet present requirements. In imitation Kaisows sales have transpired ex Cambalu at 1s. 10d. to 2s. 1d. per lb. for strong and brisk pungent and malty kinds, which are taking the place of medium to fine Kaisows, common and medium qualities are unsaleable except at nominal prices. In Souchong fine and finest qualities have sold at 1s. 7d. to 2s. per lb. being a decline on the latter grade. In Oolong there has been rather more doing in medium qualities of strong and brisk burnt kinds at 1s. 5d. to to 1s. 7d. per lb. Scented Tea: Canton make of orange Pekoe maintains its price, as the supply continues very moderate; for Caper, however, prices are another 1d. lower, although the supply is not in excess—in fact, much below former years. Foochow Orange Pekoe is still scarce, under 2s., but above this price there is no inquiry, most of the trade being full. In Caper the demand is not active, but there is not much offering. Green: The bulk of the business has been in the Ping-Suey and Japan kinds that sold in public sale, showing 2d. per lb. decline. The present quotations for Ping-Suey, and which may be of service in China for the new season, are:—Twankay, 10d. to 11d. per lb.; Young Hyson, common to fair, No. 4, 1s. to 1s. 3d.; good to medium, No. 3, 1s. 4d. to 1s. 7d.; fine, No. 2, 1s. 8d. to 1s. 11d.; finest, No. 1, 2s. to 2s. 3d. per lb.; Gunpowder, common to fair, No. 4, 1s. 5d. to 1s. 8d.; good to medium, No. 3, 1s. 9d. to 2s.; fine, or No. 2, 2s. 2d. to 2s. 6d.; finest, 2s. 8d. to 3s. per lb. In Japan leaf sales have been made at a further reduction of 2d. to 3d. Several parcels of China sold during the past week show a loss on the invoice cost of 40 and 45 per cent. Some sales of Souchong were made at 1s. 1d. to 1s. 3d. for which 2s. 2d. had been refused last year, and many chops of Congous for which 1s. 6d. and 1s. 7d. had been refused have been sold at 10d. to 11d. The arrivals have been nearly 10 million lbs. since the 10th inst. The quantity afloat is about 18 millions. Stock in United Kingdom (March), about 120 against 96 in 1864.

SILK.—The scarcity of good qualities of both China and Japan Silk is now much felt, and any apparent reduction in quotations is owing more to deterioration in quality than to any further fall in the market. Deliveries from 1st to 24th inclusive:—China, 2,291 bales; Japan, 943 bales; total, 3,234 bales. Quotations are—Tsatlee, No. 1, 27s. 6d. to 28s.; No. 2, 26s. 6d. to 27s.; No. 3, 25s. 6d. to 26s. Taysaam: No. 1, 24s. 6d. to 25s.; No. 2, 23s. 6d. to 24s. Mibash: No. 1, 28s. to 28s. 6d; No. 2 27s. 6d. to 28s.

COTTON.—The circular of the London Cotton Brokers' Association for the week ending the 24th, reports continued dulness throughout the week, business closing flatly at an average decline of 1d. per lb The closing quotations were—China, middling fair 9d.; fair to good fair, 9½d. to 10d.; good to fine, 10¼d. Japan mid. fair, 9½d.; fair to good fair, 10d. to 10½d.; good to fine, 11d. to 12d. Quotations of fair same time 1864, China, 18d.; Japan, 19½d. The import of China and Japan into London from 1st. Jan. to 23rd March, was 11,867 bales, and the stock on the 23rd was 18,197 bales. The stock of all kinds in London on that date was 126,735 bales, against 91,022 bales in 1864. The arrivals in London during the week were 2,179 bales, of which the Comus, from Yokohama, brought 1,125. The cotton afloat to Europe on 24th March was 281,323 bales against 480,274 bales at same date of last year. Of that quantity 270 bales of China, and 1,101 bales Japan were for London, and 28,595 bales of China for Liverpool. The total stock at Liverpool on the 24th of March was 603.000 bales, against 306.190 bales in 1864. China has changed hands to a fair extent during the week at that port, closing at a reduction of fully ½d., while Japan has fallen 1d. per lb. from last week's rates. No transactions "to arrive" during the week. Quotations of China: Middling, 8d; fair, 9½d.; good fair, 10d.; good, 10½d.; fine, 11½d. From the increased arrivals to be looked for from America, and all parts, no advance in price can reasonably be looked for.

SUGAR.—The market has remained very dull throughout the week, and with a much lighter supply on offer, the business in landed parcels has been on a contracted scale at prices on the average rather in favour of the buyer. No Manila reported sold. On the 24th 523 baskets Java were held for stiff prices, and bought in; low to good white (duty 11s. 8d.) 37s. to 39s.; as also 602 bags Siam, yellow and low white, 33s. to 35s.; and middling white (duty 11s. 8d.), 36s. to 36s. 6d.

RUM.—Of East India only small quantities have been realised, Mauritius, at 1s. 5d., and common Penang, at 1s. 4½d.

COFFEE.—By reason of the late abundant arrivals the Colonial market

Digitized by Google

opened heavily, and the public sales of Plantation Ceylon (chiefly of the new crop) went off languidly at a depreciation of 1s. to 2s. per cwt., on the extreme rates obtained during the recent scanty supply, which however, has since been partly recovered, the total quantity offered being 600 casks, 440 barrels and bags, and range of prices, as follows:—Fine ordinary to low middling, 78s. to 83s., middling to good middling bright, 83s. 6d. to 90s. 310 casks, 2,814 bags Native were held firmly, and only a small portion was sold; good ordinary, 69s. to 70s., fine ordinary and superior, 71s. to 72s. At public sale on the 24th 600 casks, 1,405 barrels and bags Plantation went off freely at the improvement, fine fine ordinary to good middling bringing 80s. to 91s.; 230 bags Native went at previous rates.

RICE.—A good demand has prevailed for soft grain descriptions. On the 24th 4,038 bags Madras were nearly all sold at previous rates, middling to fine pinky, 10s. 9d. to 11s.; ordinary heated, 9s. 6d. Business has been done in Rangoon, to arrive, at 10s. 6d. for the United Kingdom, or 10s. 1½d. for the continent, new terms.

CAMPHOR.—Subsequently to our last there was a revival of demand, and large business was done up to £5. 5s. per cwt. for China in lead, and £5s. 7s. 6d. Japan; but latterly the market has become more quiet, and £5s. 2s. 6d. for China in lead is the latest price.

CARDAMOMS.—Are generally rather dearer: 2 cases Malabar at auction retired; and of 30 bags Madras half sold at 3s. 4d. per lb. for fair long lean; and of 22 bags Ceylon, a few sold at 3s. 2d. for ordinary husky.

CASSIA LIGNEA.—In public sale 536 casks were mostly realised at and afterwards, the better qualities at firm prices, but the inferior in some instances rather cheaper; low middling, 77s. to 78s.; middling, 80s.; good, 83s. to 84s. Buds: 15 cases withdrawn at £11.

COCOA NUT OIL.—This market has been very firm and active, with large operations on the spot and for arrival. Cochin has advanced £3, and Ceylon £1 per ton. 568 casks Cochin, 158 casks Ceylon, 909 casks Sydney, and 450 casks Manila at auction.

DRUGS.—Cubebs: Some inquiry at present quotations, £3. 15s to £4 per cwt. Dragoon's Blood: Quiet, only 4 cases at auction, retired. Galangal Root: Nothing of any moment doing. Rhubarb: Firm, but quiet; 39 cases at auction, all retired.

GUMS.—Benjamin: Only 40 cases Sumatra at auction, and those retired. Damar: Remains steady, and of 54 cases at auction three-fourths sold at 38s. to 39s. per cwt. for good quality, in sorts. Gamboge: Flat; 16 cases at auction sold at £8 to £11 per cwt. for ordinary to good pipe.

HIDES.—There was a moderate demand for East India Hides at the sales of the 23rd, principally for export, and about two-thirds of the quantity offered found buyers at last sale prices for the better descriptions, and at ¼d. to ½d. per lb. advance on the lower qualities. 1,982 Batavia Buffalo Hides offered, 416 sold at 5¾d. per lb.; 567 Singapore Buffalo Hides offered, 397 sold as above; 1,109 Singapore Cow Hides offered, 945 sold—Light, 5¼d. to 6¾ per lb.; Heavy, 5d. to 5¼d. per lb.; Thirds, 4¾d. per lb.

JAPAN WAX.—Steady: Good saucer sold at 64s. 6d. to 68s.; ordinary 59s. to 60s.; middling 62s. to 63s.

GUTTA PERCHA.—Remains very quiet, but fine would sell readily, as also ordinary, at present low prices. Of 7 tons at auction only one sold at 10¾d. per lb. for middling mixed; good reboiled has sold privately at 9d. India Rubber: Very quiet, 229 baskets Singapore at auction retired; good Penang has sold to a limited extent at 1s. 2d. per lb.

HEMP (MANILA).—This market has been inactive, and 4,974 bales, recently arrived, offered at auction, were all retired, except a small proportion of damaged. Private trade very restricted. Quotations £27 to £30.

OILS.—Anniseed: No auctions held: fair business done privately at 6s. per lb., at which price there are still buyers. Cassia: Quiet, and rather cheaper: limited business at the higher quotation. Cinnamon, and Mace and Nutmegs: Nothing doing in either of these oils: 3 cases Oil of Cinnamon at auction retired; Nutmeg Paste selling privately at 1d. per oz.

SAGO.—Steady; 1,481 boxes at auction, mostly sold at 18s. 6d. to 19s. per cwt. for middling small, and 19s. to 19s. 6d. for medium. Flour: Nothing of any interest doing.

SHELLAC.—This market has remained very flat, and prices are again generally rather lower. Of 1,047 packages at auction, less than half sold: Orange, at £5. 15s. to £6. 10s. per cwt.; Garnet £5. 5s. to £5. 12s. 6d; Liver £5. 7s. 6d.; Button £5. 7s. 6d. to £6. 2s. 6d.; Native £4. 12s. 6d. to £5.; and Block and Blocky £5. to £5. 15s. Very little trade privately.

SPICES.—Cinnamon: We quote 1st sort, 1s. 8d. to 2s. 7d.; 2nd, 1s. 5d. to 2s. 3d.; 3rd, 1s. 3d. to 1s. 10d.; 4th and Jungle, 10d. to 1s. 5d. per lb. Recent importations, 264 bales, offered at auction, and mostly sold at the currency of the recent quarterly sales. Cloves: Zanzibar rather dearer, and 6,141 bags at auction sold at 3⅛d. to 3⅛d. per lb. for midling to good. Mace: Firm, 16 cases Penang and 16 cases Singapore at auction, half sold at 7d. to 1s. 4d. per lb. for very low to fair reddish. Nutmegs: Have realised former terms; and 179 cases Penang, and 7 cases Singapore at auction, mostly sold at 2s. 1d. to 3s. 7d. per lb. ordinary to good bold, and 10d. to 1s. 5d. inferior small to good medium.

PEPPER.—Black: There was some improvement in this market subsequently to our last, but it has since become very quiet: of 3,100 bags Singapore at auction half sold at 3½d. per lb., and of 2,839 bags Penang one-fourth sold at 3½d. to 3⅝d. White: Has been brought forward plentifully, whilst the demand has for the present subsided: of 1,208 bags Singapore, and 372 bags Penang at auction, a few only sold at 6½d. per lb. for good quality of both. 33 pkgs. Tellicherry sold at 1s. 0¼d. per lb. for good, and 7¼d. to 8¼d. Coriander.

TERRA JAPONICA.—Cutch, Pegue: Quiet, with limited trade upon former terms: 900 bags at auction, all retired. Gambier: Dull; and of 1,363 bales at auction, one-third sold at 22s. 6d. for fair block, and 27s. per cwt. cubes.

MISCELLANEOUS.—Galls: Turkey are offering at less money, £10. 10s. per cwt.; China and Japan on the contrary again dearer: of 465 packages China at auction, three-fourth sold at 67s. 6d. to 71s. per cwt.; and of 647 packages Japan, two-thirds sold at 57s. 6d. to 66s. per cwt. Considerable sales also effected privately upon corresponding terms. Rattans: Steady, and 6,768 bdls. Penang at auction sold at 3s. 6d. to 5s. 6d. per 100. Sapan Wood: Flat; 43 tons Siam at auction, retired, and of 16 tons Manila, half sold at £6. 17s. 6d. per ton for common. There is export inquiry for good Manila. Mother-o'-Pearl Shells: Steady; 38 cases Singapore at auction retired. Soy: Remains firm, with inquiry; none offering. Star Anniseeds: Firm; 50 cases at auction sold at £5. 17s. 6d. to £6 per cwt. for good. Sticklac, Siam: Of 733 cases at auction, two-thirds sold at 44s. 6d. to 50s. per cwt. for middling to good small; 36s. to 40s. block; and 20s. to 21s. dust, being very firm rates, but latterly the market has again become flat. Tortoise-Shell: Very dull, and only saleable at low prices: 5 cases Singapore at auction, sold at 8s. 6d. to 13s. 6d. per lb. Turmeric: No China offering; Java scarce: nothing of any consequence doing. Vermilion: Further supplies have rendered the market more weak, and there are again sellers at 2s. 6d. ber lb.

ARTICLES OF EXPORT.

IRON.—The quotations in London are for Welsh bars, £7. 5s.; nail rod, £8. 15s. to £9; hoops, £9. 15s. to £10; sheets, single, £10. 15s. to £11; Staffordshire bars, £8. 15s.; rails, £6. 10s. to £7.

STEEL.—Swedish keg, £15.

COPPER.—Sheet and Sheathing, £95 to £96 per ton; yellow metal, 8d. to 8¼d. per lb.

TIN.—95s. to 96s. for block; 96s. for bar. Tin plates, best charcoal, I.C., 28s. to 29s.

LEAD, &c.—English pig, £20 to £20. 7s. 6d.; W.B., £21. 15s.; shot, patent, £23; sheet, £21; spelter, £19. 10s.; zinc, English sheet, £24.; quicksilver, £8.

The following is from the Circular of Messrs. French and Smith:—Since the date of our last circular, the Metal Market has remained quiet. Iron: Welsh continues in demand. In Staffordshire the manufacturers are not disposed to commit themselves largely, pending the dispute with the workmen; and firm quotations are difficult to obtain excepting for actual orders. In Copper there has been more activity, and prices are rather firmer. Tin: There is a fair inquiry for English, but at low prices. Straits lower, 86s. 6d. being the latest transaction. For Tin Plates a better demand. Lead and Spelter both inactive.

EXPORT OF BULLION TO CHINA, &c.

The following return shows the shipments of bullion from Southampton from the 1st January by the P. and O. Company's mail steamers.

ASIA, Batavia to Amsterdam, Feb. 17, 20 S., 1 W.

FREIGHTS AND CHARTERS.

The improvement in outward freights noticed in our last impression is still supported, and a more general disposition to do business is evinced throughout the export market. In homeward charters we have but to confirm our last advices, business having been restricted to 70s. to 75s. per ton from Java to the United Kingdom or Continent.

Current Rates of Freight for Vessels on the Berth:—To Yokohama: 50s. weight, 40s. to 50s. meast. To Nagasaki: The same. To Hankow: 60s. meast. To Amoy and Foo-chow-Foo: 50s. weight, 40s. meast. To Shanghai: 40s. weight, 25s. to 30s. meast. To Hong Kong: 40s. weight, 20s. to 30s. meast. To Manila and Labuan: 50s. weight or measurement. To Singapore: 25s. to 30s. weight or measurement. To Penang: 40s. weight or measurement. To Batavia: 40s. weight, 30s. measurement. To Bankok: 60s. weight or measurement. To Ceylon: 40s. weight, 25s. measurement.

The quotations for coal and iron from the North are as follows:—For Hong Kong: £33 and £1. 8s. For Shanghai: £40 and £1. 16s. For Manila: £1. 12s. 6d. For Batavia: £23. For Singapore: £26 and £1. 1s. 0d. For Galle: £25 and £1. 3d. These rates are from the Wear or Tyne, and Newport, Cardiff, or Swansea respectively.

The Admiralty have invited tenders for the conveyance of 74 tons naval stores, principally ammunition and combustibles, from the river Thames to Hong Kong.

CASUALTIES.

The Jan Hendrik, Lelyvelt, from Batavia for Amsterdam, which put into Simon's Bay, Jan. 30, leaky, was discharging part of her cargo there.

The C. S. Lemon, from Manila for Liverpool, which put into Table Bay, Feb. 4, had experienced severe weather, cut away sails and sprung a leak, she was discharging cargo previously to undergoing repairs.

The President, Minne, from Bordeaux for China, put back in tow to the former port, having encountered a gale from N. to N.W., at the entrance of the gulf, during which she sustained severe damage, and would probably have to discharge part or the whole of her cargo.

The Nova Zembla (Dutch ship), Mammes, from Patjitan for Holland, which put into St. Helena, Jan. 28, making a little water, sailed again Jan. 30, with extra hands.

The Alfred the Great, Louttit, from Batavia for Amsterdam, which put into Simons Bay, Jan. 19, leaky, &c., was discharging and repairing there on Feb. 11.

The Joseph Willem, Byk, from Batavia, got aground, March 21, in Voorne Canal, near Neeuwsluis, and stopped the navigation through the canal.

Advices from Tremblade, dated March 14, state that part of the cargo of the Concorde, Zisley, from Singapore, for Bordeaux, which vessel was wrecked at Coubre Point, had been saved.

The missing ship, Claramont, now 201 days out, from Shanghai is exciting much controversy at Lloyd's The ship left Shanghai for England, on the 15th of September. She appears to have been spoken with on the 27th September, in lat. 9 N. lon. 109 E.; again in the Straits of Sunda on the 17th of October; again in lat. 29 S, 49 E, on the 11th of November, by the Ida; and, fourthly between St. Helena and Ascension by the ship Edward Percy; and the next heard of her is her arrival at Ascension on the 6th of December, and her sailing again on the 8th. About the latter end of last month her non-arrival created an advance of her premium, but no real anxiety was felt about her till about the 5th of the present month, when 40 and 50 guineas were paid on on her. On the 17th Her Majesty's ship Orontes arrived off Plymouth with intelligence that she had signalled the Claramont on the 17th of January, the other side of the Cape, namely, in lat. 30 S., long. 42 E. For a moment this news induced hopes that the ship was all right, and her premiums of insurance receded from 75 guineas to 50, but it was merely transitory, for on comparing the Orontes signalling with the Claramont's speaking, it was at once seen that the Orontes saw her nearly in the same latitude and longitude on the 17th of January as spoken in by the Ida two months previously, a circumstance most remarkable, unless the Claramont had after she had left Ascension been blown back again round the Cape to the latitude mentioned. The captain of the Orontes was telegraphed to ascertain if he had any doubts as to the ship signalled being the Claramont; the answer was in the negative. It has since transpired that the master of the Claramont Captain Macintosh, was seen on shore at Ascension on Dec. 8th by Captain Stewart, of the ship Edward Percy, from Hong Kong, who also sailed the same day for England, in company with the Claramont, but saw nothing of her afterwards. the Edward Percy, arriving at Liverpool as far back as Feb. 2 last. This information places the fate of the ship in the worse light that is possible, but still she may turn up. Eighty guineas of insurance has been paid on the ship.

CAPETOWN, Feb. 11.—About 600 tons of the cargo of the Johannes, Rademakers, from Batavia for Rotterdam, which put into Simons Bay, Dec. 6, leaky, will be laden on board the Gondola.

LISBON.—March 14, The Priam, Irvine, from Glasgow, for Singapore, which put in here, March 11, leaky, received pratique this morning, having had to perform three days' quarantine through the want of a bill of health. On the 15th inst. she was surveyed, and found to be tight in her bottom, but the caulking of her topsides and decks, very open from straining in bad weather; her bulwarks were broken, and one of her fore shrouds carried away; she has been ordered to be well caulked, and her damages repaired.

MISCELLANEOUS.

At ST. HELENA.—Feb. 14, from Singapore, Obey, Legros, and sailed for the Clyde; from Java, Sophie, Collberz, and sailed 15 for Amsterdam; from Foo-chow-Foo, White Eagle, Williams, and sailed for New York; from Banjoewangie, Philip v. Marnix, v. Runge, and sailed 15 for Rotterdam; 15, from Manila, Nuevo Lantero, Estival, and sailed for Alicante; Ottilie, Schramm, and sailed for London; 16, from Batavia, Bernard and Agnes, Ordeman, and sailed for Amsterdam; 17, from Singapore, Marie, Thin, and sailed 18 for Bordeaux; from Colombo Argali, Winn, and sailed 18 for London; 18, from Shanghai, Clara Babuyan, Errington, and sailed for New York; 19, from Hong Kong, Marie; from Sourabaya, Nordstern, Baetjer.

Off ASCENSION.—Feb. 4, from Colombo, for London, Venilia; 19, from Foo-chow-Foo, for London, Langdale.

At TABLE BAY.—Feb. 11, Hilda, Smidt, sailed for Ceylon.

At ALGOA BAY.—Jan. 24, Jane Pardew, M'Gregor, sailed for Colombo; Feb. 2, Formica, Freming, sailed for Colombo; 10, Oleander, Taylor, sailed for Colombo.

At MAURITIUS.—Feb. 7, from New York, &c., Yesso (s.), and left 14, for Hong Kong, &c.; 10, from Singapore, Hamlet, Stevens; 15, Carl, Schaw, sailed for Singapore.

TUCKER AND SON'S

IMPROVED

ENAMELLED PUNKAH TABLE LAMPS.

THE celebrity which TUCKER AND SON'S LAMPS have acquired in the East for burning *steadily* under the Punkah or in side draughts, and *brilliantly* with any of the *coarse native oils*, renders eulogy unnecessary; but having been enabled, by increased facilities of manufacture, very considerably to *reduce the prices* of the above favourite (but hitherto expensive) description of their lamps, T. and Son beg to notify the fact to the Eastern public.

They are elegant and durable, are finished in exact imitation of many beautiful stones and marbles, such as Malachite, Lapis Lazuli, Serpentine, Sienna, Brocatella, Jasper, &c., and are not affected by heat, damp, friction, or insects; oil, spirits, or acids accidentally spilled. The enamel surface is so inseparable from the base (block slate, proverbial for its strength) that it cannot be removed except by an edged tool. It *requires* simply *dusting*, but if rubbed hard, it only adds a gloss to its appearance—at all times cool and agreeable.

After ten years' constant use and handling, these lamps are none the worse for wear.

Malachite (green), Serpentine (brown), or Lapis Lazuli (blue), are most re commended.

Table Lamp complete, with engraved glasses, as sketch, 72s.

A Plainer Lamp, without the Corinthian capital, 50s. complete.

Either pattern, with plain frosted glasses, 7s. 6d. each less.

*** *The above Lamps are supplied to burn Petroleum or Rock Oil also.*

Orders can be sent through any merchant or Agent, or, if accompanied by a remittance, direct to

Silk, Alpaca, Gingham Steel Frames, Canes, Fittings and all kinds of Material for the Trade. Oiled and japanned silks and cambrics.

CAUTION.

THE GROSS FRAUDS which continue to be practised by obscure manufacturers, more particularly in Germany, by imitating the Labels attached to JOHN GOSNELL and Co.'s PERFUMERY, render it imperative upon the Proprietors to Caution the public against such nefarious proceedings, and to request their friends and patrons to purchase only of respectable dealers, who import direct from JOHN GOSNELL and Co., and invite special attention to the address, 12, THREE KING-COURT, LOMBARD-STREET, LONDON, E.C.

JOHN GOSNELL and Co.'s Instantaneous Hair Dye.

JOHN GOSNELL and Co's Cherry Tooth Paste is greatly superior to any tooth powder, gives the teeth a pearl-like whiteness, protects the enamel from decay, and imparts a pleasing fragrance to the breath.

NOTHING IMPOSSIBLE.—The Greatest and most Useful Invention of the day, AGUA AMARELLA.—Messrs. JOHN GOSNELL and CO., 12, Three King-court, Lombard-street, London, Perfumers to Her Majesty, respectfully offer to the public this truly marvellous fluid, which gradually restores the human hair to its pristine hue—no matter at what age. The Agua Amarella has none of the properties of dyes; it, on the contrary, is beneficial to the system, and when the hair is once restored one application per month will keep it in perfect colour. Price One Guinea per bottle; half bottles, 10s. 6d.

JOHN GOSNELL and Co., Perfumers to Her Majesty, and by Special Appointment to H.R.H. the Princess of Wales, London.

HOLLOWAY'S PILLS AND OINTMENT.—INFLUENZA, COLDS.—In diseases of the throat and chest, so prevalent in this country, nothing so speedily relieves or so certainly cures as these inestimable remedies. These disorders are too often neglected at the commencement, or are injudiciously treated, resulting, in either case, in disastrous consequences. Whatever the condition of the patient, Holloway's medicine will restore if recovery be possible. They will retard the alarming symptoms till the blood is purified, and Nature consummates the cure, gradually restoring strength and vital nervous power. By persevering in the use of Holloway's preparations, tone is conferred on the stomach and frame generally, the fluids are regenerated, morbific matter is expelled, and a happy revolution occurs throughout the system.

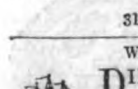
Hong Kong & Whampoa	Avondhu ...	394	K.D.

31, Great St. Helen's, E.C.

With immediate Despatch.



DIRECT for HONG KONG, the fine fast-sailing ship AVONDHU, A 1, 394 tons register, W. DAVIE, Commander; St. Katharine Docks. This splendid vessel is celebrated for her very rapid passages and the good order in which she invariably delivers her Cargoes.

For Freight or Passage apply to A. WRIGHT and Co., 19, St. Helen's-place; or to TOULMIN, LIVINGSTON, and Co., 31, Great St. Helen's, Bishopsgate-street, E.C.

To sail on the 15th April.

FOR HONG KONG and WHAMPOA, the celebrated clipper ESPERANZA, A 1, ten years; 650 tons burthen; FREDERICK MURRELL, Commander; lying in the St Katharine Docks. This beautiful vessel has just arrived from Foo chow-Foo in 102 days.

For Freight or Passage apply to PHILLIPPS, SHAW, and LOWTHER, 2, Royal Exchange-buildings, E.C.

CHINA, JAPAN, and SINGAPORE.—The following splendid first-class clipper SHIPS will be despatched as under:—

Ports.	Ships.	Class.	Docks.	To sail.
Shanghai ...	Prince Alfred	A1 12 yr.	E.I.D.	April 20.
Kanagawa (Yokohama) ...	Gleam ...	A1 12 yr.	W.I.D	With des.
Singapore ...	Helensbank .	A1 10 yr.	S K.D.	With des.

For Freight or Passage apply to KILLICK, MARTIN and Co., 28, Nicholas lane, Lombard-street, E.C.

INDIA AND CHINA.

ROBERTSON and CO. will despatch the following first-class VESSELS to their respective destinations. They are well adapted for their several trades, and are confidently recommended to their friends:—

Destination.	Ships.	Docks.	To Sail.
Shanghai	Queen of the Ocean ...	W I.D.	With des.
Shanghai	Juanpore ...	W.I.D.	With des.
Manila	Manila ...	W.I.D.	With des.
Kanagawa	Maravi ...	W.I.D.	With des.
Penang	Rifle ...	W.I.D.	With des.
Calcutta	Childwall Abbey.	E.I.D.	With des.

Apply at 5, Newman's-court, Cornhill, London; or York-Chambers, 55, King-street, Manchester.

SHANGHAI Direct (with quick despatch), the splendid new clippr QUEEN OF THE FORTH, A 1 ten years. 700 tons register, ALEX. CROMBIE, Commander; loading in the East India Docks. Has good accommodation for passengers.

For Freight or Passage apply to the owners, Messrs. A. WRIGHT and Co., 19, St. Helen's-place; or to W. O. YOUNG, 74, Cornhill.

FOR YOKOHAMA and KANAGAWA (to sail 10th April), the splendid fast-sailing clipper CASTLETON, A 1 twelve years; 499 tons register; WILLIAM HILL, Commander; lying in the London Docks. This beautiful vessel has just arrived from Japan. Has good accommodation for passengers.

For Freight or Passage apply to PHILLIPPS, SHAW, and LOWTHER, 2, Royal Exchange-buildings. E.C.

COLOMBO, CEYLON, Direct, with quick despatch. The splendid clipper-built ship STAR OF CEYLON. 390 tons register, loading in the London Docks.

For Freight or Passage apply to TOULMIN LIVINGSTON, and Co., 31, Great St. Helen's, Bishopsgate-street, E.C.

To follow the "Empress."—With Despatch.

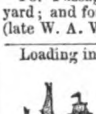
FOR COLOMBO Direct, the very fine clipper barque SKIMMER OF THE WAVES, A 1 eleven years; 396 tons register, W. H. HAMMOND, Commander; now loading in the London Docks. This beautiful vessel, built under special survey in 1860, is well known for her fast sailing qualities, and the excellent condition in which she invariably discharges her cargoes. Has good accommodation for cabin passengers.

For Freight or Passage apply to SUART and SIMPSON, 9, Clement's-lane, Lombard-street, London, E.C.

FOR COLOMBO, CELYON, Direct, having a considerable portion of her cargo engaged and shipping, the magnificent well-known clipper ship AVON, A 1, for thirteen years; register 645 tons; J. EDMOND, Commander; loading in the West India Docks. This splendid vessel has a full poop, with unrivalled accommodations for the comfort and convenience of Passengers, and will carry an experienced Surgeon.

For Passage apply to W. H. TINDALL, 5, Tokenhouse-yard; and for Freight or Passage apply to F. TALLACK (late W. A. Winkley), 23, Birchin-lane, Cornhill, E.C.

Loading in Queen's Dock, and will be despatched in a few days,



FOR SINGAPORE, and will take cargo for Bangkok or Saigon, if inducement offers, the new iron screw steamer BINTANG, Captain WEBBER; 316 tons; A 1 for nine years. Will proceed under steam and canvas, and has room for only a limited quantity of cargo.

For terms of Freight or Passage apply to Messrs. GRANT, MURDOCH, and Co.; or to MCDIARMID, GREENSHIELDS, and Co.

To follow the "Carleton."

With very quick Despatch, having a large portion of her Cargo engaged.

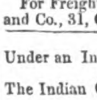
DIRECT for CALCUTTA, the splendid British-built clipper ship REVENUE, A 1 ten years, 797 tons register, THOMAS MOURANT, Commander; lying in the London Docks. This beautiful vessel offers a first-rate opportunity to shippers of fine goods.

For Freight or Passage apply to TOULMIN, LIVINGSTON, and Co., 31, Great St. Helen's, Bishopsgate-street, E.C.

STEAM TO CALCUTTA.

Under an Indemnity with the Council of India to make the Passage in sixty-five days.

The Indian Government may require the Ship to call at Newcastle and (or) Cardiff.



FOR CALCUTTA Direct, the splendid river-built twin-screw steamship FAR EAST, A 1 twelve years 1,062 tons register, horse power 150 nominal, 600 indicated, HENRY JONES, Commander; loading in the East India Docks. This magnificent steamship, built in 1864 by Messrs. J. and W. Dudgeon, of Millwall, affords the best opportunity to shippers requiring despatch. Her cabin accommodation cannot be surpassed.

For Freight or Passage apply to Captain HENRY JONES, on board; or to GELLATLY, HANKEY, and SEWELL, 27, Leadenhall-street, E.C. Bills of Lading to be had on application to Messrs. SMITH, ELDER, and Co., Cornhill.

With immediate Despatch.

FOR MASULIPATAM and MAULMEIN, the fine fast-sailing ship REFUGE. 5-6ths 2 1, 803 tons register, J. HOWARD. Commander; West India Docks. This splendid vessel is celebrated for her rapid passages, and the good order in which she invariably delivers her cargoes.

For Freight or Passage apply to EDWARD HIGGIN and Co., 2, East India Avenue, Leadenhall-street; or to TOULMIN, LIVINGSTON, and Co., 31, Great St. Helen's, Bishopsgate-street, E.C.

Will follow the "Duke of Wellington."

With immediate Despatch.

DIRECT for RANGOON, the splendid clipper ship ADELAIDE, A 1 12 years, 453 tons register, F. COOPER, Commander; lying in the West India Docks. This beautiful vessel, so well known in the India trades, offers a favourable opportunity to shippers desirous of despatch.

For Freight or Passage apply to EDWARD HIGGIN and Co., 2, East India-avenue, Leadenhall-street; or to TOULMIN, LIVINGSTON, and Co., 31, Great St. Helen's, Bishopsgate-street, E.C

With immediate Despatch.

DIRECT for BOMBAY, the magnificent clipper-built ship JAMES SEDDON, A 1, 1,445 tons register, J. JEFFARES, Commander; East India Docks. This splendid vessel, built in 1863, offers a first-rate opportunity to shippers requiring quick despatch.

For Freight or Passage apply to TOULMIN, LIVINGSTON, and Co., 31, Great St. Helen's, Bishopsgate-street, E.C.

TO STEAMSHIP CAPTAINS.

REQUIRED, One or Two Experienced Men to navigate Steamers to the East, and continue in command afterwards at the option of Owners. It is essential that they understand and speak the Dutch language. No masters of sailing vessels only need apply.

Apply by letter only, addressed S. S. C., care of CHARLES BARKER and SONS, 8, Birchin-lane.

PAYNE'S INDIAN CURRY POWDER

IS unequalled for its delicious flavour and stimulating qualities.

In Bottles, 3s. 6d., 2s. 3d., and 1s. 6d. each.

Curry and Mulligatawny Paste, jars, 3s. 6d. and 2s. 3d. each. Royal Combination Pickle, bottles, 2s. each.

N.B.—This pickle is highly approved, and as a zest for cold meat, &c., will be found unrivalled

LIST OF CONDIMENTS, &C.,

Prepared by PAYNE and CO., at the Belatee Bungalow Calcutta.

List of Passengers.

PASSENGERS OUTWARD.

Per P. and O. steamer Delhi, from Southampton, April 4.—To Shanghai: Mr. and Mrs. Medhurst and two infants and European servant, and five second-class passengers. To Hong Kong: Mr. R. M. Reddie, Lieut.-Col. T. W Lovell, C.B., R.E. Mr. C G. Tatham, Dr. A. M'Kenna, R.N., Mr. W. C. Johnston, Dr. Freer, Mr. W. L. Nash, Capt. Burland, Mr. G. E. Wilkinson, and five second-class passengers. To Singapore: Mr. Odardo Beccari and one second-class passenger. To Penang: Mr. Lyster. To Ceylon: Lieut and Mrs. J. J. C. Miller and child, Mr. and Mrs. Hill, Mr H. V. Ellis, Mr. A. Featherstonhaugh, and one second-class passenger. To Calcutta: Capt. Watts, R.E, Mr. Balderson, Col. Bagot, Miss H. Taylor, Mr. Abbott. Mr. Morris Mr. Banyard, Lieut. R. J O'Brien, and four second-class passengers. To Madras: Mr. F R. Twynam, Miss Vincent, and three second-class passengers. To Suez: One second-class passenger. To Alexandria: Three second-class passengers and one child.

From Marseilles, April 12.—To Hong Kong: Mr. H. Pember, Mr. José Loureiro, Mr G. F. Vienna, Mr. and Mrs. A. A. de Zarate. To Shanghai: Mr. E. M. Satow, Mr. Theotoky. To Singapore: Baron R. de Tuyll. To Calcutta: Mr. G. Woodbridge, Mr. J. M. Clelland, Lieut. H. Collett, Ensign Cutbill, Mr. M. K. Angelo. To Madras: General Smythe, Lieut. G. S. Neile.

From Malta.—To Calcutta: Mr. and Miss Howard.

Per P. and O. Co.'s steamer Pera, from Southampton, April 20.—To Hong Kong: Dr. A. B. Messer, R.N., Mrs. Carey and two sons. To Singapore: Mr. Frohlich, Mr. F. H. Gottlieb. To Ceylon: Mr. and Mrs. G. A. Mackenzie, Mr. Cross, Miss Cumberland, Mr. J. L. Dewar, Mr. C. B. Culpepper.

From Marseilles, April 26.—To Hong Kong: Mr. G. Raynal. To Ceylon: Mr. and Mrs. Rose.

Summary of News from the Far East.

JAPAN.

No later intelligence of any kind from this quarter has been brought by the French mail.

CHINA.

SHANGHAI.

The English mail of the 26th December arrived in the river on the 14th February. Dates hence are to the 25th February.

A *Peking Gazette* of the 2nd February confirmed Ting Jih-ch'ang in the Tao-tai-ship of Shanghai. There seems, therefore, every reason to suppose that the rumour of his disgrace was started by some person or persons anxious to diminish his popularity with foreigners.

Assistant-Commissary-General Eichbaum has received orders to leave for England by the mail of March 15th, and will be succeeded in the post of Military Accountant by Assistant-Commissary-General Murray. The latter officer will proceed to Hong Kong, as soon as he is relieved by Deputy-Assistant-Commissary-General Barlie, who left for Yokohama on the 16th February. The 2nd Belooch Regiment is under orders to leave Shanghai by the end of the month, if possible.

It is expected that Rear-Admiral Sir Augustus Kuper, K.C.B., will leave Nagasaki in H.M.S. *Euryalus* for this port, on the 22nd Feb. The *Adventure* is expected daily from Hong Kong, and will probably take the Beloochees to Bombay.

On Thursday, the 16th February, as the steam barge *Spunkie* was proceeding down the river, her boiler bursted, and Mr. Smeaton, late engineer of the steamer *Fei-ma* and a Chinese stoker, were killed on the spot. Mr. Nicolson, of the firm of Nicolson and Boyd, who was on board at the time the accident occurred, was also severely hurt, and has since died from the effects of the injuries which he sustained. Little damage appears, however, to have been done to the vessel by the explosion.

The following notice by native silkmen appears in the *Daily News*:—"During the long time that Chinamen have been transacting business with foreigners, it has never, until lately, happened that any 'cut' silk has been found in silk bales; whereas now some complaints have lately been made on this head, and silk brokers have been required to pay for damages arising therefrom. The silk brokers have now agreed together that they will not be responsible for any such claims, unless the silk so damaged is returned to them, and in this case only they are ready to make good any claim for damage."

In the case of Messrs. Hogg Brothers *versus* the China Fire Insurance Company, the Consular Court gave judgment on the 14th Feb. in favour of the defendants. In this action Messrs. Hogg Bros. and Co. sued the China Fire Insurance Company for 30,000 tls., insured on goods described in the policy as "their own in trust or on commission," and the defendants resisted the claim on the grounds that Messrs. Hogg Bros. were not interested in the goods in question, and that the loss had been fraudulently stated. The plaintiffs explained at the opening of the proceedings that their interest was not strictly that which was stated in their declaration; that they really sued for the purpose of protecting Ping-ke, the Chinese merchant to whom the goods insured belonged; and that entertaining themselves the same conviction, they had led Ping-ke to believe that the said goods were covered. Further, that as the fact of Ping-ke being the real owner of the goods was known to the defendants at the time the policy was effected, they, Messrs. Hogg Bros., claimed a right to sue upon the policy which stood in their name, and the general claim on the part of Ping-ke included a particular claim on their own account of 7,570 tls. The defendants denied all knowledge of the goods being Ping-ke's, and resisted the claim because the plaintiffs had laid the ownership of the goods entirely on Ping-ke, whom they (the company) had never insured, and the defendants declared that they had never received any intimation from Messrs. Hogg Bros. that the latter themselves possessed the particular insurable interest above stated.

Digitized by Google

The Court were of opinion that no engagement was ever made by the Insurance Company with Ping-ke, either direct or through Messrs. Hogg Bros. as his agents; and in respect of the alleged fraudulent statement of loss, the Court and the Assessors also held that the plea was completely sustained:—

It has been as clearly proved by the plaintiff's witnesses as by those for the defence, that a shorter period than half an hour elapsed from the time that the godown keeper, being himself in bed in the godown, first discovered signs of fire until the roof fell in and showed that the contents of the building were then limited to two burning masses of loose cotton, some packages of tobacco, and a pile of coffin-wood. When extinguished these heaps showed not a trace of the cotton having been previously packed in bales, as the plaintiff's witnesses declared was the case, with the trifling exception of 500 or 600 catties. The loss is stated by Ping-ke at 703 bales of cotton, 518 bales of tobacco, and a few minor articles. If this statement were correct a very large proportion of this mass of material, although by no means readily consumable, must have been annihilated between the time of the breaking out of the fire and falling in of the roof, the cotton must have been thrown out of its form in bales into two loose heaps and every vestige of its former packed condition been obliterated. To the mind of the Court and assessors such a result would be physically impossible, and they are therefore satisfied that the godown, at the time of the occurrence of the fire, did not contain the quantity of goods stated in the claim.

At a meeting of the Branch Royal Asiatic Society, held on the 10th February, the following gentlemen were balloted for and duly elected members of the society:—Messrs. E. Milsom, H. S. Bidwell, and J. Newberry. The following gentlemen were then proposed:—Proposed by Mr. Kingsmill, seconded by Mr Brown, B. Barclay Esq., M.D. Proposed by Sir Harry Parkes, seconded by Dr. Henderson, G. Tyson, Esq., and H. G. Hollingworth, Esq, (Kiukiang).

The President read a letter which he had received from C. T. Jones, Esq., resigning his office as local secretary, on the plea that the distance at which he resides from the settlement prevents his performing effectively the duties attached to that post. Mr. Brown was elected to the vacant office.

The minutes of the preceding meeting were then read, and the routine business having been closed, the first paper for the evening, entitled "Northern Chinese Sugar-cane (Sorghum) and Its Uses," was read by Dr. Collins. The following is an abstract:—

After giving a short history of the introduction of the ordinary Chinese Sugar-cane (Saccharatum officinarum) among Western nations, it was stated that for some unaccountable reason, not only the Chinese but other nations have not, until recently, duly appreciated the Sorgho-cane of the North. In France and the United States the plant has been successfully cultivated during the last ten years, and is now very highly prized. The following were the points discussed in the paper:—1st, the *Botany*, 2nd, the *History*, 3rd, the *Culture*, and lastly, the *Uses* of Sorgho.

The following, from a work on *The Trees, Plants, and Flowers of China*, is the nearest approach to a Chinese botanical and historical notice of the plant by native writers, and this passage evidently refers to another species of Sorghum called *Kauliang*, though some of the characteristics of Sorgho (Loo'tso) are mentioned; viz:—black seed and saccharine juice. "*T'Sh-soo*: This plant has received several names, all referable to the district where it was first produced. The seed was brought from the Province of Sze-chuen, whose ancient name was Se T'sok. The names by which the plant has been called are Kauliang, T'sok-t'sack, Loo'tsee, Loo'tso, Mohtsih, and Tih-liang. The seed should be planted in good dry soil, early in the season—say April, if you would reap a good crop of seed. It ripens in autumn. The stalks are large and more than ten feet high—in leaves and general appearance resembling reeds, though the stalks are not hollow. The top resembles a broom, and is thickly covered with little red or black seeds, resembling kernels of pepper. This kernel is hard, and the heart of it is of a yellowish colour. When the plant is ripe the top is first taken off. The stalks are then gathered, bound in bundles, and placed in sheds to dry. There are two species of seed. The first is glutinous; and with a kind of rice is used in manufacturing alchoholic drinks—also made into cakes. The other seed is not glutinous. It makes good gruel, cakes, &c., and is useful to feed cattle. The stalks are manufactured into matting, &c., and the tops into brooms. The hulls of the seeds contain a red matter used in colouring red wines. The heart of the stalk is sweet, heating, slightly glutinous, and useful as a medicine in cases of diarrhœa."

The latest authorities place the plant of which we speak, some under the genus *Andropogon*, and others under that of *Sorghum*; indeed, the difference is so slight as to warrant their union in one. In regard to the various species of Sorghum grown in China (the names of some being given in the passage translated), there is not much doubt that they are identically the same plant, the differences between them being due to the long cultivation which the plant has undergone in different latitudes, soils, and other controlling circumstances, just as some of the grasses have sported into numerous varieties.

The leading differences besides appearance, between *Sorgho* and the ordinary Sugar-cane of middle and southern China, were stated to be these. The Sorgho is an annual plant, springing from and bearing seed, the cane is propagated annually, or every few years from cuttings, but yields no seed. The latter is seldom successfully grown above 25° or 30° N. Lat., or where the mean temperature is less than 65° or 68° Far., while Sorgho flourishes above 40° N. Lat. Indeed, wherever Indian corn will grow, it succeeds well, and ripens in much less time than ordinary cane. A lengthy description of the Sorgho was given, from the time it first appears above the ground until it matures—a towering plant from twelve to eighteen feet high.

The history of the introduction of Sorgho among Western nations was given as follows:—In 1851 Count de Montigny, at that time French Consul at Shanghai, forwarded, at the request of his Government, to the Geographical Society of Paris, a collection of such plants, seeds, and cuttings, found in this part of China as he thought might grow in Europe. Among this collection was a package of Sorgho seeds. These seeds were planted, and from them have sprung all the subsequent crops of Europe and America. The plant was introduced into the United States in 1854. Since that time, for various reasons, the area of Sorgho cultivation in the United States has steadily increased, until now it has become one of the great crops of the country. The same is true, to a limited extent, in France and Algiers, but these countries cultivate the plant, in the main, for different purposes, chiefly for alcohol, while in America it is raised for seed, forage, and for the manufacture of sugar, syrup, alcohol, vinegar and beer.

It must be confessed, however, that in one important particular Sorgho has somewhat disappointed public expectation in America, in that sugar is, with difficulty, manufactured from its juice, owing to a gummy principle which it contains. Still a large quantity of sugar is manufactured. The single State of Iowa, for instance (between 40 deg. and 45 deg. N. lat.), cultivated, in 1863, 36,667 acres of cane, which yielded 21,467 lbs. of sugar, 3,012,396 gals. of syrup, besides forage, alcohol, seed and vinegar.

It was for the purpose of observing the Chinese method of cultivating Sorgho, and especially their processes of manufacturing sugar from its juice, that Mr. C. came to China; for it is the impression in France and America that the Chinese are thoroughly acquainted with all plants indigenous to their country; and that the chief difficulty in obtaining sugar from the juice of the Sorgho was owing, either to some defect in foreign cultivation, in the mode of treating the juice, or in not possessing that species of Sorghum which yields the largest amount of crystallisable juice.

Strange as it may appear, there is nothing in the agricultural works or actual present practice of the Chinese to prove that they cultivate Sorgho (Loo'tso) for any manufacturing purposes whatsoever, but chiefly for chewing and sucking the stalks.

The plant, in this province, is cultivated chiefly on the island of Dzongming in the Yangtzse, just opposite Wusung; and from thence the Shanghai market is supplied. A sketch of the island was given, and the Chinese method of tillage. From all Mr. C. has read and seen, both here and in America, he is well satisfied that foreigners have nothing to learn from, but much to impart to the Chinese, in respect to Sorgho.

In regard to the *cultivation* of Sorgho for extracting sugar, it has been found that it may be successfully grown upon all lands where a fair crop of Indian corn can be cultivated. This simple statement covers the whole question of latitude and soils; and shows what an immense advantage Sorgho possesses over ordinary sugar-cane in respect to temperature, flourishing as it does in torrid and temperate zones alike. Mr. C. gave then a description of the soils, manures, and tillage best adapted to Sorgho. The Chinese and foreign methods of tillage, however, do not greatly differ, though the latter is probably superior. The uses of Sorgho were stated, and among them are the following. An acre of ground produces about 22,000 stalks, yielding from three to nine tons of comparatively dry forage, besides seed to the amount of from 25 to 40 bushels, weighing 36 lbs. to the bushel, and equal to oats or barley in nutrition. The hulls of the seeds yield a very beautiful purple tint used in colouring wines and silks. If the plant is cultivated for other purposes, an acre yields about 1,700 gallons of juice, giving from 10 to 13 per cent. of saccharine matter in the form of sugar or syrup, or about 6 per cent. of absolute alcohol. The yield of vinegar and beer is about the amount of juice consumed. Mr. C. explained the methods of manufacturing sugar, syrup, alcohol, ether, vinegar, beer and meal from Sorgho, and exhibited specimens of these articles made by himself at Shanghai last fall. In conclusion, he stated that in the cultivation of Sorgho in China there opens up a new and profitable field of enterprise, because the plant yields cheaply an abundance of saccharine matter, used in manufacturing some of the chief articles of modern consumption.

The second paper for the evening, on "The Geology of the Great Plain," by Dr. Lamprey, 67th Regiment, was then read. Lack of space prevents us from enlarging upon the topics introduced. Several interesting specimens were laid before the meeting, of shells, &c., found in different places, and illustrative of the subject. A vote of thanks having been passed to Dr. Collins and Dr. Lamprey, the proceedings terminated.

NINGPO.

On the night of the 5th February, a Ningpo boat from Wanchew, while lying in the river (Ningpo) was boarded by six Europeans with masks on, who overpowered the crew, robbed the boat of $213 in money, and the clothes that were of any use belonging to the crew. These scoundrels were armed with swords and revolvers, and threatened to kill the first that made any noise. After they had got all they could, they cut adrift the boat's sampan, and shoved themselves off.

The lighthouses are drawing fast towards completion, and will be lit for the first time about the end of the current or beginning of next month (March). At present, after leaving the Light Ship, nothing is seen ahead in the light way from Shanghai to Ningpo (says the *Friend of China*), till a glimpse is caught of an oyster-shell lantern over an upper room of the gateway to the dilapidated citadel on the hill at Chinhae; a light of use only in steering to within a couple of miles or so of the entrance to the river, and which it is proposed to do without as soon as the other lights are fairly in operation.

The new lighthouses comprise, one on the island of Tse-lee,

Digitized by Google

about five miles from the river entrance, and another on the the islet of Pas-yeu, a quarter of a mile or so from Cho-poa-san (Citadel hill). The Tse-lee lighthouse, complete in all but glazing, is an octagonal building about twenty-five feet high, on a three feet thick brick foundation, with walls two and a-half feet thick on the base, reduced to two feet half the way up, and tapering from a diameter inside of eleven feet on lower story to six feet for the floor of the lantern. This Tse-lee or outer luminary, is 185 feet above the water, and a clear bright light will be visible in ordinary weather at a distance of eight miles or so. The greatest benefit derivable from this light will be by navigators who approach Ningpo river through the Kintang Channel—say by sailing ships, of which as many as thirty got ashore outside Ningpo during the last year only.

The inner light on Pas-yeu will be a dark red, a hundred and fifty feet above water, and particularly useful to steamers in helping them to strike the centre of the channel on either side of the islet. Until Chinese keepers are sufficiently acquainted with the duty required of them, common oil lamps, eight of them to each lighthouse, in plated copper reflectors, will be used, sliding on revolving carriages, twenty-four inches by twenty-four, and fed from the tops. Substantial cottages are built in the vicinity of each lighthouse for the accommodation of the keepers (one European and two Chinese to each); and on Tse-lee there is to be a flag-staff to warn ships when approaching dangers unawittingly, a gun for foggy day alarms, &c.

The lighthouses, however, are not the only useful improvements. Buoys are to be laid as follows:—One on Sesostris Rock near Pas-yeu island—where there is only twelve feet of water at low spring tides; one on Tiger's Tail; one on the Blonde Rock, and one on Alligator Point;—the cost of the whole of these arrangements being somewhat considerable when viewed as a contribution in progress by Chinese Mandarins.

HONAN.

The Mahometan rebels in Honan are pursuing their successes, and have now captured the city of Lo-yang-hsien, where they have strongly entrenched themselves. The course of this rebellious movement is marked by desolation and misery inflicted on the peaceful inhabitants, such as even the Taipings never approached in their wildest forays. The country around Lo-yang has been turned into a wilderness, and the villages have been without exception burned to the ground.

FOOCHOW.

The British steamer *Undine* reports having left Foochow on the 12th of February, arrived at Amoy on the 13th, arrived in Swatow same day, left on the 14th at three P.M., and arrived at Hong Kong on the 15th. The steamers *Maria*, *Prince Kung*, *Waratah*, and H.M.'s gunboat *Bustard*, were in Foochow; H.M.S. *Pelorus*, and gunboats *Bustard*, *Janus*, and *Flamer*. H.M.'s gunboat *Haughty* arrived in Swatow on the 13th. An expedition was sent out from H M.'s vessels in Amoy to a piratical village some distance up the river. No news, however, of what they had effected had reached Amoy before the departure of the *Undine*.

HONG KONG.
